MAGAZINE RIFLES.—A great deal of ink is spilling just now over the question of magazine rifles for military use. Several of the Continental armies have adopted some form of repeater. The English Ordnance Boards are working over the problem with no end of civilian advice. In our own country, the men on the new cruisers will be armed with a magazine weapon, but the cry is for its universal adoption. The old objection that in the excitement of conflict the men would empty the magazine without result in any way commensurate with the consumption of ammunition, is no longer held to have any weight. Against it the argument is urged that it would break up the morale and efficiency of the oldest fighters to know the enemy had a much better arm, while with such a reservoir of destruction as a well-filled cartridge chamber, the men will gain in steadiness, and reserve their fire until its best effect can be gained. What with long-range military rifles to create dismay before the enemy is in sight, and a close skirmishing fire from magazine arms, war will soon become too sure a method of death for the most enthusiastic glory hunter.

A SOUVENIR FROM KILLARNEY.—A Montreal sportsman and admirer of the Canadian sporting sketches of J. M. Le Moine, having shot a splendid Irish deer while deer stalking recently on the lovely banks of Lake Killarney, at Muckross, forwarded, per last trip of the S. S. Polynesian, a haunch of venison to the author of "Maple Leaves." Our esteemed contributor might now address to his friend, the Canadian Laureate, Frechette, an invitation to meet him under the green groves of Spencer Grange, something like Walter Savage Landor's to his friend, the English Laureate:

I entreat you, Alfred Tennyson,
Come and share my haunch of venison.
I have, too, a line of claret,
Good, but better when you share it.

THE DEATH OF JOHN KRIDER removes a figure long familiar to multitudes of sportsmen. Mr. Krider was one of the old school; he had enjoyed a wide experience in the field and it was a pleasure to listen to his relations of scenes in which he had participated. Mr. Krider was something of an ornithologist; he made a number of collections, and his services in this department were recognized by naming for him a Western form of the red-tailed hawk, *Buteo borealis krideri*.

"NESSMUK'S" POEMS.—We repeat this week the subscription blank for the forthcoming volume of "Nessmuk's" poems.

FATE—To go through a civil war and then meet death at the hands of a deer-dogger in Maine woods.

MEMORIES OF LAKE BUTLER.

BEING laid up in ordinary with the toe of a coming winter kicking sharply at my breathing works, I feel strongly impelled to write of scenes and places that I may never go over again. And, sitting in my little backwoods den, it is pleasant to find that there is a lasting pleasure in going over these scenes, that leaves no sting behind. Looking over my Florida notes for 1885 I find the following entry under date of Oct. 19:

"Tired of lying off in camp, and carried the canoe over to Salt Lake before sunrise to try fly-fishing in Lake Butler with some new tackle sent me by a friend. Caught the finest—though not the largest—bass I ever happened to strike. Though I held hard it was over an hour before I could get him alongside the canoe and shoot him in the head. And he was lively to the last."

Sitting in a cosy attic with a persistent northeaster beating at the window, it all comes back to me with the vividness of a sharp photograph. The long, hot summer, with its constant plague of insects, with everybody gone north who could get away, and only a heat-oppressed, insect-bitten contingent of some fifty souls left at the Springs to keep each other in countenance. The listless, feverish languor that comes to the Northerner in the hot, weary days, with little to amuse or kill the time, and no game except a few shore birds in season, at least to any true sportsman. As for the native cracker, it is all open season to him. He kills when he can and all he can. I spent much time tramping about the woods, cruised up and down the coast and on rivers and lakes, until I was tired of it. There was no lack of good fishing, but I soon tired of it too. I could buy a fat "buck" mullet for a nickel, and, as he was about the best fish on the coast, and would afford two ample meals, it seemed a waste of time and muscle to paddle three or four miles on a hot morning to catch one or two sea trout or channel bass, when the mullet was much the better fish, unless one were actuated by a passion for angling, which I was not, having about fished away my angling ardor.

It was during the heated term that I received a light bass rod with a cast of flies from E. W. Davies, of Athens, Pa., with a request that I give rod and flies a fair test on the big bass of Florida. Of course I gave the promise; but it was months before I made it good. At length, when the weather had become a trifle cooler, it struck me as a good notion to try the bass on Lake Butler with the fly, and I got out and overhauled my bass tackle. The rod was a 7oz. lancewood, with a black walnut handle, very plain, but hand-made. The flies were an ibis, a yellow-May, and a black with drab tail. Mr. Davies had written me that the black was the killing fly on the Susquehanna; but it was always a poor one with me, especially in the lakes of the Northern Wilderness. There I had found the scarlet-ibis and split-ibis the best, while the yellow-May was but so-so.

In tying on the cast, however, I gave the black the advantage of tail fly, yellow-May second, ibis for hand fly. I thought the ibis would still prove the taking fly; but I was mistaken. I often am. I seem to have as great an alacrity in being mistaken as Falstaff had in sinking.

It certainly was a glorious morning that 19th of October, when, at the first faint streak of dawn, I turned out, had a powerful cup of coffee, inverted the canoe on my head and started for a one-mile walk over to Upper Salt Lake. I could have made the trip by water, but it would have included nearly four miles of paddling, and it is the early worm—or fly—that catches the bass; so I elected to walk. I forgot to take into account the heavy dews and the rank growth of coarse grass, flowering shrubs and plants that I must needs wade through; whence it happened that I reached the shore of Salt Lake wet to the skin and blue with cold.

I dumped myself into the canoe and paddled over to the carry in no very amiable mood, took out, and commenced climbing the steep ridge that separates the two lakes. It is quite a hill—for Florida, and I paused on the summit at the big live oak, which is the resting place, to get my wind and also for a brief survey of the scene, which, to say the truth, was really worth looking at.

I am not much given to describing sunrises. I mostly leave that to the other fellows. But I thought this exceptionally fine. Lake Butler lay below, placid as a mirror, its glassy surface flecked here and there by small flocks of summer ducks and the ugly heads of a few 'gators, floating grim and motionless. Across the lake, to the east, an interminable forest of pines, with the sun just showing his rim above their plumed tops, looking much larger and milder than usual, say about fifteen feet in diameter, and the color of a well-ripened pumpkin.

Mocking birds, cardinals, bluejays and chewinks were making the woods vocal, and I raised the canoe, carried it down to the beach, put my rig in order, and started for a paddle of a mile and a quarter up the coast to Salmon Bay, where, if anywhere, big bass are to be caught.

Now, it is usual to catch several fair-sized bass in paddling up the coast; but the flies were a Yankee innovation they did not understand, and I did not get a rise until the canoe had rounded the point into Salmon Bay. Then it came so sharp, quick and heavy that I was near losing the rod overboard. No need to "strike;" the bass did that.

I dropped the broad double blade overboard, seized the little single blade and commenced setting the canoe out into deep water. For, in a canoe only 8½ft. long I had found the large paddle a fearful incumbrance in handling large fish, and I could always pick it up when wanted.

I did not see the fish for a while, but I could feel that he was large and lively. I think he made a dozen leaps while I was working him out into the bay.

At last I got him where I wanted him and the sport commenced in earnest. I reeled up on him to about 25ft. of line and had him where I could see him. Well, he was a beauty. Bright and iridescent in the sunlight, leaping almost incessantly for the first ten minutes, towing the canoe in his mad rushes almost as fast as she would go under ordinary paddling, sounding for bottom occasionally so strongly that the rod was taken under to the handle, then making a runaway dash for the lily-pads only to find himself foiled, and then trying a rush home on the canoe to find the line quietly passed around the stern, allowing him the side he most wanted. Yes, it was sport for the first fifteen minutes, and then it began to get a little tiresome. It kept one constantly on the strain, and the sun was getting hot, especially on one's back, the perspiration was streaming down my face and I decided that it was time to take him in. But he would not come and I could not fetch him. He seemed as lively at the end of thirty minutes as at first, and I felt that I had got enough of fly-fishing to last me a good while.

The pliant rod, with the easy yield of the light canoe, reduced the danger of breakage to the minimum; but it also made it very difficult to force the gamy rascal alongside. I am satisfied that in his brave fight for life he made more than fifty fair leaps in the air, and I never was so disgusted with a fish in my life. As often as I got him to wallowing with his dorsal fin out of water and succeeded in leading him near the canoe, he would take a scare and dive down just as I was getting ready to shoot. Then the leaping and running had to be all gone over again.

If I timed him correctly it was an hour and a quarter before I succeeded in getting him fairly alongside and putting a bullet in his head from the little .23, which I preferred to the gaff. He did not move a fin after the shot, and I took him in at once and proceeded to weigh him; but my scales did not weigh above 5lbs., and I never shall know his exact weight. Probably not much more than 6lbs. I had taken the big-mouth much heavier than that; but he was the gamiest, plumpest and brightest I had ever taken. I took a slice off one side of him that just filled my little frying pan and found him as good on the table as he was game in the water.

Going out of Salmon Bay I let the flies trail, and caught a couple of bass weighing about 1½lbs., both of which I turned loose. All three were taken on the yellow-May, and although I used the same cast frequently, I never took a bass on the black, and only occasionally on the ibis. I often changed the position of the flies, but the yellow always remained first favorite in Florida waters.

As for the 7oz. rod, I tested it to the uttermost, and it came out of the fray as sound as it went in.

And now for a little sequel.

It happened that, at the very time I was playing my bass in Salmon Bay, my cracker friend, Gause, was fishing from the island at the foot of the lake. He used an 18ft. cypress pole, 10ft. of strong line, a large hook, and cut bait. His entire rig did not cost more than ten cents, and he only fished about an hour, going home in time for breakfast with four bass (which he called trout) weighing respectively 13lbs., 10lbs., 7lbs. and 5lbs.

It happened also that Gause stopped at my camp on his way to the Springs in the evening, and we compared notes concerning the fishing on Lake Butler. He examined my fishing tackle with indulgent curiosity, and I thought he regarded my light rod something as a California stage driver would look at a toy coach. He inquired the price of rod, reel, flies and line, and then proceeded to free his mind about thus:

"Now, Cap'n Nessmuk, it's a nice little trick, but what's the good of such a triflin' switch to ketch big trout? It took you longer to ketch one fish than it did me to ketch four, and I don't see why you had any more fun than I did, let alone that it costs more than it comes to. Why, I knowed Cap'n Sam Stephenson, who lives up the Anclote, to ketch 200lbs. of trout in one afternoon. He used four or five feet of line and a 'bob,' and took 'em all among the bonnets and snags, just where your flies 'n' trollin' spoons couldn't be handled. He sold 'em the next mornin' in Brookville for ten cents a pound, and it was enough to load his cart with supplies. You see, Brookville don't have any fishin' nearer than the coast, 'n' they wuz wild for trout. I can't understand you Yankees. Seems as tho' the less fish you ketch an' the more it costs the better you like it."

It struck me that Gause had the right idea. He explained the gaminess of the trout (bass) to his own satisfaction, and subsequent experience proves him pretty well right. He said: "As for you-uns 'playin'' a fish soch a long spell instead of takin' him right plum in, it all depends on the tackle. I you will use a limber switch an' a long, thin line, why the fish gets headway on ye an' slashes around about as he's a mind to. But if your line is strong an' you jest snatch him baldheaded from the start, he sort o' loses his grip an' comes right in like a stick of driftwood."

As I had plenty of time on my hands and may add a trifle given to experimenting on matters pertaining to "fishin' an' huntin'," I concluded to put in a week on my favorite stamping ground, the old clearing at the head of Lake Butler; firstly, because there was a pair of ivory-billed woodpeckers living and breeding about the head of the lake and I hankered after the cock bird for a specimen; and secondly, to test the bass with any and every line at my command. Whence it happened that one pleasant day, when the weather was just cool enough to be delightful, I paddled out with a well-laden canoe and reached the camp a little before noon—a ten-mile trip with one carry of 70 rods which had to be doubled.

As the poles, crotches and sides of the camp were in good order, it was a short two hours' work to stretch and fasten the canvas roof, slick up the camp and lay in night-wood.

When the job was done and such *débris* as gathers about a woodland camp cleaned up, as Secretary McCulloch retired the greenbacks—"by burning," I thought it as pleasant and homelike a residence as a modest-minded man could desire for a Florida winter, and I could not help a passing wonder at the restless and uneasy Northerners, who, coming to Florida for an outing, commence their restless peregrinations on the eastern coast, take in the St. Johns, Indian River, the Kissimmee, Lake Okeechobee, the Caloosahatchie, and a long line of the Gulf coast, resting nowhere for more than three or four days at a time, constantly getting tangled in dreary marshes, muddy lakes and rivers, the courses of which would puzzle an alligator. The worst feature about this is the fact that when these fellows do happen to strike a pleasant spot where high, dry camping-ground, good water, good boating, with fair fishing and shooting all combine to tempt the outer into making a protracted stay, the demon of unrest is sure to hurry them away—perhaps to spend the first night in a wet boat on a desolate marsh through inability to find a landing.

It was late in the afternoon when I put my rig in order and paddled a mile down the west shore of the lake to a cozy little bay for an hour's fly-fishing. Two little brooks empty into this bay, and it is a lovely spot for fishing with the fly; but the bass are small. I fished until sundown and caught three bass of a little over 1lb. each. Saved one and let the others go free. All took the yellow-May. Then I went to camp, and while I was quietly smoking by the fire, a plump gray squirrel scrambled up a hickory tree within four rods of the shanty, cocked himself pertly on a limb and commenced working his way to the inside of a hickory nut. I ought to have left him in peace; but the camp was short on game, and he was such a beautiful mark. Well, I took him in.

One squirrel and a bass were rations for a day.

Then I overhauled my stock of feathered spoons, plain spoons, "propellers," and artificial minnows, with a view to exhaustive experiments on the big-mouths.

I also had a lure which was fashioned after the "bob," which proves so killing in cracker hands. Now this "bob" is an institution; you may swear by it all day without breaking any commandment. It is composed of red and white rags with a dash of gaudy feathers, and looks like a Mother Hubbard rag baby struck by a cyclone; but all the same it is the most taking lure used for the big-mouth. I made my lure on a three-hook gang, working a funnel-shaped head of bright scarlet cloth on the lip-hook, and making the body simply of long white hair from a deer's tail, letting the brush come low enough to cover the tail-hooks.

For one hour each morning and the same each evening I tried the bass, giving each lure its fair turn over the same ground and keeping a fair account of every rise and every fish taken.

Of the spoons a small feathered spoon from Buffalo was the most successful by a small percentage. The phantom-minnow was a close second. Large, plain spoons were not so taking. And the nondescript, the "bob" of scarlet cloth and deer's hair, won just about two rises and caught fully two bass where the best spoon counted one. I spent a week alone experimenting with the bass and had a record of sixty-three strikes with thirty-one fish brought in. My two heaviest strikers got away by fairly breaking a sixteen-thread Cuttyhunk line. I shall not say what I think they would have weighed. When hooked they made for the cypress roots, and a stiff breeze blowing on shore rendered it impossible to set the canoe out into deep water with one hand. I only used three fish during the week, gave away a couple of messes to people who came up from the Springs and turned the rest back into the lake.

Gray squirrels were fat and plenty, while I could get quail when I wanted them, and either was superior to fish. I also tried my hand on goggle-eyes and bream, which were plenty both in the lake and Brooker Creek, the latter being the inlet. They were of fair size for their kind, but so inferior in the pan that I seldom kept them. And even the black bass, though fully the equal of his northern brother, is by no means so good on the table as the sea-trout, the mullet or the pompano.

And looking from my window out on the bleak side-hill where the snow lies in ragged patches on the damp, dark plowed ground, my soul hungers for that pleasant camp at the head of Lake Butler, or the larger, better appointed camp where I kept my traps and made my headquarters for more than a twelvemonth at the Oak and Pine.

NESSMUK.

Natural History.

AMERICAN ORNITHOLOGISTS' UNION.

THE annual meeting of the American Ornithologists' Union opened Tuesday last at the National Museum in Washington. Among those present were Mr. J. A. Allen, Mr. G. B. Sennett and Mr. William Dutcher, of New York; Prof. S. F. Baird, Mr. R. Ridgway, Dr. E. Coues, Dr. C. Hart Merriam, Dr. A. K. Fisher, Dr. Leonard Stejneger and Capt. Chas. Bendire, all of Washington; Mr. J. H. Sage, of Portland, Conn., and a number of others.

The Committee on Migration and Distribution of Birds reported, as did also that on Protection of Birds. This last report, read by Mr. Sennett, the chairman of the committee, was quite a long and interesting paper, and was listened to with great attention.

He said: "The committee appointed by the American Ornithologists' Union to work in the interest of bird protection embraces ten members, seven of whom are of New York (that we may the more readily assemble a quorum in that city). One is from Boston, one is from New Brunswick and one from Kansas. Besides several informal gatherings, we have had twenty meetings when business has been transacted and recorded by a quorum or more of the members. Our plans were chiefly to awaken public interest in behalf of the birds, that their wanton destruction might be checked; and to frame suitable laws for the protection of our native song birds and to secure their enactment in the various States.

"In carrying out these ideas we have received valuable assistance from many friends of the cause we championed; the editor of *Science* devoted to our use a supplement of that journal, which presented to the public certain articles on bird destruction from the pens of various members of our committee, and also the draft of a bird law, which seemed to us so simple and effective as to meet the requirements of the greater number of our States. This publication, slightly changed to appear as our Bulletin No. 1, and the Supplement brochure were sent broadcast over the country to the number of about twenty thousand; they were sent to the press, to legislators, to the AUDUBON SOCIETY, to school superintendents and elsewhere, according to our best judgment and the limited amount of money at our disposal. The Bulletin forms were electrotyped for future use when funds shall be forthcoming.

"Early in the year a statement of the nature and objects of our committee was furnished the FOREST AND STREAM for publication, and duly appeared in that journal; moreover, the statements, in the form of slips printed for circulation and distributed as seemed best, to the number of about eighteen hundred, served as our first direct appeal for public sympathy and coöperation. These seemed to meet with general approval, since they were freely copied and published. Newspaper paragraphs

touching upon bird protection now began to appear in large numbers and correspondence from many quarters poured in upon us. Letters were received from the Selborne Society, of England, asking an interchange of plans, ideas, etc., and offering us their coöperation.

"The AUDUBON SOCIETY has grown to immense proportions under the fostering care of the FOREST AND STREAM, and already numbers [Nov. 1, 1886] more than fourteen thousand members, with a working force of three hundred local secretaries, who are scattered over the United States and various foreign countries.

"We have received and accepted offers of assistance from persons and societies whose approval is most flattering to our hopes of great success; the American Humane Association has, through its president, given valuable assistance, and a talented lawyer of New York city has offered his legal services whenever such shall be needed.

"It seemed advisable to complete our year's work by issuing a second Bulletin, entitled 'Protection of Birds by Legislation,' which is before you.

"To sum up, we feel justified in claiming the fairest results for our labors. Nothing could promise better for the future than the great public sympathy and assistance which has come from all good sources to encourage us and to help us in pushing the work still further."

"COON" CATS.

Editor Forest and Stream:

It appears to be a disputed question whether there is or is not such an animal as a "coon" cat, or whether the animal so termed is a cat of the Angora breed. I have seen two which were called "coon" cats, both during the summer of 1885. The first was at a drug store on School street, Boston. It was a cat of about 8lbs. weight, of the color of a coon with similar stripes on the body, sharp nose, long whiskers, and large bushy tail, striped like that of a coon. The animal was sociable, and apparently liked petting as do other cats. The clerk said it was a "coon" cat, that is, a cross between a coon and the common domestic cat. Two weeks later I saw another cat of the same kind, but not so large and of somewhat lighter colors, at the principal hotel in Bath, Me. It was owned by an ex-mayor of the city, who lodged there. I did not meet the owner, but a gentleman residing at the hotel said it was an Angora cat, but "some called it a 'coon' cat." He said he had seen other similiar cats in Maine. Continuing my trip through that State, I heard of several "coon" cats, and the same story that I heard in Boston, that they were a cross between a coon and a cat. But I never found any, although I made offers for the purchase of a kitten. It was always old Uncle Zeke or old Aunt Sally, or some other mythical personage in some backwood place, who was reported to breed "coon" cats, but I had no time to search for them. In New York recently I saw two Angora cats, the male all white, and the female dark, in the hands of one of the FOREST AND STREAM advertisers, who advertised Angora cats for sale. In conversation the breeder said that "down in Maine people raised coon cats." But I could not learn whether the "coon" was or was not an Angora, and the breeder had never seen a cat of the colors of those I saw in Boston and in Bath.

Now the existence of cats closely resembling coons is a certainty. But are they Angoras? Or are they a cross between the cat and the coon? which I am not inclined to credit, despite the stories that are told about it. Probably some of the FOREST AND STREAM readers who have roamed all over Maine on their shooting and fishing trips may have some facts worth communicating. If there is such a thing as a genuine "coon" cat, or an Angora cat resembling the coon, where can it be found? G. D. C.

HARTFORD, Conn., Oct. 30.

[This subject of impossible hybrids has been referred to before, and it is hardly necessary now to discuss the question at length. It is an elementary fact, well known to intelligent persons, that an animal of one species cannot breed with an animal of another species. The coon-cat belongs to the hoop-snake and dog-rabbit collection of monstrosities which exist only in the vulgar beliefs of ignorant persons.]

LAND BIRDS AT SEA.—Gloucester, Mass., Nov. 9.—About October 15 of the year, while the Gloucester fishing schooner Martha A. Bradley was at Chetegan, Cape Breton, a ruffed grouse (*B. umbellus*) flew off from shore and alighted on the schooner's mainboom. One other of these birds came aboard another schooner at anchor near by. I have seen several other species of land birds this season that have flown around or alighted on the U. S. F. C. schooner Grampus. Some I did not see close enough to identify. Among those that were close enough to name may be mentioned the goshawk (*A. atricapillus*); Coopers hawk (*A. cooperii*); winter yellowleg (*G. melanoleuca*); turnstone (*S. interpres*), and cherrybirds (*A. cedrorum*); there were three of these. I have also seen a warbler (*G. tricha*), and a tree sparrow (*S. monticola*). I also remember having seen a crow on the bowsprit of a schooner at Pubnico, N. S. Excepting the crow just noticed and the ruffed grouse at Cape Breton, all of these instances occurred off on the "blue water," from 40 to 250 miles from Cape Ann.—X. Y. Z.

WOODCOCK IN CITY HALL PARK.—The following note has been kindly sent to us by Mr. Wm. Dutcher: "New York, Nov. 5, 1886.—Mr. Wm. Dutcher. Dear Sir: At five minutes past eight this morning a woodcock alighted in the City Hall Park, main lawn. Its flight was so irregular that I could not be sure of the direction from which it came, but I think it crossed Broadway from the northwest.—W. J. KENYON."

CAPTURE OF AN EIDER DUCK.—New York, Nov. 16.—*Editor Forest and Stream:* I beg the courtesy of entrance into your columns to record the capture of a young male American eider (*Somateria dresseri*) on Nov. 8. at Center Moriches, Long Island, N. Y. The bird was shot by Mr. Benjamin Hallock. The skin is now in my collection.—L. S. FOSTER.

ATTENTION IS CALLED to our advertising columns this week, where an unusually attractive display of holiday gift announcements may be found. The few weeks immediately preceding Christmas are usually very busy ones, and it is always well for intending purchasers to begin their buying well in advance of the time when they need their articles. A wide range of choice is afforded by our columns and they should have a careful scrutiny.

Game Bag and Gun.

LOUISIANA FIRE-HUNTING.

WHILE not a regular subscriber I have been a frequent reader of your valuable and entertaining journal for years, and the sight of the familiar vignette on a news stand never fails to cause me to feel for the necessary nickels wherewith to buy. Having derived so much pleasure from following your hunters and fishermen through forest and stream, and having lingered around their blazing camp-fires with so much zest, I consider that I owe them a debt of gratitude that I can best repay by giving them an account of our sport here in northern Louisana, more especially as our favorite method of hunting deer is by fire light, called "fire-hunting," which, as we follow it, I have never seen correctly described in your journal.

We fire-hunt on horseback in parties of two, the foremost man carrying the light, which is a large tin head lamp made for the purpose, the other following closely behind has the horses to hold when "eyes" are found, and has to carry the game. Thus equipped, the hunter with his fire-cap on, his gun across his saddle in front and his pocket compass in his hand, knowing the location and general direction of some road or stream, by means of which he can find his way back to camp, takes his course out into the night. Around him is a small circle of light. The bodies of the forest trees at twenty-five steps are distinct, at forty they give back only a dim outline and beyond that a deep black pall, a hemisphere of intense blackness closes the horizon on all sides. On he rides, slowly, avoiding rotten brush and logs and thickets, his eyes scanning the black curtain around him, until at last a bright spark flashes for an instant, not long enough to fix the eye, but still enough to cause the electric thrill of a find, enough to cause his hand instantly to tighten his rein and check his horse and make him grasp his gun more firmly. In a moment it flashes out again bright and clear. The excitement is over. It was only a lightning bug, signaling for its mate. A glance at his compass and on he goes again. There! another flash! Another pause and a steady look! Eyes they are, but they are low down; they are close together; they are red, and yes, there is the unmistakable aureole around them. It is a coon. We don't want him. But look at the wild pea vines and the bluestone on the bank of this slough. This is splendid deer woods. We will surely find one directly. Expectation is on tip-toe. And now, oh cattle, with your appetites sated, lying quietly among the vines, chewing your cud and at peace with all the world, if you value life and happiness, turn both your mild dim orbs full upon us as we approach. Then we will know you. But if you lie still with the light reflecting from the side of one eye only, we may be young hunters and allow our eagerness to cloud our judgment and a terrible blast of buckshot may bring your pleasant ruminations to a sudden close. This is the risk. But we are old hunters and our motto is, "Don't shoot until you know your game and then shoot to kill."

On we ride, our "pillar of darkness" moving as we move. At last there are "eyes." Perhaps a sudden turn around some thicket has brought us close up, and there just behind that bush are two bright, pure white orbs, not of fire, but looking more like two full moons, as big as No. 12 gun wads, set about six inches apart. Look closely and you will see the outline of horns and ears above them. Now is your chance to shoot. You cannot dismount. If your horse will stand a gun, all right. But if he won't, just brace yourself in your stirrups and clamp your knees tight, raise your gun steadily and pull about two inches below the eyes, and let the free circus that follows advertise itself. Sometimes, in cases like this, your companion has lots of fun at remarkably cheap rates; but if you have done your duty you have got meat.

But usually when found the eyes are at a distance. Perhaps your attention is attracted to an indistinct semi-luminous spot or line on the black curtain. You check your horse and take a steady look. It looks like a small slice out of the "milky way" not larger than your finger, and seeming to waver. But your experience tells you that it is the shining eyes of some animal. Then you dismount and leave your horse in charge of your companion. You cast your eye to the ground to select the smoothest walking, and from the smoke of your lamp you take the direction of the wind, so that the game will not hear you or smell you. His eyesight you may obscure, but his ears and nose are acute. You advance twenty steps. The luminous line becomes brighter, and you can see but cannot fix the eyes. They seem to come and go. But now you know it is a deer, and that he is seventy-five or eighty yards off. Very cautiously now. The wavy motion begins to disappear and eyes are more steady. At sixty yards they are distinct, but they seem small and too close together. And now be very careful. The breaking of a twig or a single mistep, and he is off. Now at last you are at forty yards. The eyes are nearly full size and there is about three inches of pure black between them. Now, bring your gun perfectly steady until the foresight rests on the black curtain about four inches below the eyes. Then give a steady, quiet pull on the trigger. You may be a splendid snap shot in the day time and able to stop a pair of snipe right and left as they rise four times out of five; but if you try your snap shooting in that black curtain you will be apt to imagine that some of the boys drew the shot out of your gun. When the gun fires there is a thick bank of smoke in front of you, through which you can see nothing, but for an instant you listen. If the shot was a clear miss, or if the neck was broken and the deer fell dead in his tracks, you will hear nothing. But if only wounded he will run over brush or logs or anything in his way, so that you can tell the direction he has gone. Follow the direction of the sound and you will be apt soon to see the welcome sight of his white belly turned up in death, or see his eyes again where he fell.

Now call up your companion, take out the entrails, and tie the deer upon the horse behind his saddle. If it is a gentle horse accustomed to this kind of service, all well. But if not, there is a chance for another circus when after blindfolding the horse to get the deer up and let your companion mount him, you remove the bandage from his eyes, and he finds a pair of horns dangling around his flanks. This show is much more interesting to the hunter than the first, but his companion seldom joins in the merriment. It is probably on account of the rather selfish and one-sided nature of both these exhibitions that most fire-hunters of experience prefer gentle animals to hunt on; for while it is undoubtedly exceedingly amusing to the rear man to see the hunter's horse whirl around and make off through the woods like an express train on down grade when the gun fires, and to see the desperate grasps of the hunter at bridle and mane, yet he has no one to laugh with him; and so also a good Texas pony with his first deer tied on, bucking around a fifty-yard circle, and the rear man yelling "Whoa" at every jump makes a first-class "one-horse" show. But this time the hunter has all the laughing to do; and so as I said before the selfish nature of the sport causes hunters of experience to prefer gentle horses for night-hunting.

From this description of fire-hunting it will be seen that it requires some practice to become a successful hunter. In the first place it is requisite to know the eyes of different animals when you see them. The eyes of dogs, wolves, sheep and goats resemble the eyes of a deer very closely, but there is nevertheless a slight difference that experience alone can teach. The eyes of a wildcat or a panther are the same color as a deer's eyes, but can easily be known by appearing to emit rays of light, having more the appearance of a star. The eyes of a coon or a mink are red, very bright, and have the ray-emitting characteristic also. The eyes of rabbits and hogs do not shine. The eyes of cattle are very dim, but there is sometimes a bright reflection from the side eye that is liable to get the young hunter into trouble—likewise the cow. Of night birds, the whipporwill only has the shining eye, which is a very deep brilliant red.

In the second place, the hunter must be able to "navigate" the woods at night without getting lost, and he must know the kind of woods in which he is most likely to find deer, and also understand their habits sufficiently to know when they are most likely to be out in their feeding grounds. In addition to this, he must know how to approach his game, and when he is close enough. All these things require practice, good judgment and skill. And then he must be a steady, careful shot, and thoroughly accustomed to the difference between day and night shooting.

But to one who is accustomed to this kind of hunting there is no other so fascinating. The night ride with the black curtain around you; the constant expectation; the thrill of a find; the noble ten-pointer dead where he stood; the day spent in camp recounting the night's successes and failures; or shooting squirrels or quail or ducks in the immediate vicinity. All this gives a zest and relish to fire-hunting that I have been able to find in no other pastime.

Our hunt of this fall will serve to exemplify. On the 18th of September we started from Bastrop in the parish of Morehouse for a hunt near the junction of the Saline and Ouachita (Washita) rivers in Arkansas, about forty-five miles distant. Our outfit comprised twelve persons besides the cook, two four-mule wagons loaded with corn, provisions, tents, bedding, etc., and three or four buggies. We reached our destination, Carroll Springs, about 2 o'clock on the 19th, Sunday, and having promised our wives that we would be good boys, we did not propose to hunt that night. But as the sun went down, and the dragons and birds and beasts commenced to outline themselves in the treetops in the gloaming, a spirit of restlessness and impiety began to assert itself until it took the form of an uncontrollable desire for venison steak for breakfast. Accordingly three of the boys saddled up and started out with the understanding that the first man who killed a deer should blow his horn and the others would then come to camp. When I speak of three hunters I mean three couples, for each hunter before coming out procures a man to follow him in hunting. In less than thirty minutes the first gun boomed out, and a moment after the soft, mellow swell of a horn told that venison steak would be served for breakfast. A few minutes later another gun waked the echoes of the sleeping forest and very soon another. In little more than an hour all hands were in and we had three deer hung up in camp. We hunted five nights, returning home Saturday, and our total was thirty-three deer in camp. The weather was delightful, but being warm we had to "jerk" our meat. Do all your readers know what this means? If not, let me draw the picture of the first duty after breakfast. We all walk out to the pole where the deer were hung when brought in last night and examine and criticise the shot in each. Now boys, get to work. You four do the skinning, you four cut up (*i. e.*, cut all the flesh off of th bones), two of you salt it and put it on the scaffold; when that is done all hands go and bring in a good armful of wood and build a fire under the meat. It must be watched and turned during the day and the fire kept burning. By evening it is thoroughly dry and is then put up in sacks for future reference.

We were a pleasant party of old friends and neighbors who had hunted together for years, except one young fellow, a very ardent sportsman, and a crack shot at birds, who, listening to our tales of the many deer we had missed and the bad shooting we had done in times past, came to the conclusion that we were rather a poor lot of hunters anyway, and did not hesitate to express the opinion that it was utterly beyond the range of possibility for him to miss as large an object as a deer within 40yds. of him. His idea of location was so good that he felt sure he could kill a deer at that distance after seeing the eyes, even if his light should go out before he could shoot. He was a fine fellow, an indefatigable hunter, and a fearless woodsman, but he was young. His score at the end of the week was two deer out of about twenty shots.

And so our days of sport were passed. Those who felt like fishing rigged up rod and line and coaxed the perch and trout (black bass) out of the little lake formed by the springs. Those who felt like shooting squirrels or birds found them abundant all around us. And those who liked to sleep off the fatigues of the previous night and be fresh for the night to come, courted the drowsy god with blanket and pillow under the shade of some adjacent tree. Do your readers think this was not sport? We who tried it did. FIRE-HUNTER.

BROOKLYN GUN CLUB.—Brooklyn, Nov. 9.—*Editor Forest and Stream:* In an article which appeared in your paper of last week you spoke of the Brooklyn Gun Club as having only 700 acres at Smithtown; it should have read 7,000 acres.—HENRY F. ATEN.

GOVERNMENT OF THE PARK.

Editor Forest and Stream:

In your comments upon my letter of Sept. 25, "The Troops and the Park," you say it "contains evidence good enough, as far as it goes, but it is mainly of a negative character and does not of necessity conflict with the positive testimony submitted by the special correspondent sent out from this office." Then follow "facts" in regard to "drunken soldiers," viz.: "In the last week of August a drunken soldier, one of the Park guardians, 'held up' a stage load of ladies and gentlemen just within the Park, coming from Cinnabar, cocked his revolver, and with profanity and obscenity detained them until it suited his intoxicated fancy to permit them to go on. On the following day a sergeant and two enlisted men were dispatched by Captain Harris to arrest this soldier. In due time all four returned, every one of them drunk." On reading this, I felt so satisfied that no such occurrence could take place on the part of enlisted men in the army without an investigation and court martial following, that I took means to ascertain and I now submit some testimony on the affair, not negative, but very positive, inasmuch as it is testimony developed by an official investigation.

"A soldier had visited the town of Gardiner, just outside the Park limits, and had taken more of the vile liquor sold there than he was able to carry. As he was riding along the road on his way home, on a borrowed pony, he was overtaken by the stage, the driver of which drove his lead horses on to the soldier, so that his pony became entangled in the harness. The driver was abusive and the soldier talked back, and when another citizen, who had charge of the stages, came up and joined in the altercation, the soldier drew and flourished his empty pistol. The court was satisfied that the soldier got out of the way as soon as he could free himself from his entanglement among the lead stage horses. The court could get no evidence as to the use of obscene language, and in profanity the drivers were fully up to the soldier. Both driver and master of transportation flatly refused to appear before a court martial and give testimony, nor would they make any complaint. A sergeant and men were not sent after the soldier in question at any time, consequently did not return drunk, as the man was in his tent in camp asleep an hour after the occurrence."

It is rather a small matter to make much of, and the way that soldier "held up" (*anglice*, your money or your life) that stage reminds one of the fight of John Phœnix with the editor; but inasmuch as it partook of the nature of a "national disgrace" it was worth while to get things straight.

One more: The fires near the head of Black Tail Deer Creek started in full view from the Mammoth Hot Springs Hotel, on Aug. 14, three days before any troops arrived in the Park, and no efforts worthy of the name were made to extinguish them by the "trained force of assistants." Am I doing another injustice in the thought, "The troops are coming; this will make it hot for them."

FREDERIC MAY WISE, Lieutenant U. S. Navy.

NAVAL ACADEMY CLUB, Nov. 1.

[Assuming the information furnished to, and quoted by, Lieut. Wise to be correct, we see but little to change in what we wrote. We are quite well aware that an official investigation took place, and that the soldier, who at the time of the occurrence was a non-commissioned officer, was reduced to the ranks. It was never intended to suggest that the "holding up" of the coach was done for purposes of plunder. It was, and was understood to be, a drunken freak and nothing more; but the timid occupants of the coach could hardly be expected to know this at the time. The moral effect of the drunken soldier refusing to get out of the road, and, with drawn six-shooter, disputing the passage of the coach, would be about the same whether his purpose were plunder, fun or fight with the driver.]

GAME PRESERVING IN BRITAIN.

V.—THE GAME OF THE MOORS.

Ptarmigan.

AMONG the game birds of Britain the ptarmigan (*Tetrao lagopus*) must undoubtedly hold place, though we may rightly call in question the advisability of including it among the game we preserve, because to all intents and purposes we do not preserve ptarmigan at all, unless this term can be applied to the slightly increased security of life offered it by the diminution in vermin which the game-keeper brings about. It is common belief here that the ptarmigan of Europe and the ptarmigan of America are the same species, but whether this be so I cannot pretend to decide. As far as Britain is concerned we have but one invariable species, and that one only in decreased numbers. It used to frequent districts in both England and Wales, but has disappeared from these two provinces and is not now to be met with further south than the Grampian Hills of Scotland, being, however, by no means so plentiful in that comparatively southern locality as it is in the Highlands, the Hebrides and other Scotch islands. The tastes of the ptarmigan cause it to frequent the most uninviting portions of the hills and moors. It abjures the somewhat sheltered heather-clad moors and expanses for the stony, barren hilltops, apparently choosing those parts where one would imagine existence most difficult to maintain and life most precarious. Besides the extreme scarcity of food of which these exposed hill-places give one an idea, the birds, by their choice, render themselves liable to other dangers. The place of their being always makes itself known both to man and to birds and beasts of prey, and from both of these enemies the ptarmigan undoubtedly severely suffers. Its habits, too, are curious; it is far from shy or wary, but of very confiding nature, tame almost in the stupid determinedness it exhibits in sticking to its ground and refusing to move. I know no game bird so easy of approach and difficult to make wild. You can sometimes almost walk up to them and kick them up, so chary are they of rising. Even when they do move it is rather at the instance of the sentinel bird which controls the movement of the covey or pack.

Being an essentially Alpine bird the ptarmigan, as is usually, one might say invariably, the case with all Alpine creatures, changes its coloring during one season of the year. So long a period is it white that I suppose we may regard the winter dress of this grouse as its normal hue, the peculiar gray, white, yellow and black versicolored plumage of summer and autumn being a temporary concession to the antithesis of winter. In either case there is no doubt that the ptarmigan owes an immense share of its immunity from molestation to these variations in plumage, for at either season, whether the mountain tops be snow-ridden or not, the coloring of this game bird is always in strict harmony with that of the ground it frequents and of its general surroundings. You place a ptarmigan in its summer plumage against an expanse of lichen-grown granite rock, and I defy the most experienced eye to discover the bird at 30 or 40yds. So well sometimes does their plumage assist them in concealment that even at much nearer distances their presence comes as a surprise. And so it is in snow time to an equal extent.

The food of the ptarmigan is of limited variety, and one would suppose of limited quantity, but this appears not to be the case, as they are invariably in fair to good condition. Shoots of mountain plants, berries and insects comprise the diet, and in winter the birds burrow under the snow for their food, using snow during hard frost as a substitute for water, and apparently when other fare runs short they consume a good deal of snow as a means for keeping body and soul together.

Their matrimonial arrangements are much allied to those of the red grouse. They commence pairing early in the season and nest about June. Incubation occupies three weeks, the female alone completing the task under the male's protection, ptarmigan being monogamous. The nest is a rough structure, a mere depression in the ground, but sheltered by some stone or tuft of growth. Both birds assist in the rearing of the flock, the youngsters reaching maturity very speedily. In late autumn several broods pack together until the following spring, when the pack is broken up.

As a game bird, a bird of sport, the ptarmigan has its merits, but gastronomically speaking it is rather a failure, bearing in mind the excellence in this respect of those other two of the *Tetraonidæ*, the red and black grouse. It is an interesting enough bird, not so much perhaps on account of any little idiosyncracies of habit it may possess, but rather for reason of the barrenness, the uninviting, sometimes inaccessibleness, of its haunts. MOORMAN.

THE GAME WARDEN MURDER.

THE sensation created by the murder of the two game wardens at Fletcher Brook, in Maine, last week, is widespread and profound. Nothing has ever taken place in the history of game laws and game protection in this country which will go so far to make the real position of both poacher and game officer clear to the public mind, and the public heart, perhaps indifferent heretofore, has been touched. Persons who have never before given the question of game preservation a moment's thought have read of the double tragedy, and opinions, not favorable to the poacher, have been formed. Game wardens and commissioners have told the story of their trials and dangers before, but they have never before received the attention that this crime will bring. The poachers' nefarious business has received a check such as could have come from no other source. From out of the grave of the one-armed-soldier-murdered warden will spring up an army of game officers that will double guard the deer parks of Maine. It is fortunate that the Legislature of that State convenes so soon—almost before the public mind has had time to sleep over the double murder. The Maine Commissioners propose to ask the State for a better game patrol; a force by which they could better cover a territory so vast and valuable as a game preserve. They may now ask for ten times the number of officers they have been allowed heretofore, and the State will grant their request. They may ask for money to pay wardens and they will get it.

McFarlan and Graves may escape with their lives, but the chances are against them. The halter awaits one or both of them; and with that halter will come the entire solution of that threat which has been so common during the past two years—"I'll shoot the d——d warden, if he meddles with me or touches my dog!" The feeling which makes a man protect his dog is a noble one. The more we have of it the better will the world be. The love of the faithful brute is next to the love of a child. But how much love can a man claim for his child when he is constantly causing it to run its neck within the hangman's halter, where the poor innocent but awaits the clip of the sheriff's hatchet to hurl it into eternity? The brute is not to blame, it is true, and should not be made to suffer for the crime of its master, but what shall we say of the master who, with his eyes wide open to the fact that the State of Maine authorizes the destruction of any dog found hunting deer, still persists in taking the poor brute into that State for the sake of exposing him to destruction? Has such a man any claim to being a true lover of that noble animal, the dog?

But the true animus of the matter does not hinge on the question of the love of the dog. There is intense hatred of the game laws in that State, and hence of the officers who attempt to enforce them. That very region where the double tragedy took place has always been the hotbed of the worst of outrages in the direction of poacher against game warden. The stories—not a whit worse than they really are—have all been told in the FOREST AND STREAM. Many of the poachers are characters of the most dangerous sort. They have not only persisted in the disregard of wholesome game laws themselves, but they have done all in their power to encourage poaching by visitors from other States. Boston poachers, I started to call them gentlemen, but *poacher* fits them better—have letters in their possession from Wesley and the region around Fletcher Brook, urging them to "come down and get a shot at a deer" in close time, and "d— the game laws." Such Boston poachers have been down there on such invitations and they have killed deer in close time, which deer they have never paid for. To-day they hang their heads when they find that instead of "poor, but honest guides," they have been the company of outlaws and murderers. Perhaps they will not feel like going down to Maine next summer and killing a deer on the sly. It is possible that their wives may persuade them to stay away, if there is to be any murder about such a little breach of the laws of another State! To brand such men as thieves—stealing game from another State, and game that the State is trying to protect and propagate for the good of the whole sporting fraternity—has not served to restrain them, but the fact that murders are to grow out of their crimes may now serve to bring them to their senses. Like the Dutchman's philosophy of the other evening. He had listened to his friend's account of the double tragedy, as his friend had read it from the morning paper, when he exclaimed, "It pe much petter to led Maine game alone!" SPECIAL.

COLORADO GAME GROUNDS.

DENVER, Colo., Nov. 8.—*Editor Forest and Stream:* I recently spent a few days in Middle Park, along Grand River and about Hot Sulphur Springs and Grand Lake, and offer a few remarks about game. Ten years ago that region was a veritable hunter's paradise. He had only to slay and eat, but that did not satisfy him. He ate but a tithe of what he killed. Eleven years ago this winter elk filled the Park as cattle do to-day. A settler of that period told me that for three or four months of that winter he believed he never looked out of his house without seeing elk, and at times he thought there were three thousand in sight. Elk and antelope came into his corrals and ate hay with his cattle. Now they have almost disappeared. There is plenty of range for them; range that is not wanted for anything else, and will not be for many years to come, but they have been ruthlessly slaughtered and for almost no profit. Big kills are seldom heard of now. I heard of only two this fall. A Mr. Kline, who lives on Fraser River in the Park, killed seven elk in one day only a few miles from his home. The other case was in the Flat-Top or Cook Mountains, about the head of William's Fork of Yampa River. Three young men, one of whom had hunted a little before and the other two not at all, in four days killed fourteen elk and ten deer. Twelve of the elk were killed in one day.

A gentleman who came up from Egeria Park about the time I went over, told me he thought there were four hundred hunters at that time in and about Egeria Park and among the Flat-Tops. A few were loading their wagons with meat, many were getting a partial supply, while many others were not killing enough to eat. Those who went furthest found most game. I saw many coming back, and was glad to know that their wagons were not generally overloaded with meat. One party, who had traveled between 200 and 300 miles to their hunting ground, said they found plenty of deer—frequently saw from 200 to 300 in a day. They had full loads. I met one gentleman who came from Kansas to hunt and had spent about a month at and near Steamboat Springs. He was starting home in greatly improved health, brown as a bear and in exultant spirits. I asked him, "What luck?" and he answered "First rate; good enough for me—good enough in fact for any man; killed one elk and got a good head." He reads FOREST AND STREAM, and is coming back next year to repeat his hunt. Altogether the hunters are not destroying very much game this year, and its waste is correspondingly small.

In North Park, during the past summer, which was remarkable for its drouth, forest fires swept over vast areas of the game ranges around the rim of the Park and high upon the mountain slopes, driving the animals down into the open park among the settlements. Elk, deer and antelope could be killed anywhere and by anybody, but the thoughtful settlers agreed that there should be no wasteful slaughter. They killed what they needed for their own use and notified outsiders that they would not be allowed to kill more.

Along Grand River was formerly good shooting ground for waterfowl in the migrating seasons. In fact, ten years ago and more many geese and ducks were hatched and rearer there. Now they have almost entirely disappeared. In traveling nearly a hundred miles up and down the Grand I did not see half a dozen ducks and not one goose or brant. Grouse are yet plentiful.

At Grand Lake trout were still taking the fly in the last days of October, but the time to catch them was short and uncomfortable. It began at dusk and lasted half an hour—possibly longer, but I saw no one who cared for the sport more than about that length of time. An industrious angler could take about twenty fish in that time. Not one could be caught in daylight. They were taken from the shore. I tried them in the river but could get none.

Of game notes here there are not very many. Two of our city hunters went up toward South Park about a month ago and fell upon the trail of a little bunch of buffalo—twenty-six, they reported—followed them up and eventually butchered three, a bull, a cow and a calf. They lost the meat before getting it out to the railway. Their great exploit was duly heralded through the daily papers. One of the latter proclaimed them a pair of heroes and decked them all over with garlands through a column and a half of slush. We will try to get a law through the next legislature to prohibit absolutely the killing of buffalo in the State.

Capt. Sedam brought in a mule deer last week that he killed in the western part of the State, which weighed, with the entrails out and a week or more after it was killed, 282lbs. It had an exceptionally fine head of antlers and will be preserved entire. I saw the carcass of a bear on the street a couple of days ago, and a daily paper said yesterday that "the market is abundantly supplied with game, consisting of buffalo, elk, antelope, deer and bear." W. N. B.

DELPHOS, Kan., Nov. 9.—*Editor Forest and Stream:* I have just returned from a hunting trip in Colorado, and wish to call attention to the slaughter of game going on in the Egeria Park country of that State. I estimate that from Oct. 15 (the commencement of the open season) to Oct. 25 at least 2,000 deer, four-fifths of which were does and fawns, were shot in that section for market during the fortnight, and the season continues up to Jan. 1. At this rate large game in Colorado will not last three years in the best game portion of the State if this slaughter is allowed to continue. I shot all the game, elk and deer, that was needed for our party and no more, although I had many tempting opportunities. I met, in a very pleasant and surprising way, your Denver correspondent "W. N. B.," at Hot Sulphur Springs, and we had an enjoyable chat over FOREST AND STREAM people in the olden time, as well as those of later days. I shall take pleasure, business permitting, in giving a detailed account of my trip to the Rockies some time during the winter. G. H. B.

WHERE ARE THE RAIL?—Easton, Md., Nov. 6.—What has become of the rail? We have had no shooting worth speaking of for the past two seasons. From what I can learn their absence is not confined to this locality, but appears to be general. Partridges are, I think, rather more plenty than usual this fall, though they get to the woods just as quick, all the same. We've no ducks as yet, they are very late this year. A good many geese have passed over, but few have tarried.—SANGWILLAH.

SHORE BIRD NOMENCLATURE.—Gloucester, Mass., Nov. 8.—Your correspondent, Mr. John Murdock, in the issue of Nov. 4, speaks of the variety of local names applied to our shore birds and the interest which might attach to a systematic study of the same. This is a subject of much interest to many others and it is perhaps possible that something could be done in the direction mentioned. With regard to the local name of *S. alpina* in the fall, I have heard but one name so applied in this vicinity, and that is "simpletons." Of the other species of sandpiper *maculata*, I have heard them called by two names: first and most common is that of "grassbird;" second and particularly about Newburyport, they are generally called "brownies." With regard to *S. helvitica* or *C. squaturola*, the true black-breasted plover, I have heard two names used in Essex county. First and more commonly they are known as "beetle heads," particularly in the fall. In spring, however, we very often hear them called "black hearts." The strongly contrasted vernal plumage seems to give fair place to the title. I have known this bird by both names for years.—X. Y. Z.

CANINE PRECOCITY.—Aiken, S. C., Nov. 6.—Quail shooting promises to be particularly good in this neighborhood this season, two broods having been raised. The abundance of good boarding houses and hotels, the ease with which Aiken can be reached from all points, its cheap livery stables and the fact that dogs and guides are easily obtainable, should make it a favorite stopping place of those who like the sport, as well as a most agreeable place in which to recuperate. I write particularly to tell you of the performance of Mr. C. L. Quinn's little pointer bitch Cora during the last few days. She is only four months old, a mere puppy that grass or weeds knee high will hide, yet on her first trial Mr. Quinn killed 17 quail over her, the next trip 11 and the next 10, making 38 birds in three afternoons. She did not flush a bird, was as staunch as an old dog, hunting faithfully and retrieving every bird killed in handsome style. For her age and inches do you not think that a remarkable showing?—JAS. H. HARD.

DEATH OF JOHN KRIDER.—John Krider, aged 73 years, after an illness of three years, died Friday morning, Nov. 11, of paralysis, at his residence, No. 4,467 Spruce street, Philadelphia. Mr. Krider was born on the old Powelton estate, in West Philadelphia. For the past sixty years he was engaged in the business of gunsmith and sportsmen's supplies, at the northeast corner of Second and Walnut streets. When residing in Southwark he took an active part in politics, and in 1858 he represented the First Ward in Common Council. He was past master of Solomon Lodge, No. 114, F. and A. M., and for thirty years was treasurer of the State Council of the order of United American Mechanics. He was also a member of the American Protestant Association and of the Knights of Pythias. He was well known throughout the country as a thorough sportsman and good shot, and up to a few years of his death was active with both his gun and fishing rod.

WILDFOWL NOTES.—Gloucester, Mass., Nov. 9.—During "cooting season" these fowl were fairly plenty in Ipswich Bay, off Squam, but since then the sea fowl along our coast have not been very plenty. I have seen one or two small flocks of old squaws (*H. glacialis*) and sheldrakes (*M. serrator*) with one or two loons, and a few scattering fowl. In September I saw a good many loons flying, and also many terns. The winter gulls or kittiwakes (*R. tridactyla*) are very common now, and, of course, some herring gulls (*L. smithsonianus*) are seen, but as yet, or rather for the past two or three weeks, sea fowl have not been numerously observed by the writer. They will very likely be more plenty after this present cold snap of weather.—X. Y. Z.

THE KANKAKEE.—Decatur, Ind.—Duck shooting on Kankakee marshes has been very poor this fall, although some good bags have been made, and those only at one point, English Lake, a party of three Chicago gentlemen having killed 312 ducks in one day's shoot. My score for two weeks was 110 birds and I was perfectly satisfied, having passed a very pleasant time while there. I am strongly in favor of abolishing spring shooting, and shall make an effort to have the State Legislature pass a bill to that effect, having a petition in my possession with a number of names of some of our most influential men on it. Hope I shall succeed.—KANKAKEE.

ROCKLAND, Me., Nov. 13.—Told in rhyme:

Good gun, good dog, nine cartridges,
Fine day, five woodcock, three partridges.

U. C. BREVITY.

WILD PIGEONS are nesting in the Indian Territory.

RIFLES OLD AND NEW.

Editor Forest and Stream:

From early boyhood I have been familiar with the rifle, having used it at home and on the larger game of the far-away wilderness. Until within a few years I used the muzzleloader, of several different makes. Those chiefly used come from the famous shop of the late William Billinghurst, of Rochester, N. Y., who was a capable maker of great celebrity, and a man of high integrity. He died in 1880. At his shop, for many years, gathered the leading riflemen from far and near; the Billinghurst Range is famous to this day. Billinghurst and Morgan James were unquestionably the two ablest and foremost rifle makers of the Western Continent, and very probably of the world, during the quarter of a century preceding the general advent of breechloaders; and it gives me pleasure to render a just tribute to these two men, the memory of whose lives is fast passing on the tide of oblivion, although worthy of the granite. James wrote a work on the rifle, and was famous in Europe as a riflemaker as well as in his own country, and contributed efficiently to the modern development of the arm. He spent his last years with the Remingtons. With reference to the comparative merits of muzzle and breechloaders, Mr. Billinghurst, up to the day of his death, held the best muzzle loader to shoot more accurately than the best made breechloader, and he was ever ready to stake money upon the former in a trial.

My own experience with the breechloader is, that while I can do with them some excellent shooting, I cannot average as accurate and satisfactory shooting as with the muzzleloader; doing my best with them, I cannot place the ball so certainly where I want it, and there are more wild shots than with the muzzleloader, and as breechloaders are now generally charged, the fall of the ball is much the greater beyond the shorter distances at which game is commonly shot. Very excellent shooting is done with the breechloaders, their make has reached an astonishing degree of perfection, and they do not risk being displaced from favor. But this is not all there is of it, and improvements may come in which will make them the undisputed equal.

Years ago for a considerable period I used to resort annually to the wilderness of northern Canada for a liberal term of hunting, and at various other times have taken other trips to wilderness districts, in all of which the rifle was generally in hand. After using several rifles I long used one made for me by Mr. Billinghurst, the last of several had of him, which was of the following make-up: Steel barrel, 28in. long; caliber .32; entire weight of gun, 7½lbs. I used this rifle several years in the pursuit of all kinds of game in the regions adverted to, deer being the principal. It was the best deer gun I ever had, and my reputed success in getting this game, whether deserved or not, was equal to that of any hunter who went to these Northern woods. And what do you think was the weight of the powder charge and of the conical bullet, respectively, which I used in this gun for the longer ranges and larger game? The powder charge habitually was 54grs., occasionally 57grs., while the weight of the bullet was 99grs. This ball (.32 caliber) was 9-16in. in length, and when placed upon the muzzle of the rifle was very accurately fixed in the bore, linen patched and shoved down a couple of inches by a brass starter fitted to the muzzle, and without inconvenience carried in the vest pocket, the bullet being pushed easily the rest of the way with the ramrod. The bearing of the bullet on the barrel was confined to its extreme base, and scarcely equaled a single ring like one of those usually found on medium-sized breechloading bullets. The bullet sped not only with great precision, but with lightning speed and force, meant business, and its effects showed it. It did not crush down game by the magnitude of its volume and force, nor make a mash or sausage-meat of the carcass; but its penetration and intensity of effect were decisive, its track a channel of a ¼in. or more in diameter, in which the tissues were utterly destroyed and from which blood could spout in death volumes, and I think any well-bred butcher of neatness and dispatch would have been well satisfied with the results.

The deer that I shot and failed to get were few; no one who carried a cannon secured a better proportion, for deer shot even with such an arm sometimes escape, and I enjoy the very desirable advantage, while efficiently equipped, of having a light weight of gun and ammunition, even when carrying a large supply of the latter, and I was thus enabled to tramp in light marching order the intricate wilds all the day long and not be lugged or weakened by carrying a burden. And let me say right here, make a good shot, shoot your deer in any part where in good reason it should be shot, and if the bullet should be .32-cal. of but 100 grains or less, if sped with the force and velocity that it may and should be, no matter if the game does not tumble under your nose but takes a run, let it do so, use it well, do not crowd the game; effective work has been done, and after a while proceed on the trail duly and you will very surely get the prize. I used to shoot deer at as great a distance as any other hunter, as great as I had opportunity, but the country was wooded and the ranges not so long as on the great plains. The first deer I held this rifle on I shot at the distance of thirty measured rods. The ball struck the center of the neck in front a trifle more than midway toward the body and came out in the middle of the back of the neck, passing through and shattering the spine, a small piece fractured from the ball coming out near an inch one side of the main track, and the deer fell dead in its tracks.

This rifle riddled bones without any trouble; not infrequently I had deer fall in their tracks at the various distances at which I shot, finding them dead on coming up. The ball generally passed through the deer and afforded plenty of evidence of continued force on the other side, the few exceptions being lengthwise shots or when a large and well filled stomach was struck; but in these cases, as a matter of course, the game went under all the same, and I did not have a long distance to go to get it, either. I often fired a bullet through a standing poplar or pine 10in. or 12in. in diameter for the great edification of my Canadian hunter friends, the shot being, of course, at close range.

This gun was satisfactory to me for the pursuit of any game in the nation, with the exception of two or three headquarter varieties. The black bear and elk with a gun of this kind, with a similar rifle by the same maker, the odds not being in its favor as against the rifle described. The grizzly and buffalo, in massive size and power and resistance to the rifle, are a special and limited game and, while no doubt a shot from such a rifle properly placed would be fatal to either, yet the necessity of very free blood in the buffalo, and often in the case of the grizzly of its immediate death or crippling for security of the hunter, make in their cases a special arm desirable. But not one hunter in three hundred thousand ever meets this class of game or takes any special risk of doing so, neither do they need such special arm, nor with better instruction would they use the same with satisfaction.

I do not mean to say that larger caliber and more lead may not be desirable in many instances, but a like law of charging can be observed with effectiveness and moderate weight of gun and ammunition also secured. If I recall correctly, the weight of the doublebarreled rifle with which Gerhard did much of his justly very famous shooting of the great African lion, was only 7lbs., and I deem it unlikely that he used bullets rivaling the immense slugs now considered necessary, and yet he used to shoot his balls clear through the immense beasts.

The round bullet, which I used in the rifle treated of, weighed 515grs., and had no difficulty in bringing down deer with it when driven by the 54gr. powder charge, large bucks often going but a few rods. The truth is that with a properly made rifle of moderate weight and a good charge of powder the desired effectiveness and range ordinarily essential can be obtained, and without going up to 500grs. or 800grs. of lead, either. I found, however, that the round ball at the distance of 30 rods lost much of its accuracy and was at such distance undesirable. With care and fair opportunity I used to shoot pigeons and squirrels at the distance of 20 and 25 rods, and ducks from 20 to 35 rods, with success; could put about every bullet into a 3½in. ring at 30 rods, and I once did so well as to put four balls out of five into a target the size of a greenback, with one-third cut off at the end, at the distance of 40 rods. And the above related shooting was done with open sights. Later I used with great advantage a peep-sight, set in the breech-pin and turned up by a hinge when in use, the peep-hole being made in a transverse sliding bar, close to its upper edge, the hole when the eye was applied looking simply like a notch, and it was a very handy and helpful sight, affording much accuracy, and good upon all occasions.

Mr. Billinghurst, for a good many years before his death, usually freed the bore of his rifles very slighly and evenly from the breech up to somewhere within one or two inches of the muzzle, the bullet fitting snugly in this upper space and going the rest of the way with easy pressure. The rifle I enlarge upon was made. The amount of powder and slight friction gave a very flat trajectory. I never raised or lowered sights in shooting. With the heavier charges at short ranges I sighted very fine and held just under or at the lower edge of the mark; at the longer ranges well up on it or just over, and with the added aid, if needed, of coarse sighting, according to the distance; and I felt able to strike with great certainty any game like deer at the distance of 50 rods and over. But an occasion to shoot at deer a much greater distance than 30 rods seldom occurs, except in a treeless country, as on the great plains.

My object is not to set forth that this was the most wonderful rifle ever made, for I have had others just as good by the same maker, and have used those of other makers apparently as accurate. Neither do I write for the purpose of any sort of laudation, but for the purpose of presenting facts and suggestions which may be of practical account and desirable in the make, the qualities and the use of the hunting rifle as well as the ammunition used in it, and to illustrate a practical and desirable type of rifle for general use. Here was a rifle of light weight, a powerful and effective shooter, giving a very flat trajectory, no sensible recoil, its ammunition of small compass, and an abundant supply light to carry, and appropriately either a squirrel gun or a satisfactory and effective gun for service in any wilderness of the continent, while the adaptation of its work to either sphere only involved a simple and not inconvenient difference in its charging. Load it with 27grs. of powder and the round ball of 515grs. and it was just the gun for small game at moderate distances, and often did bring down a deer; double the charge or load with 54grs. of powder and the conical bullet of 99grs., and it was good for squirrel if you wanted him badly "done," or for black bear, red deer, or elk, at either short or long ranges. I recognize, of course, that in the very long ranges sometimes shot on the treeless plains or in the mountain wilds of the continent, and with some kinds of game more lead as well as powder would be of account.

Note that in the use of the conical bullet the proportion of lead to powder by weight lacked considerable of being two parts to one, while in the heavier charges in the use of the round ball the weight of the powder considerably exceeded that of the lead. In the case of the round bullet the powder charge, compared with what is customary, was very extraordinary, yet the charges stated worked well with both bullets and accuracy was not impaired, but improved, where the distance was considerable. Is there not here a practical line of experience and fact susceptible of wide and desirable application in the construction and use of the hunting rifle and applicable alike to breech as well as muzzleloaders? I do not profess to have ascertained and settled the proportions of powder to lead that will be found most desirable, or the amount of powder that can be most advantageously burned in a given space, nor to teach to what extent, if any, the present bearing and friction of bullets in breechloaders can be decreased with benefit, but I believe that with the best adjustment of these potential elements in rifle shooting the present breechloading rifle can be made much more desirable. The experience and facts related are suggestive; they have strong corroborative evidence of value and warrant further trial and give as well assurance of improved adaptation of the rifle. Accomplished facts are facts, and if we have not got a theory to explain or support them, it follows that we have not got at the whole truth of the matter. Also, facts cannot be theorized away.

And how does the breechloader stand in relation to the subject? It is the hunting rifle of to-day, few others being manufactured or used. The weight of the great majority in general use ranges from a little over 8lbs. to over 9lbs., and the caliber from .40 upward; the weight of the bullet ranges anywhere from 200grs. up to 500grs. and over; the powder charge from 40grs. up to 120grs., in but few instances, however, reaching to 100grs., and in many instances the 45 to 60grs. charges are late advances. 40grs. and 45grs. of powder are used for from 200grs. to over 500grs. of lead, and but seldom does the bullet weigh so little as 200grs. In a good many instances the proportion of powder to lead does not exceed or quite reach one part to six; in a large proportion the powder does not exceed one part to five; in many it does not reach one part to four, and in none that I recall does the proportion fully reach one part to three. The common result, therefore, is a strongly curved trajectory, and to the experienced hunter a most unsatisfactory want of direct and powerful shooting. I do not include the Express rifle in this paper.

Of course there are some .38-cal., and they are growing in favor; and, true, the Remington and other makers have ever kept on the market the smaller calibers of 5lbs. to 7lbs. weight, and the extra long cartridge of the little .32-cal. received some years since an allowance of 20grs. of powder and 90grs. of lead. But these calibers have seldom been found in the hands of hunters who expected to kill deer. The small calibers and light-weight guns generally have been outlawed for such service by common opinion as well as by the gunmakers for want of experience and better information, and, I may add also, for want of heavier charges of powder. But advance is plainly being made in the direction of proportionately larger powder charges, and smaller calibers are being more manufactured and extended more consideration. The little .32-cal. has lately come along, timidly at first, as a hunting rifle; but now there are a few parties sufficiently advanced to claim that it is good to shoot deer with, and it will certainly be found first-rate for that business if sufficient courage is ever infused to put into it the requisite amount of powder with lead duly proportioned. And what is the use, what is the sense, in loading a .32-cal. with 125grs. of lead and only 20grs. to 35grs. of powder, or with less than one part of powder to four or three of lead, in consequence having a comparatively weak gun, when by putting in powder in proportions of from one part to two of lead anywhere up to equal proportions, it can be made an arm of good hunting range and effect?

On the vital point of an improved practical adjustment of the relative proportions of powder and lead, our rifle makers seem to be in bonds. They do not seem to think or see that it may be practicable to liberally cut down the proportion of lead now generally used and considered necessary, and at the same time, as the case may be, make a liberal addition to the powder charge and thereby secure greater velocity, range, effect and a flatter trajectory, with freedom from offensive recoil, enabling the use of a lighter gun and weight of ammunition. These are all first-class advantages, while they would secure a much more satisfactory hunting arm in general than the breechloaders, as now commonly made and charged. All these desirable results were achieved in the case of the muzzleloader of which I have just treated, and why is not the method practicable with the breechloader? It undoubtedly is, in the main, a chief requirement being a proper adjustment of bore and bullet; and if this view be well taken it should insure a rifle of 7lbs. to 8lbs. weight equal to any game of the continent.

There is some sense in the multitude, though it be common and a little in the rough. A young man of good parts, who has spent several years in northern Dakota and the further West, relates that it was a standing swear among the hunters in those regions that the breechloading rifles in use there did not shoot powder enough; that there was too much lead for the powder used, and that the bullet did not hold up to the mark as it should. In this view, said an old hunter one day when stumped to trade his old muzzleloader for a new and fine-looking breechloader: "I wouldn't give it for a dozen breechloaders." And I add that among hunters who have used muzzle as well as breechloaders the expression is common that the latter does not use powder enough for the lead. And it is largely a fact, and one of practical account, that a lighter bullet with plenty of powder behind it will do the work just as well and often better than a heavier ball with less powder. The truth is that the greatly increased velocity makes compensation for weight, insuring, as it does, increase of penetration and of the disintegration and destructive effect in the tissues.

Of course it is nowhere intended to imply that a little bullet will give a flatter trajectory, exert an equal effect, or have as great a range as would a heavy bullet when the latter is driven with a relatively large charge of powder; but about all the breechloaders of the continent could avail themselves of the large powder charges indicated while retaining their present lead, on account of the great recoil which would ensue, and it is probable also that in most instances the requisite powder could not be burned in the bore. The increased weight of the bullet comes perhaps more from elongation than from increase of diameter, thus the burning space is not increased proportionally with the bullet; further increase of weight of this class of guns to enable the use of more powder and prevent undue recoil is impracticable, they being generally too heavy anyway. Their improvement in the line that makes them both more practicable and desirable plainly lies in the direction of cutting down the lead and burning more powder.

It is at once obvious that increase of the powder charge, up to the almost point which will increase the velocity of the bullet without impairing accuracy, must be both desirable and valuable where directness, range and effectiveness are sought. And I reassert that the rifle will shoot the so deemed extraordinary charges of something more than one part of powder to one of lead in the case of the round bullet, and in the case of the conical bullet one part of powder to something less than two up to perhaps equal parts of lead, with the desired increase of range and effect and as great accuracy as I have seen exhibited by the arm. This I know, because I habitually did much such shooting during several years with different rifles just previous to the late war, and have done some since, and the first mentioned and thereto by the apparent need of direct and effective shooting, and guided by reflection and the results of experiment. The same relative amount of powder could evidently be used behind the conical ball but for the fact that when a certain volume is reached it might not all be burned.

But, superb as is the mechanism of the breechloaders and grandly as they do much of their work, yet they lack a something, which one can fairly feel, that is essential to a desirable completeness of satisfaction. The bullet velocity, as a rule, is not up to what it might be, apparently, with advantage. The almost universal excessively curved trajectory imposes a measure of guess work and impediment to satisfactory shooting. The hard shooters, as well as many of the weaker ones, are too heavy in weight, too much like crowbars to tramp with through woods and over hills and mountains, while the lead is something like a small quartz mine to carry. The small calibers generally use a sickly powder charge, as if the arm could not be advanced to any more important status than that of a plaything or to shoot blackbirds and squirrels. In these things are found its principal defect, and they do not seem irremediable.

Let me illustrate a little. I take my finely made breechloading Remington rifle, a very correct shooter, of a little over 8lbs. weight, a .40-70-330, and go out to shoot squirrels for an afternoon. But the arm and game do not seem to be adapted to each other. The bullets in the 21 cartridges which I take, while not sufficient in number, weigh a heavy pound and the lead in them would make 70 of the conical bullets of the little .32-caliber, which I used with so much success and satisfaction in shooting deer. I hold point blank at a hawk 40 measured rods distant, and the bullet pursuing its grand curve strikes 15in. below the lowest feather. A conical bullet of 142grs. from the same rifle, before the same powder, with the same aim, would have struck the bird plump in mid body. And this last bullet would readily kill any deer of the continent. Intent on experiments as well, I had carefully removed the base of several bullets, such as I was using, above the third ring, leaving one ring on the bullet for a bearing, and the weight of each ball thus cut down was 142grs. Shells were loaded with these the same as the full 330 balls, with 70grs. of powder, and I proceeded to experiment with both classes on a 4in. target at the distance of 40 rods. My statement just made was fully justified, the strike of the smaller bullets averaging the height of the middle of the target, and that of the heavier bullets a point 15in. below. Like results in the line of abated lead were afterward obtained by the same charges and other in several experiments made.

Cutting down of the excessive amount of lead now generally used in the breechloader and a proper graduation of the amount of powder, to be obtained by experiment, will apparently mitigate if not fully enable the remedy of the defects and faults of this arm which I have passed in review, and it is difficult to see how anything else can. If the views I have set forth prove to be well taken, experiment and investigation will sooner or later bring them into practical use, with the result of a general substitution

of a lighter weight of arm and lead with more powder for the hunting rifle.

There is no doubt but a measurable cutting down of heavy lead and the larger calibers is to come, and we can already see an earnest of this in the new rifle which, after much investigation, has recently been adopted for the British Army. The caliber has been cut down from .45, the old arm, to .40, and the weight of the bullet has been reduced 96grs., while the former powder charge of 85grs. is retained, with the effect to give a far greater muzzle velocity, a decidedly flatter trajectory, much less recoil, and a much more effective and desirable arm in every respect, which the English press lauds as by far the most efficient service gun possessed by any nation.

Major H. W. Merrill's experiments (see FOREST AND STREAM Sept. 17, 1885) with a round ball in muzzleloader shooting at target, equal parts of powder and lead, resulted just as was to be expected, and accord with my own experience in the same line. The FOREST AND STREAM's extensive trajectory test at Creedmoor in September and October, 1885, fully confirmed Major Merrill's tests. F. M. WILCOX.

Camp-Fire Flickerings.

"That reminds me."

195.

ON the 12th of November, 1880, Ed C. and the writer were duck hunting on the Bungay River, just north of the enterprising town of A——, in Massachusetts. For five miles above the town the river flows sluggishly over a tortuous course through an almost impenetrable swamp. The day was bright and clear, and more like October than November, although the banks of the river were fringed in places with thin ice.

We had proceeded about three miles above the town in our home-made canvas canoe, and having bagged one wood duck were anxiously looking for its mate, which had flown on ahead. Ed sat in the stern and wielded the double-bladed paddle, while I sat in the bow, gun in hand. Both were seated on top of empty soap boxes, so that the naturally cranky canoe became a thing of life in earnest.

Suddenly out from a bend in the river just ahead flew the duck, and, following the river, flew well to my right. Hurriedly I tried to bring my aim in line with the bird's course until I had swung my gun as far to the right as I could without moving from my seat on the box, when I fired, and immediately, my box giving a lurch, landed me on the gunwale of the canoe, while Ed performed various antics in his endeavor to keep the boat from upsetting; but it was no use, and gently I was dumped backward into the river, while Ed followed head first.

We had upset in the channel, where the river was about thirty feet wide, and soon the heads of both appeared at the surface, while just in front of us floated the canoe bottom up.

Both grabbed the canoe and scrambled on to her, but in our eagerness we overdid the matter, and the boat lazily dumped us head first into the water again.

Abandoning the boat we swam for shore, and reaching shallow water we endeavored to wade; but the mud was so soft we were obliged to crawl turtle fashion, and made shore two sorry-looking fellows.

Hardly had we reached dry land when Ed said, with all earnestness, "Did you get the duck?" and, as I turned to answer him, he slowly took a corn cob pipe from his mouth, which he had firmly between his teeth during the accident, and remarked, "You haven't a match, have you?"

With some difficulty we pulled the canoe ashore, unloaded our overcoats, which were stowed in the bows, made our way through the swamp to hard land, and then, with boots working like suction pumps, struck into an easy run which we held till we reached home.

The next morning we fished up the gun and powder flask, but the shot pouch remains buried in the mud to mark the spot. L. W. J.

"NESSMUK'S" POEMS.

Editor Forest and Stream:

I have been a long-time admirer of your sensible as well as gifted contributor "Nessmuk," and I was delighted to learn that you intended to print and publish an edition of his poems. Such a book will not only be heartily welcomed by all the sportsmen of this country, but by men of purely literary taste and culture, who, mayhap, loving, still, do not linger, as many of us do, amid the joys of the forest and the stream. "The Arkansas Idyl" fills a corner in my literary "eye" never filled before. Inimitable as it is original, it is the equal of many things in Bret Harte or John Hay's books. The old man is a master, whether in bringing down a gobbler with a rifle, or when he essays to handle the gray goose quill. Let all men who take joy in the woods, who appreciate the rare gifts and good sense of "Nessmuk," send on for his book. I did so the moment my eyes met your notice this week. J. M. S.

CAMDEN, N. J.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

IN DEFENSE OF ALASKAN TROUT.

Editor Forest and Stream:

When, in the FOREST AND STREAM of June 8, of the present year, I quoted from Capt. Beardslee's article in "Fishing with the Fly," Orvis-Cheney collection, I had not seen the original, but, as I then stated, my information was derived from a reprint of the article in the *Alaskan*, a newspaper published in Sitka. Since returning to the land of books I find that the *Alaskan* did not print the article entire. As the pioneer fisherman with the fly in Alaska—the successful one at least—I desire to enter a more vigorous protest against his unjust accusations, which, at the date referred to above, I was ignorant of. He says: "There is not, I am convinced, an Alaskan fish, which, through any merit of its own, is entitled to an introduction to the angling fraternity through the medium of this volume, and to the companionship of the beautiful fac-similes of the flies, which in life they scorned.

"From personal observation and collected information, I am prepared to accuse all the salmon family which are found in Alaska, of the grave offense of utterly ignoring the fly, either as food or plaything, and of depending upon more gross and substantial resources."

As the author observes he has preferred a grave charge against the trout of Alaska, but that it is undeserved I am equally prepared to maintain.

During the two seasons I was in that far-away country I took from its rivers and lakes nearly one thousand trout with the fly. Therefore, I think I am justified in holding a contrary opinion to Capt. Beardslee. From the very commencement of our trip to Alaska I had been told that the trout there would not rise to the fly. We reached the Pacific by way of the Strait of Magellan, and in our mess was an old Alaskan cruiser, who was stationed there in the sloop-of-war Cyane, shortly after the transfer, and who, though no fisherman himself, had imbibed the tradition from others until it was a part of his Alaskan creed. From every one I heard the same story.

About the middle of the season last year we were in company for a short time with the U. S. S. Pinta, stationed in Alaska. Among her officers were several who indulged frequently in the sport of trout fishing. One, an ardent sportsman, was then four years in Alaska. None of these believed, until our coming, that the trout would rise to the fly; and some even then denied that the trait was possessed by the Sitkan trout. If that be so or not I cannot say. My experience extends upward from the boundary line, but stops short of Sitka by about eighty miles. However, some one must have been educating the trout up there too, if what I saw in the *Alaskan* last spring be true. It was to the effect that the fish in the lake near Sitka were then rising to the fly.

The first to give me encouragement was William Anderson, of Port Simpson, British Columbia, who is a sportsman, naturalist and artisan, making his own flies and using them, too, in the capture of fish. Port Simpson, it is true, is not in Alaska, but it is so near the boundary line that it is not probable that the fish of the two sides have different habits.

I can give the names of a number of fishermen who will testify from their own experience that Alaskan trout do not scorn the fly. But I shall content myself at present with one whose name, I believe, is familiar to most of the angling readers of the FOREST AND STREAM.

Last year the excursion steamer, on which was Mr. Charles Hallock, lay alongside of us replenishing our empty coal bunkers. I went with him to the stream and lake in our vicinity. The excursionists were all loose on shore; some were fishing, and others were spearing and shooting at the salmon with revolvers. As we made our way along the rocky stream, Mr. Hallock made a few casts into it and likewise into the lake outlet. At the latter locality he desisted after one or two casts on account of the bushes at his back. But he caught one fish in the stream going up. It was small, it is true, and, if I remember rightly, he put it back into the water; but it was large enough to demonstrate the fact that Alaskan trout will rise to the fly. I little thought, as I witnessed the capture of that small fish, that it would be of importance to me, on account of the wide reputation of its captor, to refute a charge made against all its kind in Alaska. T. H. STREETS, P. A. Surgeon, U. S. Navy.

U. S. C. & G. S. STR. PATTERSON, Mare Island, Cal., Nov. 6.

STOVES IN CAMP.

Editor Forest and Stream:

I feel for your prosaic friend and critic (F. D. Faythorne) a tender sorrow. In fact, I am possessed with a combination of grief—poignancy at his lack of interest in the beauties of nature in combination with the ecstatic glory that attends all true angling, and commiseration at his ill-fated assault upon the pleasing reminiscences of my friend and camp companion, "Kingfisher."

After reading the comments of his "critics," who illustrate so thoroughly the poverty of his piscatorial ambition, one feels that the "ghost is laid" and there is nothing more to say. But for the "side-issue," or "stove" matter, interjected by the philosophic "Seneca," it were, in fact, mere surplusage to add another word. "Seneca" evidently labors under a gross misapprehension. Personal observation enables me to say that the services of that stove are wholly discretionary and culinary, and that it is by no means a "creature of necessity." The broad camp-fire nightly illuminates the vast arches of the forest where the tents of the "Kingfishers" are spread, and the hungry fisherman is at liberty to broil his bacon on a forked stick over the glowing coals, and to boil his coffee or fry his fish till brown and crisp on hot embers drawn outside the curling blaze, or he can humbly accept the ministrations of that prosaic stove—the "last relic of civilization." And then it is such a "little one" it ought not to count—especially where conveyance is easy and angling waters accessible. "Seneca" might take it under his arm and run away with it as easily as the clown gets away with the pig in "Humpty Dumpty."

Some lately printed expressions of the veteran angler, D. D. Banta, upon what constitutes the conditions of true camp life, are just here in point. We quote:

> There has been some acrimonious debate anent what ought to be taken as a part of a camp outfit, but I have as yet failed to see any room for debate at all. It is, or ought to be, a question of comfort pared down by convenience of transportation, and it may readily be seen there must be a good deal of room for variation in camp outfits, and, therefore, no need for any one to go to war about it. When one goes tramping in the woods and carries his outfit on his back he reduces his pack to the least compass and weight the bare necessaries of life will let him. And so, if one takes his outing along a lake shore or on a river, he will not fail to consider with the question of his wants the carrying capacity of his boat. In like manner does he when he goes on wheels to a stationary camp. In every case he balances what he esteems as camp conveniences with his power of transportation, and so it may readily be seen there can be no iron rule fixing what shall be adjudged a proper camping outfit and what not. * * * Comfort, that is the word—that is the key to the situation. The more comfortable our camp is the better it will subserve our purpose, the more surely will we dream sweet dreams of its pleasures in days to come.

"Kingfisher" is a veteran angler from "way back;" a lover of the silent woods and the laughing streams; a close observer and admirer of nature in all her moods; of rare endurance in all hardships incident to forest adventure; thoroughly skilled in the art of "roughing it" when it suits his whims; a genial companion whether in camp or on the jaunt; and his apt and humorous descriptions of camp life have, no doubt, been a genuine feast to the readers of FOREST AND STREAM—(Faythorne omitted, solus).

There were a variety and spice in the last trip of the "Kingfishers" to Michigan and Canada—from the shipwreck and Indian rescue on the "raging" St. Mary to the grand hair-raising leap of "Old Knots" on the flying trapeze at Pelston—from the patent "toe-trap," or mosquito-killer, at Echo Lake, to the baptism of "Old Dan," at Douglass Lake—which surpasses all previous experiences, and under the photographic pen of "Kingfisher" would prove rarely interesting. Won't he favor us with the recital? S.

FRANKFORT, Ky., Nov. 8.

A COINCIDENCE.

I HAD finished my dinner and settled myself before a pleasant fire on Saturday evening last, to read and inwardly digest my FOREST AND STREAM of the Thursday preceding, always pleasant, but now particularly so, as the rain, sleet and wind without beat on the panes, a reminder that summer with its pleasure of outing was gone, and we must look to the pages of your welcome journal to reflect the days we have enjoyed in the woods and on the waters; in fact, we may if we will, enjoy and have always with us, the pleasures of the FOREST AND STREAM.

My eyes fell on "In Northern Michigan"—that interested me, for I've been there. I read on—"July 3, 1882," "Elk Rapids," "Lake View Hotel." That's funny, I said, why I was there myself that date at that hotel, and on the 5th I too took the steamer Queen for the head of Torch Lake. Why, thought I, this must have been the party that left the Queen at Clam River, and that I met afterward as I came out at the mouth of the river at Bellaire, or what was left of them after the mosquitoes had feasted three days upon them on the reedy shores of Grass Lake. Before I finished the article I find the identity fully established by the writer who recites meeting me at the mouth of the river with my guide, and recounting my experience and sport that I enjoyed, to them. Thus, more than four years after, on a bleak November night, and a thousand miles from the scene, I am able to enjoy through your pages, and see all the surroundings of meeting these brother sportsmen on that July day in the woods of Northern Michigan.

Well, my gentle friends, I did have good sport those few days I spent on Central Lake and the Intermediate Chain, and though I have had good bass fishing in many places since, I have often thought of the trip and meeting your mosquito-bitten faces that day. I have never seen the time since when the bass bit so recklessly, and came to net so reluctantly, as those days on Central Lake. They seemed to snap at anything cast toward them, and double after double did I take, until I began to think, what shall I do with them? I didn't want to stop the sport, such days are rare, and yet it is against my grain to kill more than I can use or give my friends. But Henry, the guide, helped me out of the trouble by saying, "You know we're on our way down, and by sundown we can reach the head of the rapids above Bellaire, and dark will bring us to the village where any of the people will be very glad to have them." So I kept on, returning every one but the largest and finest that came to net, and by sundown we had reached the head of the rapids with a boat's bottom covered with as handsome a lot of small-mouths as one seldom sees. Among them were a half-dozen of large-mouths and three or four pickerel, the last of from 6 to 12lbs. The latter brutes I despise and never try to save one when hooked unless he be a large one; that is if, there's anything as good as yellow perch around, when there isn't why I'll catch pickerel. They are a little better than nothing to catch, but not much better than nothing to eat.

Twice I lost a monster bass, struck in deep water just off the weedy shoal, and though the guide was an excellent man to handle the boat, and I played the fish at my best for two or three minutes, during which each one sprang more than once a foot or more clear of the water, giving us a good view of their size, a desperate lunge and an unlucky bunch of weeds gave them such vantage that both broke away with part of a leader trailing in their wake. The good people of the village seemed well pleased to get such fine fish, and it did not take long to portion out all I had as soon as it was known they were given away, not sold. I reserved a half-dozen for the keeper of the little tavern, or "hotel," as the sign rather ambitiously designated it, where I was to lodge, for my own supper and breakfast and such other guest as might wish to enjoy them. After giving away all but those I had kept for myself I gathered up my rods and followed by the guide with the fish and duffle went up to the aforesaid hotel, a little two-story frame house in the center of a group of eight or ten more buildings which made up the town, and which faced each other at intervals among the stumps of a clearing. Asking if we could find supper and lodgings, and being answered in the affirmative, I turned the fish over to the proprietor's care. We soon had fish for supper, whatever might be said of the rest, and I settled myself with my pipe outside for a smoke and chat with the natives sitting around the door.

The guide soon crept off to bed, where they put him I did not know, but when I signified to the proprietor that I would go too, he lit a short bit of candle, and I followed him upstairs and into a room with one bed and a man already fast asleep in it. The worthy host set the piece of candle on a box and prepared to say good-night, while I begged to know where I was to sleep. He nodded toward the bed on which lay a big, blue-shirted, brown-bearded man with his stockings on, snoring in a subdued but regular way, that gave evidence of great power when once his throttle valve was fully open, "He'll shove over when you get in, he's all right, a regular boarder." I mildly but firmly suggested that I was not in the habit of sleeping with "boarders," regular, irregular, or transitive, and that unless he could furnish me with a room, or at least a bed to myself, that I should take my blanket and camp outside. After bustling about he fixed me up a couch by myself in the corner of the room with the "regular boarder," and I turned in.

I will spare the reader a description of how I passed that night, but when things got quieted down, the "regular boarder" in the other end of the room opened up his fog horn, and sleep was impossible for me, tired as I was.

And now, brother anglers of that party—if you'll take a little kindly advice from an old camper without feeling offended—when you go again don't take such a lot of useless duffle along to wear yourselves out lugging about, and don't camp on a low shore of a grassy lake with the timber at your backs, if you don't want to be devoured by mosquitoes. When I saw your camp that day I wondered you still lived to tell the tale, but it was not my funeral; and advice from strangers is not always welcome. However, next time don't stop short of Central and you'll find plenty of bass—and if you camp right—few mosquitoes.

NEW YORK, Nov. 10, 1886. DORRS L. FINN.

THE "WILD WEST" MAY GO TO THE HEAD.—A Carson, Nev., newspaper says that in the Carson River above Empire the fishing is good, but below the town fish will not bite, "having lost their teeth from salivation by the mill chemicals."

LAKE BOMOSENE.

THIS sheet of water, which is one of the most beautiful in the New England States, is situated in the towns of Castleton and Hubbardton, Rutland county, Vt., and about twelve miles from the headwaters of Lake Champlain. It is about ten miles long and nearly two in width. At the widest part, about three miles of the upper portion of the lake is a large marsh, which makes a splendid breeding ground for bass and pickerel. It receives its supply of water from a few small streams and a string of six or eight little lakes at the north of it. The lake is easily reached from Fair Haven and Castleton, which are situated on the Delaware & Hudson Canal Company's railroad. The former town is 1¼ miles from the outlet and the other 3½ miles. There is an excellent road from either place. A number of boat houses are scattered along the east shore. The fishing has been the best this season for a number of years, owing, no doubt, to the fact that the Fish Commissioners have been watching the parties that have netted its waters for a number of years. The officers succeeded in capturing quite a number of large nets, and the Legislature, which is now in session, has been asked to pass more rigid laws for the preservation of our game fish, and it will probably do so.

Of the large pickerel caught in this lake there are no doubt two kinds, one being shorter and thicker, which I have no doubt in calling the mascalonge, and the other the great northern pickerel. Both of these fish are caught in the St. Lawrence River, and Lake Champlain empties into the St. Lawrence, so that it is easy to see how they could get there; but from Lake Champlain to Lake Bomosene there are two falls about 60ft. high, and no pickerel could go up there. The question arises, How did the mascalonge and great northern pickerel get into the waters of Lake Bomosene? Something over a year ago I was talking with the late J. T. Buel (every fisherman knows the Buel trolling spoon). He asked how large a pickerel I had ever caught in Lake Bomosene. I told him the largest that I ever weighed was 8lbs., but I had seen some that weighed 18lbs. (Since then some have been caught that weighed over 25lbs.) I added that they were very large, more like the pickerel of Lake Champlain than the common inland pond pickerel. He said: "They are no doubt the mascalonge and great northern pickerel of Lake Champlain and the St. Lawrence River, for a good many years ago I was going there for a day's sport with a friend, and we took over about a dozen pickerel from Lake Champlain and put in there." I have no doubt that we have to thank the old gentleman for the fish we are now catching. I should like to hear from others about these fish through your paper. NED.

FAIR HAVEN, Vt.

A SOUTHERN MASKINONJE.

LAST week we received a fish from our well-known correspondent "Kingfisher" with a request to indentify it. It proved to be a maskinonje of 5 or 6lbs. weight, but not having been packed in ice it was not in good condition for preserving. It was black spotted and not the blue pike from the West. The following letter gives the particulars:

CINCINNATI, O., Nov. 9.—*Editor Forest and Stream:* I am powerfully pleased that the fish turned out to be a mascalonge, as it is the first one that I know of to be credited to the waters south of Mason and Dixon's line. The one sent was taken (we took two of just about the same size, not 50yds. apart) with a Buel spoon in Clear Fork, a few rods above where it empties into New River (on the Postal maps New River is called Big South Fork), in Scott county, Tenn. New River rises in the mountains above Huntsville, Tenn. and empties in the Cumberland River at Port Burnside, Ky.

Clear Fork flows into New River about ten miles below New River station, a small hamlet on the Cincinnati Southern R. R., fifty-one miles from Port Burnside and 216 from Cincinnati. Here in the "crotch" we made our camp with neither stream more than two rods from the tent.

From New River station to its mouth by river, a fraction over eighty-one miles, per Government survey, the stream has a fall of 731ft., in some places as much as 50ft. to the mile, and infested with rocks and boulders from the size of a house up.

The fish sent is called by the natives in that region a "Jack" and we were told they are very plentiful both in New River and its tributary, Clear Fork.

Mr. Maurice Foster—our nearest camp neigbor—told us he had taken them weighing 10, 12, 15, 20 and as high as 30lbs., the latter one measuring 4ft. 6in. in length. They are as game a fish as I have handled for half a year, the first one taken leaving the water three times to a height of 3 and 4ft., and the other one, taken by Billy Wetzel, leaving it four times before he saw the errror of his ways. I believe they are a simon pure maskalonge, the only difference noticeable between them and their Michigan brethren being their brighter color and markings, and while the Northern fish has flesh of a faint straw color, the flesh of the other is white. I thank you for the interest taken in having the fish "analyzed" and his proper family name given him. KINGFISHER.

CATGUT.

Editor Forest and Stream:

I am rejoiced to note in your issue of yesterday that Mr. Dun took his 54lbs. salmon on a catgut leader; for I have long contended that a genuine fiddle string would be the proper thing to use for tackle, since the swish of the line is to angler's ear music more entrancing than ever Ole Bull could wax from rarest old Cromona. C. SHARP.

Editor Forest and Stream:

Wm. Black, in "White Heather," writes about "catgut leaders," and so does Mr. Wiman in FOREST AND STREAM. There is no excuse for Mr. Black, but there may be for Mr. W. Chas. Dudley Warner has written about "catgut leaders," but only in a humorous manner, for he knows what leaders are made of, as I am personally aware. C.

A HADDOCK'S REFUGE.—U. S. F. C. Schooner Grampus, off Gloucester, Nov. 9.—This morning as one of our men was removing from the well some of the fish that were dead he brought up a dead cod of some 7 or 8lbs. weight. A look inside his mouth disclosed the presence of a lively Norway haddock of perhaps ½lb. weight. The little chap was taken out of his odd quarters and returned to the well again. That passage which says: "In the midst of life we are in death," was quite reversed. Some of the larger fish had doubtless tried to catch him to eat. Under these circumstances the smaller fish was obliged to practice the sailor plan of "any port in a storm." Seriously, however, there is room for conjecture as to how the haddock knew the mouth of his dead enemy to be a safe retreat from the mouth of his living enemies. The cod was the common *Gadus morrhua*, the Norway haddock was *Sebastes marines*.—X. Y. Z.

SILKWORM GUT.—Under the title of "Fishing Lines and Ligatures from the Silk-glands of Lepidopterous Larvæ" in the Proceedings of the Academy of Natural Sciences of Philadelphia is the following: A communication was received from Miss Adele M. Fielde, stating that the locality in which she wrote, Swaton, China, the silk-glands are taken from the larvæ of several species of large lepidopterous insects just before they enter the pupa stage, and are made into fishing lines. At this period in the life-history of the insect, the glands are full of the viscid white substance from which the cocoon is to be spun. The silk-glands of a species of *Atlas* were found to be one yard long, a tenth of an inch in diameter at the free, posterior end, and the hundredth of an inch in diameter at the anterior end. The two glands extend nearly the whole length of the body cavity, on either side of the alimentary canal, lying in loops of varying length, and uniting in a single duct under the mouth, as in the silk-worm, *Bombyx mori*. The Chinese make a transverse cut across the back of the caterpillar, take hold of one of the loops of the silk-glands, draw it out entire, drop it in vinegar to take off its external coat, then stretch it to double or treble its original length, and dry it. A durable filament is thus formed, strong as catgut, and much cheaper. The tenacity of the filament is constantly restored by soaking it for a few minutes in warm rice-water, that is, in the water in which rice has been boiled for food. The fishermen say that when thus prepared a line will hold the largest fish taken on the coast. It was found, however, that a single filament would not sustain more than four and a half pounds. Dr. Causland, in charge of the hospital in the English Presbyterian Mission at Swatow, had successfully used these filaments for tying arteries in surgical operations. It was suggested that the cocoon-spinning lepidoptera of the United States might furnish in their silk-glands, for the joining of wounds, a thread which would have all the virtue of spun silk, without its objectionable traits. Silk-worms have been successfully reared in the neighborhood of Swatow, on lettuce, the silk from such caterpillars being coarser than that from those fed on mulberry leaves.

AGE OF FISHES.—A newspaper report has been going the rounds stating that "Professor Baird, who is at the head of the Smithsonian Institute and United States Commission, and probably the best living authority on fish, says, 'There is, I believe, authentic evidence to show that carp have attained one hundred years. There is a tradition that within fifty years a pike was living whose age dated back to the fifteenth century. The fish is said to be 18ft. long. This is not, however, considered to be reliable. There is nothing, however, to prevent a fish living almost indefinitely, as it has no period of maturity, but grows with each year of life. In each species, like mammals and birds, where there is a limit, a definite term of years is the rule.'" Concerning the authenticity of this Professor Baird writes us in reply to an inquiry: "It is possible that I made the statement ascribed to me in the concluding part of the paragraph which I herewith return. The pike story is an established one, however authentic it may be. It was said to have been owned by Frederick Barbarossa. The statement as to the continuance of the life of the fish, and its indefinite growth, is, I think, accurate; although, of course, there must be some limitation, such as hems in the life of the mammal and bird, though less decided.—SPENCER F. BAIRD."

GRAYLING OR MOUNTAIN HERRING?—Denver, Col.—In FOREST AND STREAM of Oct. 21 "H." reports the catching of two grayling in the Smith Fork of Green River, Wyoming Territory. I apprehend this is a mistake. The fish was probably the mountain herring, which is plentiful in Yampa, White and many other tributaries of Green River. It is almost universally called grayling throughout that section of country. It takes the fly readily and often shows quite as much game as the trout. In 1877 I first caught this fish, although I had heard of it for some years before. In writing FOREST AND STREAM I called it grayling, as I heard others term it. You questioned the correctness of the name and requested specimens of the characteristic features to determine, which I furnished. The decision, and I think it was given by Professor Baird, was that it was the mountain herring. In your final answer you sent me the dorsal fin of a grayling, which is all I ever saw of that fish; but it proved conclusively that our Green River fish is not a grayling. Once when fishing in the Yampa my line fell upon some willows, leaving the fly dangling six or eight inches above the water, when one of these herring leaped up and caught the fly, was hooked and safely landed.—W. N. B.

DEATH OF NATHANIEL E. ATWOOD.—Nathaniel E. Atwood, the famous old fisherman of Cape Cod, died at his home on Nov. 8 at the age of 79. As a practical ichthyologist he not only enjoyed a national reputation in his own country, but his name, in connection with this branch, has for many years been known by scientific men in Europe. In 1852 Louis Agassiz, impressed with the value of Mr. Atwood's contributions to ichthyology, visited him in his home upon Long Point, and there began an acquaintance that shortly ripened into a warm, life-long friendship. Their correspondence respecting fishes was constant, and continued through the Professor's life. It was at his suggestion that Mr. Atwood was employed in the winter of 1868-69 to deliver a course of fourteen lectures upon food fishes before the Lowell Institute of Boston. When Mr. Atwood was a boy his people were very poor—so poor that they could not afford to keep a clock—and his father used to call him up in the night and send him out on the beach to ascertain the time by the height of the tide so he could know when to launch his boat.

THE REMARKABLE CASE in issue of Nov. 4 reminds me of an incident related to me by a friend of mine, who was on a fishing excursion with his son. They had caught quite a quantity of trout and other fish, and prepared them for frying, throwing the heads, etc., back into the stream. While the gentleman was starting a fire the boy picked up a rod and gave the flies a flirt into the stream. A rise, a strike and a rush that made the reel sing followed. A struggle in which the odds were at times in favor of the fish, was finally ended by my friend slipping the landing net under and bringing safely to shore—one of the heads that had just been thrown into the water.—A. A. D.

MASKINONGÉ.—*Editor Forest and Stream:* I note what "H. R." says on this name in your last issue. Most of the American authors on angling have followed a statement made by some one that "mascalonge," as it is often spelled, was a word meaning "long snout," and came from the French words *masque allonge*. It was to this that I referred. What "H. R." further says bears out my former statement that the word is one of four syllables and that the g should be soft. All forms of the name which sound that letter hard, as "muskellung," are corruptions worse corrupted. I have, however, heard a Canadian call the fish "mascalonge," but it is on this side of the line where all sorts of barbarous names have been applied to this fish. I owe an apology to General Garrard for misspelling his name while trying to settle the spelling of another. Either the printer or I was responsible for printing it Gerrard, perhaps the fault lay in a miserable penman.—FRED MATHER.

SENSIBILITY OF FISHES TO PAIN.—*Editor Forest and Stream:* Your correspondent "O. O. S." is hardly fair in his allusion to Rev. Dr. M. M. Marshall's experience with the fish. Imputations upon that gentleman's humanity would be in order were there any reason whatever for thinking that he had been cruel to the fish. "O. O. S." appears to think that it was an act of cruelty to cut a piece out of the living fish and then throw the mutilated creature back into the water. Well, there are two ways of looking at that. If it hurt the fish, perhaps it was cruel. But it did not. The very fact that the fish was ready for more of the same sort shows that.—LOGIC.

PENNSYLVANIA.—Creighton.—The Jolly Hunting and Fishing Club were encamped at West Hickory, Forest county, Pa., from Aug. 23 until Sept. 10, and we caught a large number of black and yellow bass and jack salmon. They were caught on night lines and were as fine a lot as I ever saw caught on the Allegheny River. We also got about a hundred and thirty or forty black, gray and red squirrels. If some reader would be kind enough to give me some information in regard to the hunting and fishing near Cumberland, Va., I will be very much obliged.—S. S. H.

THE MENHADEN STEAMERS.—Greenport, L. I., Nov. 7.—A large number of the menhaden steamers have now laid up for the season. Several of them still follow the sea, but will probably soon tie up. They had very good luck during the week ending Oct. 30, and some of the boats caught many hundreds of thousands during this week.—ISAAC MCLELLAN.

THE GREAT WORKS FISHWAY.

THIS was originally designed by Mr. Everett Smith, civil engineer, Portland, Me., for the Great Works dam in Penobscot River, and the following description accompanied a model exhibited at the Berlin Fisheries Exhibition in 1880, but has never been published:

This fishway is designed and located to afford a passage for salmon, trout, alewives, shad, etc., to pass the dam and ascend the river, and to be such a passage as the fish will naturally and readily find and use for this purpose. It is designed to be effective at all stages of the water of the river, whether high or low, and to require no attendance.

The model shows the design as adapted to the end of a dam at the river's bank. But at the Great Works dam the fishway was located near the middle of the river, at the junction of the main dam and a wing dam. No flume was there required, but the water admitted directly to the fishway through the wing dam.

This design can be adapted to any dam, and the capacity of the fishway modified to meet the requirements of any stream.

The model shows a high pier, that serves as a necessary protection to the fishway in a great river subject to freshets carrying down immense quantities of logs and ice. The water is conducted from the river above the dam by means of a flume or aqueduct to the head of the fishway (its end furthest from the dam), whence it flows to join the river current at the outlet near the foot of the dam. It is here that the fish enter the fishway, and they can tarry to rest in each department of it if so disposed, finally passing through the flume to the river above the dam.

Many fishways have been constructed as inclined planes, down which the water flows with accelerated velocity until abruptly checked, whereby it is much broken, filled with air, and objectionable for the passage of fish, and at times impassable when the incline is too steep, or the water improperly checked. Or still more defective if the water is too much retarded, so that its delivery at the outlet is so slow that no fish will be attracted to enter the fishway.

In the Great Works fishway the water descends from one level plane to another successively. The velocity of the current is also retarded on the bottom by the stone paving and is checked and diverted by the partitions.

The stone paving serves a triple purpose. It loads the wooden structure, retards the current within the fishway and makes a bottom resembling that of a natural stream, hence more enticing to the fish. The effectiveness of a fishway depends upon its location in the river. As a general rule its outlet should be located at the part of the waterfall furthest up stream.

EXPLANATION OF DETAILS (OF MODEL).

The inlet to this fishway, for the delivery of water from above the dam is 6ft. high, 4ft. wide, and its bottom 2½ft. below the crest or highest part of the dam (these dimensions varied to suit dam and stream, but must always be such as to afford an ample supply of water at all times). The "inlet" to have a floating guard to prevent drift material entering therein.

The pier for protection against freshets, ice, logs, etc., is not required upon some of the smaller streams.

The flume or acqueduct to this fishway is 6ft. wide, 78ft. long, and consists of three level planes, each ½ft. lower than the next preceding one.

The waste-ways relieve the fishway of a surplus of water during freshets, but allow no waste when the river is low.

The floor of this fishway is laid on the incline of 1 in 12, but so paved with stones as to make a level bottom to each alternate chamber.

The longitudinal partitions regulate the volume of water required, and the capacity of the fishway for its delivery may be diminished or increased by the addition or removal of the vertical planks.

The outer side of the fishway is of such height and strength as to preclude all danger from damage by freshets.

The outlet for the water is the entrance for the fish. Its stone-paved bottom is below the low water level and in this

nstance (the model) is 10½ft. vertically below the "crest" or top of the dam.

The outlet is located very near the foot of the waterfall, but so as always to be accessible to the fish and never submerged.

Total length of fishway inside, 78ft.

Total width of fishway inside, 16ft.

Compartments, 8ft x12ft., partially divided into chambers of 8ft.x6ft.

Total elevation overcome, 10½ft. (height from bottom of outlet to top of dam).

THE AMERICAN FISHERIES SOCIETY.—The report of the proceedings of the last meeting, at Chicago, has been issued to the members and is a printed book of 100 pages. These reports are suitable for binding into volumes when a few have accumulated. Already there is a demand for the older reports, and the Society does not own a complete set. It is doubtful if there are more than two entire sets extant, for in the earlier days of the Society, then the Fishculturists' Association, there was much carelessness in the matter of preserving the records both among the members and the officers, and not until Mr. Blackford became the treasurer was there any systematic attempt to preserve sets of the proceedings. After much trouble, Mr. Blackford collected a complete set of the reports, but the volume was lost by the binder. One complete set is owned by Mr. Mather, the recording secretary, one of the original members, and it is possible that Mr. Stone, also an original member, has one. The Society has outgrown the limits that it was at first intended to cover and has become a most useful body of workers, whose reports are valuable to all who are interested in fish matters.

THE NEW YORK COMMISSION.—At the Caledonia station, in charge of Mr. Monroe A. Green, over 4,000,000 eggs of the lake trout are now on the hatching trays. They were obtained from Lake Huron. The brook trout in the ponds are spawning and are yielding from 20,000 to 50,000 eggs daily. Mr. Mason has been on Lake Huron after eggs of the whitefish and has been successful. At the Long Island station Mr. Mather reports that the warm weather has kept back the spawning season and the fish are just beginning to enter the spawning races. Few adult fish have been kept at Cold Spring Harbor, but last season a number of fry were kept which have grown wonderfully. At the Adirondack station Mr. Walters has over 200,000 eggs of the brook trout and some lake trout, and expected the frost fish to yield eggs at the last report, before the great snow blockade stopped all mails in that region.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Nov 22.—Eighth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. W. A. Coster, Secretary, Flatbush, Kings county, N. Y.

Nov. 23.—Fifth Annual Field Trials of the Robins Island Club, Robins Island, L. I. Open to members only. V. Wateroury, Secretary.

Dec. 1.—First Annual Field Trials of the Irish Setter Club, at Salisbury, N. C. W. Dunphy, President, Peekskill, N. Y.

Dec. 13.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4236.**

FISHER'S ISLAND TRIALS.

[From a Special Correspondent.]

THE second annual trials of the Fisher's Island Club were held Nov. 8. The entries were as follows:

MEG (Chas. J. Stewart, Jamaica, L. I.), red Irish setter bitch (Chief—Beesy).

DOC B. (Robert Betty, New York city), orange and white setter dog (Jersey Duke—Topsy).

SPOT (Frank Billings, Cleveland, O.), pointer dog (Donald II.—Caton's Nellie).

LADY ESSEX (W. H. Schieffelin, New York city), blue belton setter bitch.

FLORID (I. C. Besson, Hoboken, N. J.), Irish setter bitch (Chief—Becky).

LADY MAY (H. Pape, Hoboken, N. J.), blue belton setter bitch (Lofty—Maud Muller).

JESSE (Ph. Phœnix, New York city), orange and white setter dog.

TIM, YOUBE, JERSEY BEAUTY, CAT-FOOT (Max Wenzel, Hoboken, N. J.), Irish setter dogs; Tim (Biz—Hazel), Yoube (Elcho—Rose), Jersey Beauty (Chief—Doe), Cat-foot (Chief—Fashion).

Mr. McGinnis's red Irish setter, Mr. Ketcham's Brown Bess, Mr. Holbrook's Dan, Mr. Dunham's Ben and Mr. Reiche's Frank were withdrawn.

The drawing for braces resulted as follows: Tim against Florid, Cat-foot against Yoube, Jesse against Spot, Meg against Lady May, Jersey Beauty against Lady Essex, Doc B., a bye.

TIM AND FLORID.

Monday morning at 10 A. M. the first brace was cast off immediately after leaving the mansion; they were the red Irish setter dog Tim, handled by J. T. Miller, and the red Irish setter bitch Florid, handled by Mr. I. C. Besson. Tim, a dog of great speed and pluck, showed better style, great speed and two points to the bitch's one throughout the score and he was handled to perfection by Miller.

CAT-FOOT AND YOUBE.

The second brace were again red Irish setters, Cat-foot, a light built young dog of the first season, handled by Miller, and Yoube, the red Irish setter bitch that ran in the same trial last year, handled by her owner. Both these heats were run in the worst brier patches on the Island, places totally unfit to run any dog under judgment, as the cover is almost too thick for the smallest cocker spaniel. Both dogs were often entirely lost, for neither handler nor judge could follow them. Cat-foot showed good speed, good breaking, dropping to wing, shot, and on a back and scored 4 points with no demerit; but the judges did not score him as high as he seemed entitled to. Yoube refused to take the briers, no doubt remembering them from the year before, when she ran her heat with a full milk bag in the same kind of cover. Her handler did not blame her, and says he hunts now and then in a Jersey green brier country, but Fisher's Island can discount any place he knows.

MEG AND LADY MAY.

Meg, a red Irish setter bitch, handled by Lawrence, and Lady May, a handsome black and white English setter bitch, handled by her owner, were the third brace called for. Both went off with a good gait, Meg the better in style and action, but not up to the Lady, who seemed to use almost human judgment in looking for birds. She would quarter every likely place and go out of her course even to look into a brier patch or a pond hole, and she did some grand work on the meanest kind of running birds, pointing and roading with great care, on one occasion describing a ring and a horseshoe, following some running birds. Meg was simply nowhere, and with a fair memory to fall back on, it is impossible for the writer to recall the instant when Meg made a point at all that was a point. She certainly never held one long enough for any one to see it. In breaking shot and refusing to back she was well up, but somehow her score was pretty good. Lady May showed by far the best of any one seen so far and is certainly one of the best field dogs of this country.

JESSE AND SPOT.

The next brace called was Jesse, an almost white English setter, handled by Lawrence, and Spot, a handsome liver and white small pointer, full of style and point, and who took to the briers very pluckily; he was handled by his owner. Jesse is a fast dog, very persevering worker on a trail, but the conditions were very unfavorable to this brace. The wind blowing a gale, they were running in a very exposed place, partly in the sedge grass, and as it was late in the evening, the birds that had been scattered all the afternoon were calling all about and flushed wild and were on the run in all directions. The pointer scored several false points, the setter always roaded to a flush and was wild and unmanageable, unsteady to shot and wild as a hawk. During this heat a 10lb. English hare was killed by the two handlers and retrieved by the secretary. It was a beauty.

JERSEY BEAUTY AND LADY ESSEX.

The following day, at 9 A. M., the red Irish setter bitch Jersey Beauty, handled by Miller, and Lady Essex, a blue belton setter bitch, handled by Lawrence, were slipped and directed toward North Hill. This was considered the crack brace, and for natural gifts they no doubt are as good as any in the club; but both were wild and showed lack of work and breaking. Beauty is the more stylish and Lady the faster of the two. In nose they are about even. Beauty soon scored a grand point down wind, being very staunch until Lady, called up to back, rushed past her and both breaking in chased the bevy. The handlers were about as wild as the dogs and missed with both barrels, paying no attention to their dogs. It was bad work all around. Turning back over the hill, the fields of the Fox mansion were passed when from a strip of rag weeds a fine English hare jumped in full sight of both dogs and a coursing match, that would have done credit to two Master McGraths, amused the spectators hugely, but the hare, heading for the hill, was tumbled over by Lawrence and Miller, who showed, in this case, good judgment, for had they not stopped that hare it would seem doubtful whether the game or their dogs would have been seen again that week. The brace was promptly relieved from any further temptation.

DOC B. AND SPOT.

Doc B., an orange and white setter, handled by Miller, and Spot, the pointer selected to run with the bye, were the last brace of the first series. The pointer again scored several false points and Doc as many times refused to back. Jersey Beauty called up to back, also left her score on backing a blank. Doc B., who was clearly off and never made a point during the whole trial was scored away up like Meg; neither of them merited their place, which, although it may no be agreeable for the judges to be told, was very unjust to other dogs that did far better work on the whole.

The four best dogs were considered Lady May, Tim, Doc B., and Meg, and the running off for places showed no better work for either Doc B. or Meg, and the heat between Lady May and Tim was cut short enough, Lady securing one point on a bevy which Tim had passed to windward. The judges consulted a moment and the prizes were awarded in the following order:

First prize, a cup, to Mr. H. Pape's Lady May.

Second prize, the Fisher's Island Club cup, to Mr. Max Wenxel's Tim.

Third prize, a silver mounted dog collar, presented by Mr. Ph. Phœnix, to Mr. C. J. Stewart's Meg.

Fourth prize, in cash, to Mr. Robt. Betty's Doc B.

Owing to the fact that a number of members had been shooting the week before the trials on the island, the birds acted very wild, and the high wind, which only subsided by Thursday, were two causes of a good deal of unsatisfactory work on part of the dogs, and the field trial men hope that another year the season of killing game will not open until after the ending of the trials. FENIAN.

WESTERN FIELD TRIALS.

[From a Special Correspondent.]

THE second annual trials of the Western Field Trials Association began at Abeline, Kansas, Monday, Nov. 8, with a large array of fine dogs; seventeen dogs started in the All-Aged Stake. The start on game was made at an early hour, almost too early we fancy for the managers and judges. The grounds were from six to eight miles from town and we had to set out promptly at 7:30 A. M. In this way only was the trial completed during the week. The Association labored under the most embarrassing circumstances as to birds and grounds. The heavy snow storms of last winter froze nearly all the quail so that the grounds had to be stocked. These birds, turned loose, were found to have gathered in that part of the county known as the Sand Hills, and though quail were there in fair numbers, the sand burrs were so bad that it was almost an impossibility to get dogs to work at all. If enough birds could have been found at other points, the dogs would not have been required to work there. There is no other place in the country where the burrs are so bad as at this particular place, and by another year the owners and handlers of dogs may be assured that there will not be sand burrs where the grounds are selected. During all the week with the exception of one day the weather was fine, only the dryness of ground and grass being objectionable as causing the best dogs to receive as many and sometimes more flushes than points.

Of the gentlemen selected to judge only Mr. Merriman, of Tennessee, came to the front, Messrs. Poyner and Johnson being unavoidably detained. The executive committee selected from those present Messrs. A. A. Whipple, of Kansas City, and H. H. Briggs, of San Francisco. These gentlemen were men of much experience, which, coupled with good judgment, carried the trials through satisfactorily to all except one or two beaten parties whose luck was against them. There never will be a meeting or show of any kind without somebody disagreeing with the judges. There is no harder position that a man can fill where there is so little pay or honor as being a judge; it is a sacrifice on the part of any one to accept the position. The Abilene members did what they could to make the stay of their brother sportsmen pleasant, and they much regretted that birds were not found on better ground. A number of good dogs were started, notably Lufra, King Noble, Natalia, Bridgeport, Spot Belton, Patsey, Cornerstone, and Rod in the All-Aged Stake. At the top of all these came Lufra; she did not have much of a walk away with King Noble and Bridgeport, and their defeat was attributed almost entirely to the want of backing up the other dogs, while Lufra makes the grandest backs of any dog put down, and only Cornerstone, the pointer, beaten by Rod for first place, came near equalling her. Backing up another dog counts seven under the rules, and a dog must be a good one to lose that number of points and then win over dogs like the class shown.

The second prize fell to the Castleman Kennel's pointer dog Rod. That Rod is a good one will be readily seen by the competition he met, as the record of each heat will show.

The dogs that divided third were all good ones. At the head comes that grand old dog Bridgeport, who was the best sharing third last year, Bridgeport was a little out of condition, and had been run too much before the trials. He has a bench show record at St. Louis, and shows that field and bench qualities can be combined. All who saw Cornerstone were delighted with his long, rangy strides, high head, grand staunch points and backs. Dick T. is a grand dog, and considering that he was so much out of condition, we do not hesitate to pronounce him a good dog, though everybody said he was the homeliest dog there; sickness is no discredit. Rod was suffering from tapeworm in its worst form, and the only wonder is he did so well. When he first started in the race his pace and style was so much against him that he did not appear to have any show, but the longer he was hunted the better he ranged, and he proved in nose equal to any dog down.

THE DERBY.

The All-Aged was not completed until Friday night, the judges being determined to run the dogs a sufficient length of time to know fully which was best and to give each full opportunity on game. Saturday morning came on too soon, and the representatives and owners of the Derby getting together agreed to suspend the rules of running down the series, and let the judges select the winners after the dogs had been run each a heat. To this the judges readily assented. The Association gave out that they would stay with the dogs another week if necessary. When the puppies had all been down, it proved the best thing that could have been done, as during the day only two dogs had shown any superior merit, namely, Bessie B., winner of first, and Spot Belton, winner of second.

These dogs were so much ahead that the handlers and spectators all agreed on them before the judges had announced their decision. Bessie B., next to her sire, King, embodies more natural qualities than any dog shown, and her courage led her through burrs where no old dog would go. Very few faults can be found with her, either as to her form or field qualities, and her breeding is by King Noble (a noble specimen of the old dog Count Noble) out of Elsie Belton; Elsie B. by Laverack Chief. Her rapid strides and style of hunting were an "eye-opener" to those owning pottering dogs said to be fast. Spot Belton did some superior work. She has the blood of Laverack Chief, Rake, Phyllis and many other noted ones. The dividers of third, viz., Dillsey, Tansey, Traveler and Ruby, were fair dogs, but showed that a week's confinement had put them all out of condition. The first three are of same blood as Rod (Meteor—Dell), and were soon put out when they got a sand burr in their feet.

THE ALL-AGED.

NATALIA AND DICK BERWYN

were put down at 8:20 A. M. Natalia is a small sized black, white and tan bitch (Gladstone—Donna J.) owned by J. Hayward, Jr., of St. Joe, Mo., and handled by the veteran field trial runner and braker, N. B. Nesbitt. Dick Berwyn is a large black, white and tan dog (Dashing Berwyn—Vanity Fair), owned by H. P. Dillon, of Topeka, Kansas, and handled by his trainer, H. G. Allen, of Lincoln, Kansas. The dogs were sent off in grass, Natalia going away at a lively gait, and Dick nosing the air leisurly as if depending on nose rather than legs to find game, but after a little warming up his pace was increased, though his strides were sluggish as compared to that of Natalia, whose springy jumps were much admired. Dick showed stiffness from some cause and had to carry about ten pounds too much flesh, and appeared to be overworked. Natalia would have looked better with a few pounds of added flesh. The grass and some timber land was drawn blank. By this time Natalia was having a walk-away in speed and style. Presently Dick drew and made game, but no birds found. Sand burrs were encountered that filled the feet of the dogs and had to be cleaned by the handlers. Sent away to try grass again, they found no birds, as these had not come out from the corn fields. Dick pointed at the edge of the corn, and wading into the corn caught and retrieved a wounded prairie chicken. Judges dismounted and sent the dogs around the edge of the corn, but passing too far from the edge, they failed to find a covey which was afterward flushed by the *Gazette* reporter. The birds were marked down and dogs sent on where a number of flushes were made by judges and spectators, but no points established by dogs. Dick drew in grass and Natalia roaded, but failed to locate. Dick pointed a rabbit and Natalia afterward stopped on the trail. Handler Allen flushed a bird in the grass, and after tramping around some time the judges flushed another near where dogs had passed, showing that birds were lying very close. After a long hunt Judge Whipple flushed a bird down wind. Handler Nesbitt got a flush, as did Judge Briggs, and he was going up wind. Dogs ordered on and gave up the chase on that covey. The reporter losing interest was lagging behind chatting with Mr. Heath, when they together flushed a new covey, which flew, scattering over the handlers and judges. Two of these were marked down, Dick going down the fence, made a point, but moved on, and a sickly bird flutterd away. Dick went over the hill and was found dropped, no birds found, and it was afterward ascertained that he had flushed a covey. Natalia going into grass found and pointed the two marked birds. Nesbitt flushed and killed. Natalia was unsteady to wing and shot, and was stopped after one jump by her handler. Sent on to retrieve she did it in fine shape. Dick was dropped by Allen by motion at one hundred yards distance. Sent on Natalia soon came to a point and Dick backed, but she moved on without getting a false point. After going about 100 yards further, the dogs were ordered up at 10:20, and heat given to Natalia. The general result of the heat was that Natalia had much the best of ranging, quartering and style. She did the only retrieving and pointing, and she made but one. In obedience and disposition both dogs were equal, as was their backing. Natalia was so much ahead that the race was not run until Dick got a point, nor was he required to retrieve. These same two handlers started dogs in first heat at the trials last year.

KRUPP AND DICK B.

Krupp is a liver and white pointer dog (Meteor—Dell) owned by the Castleman Kennels, of Trenton, Tenn., and handled by W. B. Stafford. This dog was run here last year in the Derby class. Dick B. is a black setter dog (McKinney—Flossy), owned and handled by J. I. Case, Jr., of Racine, Wisconsin. Dogs sent off at 10:30 A. M. in grass. Krupp made away with head up, showing himself a fair ranger, while Dick was not far behind. Going into high grass,

Krupp got near a fine covey, which flushed and went down at the edge of corn. The dogs were sent on, but passed by the birds. Brought back again, they were sent into corn. Krupp flushed three birds on bare ground, and the covey to the left all flushed and were marked down in grass and low brush. The dogs were sent on into the place where they were marked, where very soon Krupp got a flush. Dick here came in with a flush, as did Stafford. Dick made a point a little further on, but no bird could be found. Krupp drew to a point, but moved on after he was sure there was no bird. Going up the fence Judge Merriam flushed a bird. Dick made game and roaded, and bird flushed. Dick was very steady to wing. Krupp crossed the road and made game, but no bird was found. Krupp ran down a small strip of grass, and having the wind in his favor, made a bad flush, and followed that up with a chase, and did not heed the whistle. The dogs were sent now into grass, and going down wind Dick came to a point and roaded on, made another point, and Krupp came up and got a point also. The birds flushed and went to cover. Both handlers snapped their guns, and the dogs were steady to wing. Going on again where birds were marked, two were soon flushed, one by Dick, the other by Stafford. Swinging around, the judges flushed two. Here Dick was marked a false point by Chase claiming a point. Soon he got a firm point and a rabbit ran out. Dogs were then started in the direction of the place to get lunch, and hunting to the house no birds were found, and they were ordered up for lunch.

One of the good farmers and his wife prepared chicken, bread, butter, pumpkin pie and coffee, and all ate their heart's desire and pronounced the lunch a success. At 1:30 P. M. the same dogs were sent away to find another covey. A small cornfield and some grassy patches were drawn and no birds were found. Passing on to another timber claim Dick soon came on to a covey which flushed wild, and remained pointing. A crippled bird was seen to run away by Chase. Going on to where birds were marked Judge Whipple flushed. Soon Krupp came rushing up and followed suit with two flushes. Dick made a point and Krupp coming up closely behind, but the bird could not be raised. A large grass field was next drawn blank. After this tramp dogs run over the ground where a covey was marked before dinner, and after Dick had made some gamey demonstrations a covey was flushed, Dick being down in the high grass and brush. Starting at once for the scattered birds the reporter soon flushed one. After a few attempts at locating some roading was done, and a pair of birds getting up to Dick, Case shot and killed both. Krupp was sent to retrieve one and Dick the other. The first was brought in by Krupp, but Dick could not get his bird, which proved a runner; the other bird was then thrown out by the judge, and Dick sent to fetch, which he did in as fair shape as could be expected. Dogs ordered up at 2:25, and heat awarded to Dick. This heat was a tedious one, not remarkable for any brilliant work.

BLITZ BURGLAR D. AND CORNERSTONE.

Blitz is a large sized black, white and tan setter dog (Burglar—Queen Dido) owned by W. B. Smith, and handled by Charles Harnes, of De Witt, Nebraska. Cornerstone is a large liver and white pointer dog (Meteor—Accident) and owned by J. W. Blythe, of Burlington, Iowa, and handled by A. J. Gleason, of Alma, Kan. Both dogs ran and were handled by same parties last year. The judges concluded to try new ground and after reaching the place sent the dogs on. It took but a few minutes to see that in point of speed, ranging, quartering and style, Cornerstone had a walk-away. Blitz followed the draws mostly, and Cornerstone took in the draws and about 400 yards on each side. Blitz presently established a point, but there was not much style about it, yet Cornerstone, coming up fast, jumped at the first glimpse into a grand back. Blitz sent on, no game was found. After going some distance Blitz came to another point and Cornerstone made another fine back. Some time was spent before any game was found. Crossing a berry patch Blitz was sent on before Gleason was ready, and in a few yards made a point. Gleason had Cornerstone down getting burrs from his feet. Blitz remained standing. As soon as Cornerstone was on his feet he at once made another of his grand backs. Blitz went on, and the birds were not found. Swinging to the left, Blitz made another point and Cornerstone, coming up on opposite side of the grass, backed again. Gleason thinking his dog made a point, claimed it, but the judges ordered Harnes to flush. No birds. Dogs both moved on and Blitz made a point here. Cornerstone showed fine dog sense by refusing to back. He had backed Blitz six times, and six times there were no birds, and now he was going to see for himself before he pointed; so going in ahead he roaded and soon made a grand point. Gleason flushed and killed. Both dogs steady to shot and wing. Sent on, Cornerstone retrieved in good shape. Swinging around, Cornerstone jumped into another grand point, and Gleason flushed several birds and shot one. Dogs steady. Blitz sent to retrieve the bird, which he did in good shape. Here the race ended and Cornerstone won by a large majority. This work of Cornerstone was the feature of the day, and the spectators were delighted and considered themselves well paid for having come out.

ROD AND DICK T.

Rod is a finely formed liver and white pointer dog (Meteor—Dell), owned by the Castleman Kennels and handled by his trainer, W. B. Stafford. Dick T. is a black, white and tan dog (Cashier—Flake), owned and handled by N. B. Nesbitt. Dick is not a handsome dog to the critic's eye, but he proved himself a goer all the same. Dogs ordered down at 4:10 P. M. in grass. Dick got right away and did not mind sand burs, while Rod was poking. Getting into high grass where a few scattered birds had pitched when flushed over Cornerstone's point Nesbitt flushed single, Dick down to wing. Dick going fast ran near a bird and it sprang from the cover without a point. From this time on no birds were found, but Dick kept showing fine ranging, speed, style and endurance, while Rod kept getting slower, until they were ordered up for the evening with heat undecided.

SECOND DAY.

On the second day, Nov. 9, judges and handlers arrived on the ground by 8:30 A. M. The first on the programme was to continue the unfinished race between Rod and Dick. While the judges and handlers with dogs to heel were getting to the proper place to be cast off, Rod stole away and had a little hunt by himself. Going into a cornfield he was lost for at least ten minutes, and when found he was pointing near a corn shock. No birds could be seen, and sending him on he stopped at the edge of the shock and the search was continued. Going in he brought out a quail and a whole bevy of about three-fourth grown birds were made to get out and fly to the hedge. It was very unfortunate for Rod that the dogs were not down and subject to being passed on by the judges, as this was the first point made by either of this brace. The dogs were put down at 8:45 and worked on the young birds marked. Getting on the windward side of the hedge Dick took a spin and made a grand point by catching the scent and jumping into it suddenly; Rod coming up backed. Birds flushed, but got out on opposite side of hedge and could not be killed. Both dogs steady to wing. Sent on, Rod drew up in good style, but no birds could be found, as they were running down the hedge where there was no cover. Going on both dogs made game, and at the corner of the hedge, Rod on one side and Dick on the other, seemed to point simultaneously. The bird was flushed ahead of Dick's nose and got up so sluggardly that Dick was a little unsteady, but stopped to command; Nesbitt shot and missed. The remainder of the hedge was drawn blank, as the birds no doubt ran to the cover of the high standing corn. They next tried high grass and weeds, where a covey was marked down by the spectators. Soon Dick, going fast for such a cover, flushed a bird and stopped to wing. Rod warmed up and got away lively, and was holding Dick level. Soon a flush was made, and both dogs being near had to share alike. Dick went on and soon made a point. Nesbitt went in and flushed several birds, shooting twice and missing both, Dick steady to wing and shot. Rod went down the bank and while hid in the grass a bird flushed, and Rod standing Stafford claimed a point. Not allowed. Judge Merriman says, "You should have claimed it sooner." Some time spent looking for straggling birds. None found. They then changed to a new field, which was drawn blank, though Rod made game while passing through; into stubble they went with no better success. Next they tried corn and a draw. Rod at top of bank drew and roaded a few feet and established a fine point. Dick had passed by the same place, and had failed to locate the game. Stafford flushed and the birds scattered; he failed to shoot. Rod steady to wing. At the rise of the covey Stafford gave command to charge. The birds were marked in the grass near a hedge. The reporter, crossing a stream, flushed another fine bevy, which he marked down in good cover ready for the next brace of dogs. The dogs going up hedge both made game; none was found, and after a little skirmish the dogs were ordered up and the heat given to Rod, without having a bird killed to him nor a chance to retrieve. This was a surprise to those who saw the whole heat, as that part run yesterday gave Dick the walkaway. But pointing counts forty, and Rod developing into a good ranging dog to-day and doing his share of the pointing brought him forward so that the judgment of three such men as pass upon the dogs, and who so closely watch every movement, cannot be questioned by others. The handlers were about evenly matched as to experience, and knew how to get all that could be brought out of the dogs during the races.

CROW AND COUNTESS LLEWELLIN

were put down at 11:10 A. M., Crow being a large-sized black pointer dog (Starr's Broncho—Waddell's Fan), owned by J. R. Daugherty, of St. Louis, Mo., and handled by N. B. Nesbitt. Countess Llewellin, a fine looking, white with lemon ears, bitch (Druid—Princess Draco), owned by G. H. Laughten and handled by Charles Harnes, of DeWitt, Neb. An open place was selected and dogs sent away to show speed and ranging. Countess got away finely and looked handsome springing along. Crow did not get an even start, but soon got down to business and commenced showing that a pointer could go somewhere near some of the Llewellins. Sent on to cover and swung around to where the flushed covey had been marked, Countess made a fine point and Crow being brought up, backed. A rabbit ran from the point. Falling back to get the wind, Countess soon had the fortune to get on to the covey, and getting the scent very strong, dropped flat. Harnes flushed, and his gun snapped. Countess was steady to wing. Crow could not see to get a back, and yet he should have pointed, as he was on the windward side. The birds were marked down and dogs sent on. Going down the draw into high cover, Crow pointed on a single, which was flushed and shot by Nesbitt. Crow was sent to retrieve and Countess was hard to stop and did not obey command. Crow retrieved in fair shape. Starting on, Crow pointed fur. Getting to the marked covey, Crow got on to a point at once, Nesbitt flushed and Crow was steady. Both dogs made game on the running birds. Sent to a slough with some trees, Countess pointed. The covey flushed and Nesbitt shot and missed; marked in stubble by the hedge. Getting dogs to wind some pretty work was done; Crow pointed and Countess backed, Nesbitt flushed two birds, missing both. Then Countess pointed but the birds ran and could not be flushed. Soon Crow pointed, and Countess, coming down wind, flushed. This ended the heat at 12:25 P. M., and Crow won. The dogs were both handled in good shape. The style and ranging of Countess was the best, but Crow is of much merit. In obedience and discipline Crow had the lead. In pointing, Crow had the best of the race.

PATSEY D. AND BRIDGEPORT

were ordered down at 1 P. M. Patsey D. (Lord Dufferin—Queen Bess), owned by R. C. Van Horn, of Kansas City, and handled by A. J. Gleason, his breeder and trainer. Bridgeport is a large, handsome black, white and tan dog (Dashing Monarch—Vannette), owned by E. E. Pray, of Denver, and handled by W. B. Stafford. Sent away on rising, open ground, slightly undulating, to try speed, both went off fairly, with Patsey surprising even his admirers. Bridgeport showed a slight stiffness or want of disposition to gallop over ground where there was no prospect of getting on to game. Patsey could not be expected to rank in style with a Llewellin, but he was holding him fairly level. Getting down the slope to cover, both began to get the hunting fever, and Bridgeport showed improvement. On the top of a bank Bridgeport made a point, Patsey came up for a back but kept drawing and had to be stopped by command, and was not very steady to word. No game was found; Patsey pointed a rabbit and started it. Going down the draw, the dogs being together, a point was made, for which Bridgeport got the credit. The birds were flushed and Stafford killed, the bird fell on the other side of the water and the dog was not required to fetch. Sent on to try the corn, Patsey soon made a point and Gleason flushed and killed; Patsey soon retrieved in good order. Again Patsey got another point; bird flushed. Patsey then made another point in a weed patch, and was really doing all the work. The game was flushed by Gleason; Patsey steady. Down the hedge Bridgeport found a bird and pointed. Patsey backed; the bird flushed. Then Patsey made game on a flock of sheep, and Gleason, not hankering after mutton, wanted the judges to call up the dogs and get away from the sheep scent. But the hunt was continued; Bridgeport got a point and Patsey a fair back. Dogs moved on and scent was hot, Patsey, roading down wind, flushed the covey. Birds were marked down in grass. Sent on, the birds flushed wild, and Stafford killed, Bridgeport retrieving in fine style. Sent on down wind Bridgeport soon had another point; roading, he was puzzled, and finally flushed the bird and made a spring as if to catch it, showing that he was used to catching crippled birds. Handlers used poor judgment in running their dogs down wind on a marked covey; the ordinary hunter would have used better judgment. A long hunt up a pasture lot followed and no birds were found. Here the judges stopped and held a consultation, lasting ten minutes. The owners seeing the time taken up urged the judges to decide without running further. By a slight majority Bridgeport won, and the good Irishman is downed. Patsey lost the race by having a poor nose. Patsey must have an off day sometimes, his flush being inexcusable. He cut out the work and Bridgeport was for a time rather trailing. Patsey lagged for a time during the race.

THIRD DAY.

The third day opened unfavorably, wind blowing cold, and continued so all day, while the clouds obscured the sun, making the birds wild and leggy. The races run were the best of the meeting, and were much enjoyed by those who had the pleasure of seeing the points, flushes, etc. Some good dogs had been down the previous days, but the best brace was that put down in the morning, consisting of

LUFRA AND KING NOBLE.

Lufra is a handsome blue and tan bitch (Dog Whip—Juno), owned and handled by N. B. Nesbitt, of St. Joe, Mo. King Noble is a fine, stylish blue belton dog (Count Noble—Rosalind), owned by J. I. Case, Jr. (son of the well-known J. I. Case, of Racine, Wisconsin, owner of the famous trotting horse Jay-Eye-See) and handled by C. W. Barker. Barker wanted to go on a run to keep up with him, but that would be a little out of the regular order of things. Meantime Lufra was getting in some grand spurts of speed, and in her actions and general style had the best of it. A small field of grass along the creek was drawn blank, and from there into corn, also blank. Getting to windward of a draw, where the cover was very high and dense, dogs were sent up the creek. These dogs were put down in open to find if they could go, and when they shot away at the word the crowd of spectators began to think that they had made a mistake and put down a pair of greyhounds. The first quarter was made in about the same time that Jay-Eye-See would have made it, and now the lookers-on began to wonder, when King soon made a point and Lufra backed in good shape. King moved on and kept making game, and moving around, pointed birds, but they were not found, and he kept roading up the creek. Lufra here began to get the scent and made a road, and after some maneuvering, the birds not being found, the judges called the dogs up to change ground, Judge Merriman remarking, "This is no place to hold a field trial with dogs." Getting on to the open, the dogs were sent away, and for an hour and a half the chase was continued over field after field, and to all appearances the heat was now being made to test the power of endurance of the dogs, rather than their scent. On and on they went; through corn and high weeds the dogs kept going, and all the time that terrific gait was kept up. When in the corn the only way the handlers could tell where they were was from the noise made by them as they knocked down the cornstalks. The dogs' tails were bloody from whipping the cover. The wagons coming up the dogs were put in and carried a distance of a mile, to get a breathing spell, while the judges stopped to look over the ground. The reporter being asked by the secretary where the birds were at that time of day, very promptly replied, "They are in the corn." The dogs were sent into the corn, and by the time a distance of 300yds. had been traveled Lufra struck the scent and made game, King coming along pointed, and Lufra made a good back. The birds had run, and Lufra, roading, made a point; Nesbitt flushed, shot and missed; both dogs steady to wing and shot. Sent on, both dogs pointed and roaded; birds ran; no cover. Sent on to find the flushed birds. After trying the border of fields and banks of the creek the same were abandoned and getting around to the road, the dogs were taken up and a change of ground was made. Sent off in grass King soon had the chance to try his nose, and it proved not wanting, for he made a good point and a covey was flushed. Lufra, coming through the high grass caught sight of King and stood like a statue. The question had gone around whether dogs with such wonderful rate of speed had noses that could be trusted to point the game without flushing, but now that delusion was thrown aside. Ordered to flush, Barker shot and killed, and the bird was retrieved by King. Dogs behaved well; steady to wing and shot. Now the fun commenced. Lufra soon got a point and moved on; the bird flushed, was shot by Nesbitt, and Lufra, sent on to retrieve, had some difficulty in getting it, as it was only winged; she was called off and sent on. King and Lufra got a point at same time, but birds were running in high grass and were hard to find. Lufra was held at her point and King brought up to back, which he did, often being stopped by word from handler. Nesbitt flushed a bird and shot and killed it. Lufra, sent to retrieve, got two fine points before getting to the dead bird; when found she brought in good shape. Sent on, both dogs pointed and roaded, as birds were running. Nesbitt finally flushed bird after following about 300yds. Some real fine work was done by the dogs, but they were badly handicapped by the handlers crowding them as though they were afraid that the competing dog would get the heat, provided he got that particular point. Going on among high grass and tall trees, the dogs still did fine ranging and quartering, but Lufra showed the finest style, and that she knew, that by feeling for scent carefully she would get on the much desired point and please herself and master. King made a point; no game, but Barker had claimed it. Starting back down the high grass Lufra flushed, down wind. Point made by King, but he roaded on and did not locate. Lufra made another and she moved on and that same big awkward "reporter" ran right on to a single and flushed it down wind. Judge Merriman followed. The handlers again hurried their dogs and when King made game and stopped Barker kept saying, "Go on," as though he was afraid of a false point. Again the dogs were trying hard to locate, and when on the hot scent were slow dogs, Lufra taking a trotting gait and King a good lope and covered all the ground and got a point, made a fine draw after being ordered on by Barker, but the scent was lost. Changing the course the dogs again roaded and birds flushed ahead. After getting on further both dogs got a point; Lufra soon had another. King went on to grass near the road in brush and made a bad flush of a covey, which were marked down the road west. Lufra got a point on these and King got his at about the same time. Birds were plenty in the weeds, roading and pointing was the order of the day, by the dogs. Lufra got the best of the scattered points, and showed that she knew more about getting points on receiving birds than King. She outgeneralled him and ran into the road, located them, and switched in, pointed with head toward handlers. The weeds were so high she could not be seen ten feet away. This fine work won the heat for Lufra, and they were ordered up at 9:45 A. M. The defeat of King we attribute partly to the fact of his having had so little experience on quail, also that his handler hurried him along too fast; coupling this with the fact that he would not back promptly without command and that he hunted high-headed all the time. Lufra put nose to ground going down wind. She has had the most birds shot over, which assisted her to show her cunning. Mr. Barker knows how to handle dogs in good style, but lacks the knowledge that field trial experience will bring to him. Mr. Nesbitt is one of the veterans in the business, having, we are informed, attended all the trials held in this country.

NELLIE TRUE AND DON BURGLAR D.

Nellie True, white and liver pointer bitch, owned by Mrs. A. J. Gleason, handled by A. J. Gleason, against Don Burglar D., black, white and tan setter dog, owned by W. B. Smith and handled by Harnes. Starting them out in the open, both go fairly, and after a while run into some bushes when birds come out. Nellie was found by Gleason on a point. Moving up a bird was flushed by Don, both dogs steady to wing. Sent to grass for marked birds, Nellie soon got a fine point, and when Gleason went to flush the bird he made a move to assist and a motion as if to catch, but the bird was a young one and started like a crippled bird. Gleason shot and missed. After a second unsuccessful trial at getting up the marked birds the dogs were sent on in new ground, Nellie taking one side and Don the other. Nellie soon commenced to road and the birds were flushed. About this time Don, getting the scent, going in flushed badly. Nellie, springing along, flushed a covey and then made a long creep, showing good style and nose, but the birds were not found; thought to be on the back track. Don came up, backed, and then drew on and would not keep the back first made. Keeping well in the grass Nellie made a grand point. Gleason flushed and killed. Nellie sent on, brought it in good order, there was not a feathered ruffled. She is a little unsteady to wing, but she was trained to put up the birds at command. Going on, Harnes claimed a point, but it proved a false one; but Nellie backed very handsomely. Nellie made rather a bad flush and had her ears pulled by Gleason. Going on soon, she placed herself in a rigid form and the bird flushed. Nellie behaved pretty well all the way through, and showed finely, all but dash and style; in those she is a

little deficient. Dogs ordered up and heat given to Nellie True.

The last dog not having a mate got the benefit of the heat without running and came in against the winner of the first brace put down Monday.

Second Series.

NATALIA AND SPOT BELTON.

Spot is a blue belton bitch, owned by J. I. Case, Jr., (Dick B.—Belle Belton) handled by C. W. Barker. Put down at 11:30 A. M., on open prairie, to try speed, ranging and style, etc. After getting away it could be seen that here was a match team, and they were much admired. After drawing the grass blank, the dogs finally got to quail ground and at once Natalia had the point established. Spot came around and backed. This was a fine picture. Nesbitt flushed a covey and killed a bird. Dogs steady to wing and shot. Natalia sent to retrieve did it finely and gave it to the judges who looked pleased. Going across the field a covey was found, and after very little roading Natalia pointed, bird flushed. Spot was getting the scent strong and she moved up and appeared to chase, but was stopped on the road. After the dogs could not get game they were sent on to the farm house. They were sent away after dinner, at 1 o'clock, but at the edge dogs made a flurry as on birds. Crossing the road Spot soon made a point and moved up a little. Natalia also made game and roaded in good shape. Spot getting the lead pointed in fine shape, but Natalia coming up passed her and got too near the birds and flushed. Moving on again, the birds flew. Passing on to where the birds were marked down, Spot and Natalia both pointed and birds flushed. Spot was very steady. The birds were now numerous to the right and left, to back and front of dogs and handlers. Both dogs flush and Spot goes it again; grass high and both dogs get a point. The woods and grass were full of birds, point after point being the rule. Natalia warming up made a very pretty point, Spot another, and Natalia backed. Another point and Barker killed, and the game was retrieved by Spot in good shape. Natalia and Spot both pointed. Spot another. Natalia coming up went ahead. Covey of birds got away. Handlers were again very uneasy and hurried dogs so much that they could not help but flush. Point by Natalia and one for Spot claimed, but no bird was raised. Dogs were at once on game again, and after some work were taken down wind to get a good show on the scattered birds. Started in on a chase of pointing and roading. It was fine pointing, but we had hard work to catch up to them. After a long time a bird was raised. Spot behaves nicely to wing and shot. Soon another point was scored and the bird flushed and shot by Barker. Spot sent to retrieve did it nicely, though the bird was only winged. Judges here called a halt to consult. No decision. Dogs again sent on, when Spot got two more points to her credit, and won the heat. Up at 2:40 P. M.

DICK B. AND CORNERSTONE,

when sent away on the open, showed good speed, but Cornerstone was getting the best of the race. Going around near the corn, Cornerstone ran into a covey that flushed, Dick being, however, on the other side, about as near. Cornerstone went down to wing and stayed there until Gleason came up. Birds marked in corn; dogs sent in, and Cornerstone having the best of the race on account of the sand burrs, got the covey and held it for a long time while waiting for Dick to get up. Gleason was finally ordered to flush, and the covey was at once sent whirring away. Gleason shot; no bird killed. Reporter flushed bird and Cornerstone got point; bird flushed. Getting back near where the covey was flushed, Dick pointed and Cornerstone backed; bird shot by Case. The young man was much complimented on his fine shot, as bird flew high and circled to the left. Dick retrieved in good shape. Sent into tall grass, Cornerstone got a point and bird was flushed. Dick made a flush and Cornerstone went down to wing. Cornerstone pointed and roaded, Gleason flushed. Dick roaded with his nose to the ground. Cornerstone went with head high in the air looking for body scent, but Dick got there first and made point, when Cornerstone made one of his grand spasmodic backs. Bird flushed to Dick's point and Case shot; Cornerstone sent to retrieve and did it up brown. Dogs ordered up at 4:05 P. M, and heat awarded to Cornerstone.

ROD AND CROW,

both pointers, went away in grass field, and Crow led right away from Rod who seemed to poke along. Finally, getting into the corn, both dogs made game at once, and Crow getting the best of the race, got on to the covey first, which flushed wild. Sent on, Rod got a fine point and Crow a good back. Stafford flushed and killed and Rod retrieved nicely. Getting away to the grass again Rod ran into a single and pointed it, head low down, bird flushed. Rod now warmed up, and Crow had none the best of the race from that time out. Trying corn, too many burrs were found, and, getting late, the heat was ended by giving it to Rod.

FOURTH DAY.

The morning of the fourth day was very unfavorable, with a cold wind and cloudy sky. The birds were hard to find, and when found, would not lie well to the dog, causing much delay, and the chase during the afternoon was for birds rather than to test the dogs. This was owing to the weather, as during the day they were feeding and hunting for a place to get out of the storm that was coming, and did not huddle in their accustomed places. The afternoon was all taken up with one brace of dogs and only two coveys were found during that time.

The judges and handlers were on the ground at the usual time, and the dogs were put down at 8:45 A. M. The first brace down were

BRIDGEPORT AND LUFRA.

On being sent off in a grassy place both dogs showed style, speed and range, and quartered the ground nicely. Bridgeport warmed up right away and did much better than the day before, proving that he had not then been at his best. Some time was spent before game was found. Getting around to a place where the birds had warm cover, Bridgeport opened the ball by getting a point on what proved to be a good covey. When flushed Stafford shot and killed, and bird was retrieved in excellent shape. Both proved steady to wing and shot. When sent on to find scattered birds in high grass the scent was very poor, as the birds had not stirred. Lufra casting about pointed finely. At flush of birds Nesbitt shot and killed. Lufra here remained steady and at order fetched. Soon Bridgeport came to one of his fine points and Lufra backed nicely. We consider that only one other dog in the whole trials can equal her in that respect. When Stafford attempted to flush no bird could be found, as it was claimed, no doubt he was scored a false point. After some maneuvering and searching, Lufra ran on to a bird and stopped; Nesbitt flushed, but did not shoot. The ground was thoroughly worked over and getting around the hedge corner Lufra succeeded in locating a single. When your reporter came into plain view, Bridgeport was standing as if backing in good shape. Sent on for some time around a corn field and up a draw, and as a pasture was being drawn the luck came to Bridgeport and he got a fine point; Lufra backed, when a large covey was flushed, and they flew down wind for a half mile and settled in corn. The judges, who were afoot, and handlers showing much pluck, followed them, and getting in a line of their flying made a swing around in the corn, and after getting the wind fairly, came up and easily found the birds. Bridgeport made a fine point, Lufra backed. Soon Lufra made two points and Bridgeport did not, after a fair trial, back the bitch as required. Dogs being sent into grass Lufra was already on a point, when the judges, not seeing her, ordered the dogs up. The heat was very soon and properly given to Lufra, but the judge had the good feeling for Stafford and Mr. Pray to say candidly, that when dogs were so evenly matched, a loss of seven points, as in this case for Bridgeport's not backing, could not be overlooked.

As Nellie True had a bye, the second series was ended.

Third Series.

SPOT BELTON AND NELLIE TRUE

were put down at 11:30 A. M. They were started out on a small inclosure and ran directly up to the sheep pen, where Gleason had objected to smell of mutton on Tuesday. There were no birds about the place, and he took it good-naturedly and said nothing. Nellie was going off at fine gait, really holding her own with Spot; the ground was not enough like the chicken country she had been used to, and she did not get away so lively as when she ran her former heat with Natalia. Getting away down the draw she was fast enough for cover and went through it in good shape, considering the discouragement of not finding birds. The dogs sent on, tried the cover where birds should be and the stubble where the calling whistle of the Bob White had been heard. They were hard to find.

Spot made a fine point by dropping to fur, as the rabbit was seen to run. On through the grass they went, and when the draw was reached Nellie made a fine point, and Gleason coming up to her, they moved up and very deliberately flushed a covey. Gleason shot and killed, and the game was retrieved by Nellie with not a feather ruffled. Sent on to high grass, Spot got a flush, and after getting a few casts to right and left, Spot came on to a single, and her staunch point was much admired. Bird flushed by Barker, not shot. The dogs were worked over the ground to get the birds if possible, both dogs heeding whistle and word, hunting finely and faithfully. In the high grass they got a single, which flushed a little wild. Barker kept encouraging Spot by saying, "Hunt them up, Spot; stick to them; go in, Spot," and finally, "that's a good lady," etc. Sent through hedge, soon Nellie got a point, but left it to road a little to get the body scent and stopped short, made a good point, which Gleason claimed, and this time used good judgment by going around the dog and flushing the bird while Nellie remained steady. Going then to a draw near by, both dogs came to a point and Spot held hers solid as a rock, while Nellie left hers and moved down the bank a few feet, then commenced to road on clear ground, went up so near that she flushed a covey, Spot meantime never moved. Going next up a small ravine Nellie made game, stood, and being a little uncertain moved on, and the bird was flushed a little to the right by Spot. Sent on, game was made by both dogs and judges flushed the bird. Still trying fine short grass cover Nellie pointed, moved on, and bird was flushed, Nellie being charged to order. About this time Spot came on to a fine point by coming suddenly up the bank; bird flushed; shot at by Judge Briggs but missed. Spot was very steady. Here the dogs were ordered up, and the judges consulting, soon awarded the heat to Spot. The race was truly lost to Nellie by not being steady, yet she will, no doubt, be set down by spectators to have a poor nose: such is not the case.

ROD AND CORNERSTONE,

the two Meteor pointers, came down together at 1:45 P. M., and started on open ground. Rod got off much better than before, but he could not hold up to Cornerstone in speed, style and ranging. When the cover was reached Gleason spied a cat and wanted to shoot him, saying he was after quail, but he flushed wild and hid among the bushes. Rod roaded in the bottom of a ravine, and then roaded down wind and flushed. Cornerstone got on to a skunk and Gleason shot at him, Cornerstone then getting addled, came around and flushed a single, but was to be excused on account of the skunk. The handlers persisted in getting the dogs on down the wind, and Rod got another flush of a brace. It is a great pity to handicap dogs by improper handling when they should have every possible assistance. Sent on, Rod pointed, Cornerstone backed, but no birds were found. Casting away to the right, Rod and Cornerstone both got a point, and when the handlers came up both dogs were steady to wing and shot. The hunt was then kept up a draw where there was no prospect of getting game, there being no cover. Sent away westward to a slough, a long hunt was made through the high weeds and sunflowers. After going a mile and a half it was suggested by an old hunter that the birds were in the corn feeding, getting ready for the snow storm. The hunt was still continued for another half mile and interest lagged and the dogs were getting rattled. Finally seeing the chances of finding birds grow beautifully less, the cover was tried and after the dogs got away in corn Cornerstone soon made game, and casting about for the wind made a grand point. Rod in the meantime came up and got the full body scent and took his stand. Handlers coming up facing dogs flushed a fine covey; dogs steady to wing and shot. Gleason shot and killed. Cornerstone, sent on to retrieve had some difficulty in getting on to the bird and was assisted by Gleason. When found the bird was squatted in a hole and not fully lifeless and fluttered, when the dog mouthed badly. Bird being inspected by all the judges, they shook their heads. The covey all went down by the hedges in short grass. Casting the dogs off they very soon came on to scent. It now became exciting to see which would get in the best work. Rod did some fine roading and Cornerstone did the same, but being cunning ran ahead after casting out in the road, and getting body scent made a fine point. Birds flushed, dogs steady. Sent on again Cornerstone raised a bird on opposite side of hedge, and chased and did not stop to whistle. Gleason claimed a rabbit, but the judges saw the bird go, and if a rabbit it was none the less unfortunate, for it lost him the race and Rod won the heat. The day's work ended here.

FIFTH DAY.

Fourth Series.

SPOT BELTON AND LUFRA.

First brace in the fourth series—Spot Belton against Lufra—were put down on the prairie at 8:45 A. M. and sent away through grass to test speed, style, ranging and quartering. In this there was not much difference as Spot was getting along very nicely. Drawing the timber skirts Lufra got a point and Spot a back. Lufra moved a little. The birds perhaps were running and the covey flushed. Dogs proved steady to wing and were sent on to try and make more game. Very soon Lufra came to a splendid point and Spot getting up backed. Nesbitt put up a single and made a fine shot. Lufra sent out and retrieved in good shape. The dogs cast off to the left, Spot became rigid and a point was claimed. Lufra here made the grandest back of the meeting, head and tail pointing at right angles to the body, showing that she dropped into that position and remained motionless. As no birds could be found presumption was that the dogs were backing each other and neither had scented birds. Lufra here stretched out and a point was claimed, but she moved on without fully establishing herself and could not be penalized for a false point. The dogs were both quartering finely and were showing obedience to all words and whistles, not found in many braces put down during the meeting. Changing the grounds and going a short distance, Spot moving on when the handler came up and, then commenced some fine roading. Lufra coming up, flies away with a merry lash of the tail. On and on they went, Spot sticking pretty close to the trail, while Lufra would swing around and try for body scent and also to head them off—the latter scheme being a little trick of her own, but showing good hunting sense. Meantime the dogs were going down wind and after the scent had been followed about 100 yards, Spot dropped, and Lufra being ahead by only half a length stood finely. Nesbitt went ahead and flushed a single; dogs steady. The judges now ordered the brace up at 9:28 A. M., giving heat to Lufra.

Fifth Series.

LUFRA AND ROD.

Lufra, handled by Nesbitt, and Rod by Stafford, came down as usual on the open ground to try their speed, pace and ranging. Rod, soon warming up, got away faster than usual. Lufra at once went off, and casting to the north made game, but failed to locate. Nesbitt, thinking to assist her, called off by whistle and cast her away to try a thicket near by; but Nesbitt was fooled, and Rod flushed a single bird while roading down wind. While all were looking for Nesbitt to get on to the birds, the covey flushed wild about one hundred yards to the rear. The dogs, sent in the direction of their flight, were some time in locating them. When they were found the dogs did not do any brilliant work, being no doubt rattled by a jack rabbit, which started from the grass near by. The birds were flushed in high grass. After this disappointment the dogs were again sent away in pasture to try the scattered birds. Soon Lufra got a point. Nesbitt flushed a single and Lufra behaved well to wing. A little further on Rod came on to a trail, and, cover being very short, birds flushed wild. Sent on, Lufra was bent on pointing and came upon a single and stood it in her best shape. Nesbitt flushed and killed; dog steady, retrieved to order. With this good work by Lufra, the judges called a halt and gave her the heat and with it the first money.

There could be but one winner of first money, and it fell to the best dog. The very best dog sometimes meets with an accident while running up through the series and gets let out, but it is very true that a poor dog cannot win. The bitch Lufra ran six races, and came out in each with a majority of points that carried her to the front. Rod, winner of second, is a fine specimen of the liver and white pointer. There has been a rivalry going on for the past two years, and the pointer men have vainly tried to breed such dogs as would equal in the field the qualities of the finest setter, and they are getting there. Last year the first place in the All-Aged Stake was taken by a Croxteth pointer, and the first and second places in the Derby were won by pointers. Malite, the winner of first, was a litter sister to Rod, while Belle, the winner of second, was by Beaufort out of Gertrude. While the setter dogs still lead the procession at the National trials, the pointer is leading at the West, and we predict the day as not far distant when the pointer will take his place alongside the setter, and at least have some part at the front.

SUMMARY.

First Series.

NATALIA (J. Hayward, Jr.), black, white and tan bitch (Gladstone—Donna J.),

beat

DICK BERWYN (H. P. Dillon), black, white and tan dog (Dashing Berwyn—Vanity Fair).

DICK B. (J. I. Case, Jr.), black and white dog (McKinney—Flossy).

beat

KRUPP (Castleman Kennels), liver and white dog (Meteor—Dell),

---

CORNERSTONE (J. W. Blythe), liver and white dog (Meteor—Accident).

beat

BLITZ BURGLAR D. (W. B. Smith), black, white and tan dog (Burglar—Queen Dido),

---

ROD (Castleman Kennel), liver and white dog (Meteor—Dell),

beat

DICK T. (N. B. Nesbitt), black and white dog (Cashier—Flake).

CROW (J. R. Daugherty), black dog (Starr's Broncho—Waddell's Fan),

beat.

COUNTESS LLEWELLIN (G. H. Laughten), lemon and white bitch (Druid—Princess Draco).

BRIDGEPORT (E. E. Pray), black, white and tan dog (Dashing Monarch—Vannette),

beat

PATSY D. (R. C. Van Horn), red dog (Lord Dufferin—Queen Bess).

LUFRA (N. B. Nesbitt), blue belton and tan bitch (Dog Whip—Juno),

beat

KING BELTON (J. I. Case, Jr.), blue belton dog (Count Noble—Rosalind).

NELLIE TRUE (A. J. Gleason), white and liver bitch (Robert le Diable—Dixie),

beat

DON BURGLAR D. (G. H. Laughten), black, white and tan dog (Burglar—Queen Dido).

SPOT BELTON (J. I. Case, Jr.), blue belton bitch (Dick B.—Belle Belton) a *bye.*

Second Series.

Spot Belton beat Natalia.
Cornerstone beat Dick B.
Rod beat Crow.
Lufra beat Bridgeport.
Nellie True, a bye.

Third Series.

Spot Belton beat Nellie True.
Rod beat Cornerstone.
Lufra, a bye.

Fourth Series.

Lufra beat Spot Belton.
Rod, a bye.

Fifth Series

Lufra beat Rod.

ABOUT A PUG.—One of the funniest things in connection with recent shows was the antics of a Jerseyman named Bannister or Ballister, part proprietor of a pug that didn't get the first prize. Bannister or Ballister thereupon wrote a long yarn of his woes and dispatched it to the *World*. The next morning he bounced out early and spent two cents to look for himself in print. Having in this vain search, which was kept up for a fortnight or two, added one copy a day to the circulation of our esteemed million-and-a-half-a-week contemporary, the pug proprietor gave it up in disgust, and sent the story of his wrongs to a Western sheet, where it promptly appeared in the same issue with a commendatory notice of an institution for feeble-minded youth. Its final appearance in print aroused in Bannister or Ballister emotions like those that filled the gravy-basted breast of the Alcayde's old rooster, when, restored to life by the blessed Santiago, he and his mate uprose re-headed and re-feathered from the platter—

Cluck! cluck! cried the Hen, right merrily then
The Cock his clarion blew,
Full glad was he to hear again
His own cock-a-doo-del-doo!

PHILADELPHIA CLUB TRIALS.

[From a Special Correspondent.]

FREDERICA, Del., Nov. 15.—The third annual field trials of the Philadelphia Kennel Club were commenced here this afternoon. The drawings for the All-Aged Stake were as follows:

VOLLEY (B. Ridgway), English setter bitch (Antic—Princess Mix),

against

MOLLIE BAWN (Chas. Thompson) Irish setter bitch (Glencho—Biddy).

CREOLE (I. H. Roberts), Irish setter bitch (Grafton—Meg),

against

GROUSE (M. Richards (English setter dog (Grouse—Leda).

CASSINO GLADSTONE (E. Comfort) English setter bitch (Gladstone—Countess Druid),

against

KNOB (G. Schreiber), English setter dog (Grouse—Flora.

VICTORIA (James E. Stovell), Irish setter bitch (Berkley—Nora).

against

WEE CLARA (E. W. Jester), English setter bitch (Count Noble—Dashing Romp).

BRUCE (I. H. Roberts), Irish setter dog (Elcho—Norem).

against

LEIGH DOANE II. (W. H. Child), Irish setter bitch (Chief—Leigh Doane).

NELLIE (Chas. Thompson), Irish setter bitch (Glencho—Bess).

against

JESSIE (I. H. Roberts), Irish setter bitch.

DAISY (I. H. Roberts), Irish setter bitch (Chief—Leigh Doane), *a bye.*

Owing to delay only one heat could be decided. To expedite matters Col. B. Ridgway was selected to judge one brace, Cassino Gladstone and Knob, while C. J. Peshall took Volley and Mollie Bawn to a different locality. Neither of the heats have been decided. Volley and Mollie Bawn were ordered up after being down one hour, no birds being found. Darkness interfered with Mr. Ridgway's pair. Grouse and Creole, being ordered down by Mr. Peshall, ran a capital heat, both doing excellent work. Creole, handled by T. Predmore, and Grouse by Shewbrook. Down, one and a half hour; heat awarded to Grouse. The trials were opened by the All-Aged Stakes. The club is well represented by 20 members.

SECOND DAY.

FREDERICA, Del., Nov. 16.—No good work was done yesterday, but the results of to-day's running were much more satisfactory. The day was delightful and an early start was made, the party leaving the Delaware House before 8 o'clock.

VOLLEY AND MOLLIE BAWN.

Mr. C. J. Peshall, judge for Mr. Ridgway's Volley and Mr. Thompson's Mollie Bawn, were the first brace put down to decide the unfinished heat of yesterday. It was nearly an hour before birds were found in some scrub oaks. Here Volley pointed false and Mollie backed. Soon after Mollie, who was not under good control, flushed a bevy, and a little later Volley pointed and Mollie refused to back, passed him and flushed. The heat was given to Volley.

CASSINO GLADSTONE AND KNOB.

Colonel Ridgway was chosen to judge this brace, and a long walk was had before birds were found. Knob failed to do anything and declined to back, while Cass made several points and easily won the heat.

VICTORIA AND WEE CLARA.

Mr. Peshall ordered down this brace, and no birds were found until they were sent into a piece of woods where a scattered bevy had taken refuge. Here Victoria pointed and held her point staunchly while Clara was called up to back. This she did, but not until she was close to Victoria. The birds were flushed and two killed, which Victoria retrieved in good style, thus winning the heat.

LEIGH DOANE II. AND BRUCE.

Mr. Child's Leigh Doane II. and Bruce were judged by Mr. Percy C. Ohl. Leigh was the first to find and pointed nicely. Bruce backed, but not very well. Leigh soon found again and pointed, and Bruce drew by her. She then pointed again and a bird was killed which she retrieved very nicely, winning the heat.

NELLIE AND JESSIE.

This brace were not on the ground when called and so did not run.

Second Series.

LEIGH DOANE II. AND VICTORIA.

This heat was marked by flushes on the part of each dog, but some good work on scattered birds followed. Vic refused to back once. Then she pointed and the bird was killed. Turning toward the hotel for dinner the dogs had a good chance to show speed and style in the open, and Victoria was far ahead in ranging and style, while Leigh pottered. After dinner the heat was continued, Vic making a flush and then a point, which was backed by Leigh. After a spin in the open, in which Victoria showed much the most style, they were ordered up and the heat given to her.

GROUSE AND VOLLEY.

Only one point was made in this heat and that by Grouse, who beat Colonel Ridgway's Volley without difficulty.

CASSINO GLADSTONE AND DAISY

were now put down, but before anything was done it became too dark to run and they were ordered up, to go down again in the morning.

SUMMARY.

First Series.

Volley beat Mollie Bawn.
Cassino Gladstone beat Knob.
Victoria beat Wee Clara.
Leigh Doane II. beat Bruce.

Second Series.

Victoria beat Leigh Doane II.
Grouse beat Volley.

NATIONAL FIELD TRIAL ENTRIES.

ALL-AGE STAKE.

SETTERS.

GLADSTONE'S BOY (Dr. Geo. G. Ware), black, white and tan dog (Gladstone—Sue).

SPORTSMAN (J. W. Murnan), black, white and tan dog (Gladstone—Sue).

CHICKASAW (P. H. & D. Bryson), black, white and tan dog (Gladstone—Sue).

PET GLADSTONE (P. H. & D. Bryson), black, white and tan bitch (Gladstone—Sue).

DAN GLADSTONE (P. H. & D. Bryson), black, white and tan dog (Gladstone—Sue).

LILLIAN (P. H. & D. Bryson), black, white and tan bitch (Gladstone—Sue).

GAY GLADSTONE (B. P. Holliday), orange and white bitch (Gladstone—Florence).

JESSE GLADSTONE (H. E. Hamilton), orange and white dog (Gladstone—Swaze).

NIOBE (T. L. Martin), white, black and tan bitch (Maxwell—Juno II.).

BRIDGEPORT (E. E. Pray), white, black and tan dog (Dashing Monarch—Vinetta).

PRINCESS HELEN (Ramapo Kennels), orange and white bitch (Thunder—Bessie).

PRINCE IMPERIAL (Ramapo Kennels), orange and white dog (Emperor Fred—Bessie).

CLIFFORD (Ramapo Kennels), black, white and tan dog (Emperor Fred—Fairy Belle).

DAISY F. (R. M. Dudley), orange and white bitch (Gleam—Dean).

BEAUMONT (W. R. Huntington), black, white and tan dog (Prince Royal—Nettie).

NED (Joel J. Carter), orange and white dog (Cid—Victoria).

LEE B. (A. F. McKinney), orange and white dog (Count Rapier—Kate B.).

BOB GATES (Wyte Bedford), black, white and tan dog (Count Rapier—Belle of Hatchie).

NOBLE C. (B. M. Stephenson), black, white and tan dog (Count Rapier—Belle of Hatchie).

LADY C. (B. M. Stephenson), black, white and tan bitch (Coleman's London—Belle of Hatchie).

BEN HILL (B. M. Stephenson), black and white dog (Druid—Ruby).

MINNIE S. (B. M. Stephenson), black, white and tan bitch (Dashing Berwyn—Romp).

DAD WILSON (Latonri Kennels), black, white and tan dog (Cambridge—Dido II.).

LUFRA (N. B. Nesbitt), blue belton and tan bitch (Dog Whip—Harrison's Juno).

JACK CADE (E. V. Hale), black, white and tan dog (Lug Dhu—Mollie C.).

DAN (W. B. Shattuc), liver and white dog (Cambridge—Dido II.).

JUNO A. (Memphis & Avent Kennels), black and white bitch (Druid—Ruby).

CANADA PEG (Memphis & Avent Kennels), black, white and tan (Cambridge—Marchioness Peg).

DORA (J. H. O'Reilly), red bitch (Box—Rowena).

PATSY D. (R. C. Van Horn), red dog (Lord Dufferin—Queen Bess).

POINTERS.

ROD (Castleman Kennel), liver and white dog (Meteor—Dell).

KRUPP (Castleman Kennel), liver and white dog (Meteor—Dell).

CONSOLATION (C. H. Odell), orange and wite dog (Bang Bang—Grace III.).

The secretary's address is B. M. Stephenson, High Point N. C.

B. M. STEPHENSON.

MASTIFFS.

Editor Forest and Stream:

Fiddle, dee dee!

W. WADE.

HULTON, Pa., Nov. 12.

NEWS FROM HIGH POINT.

NOTHING of importance has transpired during the past week, except that yesterday we had a glorious rain which insures a very favorable condition of affairs for the trials. Messrs. Donner and Gregory, of New York, and Dr. Williams, of Springfield, Mass., are the only arrivals during the week. Several more are expected in a day or two and by Wednesday there will be quite a crowd. I am taking kindly to my training and am doing a fair amount of work, and although I have not yet developed the requisite rate of speed necessary for field trial work, I hope, with judicious handling, to start on Thursday in first-class form. Until yesterday all my work has been on quail. We have found them more plentiful than I have ever known them to be here, and our sport has been all that we could wish. Yesterday it rained all the morning and although the weather at noon was threatening, seven of us, seduced by wonderful tales of fabulous numbers of turkeys, concluded to brave the warring elements and go for them. Taking teams we drove about four miles to the range, and forming our lines in battle array to beat down the creek on each side, we "let slip the dogs of war" (which was old Shot) and started through the pines toward the lower end, where we arrived with the loss of only one man. He was soon found, however, but as it was raining cats and dogs we abandoned further turkey hunting and hunted shelter under the spreading pines. Our trees soon began to leak and we sought others, and continuing to change we soon had the entire forest leaking like a sieve. As soon as we had become as wet as we could be we started for the teams. It was now raining pitchforks, but we trudged on serenely confident that no matter what came we could be no worse off outside, and that in any event we were as dry as powder inside. As we came out of the woods we saw a magnificent (I believe that is the word) gobbler. He also saw us, and as some of his family have been known to leave under such conditions, he was in a few brief seconds but a beautiful vision of the past. We stood there spellbound, seven souls with but a single thought, seven hearts that beat as twenty-one. Old Shot, however, did his duty bravely and charged the enemy at his best speed, but nimble steps and frantic yelps failed to make the charge of shot any more effective than those that remained quietly in our guns. Defeated and cast down we formed in line and followed on in the direction he had taken, and soon one division of our forces routed him from the sedge grass and at once opened fire at long range, but notwithstanding their best efforts we shall dine upon roast beef to-morrow. Some of us had taken the wise precaution to bring rubber coats, and it was with deep feelings of satisfaction that we found that not a drop of rain had fallen upon them, as the driver, with a wisdom that only comes to the gifted, had placed them under an overcoat. To-day, in company with Mr. A. E. Smith and Dr. Williams, I have enjoyed the best day among the quail that ever fell to my lot. We drove about seven miles to the farm of a gentleman who had kindly invited us to shoot over his grounds. We had with us Mr. Smith's Irish dog Birdo and a nine months old pointer owned by Dr. Williams that had only been hunted one day previously. Birdo is the best Irish dog that I have ever seen afield, and much of his work to-day was of a high order of merit. His tail action when on point that I mentioned last week was lacking, and nearly all his points were quite rigid and stylish. The puppy also covered himself with glory and gave flattering promise of future usefulness. We found some fifteen large bevies of fine, strong birds and brought home a fair bag, and better than this, recollections of the glorious day on the stubbles and among the fragrant pines that will long live in memory as one of the most delightful of many delightful days afield.

SHADOW.

THE STAFFORD SHOW.—Stafford Springs, Conn., Nov 15.—*Editor Forest and Stream:* We are much surprised at the complaint of August Belmont, Jr., in your paper of Nov. 11 agains this club. Mr. Belmont's first letter asking for our premium list, etc., came to us unsolicited. We have never attempted to deceive him in any particular, and we would be much pleased to have him hand to the FOREST AND STREAM every letter that he has ever received from any member of this club, with a request that you state to your readers "fearlessly" whether in your opinion there has been any attempt to "deceive," "victimize," etc. We expected that Mr. James Mortimer would judge the sporting dogs, but he was obliged to decline on account of the pressure of his own business, and we afterward secured the services of Mr. Tallman. As to the statement that Mr. Tallman remarked when he judged the dogs "that he knew nothing about fox-terriers," we find upon inquiry that no member of this club ever heard him make any such statement, but on the contrary, when he finished his judging, he stated plainly to all present, that if any person desired to take any exception to his awards, he was willing that they should appeal to any competent judge to say whether he was right in his decision, but no appeal was taken. It was not for this club to ask the judge to award the premiums against his own judgment, and we have never done it under any circumstances, for it is our intention to give equal and exact judgment to all, whether rich or poor. We made all of our arrangements to get out a printed list of entries, but as the time of closing the entries was only three days before the bench show, we were unable to do it. Mr. Belmont's own entries were not received until the day before the show. The tent was a large and serviceable one, free from all rents (as per affidavit inclosed), and being closed at night, was warm and comfortable; in fact, many of the owners of dogs preferred the tent to a close building, for that season of the year, and we have yet to hear of a single dog that has suffered in any way from the exposure. We have contracted for a building, to be finished before the next season, which for convenience and comfort will not be excelled by any in the country, but we shall not even then be able to promise first premiums to every exhibitor, neither do we expect to hold a bench show when there will not be some "kickers."—STAFFORD KENNEL CLUB.

WESTERN FIELD TRIALS ASSOCIATION.—The annual election of officers in the Western Field Trials Association was held in the Henry House parlors, and resulted in the following named members being selected to serve for the ensuing year: President, A. A. Whipple, of Kansas City; First Vice-President, Theo. Mosher, of Abilene, Kansas; Second Vice-President, E. E. Pray, of Denver, Col.; Third Vice-President, E. F. Stoddard, of Dayton, O.; Secretary and Treasurer, R. C. Van Horn, of Kansas City. Executive Committee—A. A. Whipple, Theo. Mosher, E. E. Pray, E. F. Stoddard, R. C. Van Horn, A. C. Walmsley, Louis Kunz, H. P. Dillon, J. W. Munson and L. H. Faulkner. Board of Appeals—G. D. Huling, J. I. Case, Jr., R. M. Hutchings, E. C. Sterling and G. W. C. Rohrer.

AMERICAN FOX-TERRIER CLUB STUD DOG STAKE OF 1887.—Following are the entries in the American Fox-Terrier Club's stud dog stake of 1887, the entries having closed Nov. 1: H. K. Bloodgood's Clover Turk (Mixture—Spite). August Belmont, Jr.'s Bacchanal (The Belgravian—Bedlamite), Regent Vox (Tackler—Sandy Vic). Ed. Kelly's Scarsdale (Joker—Ella), Clover Spice (Spice—Poppy). Kelly & Hoey's Valet (Venetian—Vinaigrette), Shovel (Spades—Roseleaf), Earl Leycester (Spice—Dame). R. de Koven's Stableford Joe (Corinthian—Jenny). L. & W. Rutherfurd's Splauger (Dickon—Sutton Veda). John E. Thayer's Mixture (Spice—Fairy 3), Raby Jack (Mixture—Shame), Belgrave Primrose (Belgrave Jerry—Wasp).—AUGUST BELMONT, JR., Pres. A. F. T. C.

AMERICAN KENNEL CLUB.—Bergen Point, N. J., Nov. 12.—Notice to the delegates to the American Kennel Club: You are hereby notified to attend a meeting of the Executive Committee of this club, to be held at the Hoffman House, New York, on Monday, December 6, at 12 o'clock, noon. As matters of importance will be presented requiring immediate action, you are hereby requested to be present. By order of the President.—A. P. VREDENBURGH, Secretary. Nov. 17.—The vote of the delegates upon the admission of the Stafford Kennel Club to the American Kennel Club, resulted in its rejection.—A. P. VREDENBURGH, Secretary.

BOSTON SHOW.—New England Kennel Club, Hotel Boylston, Boston, Nov. 11, 1886.—*Editor Forest and Stream:* The New England Kennel Club have secured Mechanic's Hall, in which their show was held last spring, and claim the dates April 5, 6, 7 and 8, 1887, for their third annual bench show. The following gentlemen have been appointed the bench show committee: Jean Grosvenor, Chairman; F. L. Weston, Secretary; A. W. Pope, F. Blackwood Fay, W. O. Partridge, J. W. Newman.—F. L. WESTON, Secy.

BENCHING AT SHOWS.—New York Nov. 4.—*Editor Forest and Stream:* My company is now prepared to undertake the benching and feeding of dog shows in the same manner as they do in England, using the open wire work benching. Our contract would include the making of the judging rings, supplying of the prize tablets, numbers, the straw and sawdust, and disinfectant; and the prices at which we do this work would secure an immense saving to any club with whom we contract.—G. G. CLEATHER, Manager.

COLUMBUS SHOW.—Columbus, O., Nov. 8.—*Editor Forest and Stream:* We will have a bench show in connection with the Ohio State Poultry, Pigeon and Pet Stock Association exhibition, Jan. 17 to 21, 1887.—WILL. F. KNELL Supt.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Oscar, Ossian, Oswald and Osmond. By Mrs. Geo. Shepard Page Stanley, N. J., for dark brindle deerhound dogs, whelped Oct. 24 1886, by Dunrobin (A.K.R. 1239) out of Shelloch (A.K.R. 2214).

Barney. By Phelps Smith, Plattsburg, N. Y., for orange tawny St. Bernard dog, whelped 30, 1886, by Nero (A.K.R. 3762) out of Ruth (A.K.R. 3145).

Pomery Sec. By Clifton Kennels, Jersey City, N. J., for liver and white pointer dog, whelped Aug. 3, 1886, by Graphic (A.K.R. 2411 out of Jane.

Monitor. By John Turnbull, Brooklyn, N. Y., for orange tawny and white St. Bernard dog, whelped Sept. 13, 1886, by Nero (A.K.R. 3762) out of Flora II. (A.K.R. 3149).

Jersey Trix. By W. H. Joeckel, Jr., Hoboken, N. J., for white with black and tan spots, fox-terrier bitch, whelped Oct. 3, 1885, by Bruce (Terror—Tasse) out of Nellie (Flippant, A.K.R. 528—Jaunty, A.K.R. 2696).

Charlotte. By Hiram Card, Elora, Ont., for black and tan fox-hound bitch, whelped May 26, 1886, by imported Jumbo (Sultan—Castaway) out of Spot (Loud—Beauty).

Chase. By Hiram Card, Elora, Ont., for black, white and tan beagle dog, whelped April 25, 1886, by Blue Cap (Blue Cap—Blue Bell) out of Chimer (A.K.R. 669).

Blue Chip. Orange and white English setter dog, whelped Aug. 27, 1886, by Buckellew (A.K.R. 30) out of Nellie Druid, by W. A. Coster, Flatbush, L. I., to E. D. Keeney, Arcade, N. Y.

DEATHS.

Beauty. Pointer bitch (A.K.R. 2834), owned by Geo. McNeil, Jr., Jersey City, N. J., from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. L. B., East Bloomfield, N. Y.—Will you please tell me through FOREST AND STREAM what the matter is with my pointer bitch, and how to cure her. The inside of ears, inside of legs and whole body generally is covered with small yellow spots which contain a thick, yellow matter; otherwise health is good, appetite good, but she is thin. Ans. You had better prick the pustules with a needle as they form; wash with a soft sponge, warm water and castile soap and dust over the surface with a powder of equal parts of calomel and borax. Keep the bowels in order with syrup of buckthorn or castor oil in teaspoonful doses and give five drops of Fowler's solution of arsenic in the food night and morning.

DON'T SUFFER COLD TO ACCUMULATE on cold until your throat and lungs are in a state of chronic inflammation. Attack the first symptoms of pulmonary irritation with Hale's Honey of Horehound and Tar, and achieve an easy victory. PIKE'S TOOTHACHE DROPS cure in 1 minute.—*Adv.*

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co.

ASKING FOR GLORY.

SPRINGFIELD, Mass.—*Editor Forest and Stream:* Your report, as far as it goes, of the presentation of the trophies won by the teams from the Massachusetts V. M., at the late Creedmoor meeting was very good. It seems to me that you devote considerable space of your very valuable paper to publish the speeches made by Lieutenant Zalinski, Colonel Rockwell, Adjutant-General Dalton and Governor Robinson; also the military gentlemen present, but I fail to find any mention of the men who were present who won the victories. Mr. Editor, if you have the names of the teams from the Massachusetts V. M. who won the trophies at Creedmoor, and who were present at the lunch and went to the Hollis Street Theater, Boston, will you kindly publish them so that the marksmen of the country may see who the men are in this State that can shoot. Judging from your glowing report, one would think that no one was present at the lunch got up expressly for the team but officers. If my memory does not fail me, I think that three-fourths of the team were enlisted men. Adjutant-General Dalton, on receiving the trophies, did not address himself to the team at all. He simply said: "Colonel Rockwell and Officers." The enlisted men who won the trophies were not mentioned. I think it a slight on the team. Why Colonel Rockwell and the officers should get the glory I fail to see. So far as I know Colonel Rockwell did nothing to help win the trophies. It seems to me that the report is in keeping with the competitions which were carried on for places on the team, simply favoritism.

The way military matters as regards rifle shooting are carried on in this State is far from creditable to the officers having charge of it. There is a great deal of dissatisfaction in this part of the State, and it is highly probable that another year will find some of the crack shots absent. Excuse me, Mr. Editor, for trespassing so much on your valuable space, but I could not help noticing the very one-sided affair. I hope, Mr. Editor, you will favor the readers of your paper with the names of the Massachusetts teams who won at Creedmoor. It will be appreciated by all lovers of fair play. M. V. M.

[Our full report of the Creedmoor meeting, published Sept. 23, gave the scores of each man in detail. In the Hilton Trophy match we find the team made up of M. W. Bull, F. R. Bull, Capt. C. W. Hinman, Capt. J. B. Osborn, L. Grant, C. C. Foster, Capt. J. P. Frost, F. D. Bartlett, M. A. Daulton, A. L. Brackett, Lieut. S. S. Bumstead, A. C. White. In the Inter-State match the winners were: M. W. Bull, F. R. Bull, R. E. Edes, W. N. Merrill, S. S. Bumstead, A. C. White; C. W. Hinman, J. H. Osborn, Lincoln Grant, C. C. Foster, M. W. Daulton, A. L. Brackett.]

THE BULLARD RIFLE PRIZES.

SPRINGFIELD, Mass.—The Bullard Repeating Arms Company of this city, to keep up the interest in rifle shooting, have decided to offer two of their fine rifles for competition, open to all rifle clubs and military companies in the United States and Canada for the first series. Rules governing the first series of matches are as follows:

Notices of entries and applications for targets should reach us before Dec. 11, in order that we may make the necessary arrangements to supply all with targets in time. Applicants should also be particular to state whether they enter for one or both matches, that the requisite number of targets may be sent them. The following are the conditions:

1. Open to all rifle clubs and military companies in the United States and Canada.
2. Teams to be composed of active members of local rifle clubs or of any regularly organized military company.
3. Distance to be shot 200yds., strictly off-hand.
4. Target—American field, off-hand.
5. Any team of the National Guard or regular army of the United States or Canada using the rifle furnished by the State or Government, and having the regulation six pound pull and regular open sights, shall be allowed 5 points for each score of 10 shots. No cleaning between shots.
6. The number of men in each team will be 10 for both matches.
7. Sighting shots, each man 2.
8. Scoring shots, each man 10.
9. Match No. 1 may be shot on any of the following days, viz., December 20, 21, 22, 23, 24, 25.
10. Match No. 2 may be shot January 10, 11, 12, 13, 14, 15, 1887.
11. Teams may select whichever of the above dates is most favorable for making their scores in the matches.
12. Targets will be furnished competing teams by the Bullard Repeating Arms Co. free on application, 2 for each match.
13. Fifty shots only will be allowed on each target, the targets and score cards to be signed by the referee and president or secretary of the club, and forwarded by mail to the Bullard Repeating Arms Co., Springfield, Mass., U. S. A., not later than 24 hours after completion of match.
14. The shooting will be governed by the revised rules of the National Rifle Association of America.
15. The president of each rifle club and commanding officer of each military company will appoint a referee who shall see that the rules of the National Rifle Association are adhered to throughout each competition. In case of any dispute arising the referee shall decide in accordance with the above rules, and if still under protest the referee and the captain of the team shall submit the matter to the Bullard Repeating Arms Co., whose decision shall be final.
16. Sighting shots must not be made on the scoring target.
17. No contestant shall be permitted to shoot under an assumed name.
18. The referee shall test the trigger-pull of all rifles before the matches commence. All rifles must pull 3lbs., except military, which will be 6lbs.
19. The team making the highest score in Match No. 1 will be awarded an extra fine Bullard magazine rifle, .45-cal.
20. The team making the highest score in Match No. 1 will be awarded an extra fine Bullard mid-range, single shot rifle.
21. The results of the matches will be published in the FOREST AND STREAM as soon as known.

The conditions of the second series will be published as early as possible. It is proposed to have an international match, open to the world. Prizes will be offered for teams, also a valuable individual gold badge to be known as the Bullard championship badge of the world, to the marksman making the highest individual score. BULLARD REPEATING ARMS CO.

RANGE AND GALLERY.

WILMINGTON, Nov. 8.—The West Philadelphia Rifle Club visited the Wilmington Club at Schuetzen Park this afternoon. The cold, blustery weather made the day unfit for good rifle shooting, but in spite of it some good scores were made. Teams of 7 men each were selected for the match, with Massachusetts target, 200yds., off-hand. The scores are as follows, out of individual possible of 120 points and a team possible of 840:

Wilmington Club.

H B Seeds	11	11	10	7	9	9	6	11	10	11—95
J B Bell	9	8	6	11	11	9	8	10	8	11—94
C Heinel, Sr	8	8	8	9	11	9	10	3	12	8—91
W F Seeds	9	9	10	8	6	7	10	11	8	11—89
W O'Connor	8	9	6	10	8	9	10	10	8	9—87
F M Clark	9	11	3	7	10	7	8	4	7	10—76
H A Heinel	3	3	8	7	9	12	2	2	10	7—62—594

West Philadelphia Club.

ONTARIO.—The Orillia Rifle Club challenges any club in Ontario to a match at 100 yards standing and 200 yards any position, open sights, any rifle, from 6 to 20 men a side. A preference is expressed for Beaverton, Barrie or Gravenhurst....The officers of Ingersoll Rifle Association for 1887 are as follows: President, M. T. Buchanan; Vice-President, A. J. McCarthy; Range Officer, Beattie Patterson; Secretary-Treasurer, George G. Beck; Auditors, Chief Wilson, D. S. Henderson.

BOSTON, Nov. 10.—At the Massachusetts rifle range, to-day, there was a goodly attendance of rest shooters, and very fine scores were made. Washburn and Francis each made full scores of 100 in the rest match.

MANCHESTER, Oct. 26.—The Manchester Rifle Club opened an annual fall field day at its range in West Manchester to-day and the occasion was one of the pleasantest in the history of the organization. The attendance was large, the weather conditions favorable for the sport, and the contest of the most animated and enlivening character. There were 237 entries, which made the result sucessful financially. The conditions were 200yds., off-hand, rounds 5, 5 scores to count, highest possible result 250. The summary is appended.

C D Palmer	45	44	42	41	45—217	F J Drake	32	31	39	45	33—170
W Morris	42	41	41	39	39—202	N Johnson	35	31	34	39	31—170
G A Leighton	44	40	39	38	40—201	E I Partridge	35	32	31	31	33—162
A B Dodge	40	41	40	41	38—200	J Hodge	30	29	28	27	28—142

	4	1	3	1	2	6	8	—25

SPRINGFIELD, Mass., Nov. 8.—The local Schuetzenverein held their annual fall shoot at their range in West Springfield to-day. The morning opened clear and bright, but before afternoon the sky was as changeable as a chameleon and a strong wind blew over the range. The company badge for first-class marksmen was won by E. T. Stephens. After a good deal of controversy Sidney Bowers was given the second-class company badge, although he contested with first-class marksmen. This is the second time Mr. Bowers has won the badge, and the next time it will become his own property. The third-class society badge was won by J. Flosdorf, and the first prize in the sweepstakes match by A. L. Eames. In the first three matches a bullseye scored 25. The result of the day's shooting follows:

First Class Society Shoot.

E T Stephens	21	25	19	20	23—108
Z C Talbot	19	19	24	23	18—103
T B Wilson	20	22	22	17	22—103
A L Eames	24	16	19	21	22—102
T T Cartwright	14	17	23	23	23—100
S Bowers	21	22	18	20	18— 99

Second Class Society Shoot.

A Kron	24	13	10	24	15—86
A Hallenstein	18	22	21	0	17—78
H Buchholtz	9	23	19	8	11—70
A Schultz	0	17	0	7	0—24

Third Class Society Shoot.

J Flosdorf	14	13	7	14	8—56
E Wurmch	4	12	14	14	6—50
P Purps	0	9	16	5	0—30
E Rolzhouser	0	0	17	9	0—26
G Baer	3	0	8	3	12—26
Wm Shroeder	11	0	0	0	0—11

Sweepstakes Match—Two scores to count, possible 50:

A L Eames	7	9	8	6	8—38	9	5	8	8	10—40—78
Z Talbot	7	9	8	7	8—39	8	7	8	8	7—38—77
E T Stephens	8	7	8	7	7—37	6	8	9	8	5—36—73
T B Wilson	6	8	9	9	7—39	6	7	5	7	8—33—72
S K Hindley	10	7	8	3	2—30	8	8	8	9	4—37—67
J Allen	6	6	7	8	7—34	7	4	6	7	7—31—65

HARTFORD, Nov. 6.—The rifle match between teams of 10 from the Franklin Rifle Club of this city and the Haverhill Club, was shot this afternoon, each club on its own range. Totals were exchanged by telegraph and it was found that Franklin had won by a score of 664 to 613. The day was a bad one for shooting and the light at 3:15 P. M., when the match began, was very bad. The scores of the Franklin Club were as follows:

W W Tucker	7	7	9	6	7	10	7	8	5	5—71
H Andrus	7	6	5	6	7	6	8	7	5	8—65
H M Pope	5	7	9	7	6	6	8	9	8	6—72
E H Williams	10	6	7	4	10	9	10	9	9	5—80
Gen J R Hawley	4	7	5	5	10	5	10	5	0	8—69
T Britten	5	8	9	4	10	6	7	6	6	4—64
Cuno Helfricht	5	8	10	6	8	6	9	10	7	4—69
Otto Klet	7	7	3	10	5	5	9	7	6	4—56
L H Robertson	6	4	10	7	8	5	10	6	6	6—62
E H Hale	8	9	6	5	8	8	0	10	7	4—65—664

The regular monthly shoot for the club medal took place during the afternoon. The medal was won by H. M. Pope with a score of 72. The half dollars were taken by E. J. Hale 0.2, C. Helfricht 0.4, and T. Britten 0.5.

SARATOGA, Nov. 5.—At the range to-day the following scores on the Massachusetts target, at 200 yards, off-hand, were made under some disadvantages as the light at times was very unsteady and the wind variable, ranging from a two-point breeze to an almost perfect calm:

Wm B Gage	11	10	11	12	11	10	12	9	11	11—108
J N Crocker, Jr	11	11	10	12	12	10	11	10	10	11—108
Wm H Gibbs	10	9	11	7	10	10	11	11	10	10— 99
H M Levengston, Jr	11	11	11	9	8	9	9	9	10	10— 97
R C Fonda	12	6	12	9	10	9	11	8	9	8— 93
A L Hall	9	11	7	11	0	11	9	3	10	11— 8

BETTER MILITIA ARMS.—To speak of the rifle practice of our home soldiers is sure to bring a protest against the weapons in use. One correspondent says: "You do not recognize the importance of a change of rifles. I know that some of the men who are "coached" could get through without help if they had good rifles. I am not an "expert," although I can make a fair score, and I have taken rifles from men at Creedmoor and fired several shots without "getting on," and I remember one case where a regular army team man undertook to show me how to sight a gun at 500yds. He got down on his back and fired several shots without hitting the target, and then concluded that I might know how, but that gun was "no good." About a week since I loaned a man my gun to shoot with in the armory. He made a good score the first time, and previous to that he had failed twice with his own. I have tried lots of guns that would not hit the bullseye unless they were aimed at a corner of the target, and this was in the armory, where there was no wind. If the State will give us better guns we will do better shooting." Now that the Creedmoor season is over, complaints are heard from nearly every city regiment in regard to the exceedingly poor quality of the fixed ammunition furnished by the State. An unusually large number of the cartridges failed to explode, and none of them seemed to contain powder of sufficient strength to carry a ball over the 500yd. range with any accuracy. This has had an exceedingly bad effect on the militia's marksmanship record. Men will not sacrifice time and money by going to Creedmoor when they find that, through no fault of their own, it is hopeless to attempt to qualify. The Seventh, it is said, got over the difficulty by simply rejecting the State supply altogether, and preparing its own ammunition. Every other city regiment would have done the same if it could have borne the expense as easily.

TORONTO, Nov. 4.—To-day the return rifle match between the civilian team of Owen Sound and the men of Grey Battalion was fired on the Exhibition Grounds, Owen Sound. On this occasion only six men on each side entered the match, the Volunteers being a special team selected by Capt. Telford from the Leith Company. In this respect the match differed from that of the 27th of May last, when the men of the Volunteer team were taken from the whole 31st. The conditions of the match were that the ranges should be 200, 400 and 500yds., 7 rounds at each range, shooting to be governed by regular military rules. Two sighting shots allowed at each range. The day proved very unfavorable, being cold and gusty, which seemed to tell strongly against the civilians' shooting. The match resulted in a victory for the Volunteer team at all the ranges. As this is a victory for each party, arrangements are to be made to shoot off the match somewhere about Christmas time on the Leith Range, weather permitting. The total scores at the three rages were as follows: 31st Battalion—Captain Telford, 25, 28, 23; total, 76. Vanwyck, 27, 28, 24; total, 79. J. Vanwyck, 22, 25, 20; total, 71. A. Waddell, 23, 21, 21; total, 65. J. Wilson, 23, 21, 15; total, 59. J. Wilson, 23, 32, 23; total, 78. Grand total, 428. Owen Sound—C. C. Pearce, 22, 20, 13; total, 55. Dr. Lang, 16, 10, 27; total, 53. C. K. Grigg, 25, 23, 14; total, 62. V. Campbell, 23, 26, 27; total, 75. J. L. Alexander, 12, 18, 15; total, 45. T. Fox, 22, 22, 18; total, 62. Grand total, 352.

RIFLE-MAKING MACHINERY.—A Hartford dispatch of recent date says that something of a flutter of excitement pervades the leading machinists of New England because it is known that agents of the French Government are hereabout buying up machinery with a liberal, if not lavish, hand. And this machinery is to be used in the manufacture of arms and ammunition. Thus far four of the New England States have been invaded, and the most famous producers of iron-working machinery in the Eastern States serenely contemplate the prospect of selling out, in short order, everything which can be made subservient to the manufacture of a weapon of war. The French Government proposes to establish another armory, capable of turning out at first at least 500 perfect rifles a day. To accomplish this, it is stated that these envoys are ordering all of the available machinery now on hand in the shops above named. It is understood that the negotiations are for immediate purchases, and not for machinery to be made. To make 500 rifles a day will require $500,000 worth of machinery, and it will cost more than $1,000,000 in all to set this machinery in motion for the production of the first 500 guns.

A TARGET TRIP.—Reading, Pa., Nov. 10. The Fifth Ward Guards, of Newark, N. J., arrived here to-day on their twelfth annual target excursion. They numbered 150. This afternoon the Guards shot with Ballard rifles at 75yds. for the gold medal offered by Newark's business men. It was won by Captain W. H. Doran.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NIAGARA FALLS, Ont., Nov. 5.—Whirlpool Shooting Club, sweepstakes day. No. 1—7 Canada blackbirds:

Smith	01101—3	Jenne, Jr	01111—4
Shirley	11010—3	Cline	10111—4

Second divided. The scores were all on account of strong rear wind, two-thirds of pigeons dropping dead out of bounds.—J. B.

BROOKLYN, Nov. 11.—The regular shoot of the Unknown Gun Club at Dexter Park to-day was productive of some excellent scores. H. Knebel, Sr., shot remarkably well, killing 10 birds straight. The first prize was divided by him with Midmer and Monsees. Chichester, Cahill, Houseman and Pope divided second, and Pike, Van Staden and Knebel, Jr., the third. In a subsequent sweepstake Knebel and Pope divided first and second prize. The scores are as follows:

	Yards.	Killed.		Yards.	Killed
Knebel, Sr	25	7	Pope	24	6
Midmer	23	7	Pike	25	5
Monsees	24	7	Van Staden	23	5
Chichester	25	6	Knebel, Jr	22	5
Cahill	21	6	Mattair	23	4
Houseman	25	6	Boyle	21	4

Sweepstake, 25yds.

Knebel	3	Houseman	2
Pope	3	Pike	2
Chichester	2	Van Staden	2
Monsees	1	Matair	2
Cahill	2		

ESSEX VS. MIDDLESEX.—The Essex Gun Club, of Newark, N. J., and the Middlesex Gun Club met in a friendly match at live birds on the grounds of the Middlesex Club at Dunellen, N. J., Thursday, Nov. 11, 15 men a side, 10 birds, Middlesex Gun Club rules, 25yds. rise, 5 traps. The Essex Club arrived at Dunellen in a special car attached to the 11:45 A. M. train, were met at the depot by the entertainment committee and conducted to the hotel, where the inner man was provided for. After which the shooting commenced. Capt. Quinlan, of the Middlesex, put in a strong squad first and obtained a lead of 5 birds, which the Essex boys were unable to overcome. There were many shooters from other clubs present, among these the present holder of the Jersey City Heights Gun Club cup, Heritage—"Old South Paw," as "Jacobstaff" calls him. "May his shadow never grow less," for his heart is in the right place and as big as the moon. Duke was not there, but in his absence his master gave the Essex boys the benefit of his skill in retrieving wounded birds. The birds for the first two squads were an average good lot. Those furnished for the last squad were all first-class, every bird starting as the trap was pulled, making the crack shots on both sides shoot for all they were worth. Captain Hayes, of the Essex, showed the Middlesex boys that a rifle is not the only gun he can point, his eighth bird, the only one he lost, falling dead just out of bounds; and he shot a breechloader, too. Could not say as to whether he cleaned between every shot or not.

The match passed off pleasantly, not a harsh word was spoken or a question as to the referee's decisions. After the match the Middlesex boys were called to one side of the platform and the Essex to the other, when the referee announced that the Middlesex Club had won by a score of 110 kills to 106 for the Essex. Captain Quinlan made a neat speech, thanking the Essex boys for allowing themselves to be defeated and proposed three rousing cheers for the Essex Gun Club. Captain Hayes responded, thanking the Middlesex Club for their gentlemanly treatment, and hoped for another meeting soon when the result would be different, ending with three cheers for the Middlesex Club, von Lengerke doing the tiger with a goose-call.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

RESISTANCE EXPERIMENTS WITH CANOES.

THE attention of canoeists just now is chiefly directed to the development of the best possible boat both in model, build and details, and many are working hard at the problem. Foremost among the builders is Mr. Rushton, who of late has been experimenting with smooth-skins in anticipation of a demand for such boats. At his large works at Canton he has facilities for experimenting on boats and canoes, and some time since he made a series of tank trials of various models to ascertain their floating capacity. This fall he has attacked the canoe problem in a new way, and aided by the little launch Joharrie, has towed a number of canoes with a spring balance, as described below. The results thus far are of little value, but with further experiments valuable data may be obtained. Perhaps the most interesting results just now might be had from trials with one standard canoe in racing (or cruising) trim by adding or reducing weight, shifting ballast fore and aft, raising and lowering board, coating the surface in various ways, with different rudders, and especially by heeling the canoe to various points. For some of these tests the spring balance might not be delicate enough, in which case the trials may be made by taking a certain boat as a standard for all tests. This boat will be made fast to one end of a light pole 10ft. or less in length, the boat to be tested to be made fast at the other end. The tow line is made fast at first at the middle of the rod, being shifted either way as a trial may indicate until the canoes tow evenly. The rod being graduated in feet and tenths, the length of each lever is easily read, and a simple proportion will give the resistance of the model to be tested in comparison with the standard boat. In place of a boat for the latter purpose, a solid plank, of such size and shape as to tow about as easily as the average canoe, would be more convenient and accurate. It should be varnished and kept dry when not in use, so that its weight would always be the same, and it would then serve as a permanent standard of comparison for all canoes. Of course, the balance might still be retained in the tow line, and its readings would be available as at present. Canoeists will appreciate the good work which Mr. Rushton is doing for them, as his object evidently is not so much to build a canoe which will sell, but to build the best possible craft for American canoeing.

Editor Forest and Stream:

I have just made a few experiments, hoping to determine the relative speed of certain boats and canoes. The returns are so conflicting that I consider nothing gained, but as the trial was very interesting to me I will give you the figures, so far as relates to canoes. The mode of trial was to tow each boat, the tow line being fastened to a spring balance (tested with other scales). The tugboat was the launch Joharrie, carrying as even steam as possible (90lbs.), and making six miles per hour. The course was about one-third of a mile, having some curve. We ran this course up and down two or three times for each boat. Each boat was loaded with 175lbs. of shot. Two of the canoes had not the deck on (but timbers, etc., in) and were given 25lbs. extra weight. One end of line, 25 to 30ft. long, was tied to ring in bow, the other to hook of balance, which was fastened to launch so as to draw perfectly free. I had on board the engineer, a man at the wheel, and one to watch the balance and call off the figures—6, 6½, 6½, 7, 7, etc.—as fast as I could easily record them and as regularly as possible. In turning at the ends of the course, and occasionally when the tow steered very wild, the figures were not taken; but when it steered reasonably fair all were noted down. The wind blew some more at the beginning than the end of trial, but quite steadily and not hard at any time. Once I towed Vesper stern first.

The result shows that a man paddling applies less than 8lbs. steady pull in racing. Beyond this it shows little. Below I give table. The first column shows number of pounds pull, the second the number of times each boat touched these certain points as called off. I have built a canoe both bow and stern like Vesper's bow in lines. To distinguish in this trial I have called them Vesper No. 1 and 2. It will be noted that the smooth Vesper seemed to run the easier, while the lapstreak Mohican beat them all. Why this contradiction I cannot tell. J. H. RUSHTON.

THE EXECUTIVE COMMITTEE MEETING.

JUST at this time, when the organization of the divisions and the changes necessary to complete the scheme, make it most desirable that the changes should be thoroughly discussed, it has happened that a large proportion of the Executive Committee have been unable to be present and only a small minority were at the place of meeting. Com. Rathbun had appointed the Gilsey House, in New York, for the meeting to be held at 10 A. M. on Nov. 13, and a full attendance was expected, but at the last moment many were prevented from attending. Com. Rathbun himself was unable to leave Deseronto on account of urgent business; Vice-Com. Gibson did not arrive in New York from England until the following day; Rear-Com. Richards is in ill health and unable to leave the house, and the Purser, Mr. E. M. Brown, is confined to his bed by a severe attack of typhoid fever. Mr. Fraser was unable to attend owing to the serious illness of his father; Mr. Bailey, who had made all arrangements to come was obliged to send his excuse together with his resignation as a member of the Executive Committee, owing to a recent change in his business which will probably prevent his attendance at the next meet; and Col. Fairtlough is in the midst of the term examination of the Royal Military College of which he is commander. The most distant member, Mr. Bousfield of Bay City, Mich., was also absent, while Purser Davidson only arrived in the evening. The members present were: Secretary Neidé, Vice-Com. Butler, Rear-Com. Barney and Dr. Parmele of the Eastern Division, and Messrs. Whitlock and Higgins.

Thus, out of 15 members only 6 were present, and there was some doubt expressed as to their power to hold a meeting. The constitution does not specify the number necessary for a quorum, and the members present finally decided to proceed with the meeting. As the constitution requires a vote of two-thirds for its amendment, they were unable to take action on any amendments, but organized with Vice-Com. Butler in the chair and proceeded to the other business.

Some members of the A. C. A. who were present were invited to listen to the discussion of the site of the next meet, Mr. Frank Hubbard, of Boston, presenting charts of Long Island and Lake Champlain.

The minutes of the previous Executive Committee meeting were read and accepted. Gen. Oliver in response to an invitation gave the views of the Mohican C. C. as to the next commodore and the place of meeting, also reading letters from Messrs. Bousfield and Richards. Ex-Com. Nickerson spoke for the Springfield C. C. and Mr. Stephens for the New York C. C. Mr. Whitlock read a letter from the Newburg C. C., indorsing Vice.-Com. Wilkin for Commodore, and Lake Champlain for the meet; and proposed that the meeting proceed to elect a commodore, the visitors being requested to retire. Mr. Whitlock then nominated Vice-Com. Wilkin; Vice-Com. Butler, Eastern Division, nominated Vice-Com. Gibson, Central Division, and Mr. Higgins nominated Mr. J. B. McMurrich. After several ballots Vice-Com. Wilkin was elected and called to the chair.

After a recess for an hour the applications of several ladies for honorary membership were introduced and laid on the table. Mr. Reade W. Bailey's resignation being read and accepted, Mr. George W. Gardner, of Cleveland, Ohio, was elected to the Executive Committee in his stead, being nominated by Sec. Neidé. On motion of Mr. Whitlock, Bow-Arrow Point, Lake Champlain, was decided on as the site for the next meet, provided it can be had, and on motion of Sec. Neidé the Chair appointed a committee, Messrs. Gibson and Hubbard, to locate the camp and make all arrangements. On motion of Mr. Higgins the date was fixed from Aug. 12 to 26. Mr. Whitlock moved that a recommendation be made that the Secretary of the Association shall forward to the Division Secretaries on or before May 15, of each year, the funds due them for the year; which motion was carried. The auditing committee asked for by Sec. Neidé last year, having reported that they had not found time for an audit of the account, Messrs. Oliver and Gibson were appointed in their places by the Chair. Mr. Parmele suggested that the word "present," in the first paragraph of Art. 8 of the Constitution, be stricken out, but no motion was taken as the required number were not present.

Treasurer Neidé read the following bill, presented by the Delaney estate for camp expenses. It being deemed exorbitant, on motion it was referred to the Auditing Committee with instructions that the Delaney estate be required to furnish a statement of the disposition of the various items.

DELANEY ESTATE BILL TO A. C. A.

1886.		
Aug. 13.	To 7½ cords wood	$15 00

28.	" Ice and delivering	40 00
		$154 34

Mr. J. B. McMurrich and Ex-Com. Nickerson were appointed a committee on transportation. On motion of Mr. Whitlock a vote of thanks was passed to Com. Rathbun and Rear-Com. Richards for their service last year. Secretary Neidé was authorized to convey to Messrs. Richards and Brown the regrets of the Committee at their illness, after which the meeting adjourned. In the evening a dinner was given by the canoeists of New York to the visitors at Clark's, Twenty-third street, at which 40 gentlemen were present. Among them were Ex-Com. Longworth of Cincinnatti, and Mr. F. Stanton Hubbard of Boston, both well known at the earlier meets, Messrs. Henshall, Heighway and Bullock of Cincinnati, Paul Butler, Lowell; Gen. Oliver, Albany; Mr. Nickerson, of Springfield; Messrs. Davidson and Parmele, Hartford; Higgins, Oswego; Grant Edgar, Newburgh; and a number of New York canoeists. The Ideal Cruising Association was also present under the command of Admiral Stanton. The dinner passed off pleasantly with songs and speeches, the company separating at a late hour.

On Sunday Vice-Com. Gibson arrived in New York on the Republic and joined the visitors, who were entertained through the day by the New York canoists, most of them leaving for home in the evening.

HARTFORD C. C.—Race for the Commodore's cup. The weather on Tuesday, Nov. 9, while not perhaps all that could be desired for a race upon the swift flowing Connecticut, was as good as could be expected this season. The postponed race for the Commodore's cup, given a year ago by Commodore Jones and held by the Phyllis, owned by W. F. Girard, was set down for 3 o'clock. At that hour a number of canoeists and their friends were on hand and it was evident there was considerable interest in the result. The competing canoes were the Phyllis, the Rambler, of E. Hart Fenn, and the Dimple, of George Forrest, all of the famous Joyner build. The Rambler is 16ft. long and the Phyllis 15 and the latter received a time allowance of 30s. There was a strong breeze blowing from the west when the boats started, but at the finish the wind had become very light and the race was barely won inside the time limit of 40m. The Phyllis got away at 3:39:15, the Dimple at 3:39:50 and the Rambler at 3:40. The Phyllis held her lead to the one mile buoy and almost all the way home, but near the finish was blanketed by the Rambler, which crossed the line at 4:19:15, the Phyllis coming in at 4:19:17. The time of the Dimple was not taken, as with her small suit of sails she did nothing after the wind fell. The Rambler's sailing time was 39.15 and that of the Phyllis 40.02. The Rambler won by 1¾.

COMMON SENSE CANOES.

Editor Forest and Stream:

Last year I innocently suggested that if sailing canoes were built a trifle wider the navigators of the Mosquito fleet might gain something in the way of comfort and speed as well as be enabled to handle their craft in a more sailor-like, if less acrobatic fashion. It is now a matter of canoe history that my hint was not, on the whole, amiably received; also it was intimated that "I did not know what I was talking about, had better attend the A. C. A. meet and see for myself, that my wide canoe could not be easily and cheaply carried on the cars, or hauled out of the water, or paddled or sailed speedily," or etc.

Numbers and talent combined carried the day and I was silenced though not convinced. Therefore, went quietly to work, built my wide canoe, attended the meet at Grindstone, learned much about the delights of canoeing, and, with your permission, will now give a brief account of how the wide canoe theory worked in practice.

She is named Red Jacket, is 14½ft. long, 47in. wide, sharp at both ends, her bottom is rounding, her sides flat like a sharpie; she weighs 130lbs., and carries a weather grip instead of centerboard. Her sail is triangular, with an area of 120sq. ft., and while this is only a small cruising rig for her, I found that none of the other canoes could outsail her, with all their advantages of racing rigs, shot bags and other questionable machinery. With regard to comfort, would say that while at the meet I slept aboard my boat under a tent hung over the boom. Usually she was anchored at night, like a small yacht, but when the weather was rough I pulled her out on the landing stage, requiring no assistance in doing so.

My kitchen, alcohol stove and pantry, were contained in a tin box which shoved entirely out of sight under the fore deck. Some of my meals were cooked and eaten while Jacket had her sail up and was lying to.

As to the predicted trouble about railroad transportation, I found it to be, like all the bugaboo stories told me last year by those bad boys, an unmitigated yarn. My freight and passage from New York to Clayton and return was $12.50, exactly what was paid by the narrow chaps. Not a railroad man complained of the size or weight of the canoe. I expended but $1.50 in "tips," and my boat, though not packed or cased, arrived home again without injury.

Red Jacket was easily propelled with a paddle whenever the wind failed.

As the general result of my experience, and on fair comparison between my wide canoe and a hundred or so narrow ones, I have come to the conclusion that a preference for any sailing canoe of less beam than 36 to 40in. is the extreme of inexperience, or else of a foolish desire to follow the fashion as set by a baker's dozen of smart racing gentlemen who smile as they realize that they will continue to capture all the regatta honors just as long as the sailing canoe's beam is kept within its present dangerous and uncomfortable limits. No one can honestly deny that the American sailing canoe of to-day has, as a racer, degenerated into a far more questionable machine than either the extremely narrow cutter or the sandbag skimming dish. Will some one speak out for a reform?

ROSLYN, L. I., Nov. 1. THOMAS CLAPHAM.

PADDLE AND CURRENT.

THIRD PAPER.

HERETOFORE our observations had been confined principally to inanimate objects, but we were now favored with abundant opportunities for the study of human nature, and that too of a kind very open to investigation. The canal was quite narrow, having only single locks; and we found a string of closely packed boats nearly a mile long waiting for upward bound scows to be let through the lock. Here were both sexes and all ages engaged in every kind of amusement and domestic occupation, everything being exposed to view. Some were washing and hanging up clothes, others were occupied in cooking or eating supper, a group would be listening to a violin player or story teller, a mother might be seen applying the slipper to a squalling youngster, a social few here and there were absorbed in the charms of a well-thumbed pack. A New York elevated railroad was not to be compared with this for panoramic effects. Attached to all was an element of novelty. City sights with the background and surroundings of the most primitive country. Naturally enough our rig made quite a commotion. The canal tramp is not wholly different from other tramps, being not in the least slow to express his thoughts in courteous and polished phrases. This remark, "Come quick! Look at the dudes in a racing boat," very much amused us; for we felt that in the condition induced by two weeks of roughing it the appellation of dudes was hardly justified. We at first very strictly minded our own business, pretending to notice neither our enforced acquaintances nor their salutations; this, however, meeting with such poor success we at last hit upon the plan of parrying words with every one, provoking, if possible, a good-natured laugh.

Carrying around the first lock, we found the next level clear of boats, thus giving us an opportunity to enjoy the scenery. It seems strange to talk about the scenery of a canal; but if the ditch and towpath are usually suggestive of uninspiring things, there was an exception here. Although the hills had all along been aggressively prominent, menacing each other across the river, at Lackawaxen below to Port Jervis they try so strenuously to come together that were it not for the river wedging them apart, there would be no valley. The elevations here rise into mountains with, in many places, an almost perpendicular river-facing bare rock.

The naturally precipitous character of these mountains is increased by artificial means. On the west bank, about two hundred feet above the river's bed runs a railroad; on the east bank, at about the same level, is the canal. The footing for both these highways had to be hewn, in large part, from the solid rock. In traveling along the canal we could look down into the valley, if the narrow opening between the hills could so be called, the river fretting itself in its contracted bounds, the beginning of the Pennsylvania wilderness before us; while on the other side, high shelving cliffs and steep cuts of earth and stone shutting out all but immediate view, and occasionally giving place to long stretches of virgin forest. In the trees in many instances the cut over the water, affording grateful shade. Heavily laden bushes of berries within arm's length tempting the canoeist, and here and there streams issuing out of the cool woods and dashing down some steep decline, made the journey very enjoyable.

Progressing thus, the lock tenders letting us through all the locks, we found the sunlight leaving the mountains, and the approach of night with no place to sleep, before us. The cooling air, a smooth course, a light day's work, coupled with the knowledge that if it were pleasant it would not be safe to camp near the tow path combined in urging us forward. At 6 o'clock the locks on the D. & H. canal close, and we were thereby put to the necessity of numerous portages. A crowd generally collected about us whenever we stopped (not always composed of the most reputable citizens), and as we could not carry the canoe and its contents at one time, we were sometimes in a dilemma about the best way to make the transport. We would either take turns in carrying the outfit, one of us all the time staying with the boat, or preferably induce a bystander to give us a lift. Assistance was sometimes secured by the offer of a cigar or money, but most frequently among the crowd of idle mule drivers the intimation that a helping hand was desired was sufficient. We would turn their inquisitiveness to account. After answering a long catalogue of questions concerning the canoe we would reply to the one, "How heavy is that boat?" by remarking, "Oh, the canoe itself weighs only about 56lbs., but we have so much luggage aboard that it is almost more than two can carry."

The rejoinder would be, "Do you want some help? We'll help you," and several brawny men snatching up the whole concern would take it around the lock before we could interpose a word. With long swinging strokes, sweeping past hills, fields and bridges, watching the color fade from the sky, noting the lights in the farm houses to one by one go out and the number of people at each succcssive lock to lessen, we anxiously bethought ourselves of the necessity of soon securing shelter.

We had been informed of a "hotel" at Pond Eddy. This place was reached at 11 o'clock, and the hotel, which was on the towpath, was found to consist almost exclusively of a bar. This bar was very abundantly occupied by a couple of inebriated gentlemen, who upon being addressed, evinced strong inclination to meet us on the field of war. Again launching out into the darkness, we inquired if there was no other place at which we could stop. Being assured in the negative, we conciliated the belligerents and secured rooms. After an exhaustive examination of the beds, in spite of our filthy surroundings, we soon fell asleep.

As we went forward we frequently had occasion to congratulate ourselves that we were not on the river. In many places by paddling close to the bank we could see far below the Delaware, very shallow and very rough. Again when hidden from sight the sullen clamor of the boisterous water, reinforced by the echoes of the cliffs, would be wafted up to our appreciative ears. But without looking away from the ditch we found much that was interesting. The boatmen that we met the night before had started long before we were up, and now as we overtook and passed them most all offered a friendly word of recognition or inquiry.

Sometimes, however, by the following circumstance their good nature was sadly tried.

All the boats were drawn by mules. The animals were provided with blinders, preventing them from seeing the canoe until it was directly opposite. As soon as our craft came in rauge they would cock their ears and come to a dead halt. Their eyes would follow us in mute surprise, and showing all the too utterly independent traits of mind that characterize the species, in spite of the horrible volleys of profanity that were fired from the boat, and in spite of the clubbing of the driver there was "no go" till we were out of sight.

A few miles above Port Jervis a large creek of beautifully clear water dashes out of the woods, flows under the canal aqueduct and joins the Delaware. Below this point the valley, narrowing, makes a sharp curve, suddenly broadens out in a plain some five miles wide, and thus gives footing for the town. The disastrous spring floods which occur at Port Jervis are by this configuration fully explained. The ice banks up in the confined elbow, and when finally forced out by the accumulated water an inundation is the result. Arriving in the town about the middle of the day we found that the canal had insensibly been edging away, being now nearly a mile from the river. Consuming much time in making purchases and finding a truck, it was not till an hour before sundown that the Delaware was reached. As we passed through the streets the gamins joined in our wake, and as soon as it was discovered that we were going to launch, swarms of half-naked youngsters of both sexes followed our wagon across the shoal. Considerable wading being necessary to reach deep water, the children, crowding around on all sides, waded with us. It was with the utmost difficulty that we prevented them from running off with our property or kept them out of the canoe. Darkness soon compelling us to lay by, we pitched our tent at the head of a rapid about two miles below Port Jervis.

A broader valley with rolling surface, vegetation, woods and fields as fresh and clean as a park, replaced the wild scenery that we had begun to look upon as the natural environment of the Delaware. The river, too, as we here found it, seemed to have grown from childhood to manhood. No longer did it fret in impotency; but in the freedom of its power moved majestically in the levels and roared defiantly in the rapids. The rushes that we now encountered would have given a permanent setback to an amateur, especially to one who could not swim. They were much longer, some of them extending nearly a mile, making the breadth and volume of the river three times as great, since the accession of the creek at the Neversink River at Port Jervis, we had much rougher water than heretofore experienced, and were obliged to keep well out from shore, thus, in case of a capsize, being deprived of that refuge. However, the depth of the water and the excitement more than compensated for the increased danger, and the situation being reduced to a mere matter of skill, we felt that with our experience we were secure.

During our entire journey on the Delaware every few miles we came to curious V-shaped falls, the point always being down stream. These falls were seldom more than two or three feet high, extended from bank to bank, and were invariably perfect Vs. We continued to meet them, but now, as the river was several hundred yards in width, instead of being Vs they were as perfect Ws. Sometimes they occupied the entire breadth of the stream, at others there would be an opening. Why such a uniform adherence to alphabetical pattern was maintained is more than we could say. At the time we encountered them the desire and effort to avoid going to smash on the rocks were incompatible with scientific research.

Beauty, and a pleasant impression received through any of the senses, as we desire it to remain, firmly fixes itself upon the mind; and the glorious scenery of that day's journey is as strongly tinctured upon my mental camera as if preserved on canvas. The vegetation of tropical richness was without tropical rankness. The splendid chestnuts and elms, the graceful undulations of the ground, the alternation of woods and fields, the clean cut perspective and the fresh appearance of all made the landscape a feast to the eye. The country was mercifully free from the shriek and rattle of the locomotive, there being no railroad between Port Jervis and the Water Gap. This demon of civilization was replaced by magnificent roads, over which the trip in Tally-ho coaches between the two places above mentioned is quite as popular as the famous drive between Glens Falls and Lake George. Hotels and boarding-houses, patronized by city people, mostly Philadelphians, abound all through this region; and in this country where bicyclists, campers, and tourists of all description abounded, as we felt less likely to be considered as doing anything strange, we were more at home. This Thursday afternoon was one of restful keen delight. A forest here, a hill or a field there, a landscape where nothing was wanting and every feature was in the right place and proportion, a painting set in the rich gilding of hills and sky and throbbing with living color, to us, with our circumscribed human conceptions, the question kept arising, "What greater beauty can heaven offer?" One stretch in particular coming after a short sharp turn and a swift rapid, gave a half mile vista of such perfect mingling of midsummer meadow of form and color that, in our enchantment, we forgot to paddle and almost to breathe.

That day's journey scored us over twenty miles, about half the distance to the Water Gap. The night we spent at Dingman's Ferry. Making an early start, to avoid the heat of the day, we did not halt for breakfast till after ten o'clock. We passed a large camp, but did not stop.

The truth is, we looked upon campers with a degree of pity. We felt the superiority of the sailor over the landsman. We did not have to confine ourselves to one place until long after its charms were exhausted; the entire country was open before us, and our port was chosen that suited us best.

Perhaps the most noticeable thing about the Delaware is the limpid purity of its waters. It might be supposed that as the river grew, contaminations would accumulate, until, when it became as large as it then was, a turbid stream would be formed. Such was not the case, and it could be partially accounted for by the abundance of springs. We were able to find a spring at any time. All we had to do was to paddle along reasonably near the bank, and wherever we spied even the minutest sparkling among the leaves or upon the turf, rocks or sand, there upon investigation we would discover a basin of water sweeter and more refreshing than anything city people can imagine. Frequently within a few feet from the river and on nearly the same level would be found springs spouting in several jets out of the sand. In many cases a person could stand with one foot in water the temperature of which was little above freezing, and the other foot in the river water, 60° or 70° Fahrenheit.

Almost all the morning, on a smooth surface, we floated or lazily paddled. We admired the scenery and absorbed the air and sunshine, until we began to forget that excitement is a part of a river voyage. We were proceeding slowly and comfortably in the shade of a high bank on a long and very straight stretch. As we approached its end the river seemed to have abruptly terminated. Had we depended solely upon our eyes, had a subdued murmur not been heard, we might have supposed that the Delaware had suddenly sunk into the earth. The murmur increased, and as we came near the jumping-off place we caught sight on the right hand of a seemingly narrow thread of water. On turning the bend sight and sound both received a surprise.

The narrow thread of water shut off by the bank was a mighty billowy river, while the subdued murmur was changed for the deafening roar of a plunging rapid. We came out of the calm and the shade of the western bank to find ourselves in turbulence and confusion, with the direct and reflected rays of the sun shining straight in our eyes. It being, of course, impossible to see, providence, and not skill, was responsible for our getting through. On that occasion we were obliged to leave more to chance than we ever care to again.

The next three hours was the most exciting time of our trip. The river, now large as the Hudson at Albany, presented for mile after mile, almost without interruption, an angry surface of foam-crested water interspersed with fragments of stone. The waves alone, in this great flood, were more formidable than in shallower water the boulders had been. Very often the only course free from rocks was right through breakers several feet in height. In the last and worst of this series, while giving all my attention to selecting a route, something struck me heavily on the shoulder. Surprised and shaken by the blow, when turning quickly, I found my clothes drenched and the boat dangerously full of water. This wave had come in sideways; another reached over the bow, a third would have swamped us, but we were spared the finishing touch, and landing at the foot of the rapid to empty the canoe, proceeded on our way.

After dinner we made a call on some campers whose tent we had noticed while eating. They proved to be artists who, after greeting us cordially, showed us into a canvas art gallery where, strangely mingled with pots and kettles, duffle, clothing and straw, hung the results of their work. Just as a man in love must, if he have any poetry in his nature, write verses, so a man, camping amid such inspiring surroundings as here showed themselves, if he has the slightest artistic ability, is obliged to use his pencil or brush.

An uneventful afternoon, a monotony of beauty, if such a thing is possible, brought us just before the gloaming to another party of campers. These fellows were perched on top of a bluff, and, instead of being artists, were a wild, rollicking lot of boys, bent on having a good time. We took supper with them, and were invited to pitch our tent; but we saw there would be more fun than sleep, and, as we needed rest, moved on. We heard a lively fusilade about a mile down stream, and upon coming suddenly upon the huntsmen, bang! and a charge of shot splashed in the water uncomfortably near. Darkness again overtook us before we had selected a camping ground. We erected our tent in the most accessible place, a field of oats. After it was up we made two important discoveries: The entire mosquito tribe was holding a family reunion at that particular spot; second, that the ridges left in harrowing the field were as hard as stone, making a night there like sleeping on a gridiron. However, after wrapping up our heads in defcrence to the mosquitoes, we not only survived but slept.

We were now within fifteen miles of the Water Gap, at which point we decided to take to the cars. As we advanced mountains again showed themselves, the river widened, islands were more numerous, hotels appeared and tourists were oftener met. As it grew in width the Delaware also became more shallow, though not so as to give us trouble. A small stone, a small shell, the minutest object, was visible at almost any depth through the wonderfully transparent medium over which we moved. Can the reader imagine running up a steep hill without exertion? Such a sensation was produced by seeing the bottom suddenly shoal while looking at it through deep water.

On the other hand the bed of the river was of all moderate depths equally distinct; passing abruptly from shallow to deep water caused a feeling like going over a precipice, involuntarily making one hold tight to the boat.

Upon approaching the Water Gap we were much disappointed in the scenery. From descriptions and from what the name implies we naturally expected to see in a chain of high mountains some terrific fracture or some tremendous work of erosion. What we did see were picturesque, beautiful, forest-clothed hills rising at a considerable height from the river that cut them at right angles; perhaps to eyes unaccustomed to landscapes abounding in bold features, it might be considered grand, to us, however, any part of the Delaware above Port Jervis would have been more imposing. The Delaware Water Gap seemed like a small slice of the highlands of the Hudson, and its being the only decidedly elevated land to the north or south for many miles, probably accounts for its popularity as a resort. A number of large and conspicuous hotels, set at various altitudes on the hill, mark the place as headquarters for tourists. Not knowing the location of the railroad station, going down stream below it, we had the pleasure of paddling, poling and wading up a rapid that we had accidentally put between the station and ourselves.

Not until now did we fully realize that our voyage was finished. Sailors look upon the vessel in which they have traveled so many miles as a friend, a thing of life. But though they may personify the ship they do not personify the ocean. With us it was different, for besides traveling upon it, we had traveled seemingly in the river, and certainly we had gone with the river. The river and ourselves were fellow voyageurs. Had we not met it in its obscurity among the mountain peaks? Had we not gone forward in its company, sharing in its moods and experiences, seeing it, tossed into foam and mist, rush by its rocky barrier, or hardly moving, have the thirsty vegetation of some fertile meadow? Surely the river as well as the canoe had carried us onward; and as we say God-speed to a friend who is going on a journey, so we naturally wished to the river that had borne us so far and well, a prosperous journey to the sea.

We reached the depot at 2 P. M.; but being afraid that should we arrive in New York in the daytime in the condition which we then were we would stand a good chance of being arrested as vagrants, did not start till evening. As usual, the express company wanted to charge for the canoe its weight in gold. There is no fixed tariff for small boats, and to make no mistake, agents always impose the highest rates. However, an argument, illustrated in the substantial way that all men appreciate, finally induced the expressman to let us off easily. Upon landing in the city we put ourselves in the barber's hands, hid our revolvers out of sight, and walking rapidly through the back streets, trying to look as little like Texas cowboys as possible, with our hats drawn over our eyes, we succeeded in reaching my home without any one discovering our identity. We emphatically voted, and the testimony of our friends as to our improved appearance bore us out, that as a restorer of waste tissue a canoe trip is the thing of things, while for a good time—well, if you doubt that there is fun in it, try it yourself.

RALPH K. WING.

A LONG FLORIDA CRUISE.—Mr. Geo. E. Andrews and Dr. Neidé leave to-day by steamer for Savannah, taking with them two boats. Mr. Andrews's was built under his direction in Philadelphia and is 16ft.×55in., 15in. deep at gunwale. She is cat-rigged, with a jib if desired, and carries a 56lbs. galvanized iron board. Her name is Mayblossom. Dr. Neidé's boat, Betsy Bobbett, is 18ft.×45in., yawl rigged, with a Rushton Bucktail as tender. They will leave Savannah and cruise to Jacksonville, inside, then outside 32 miles to St. Augustine, then down 15 miles inside to Matanzas Inlet, then by Hillsboro River and Mosquito Lagoon to Indian River, following it down to Indian River Inlet, then outside to Lake Worth. After spending some time around the lake they will continue outside to Biscayne Bay, where Mr. and Mrs Munroe will spend the winter. After cruising among the little known keys along the south and southwest coasts they will go on to Cape Romano and Charlotte Harbor, finishing somewhere in this locality, returning home by rail.

MATERIALS USED AT THE MEET.—Secretary Neidé has written to the commanders of the various clubs present at the meet to know what material used by their men was paid for individually, in order to check the bill of the Delaney estate. The floors of the tents were in most cases paid for by the parties ordering them of Mr. Delaney, and the secretary is desirous of knowing whether any such work was done or lumber furnished that was not paid for privately.

Yachting.

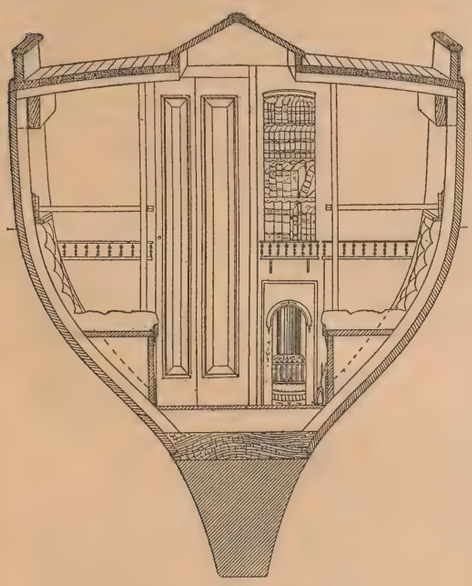
A CRUISER'S CABIN.

THERE is no reason at this late day to preface a description of Rondina with the reasons which impelled her owner to select such a boat, or with any plea for the type of small cruisers. At one time the advent of such a boat would have given rise to plenty of adverse criticism, and she would have been tried and summarily condemned by a very false standard. Fortunately, however, the claims of this class are now widely recognized, and there is a wide demand for just such a boat. The young Corinthian who usually does not mind a certain amount of discomfort and crowding can take his pleasure in a very small boat, ranging all the way from an 18ft. cutter like the Windward, to a 26in. canoe, but there are many other cruisers who enjoy as fully the work and exertion of yachting, but prefer a little more room than the hardy single-hander is willing to be content with. A hand must be stowed forward and the cabin must give room enough to eat, sleep, dress and move about with a reasonable degree of comfort. To obtain this room two elements are necessary, length and depth; the third, breadth, being of far less importance, as we have frequently shown in the plans of very narrow boats. Height sufficient to stand erect must be had, as a matter of course, if living aboard for a length of time is intended, and if this is joined to a flush deck so much the better. A certain minimum of length also cannot be exceeded. This is fixed simply by the conditions of the case, a separate forecastle for one or two men, with length in the clear for a berth (6ft. 6in.), a little length for cupboards and lockers, and in addition the waste length in the extreme bow. This will occupy about 12ft. from fore side of stem to bulkhead, abaft which must be 8 to 10ft. for cabin, making, say, 20 to 22ft. Between the after end of cabin and the sternpost the taper of the boat requires some 8ft. more, according to the beam, so that the least length must be 28ft. Beam is of less importance than the other two dimensions, as a man, while needing his own length and more to stand or sleep comfortably, can do with a very moderate breadth if not crowded in other directions, in fact very good accommodations have been had on less than 5ft. beam, coupled with length and depth. Thus a limit of length and depth is fixed below which the designer cannot well go, but beam is left much more freely to his discretion and to the special requirements of each case.

The boat here shown, the Rondina, designed by Mr. Edward Burgess for Dr. W. F. Whitney of Boston, and built in 1884 by Lawley & Son, is a good example of what may be done on a limited bulk, her accommodations below being probably unequaled by any boat of her class in the Atlantic fleet. The interior was designed by Mr. Burgess, and for attractive appearance and economy of space will compare favorably with many yachts of much greater size.

Rondina was designed for cruising about the New England coast, to carry one or two forward, to give good room for her owner and one or two friends in comparatively long cruises, and to suit the rough waters of the Massachusetts and Maine coasts, and all of these purposes she has served admirably. For three seasons she

has been seen in all the ports from Newport to the Bay of Fundy, and for a greater part of each season has been the home of her owner. Her dimensions are:



Length over all	36ft. 4in.
Length L. W. L.	30ft. ....
Beam extreme	8ft. 2in.
Beam L. W. L.	8ft. ....
Draft	6ft. 6in.
Least freeboard	2ft. 3in.
Displacement, long tons	12.75
Keel, iron, long tons	6.00
Ballast, inside, long tons	.50
Area lower sail, sq. ft.	987

It will be seen that the freeboard has been served out quite liberally, but the counter and sheer are so managed as to avoid any boxy appearance, while a good height is gained under beams.

The forecastle has 5ft. 8in. head room with a good length. Around it on each side runs a locker. On the port side is a good sized icebox and refrigerator and on the starboard a stewart's pantry and closet. Two iron frame hammocks are slung to the side. The stove is forward, as shown, while a circular hatch with an iron cover gives light and ventilation.

The cabin has a height of 5t. 9in. under beams and a breadth of floor of 3ft., the length being 11ft. On each side is a sofa with a locker at the fore end as shown. At the after end are closets and lockers for clothes, etc., a washbowl and toilet appliances and a mirror on the back of the closet door. Under the stairs is the forward part of the sail locker, shut off by an open grating and used for general stowage, the sails being stowed through a hatch on deck, just abaft the cockpit. The swing table, not shown, is quite narrow with folding leaves.

The sleeping arrangements are peculiar, there being a canvas bed or hammock slung on each side over the lockers. At each end of the latter rises an upright or stanchion to the deck. The canvas is cut long enough to reach the full length and at each end is lashed to an iron bar. Each of these bars is fitted in journals on the stanchions and on the side of cabin, the forward bar being fitted with a pawl wheel. When not in use the canvas is rolled

CUTTER RONDINA—CABIN PLAN.

on the two bars and all is stowed in a locker. When the bed is to be made, the bars are dropped into their places and a wrench is applied to the forward one by which it is turned until the canvas is stretched as tightly as desirable, the pawl holding all in place. The bedding is then made up on the canvas. In stowing it all away the pawl is loosened, when the bars and canvas can be readily removed. The lockers can also be utilized as beds if desired.

The fore bulkhead beside the forecastle door is fitted with a very tastily designed tile stove of Boston make, above which is a neat bookcase. The fitting and paneling is plain and neat, but in excellent taste, the wood being all varnished. On deck is a good cockpit high above the waterline.

The cosy and homelike appearance of the cabin cannot be conveyed by any plans, but it offers as comfortable a home as any cruiser could desire. High, roomy and well aired, dry in all weathers, with the welcome grate and fire, the warm hangings, the library at hand, the lockers and shelves well-furnished, and the well-cushioned lockers, it is always ready, always snug and comfortable, whether in a warm summer day or when fog and rain make the deck a good place to avoid. The proportions are such as to make it really a little room instead of a dismal cubby hole found in many centerboard boats of even greater length, while the forecastle, completely missing in these latter craft, is also roomy and commodious, a home for the crew and a place where cooking may be done in comfort.

Mr. Burgess has shown a special aptitude in the planning of such interiors, his experience as an old yachtsman joined to his practical skill, standing him in good stead; and he is sure to utilize the last inch of space to advantage. Another of his boats is the Fad, the interior of which, designed by him (the boat being designed by her owner) is a good example of what may be done on extreme dimensions for a cruiser 24x6.

After three seasons in Rondina, her owner has decided on a larger yacht, and Mr. Burgess is now at work on the plans of a cruising schooner to take her place.

A FINAL EXPLANATION.

Editor Forest and Stream:

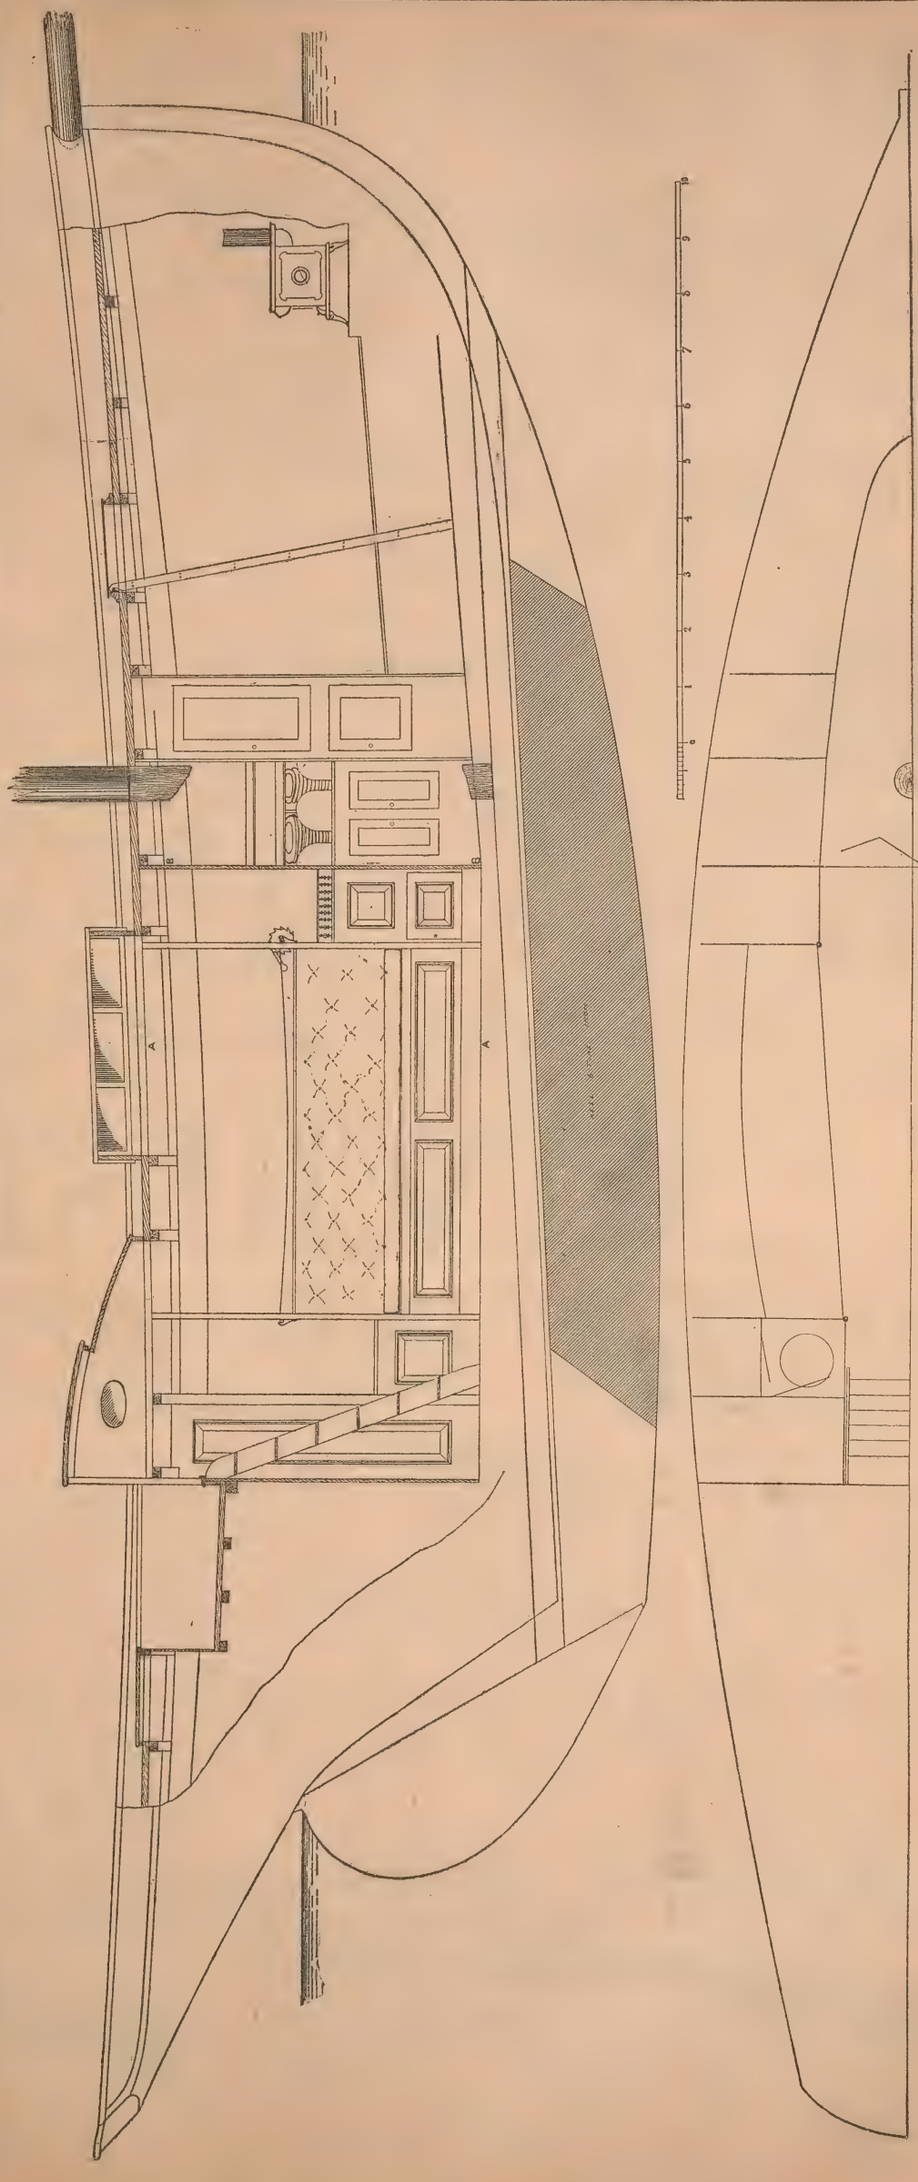
Although you have kindly announced my intention to withdraw from further discussion in your columns, I desire my record to remain free from misapprehension.

The letter of Mr. D. W. Brown, in your last issue, is sufficiently straightforward and logical to deserve my respect. To such a communication I am ready to extend that consideration and courtesy which I decline to bestow upon persons who descend to quibbling and the boyish practice of assailing the honesty of my motives for lack of better argument. Mr. Brown's reasoning is sound enough, but his premises rest upon a misinterpretation.

For this I have perhaps to blame myself.

In a short note in your issue of Oct. 28, I certainly did utter the sentence: "The cutter has earned her title to rank at least equal with the sloop in point of speed."

Mr. Brown might, however, have given me the benefit of a more liberal construction than the exact letter of a sentence, which, in its very brevity, precluded a comprehensive announcement.



I have so often reiterated my exact position in your columns, that it did not occur to me to needlessly make a casual sentence redundant. Of course that sentence had reference only to "normal conditions" of wind and wave.

For, unlike Mr. Brown, I do not generalize from one or even two specific instances admitting of various explanations. It is a very distinct practical reduction, long ago removed beyond the realms of controversy, that the narrow and heavy cutters are at their best in a steep sea, and will carry their canvas longer than any other style of craft in existence. Hundreds of races, in British waters, covering the experience of many years, and numerous trials in America, have firmly established this attribute of the modern racing cutter.

Faulty lines, poor conditions, bad policy or lack of heart in the crew, may of course neutralize this ascertained superiority in particular cases.

As to the large 85ft. classes which have recently come into temporary prominence, the same relative superiority of the cutter has neither been established nor upset for the lack of opportunity. One opinion is as good as another, as long as data enough are wanting for sound generalization.

Mr. Brown should also do me the justice to remember that my position was originally drawn on the issue between the orthodox

CUTTER RONDINA—MIDSHIP SECTION A A AND FORE BULKHEAD B B.

American sloop—as she was known up to the appearance of Puritan in 1885—and the modern British racing cutter. Thetis, Mayflower, and their kind, scarcely represent the original question in a true light. A regular sloop, like the Fanny of New York, in competition with the cutter Stranger, would more strictly afford the comparison upon which my stand has been taken.

Mr. Brown will probably agree with me, that a Fanny would not only have been distanced by a Stranger during the coarse bout from Newport to Marblehead—in which Thetis won her laurels—but also that a Fanny would have been totally unable to face the gale and sea to any advantage.

That the new hermaphrodites with their lead keels, cutter rigs and cutter equipments are a vast improvement upon the American sloop for hard weather service is admitted on all sides, and that they will average better than the sloop in competition with the British cutter follows as a natural sequence.

The Miranda—Sachem race should not be invested with too much weight. Miranda was built back in 75 and, according to the dictum of those who concede the cutter Clara's superiority, is "only an old boat." She is quite beamy, has but a portion of her ballast outside, raced with rough copper, old and ill-fitting sails and in the hands of an American skipper. I mention this by the way of information, without any wish to detract from Sachem's honest victory, or to impugn the skill of Miranda's master. Miranda in thoroughly modern racing form may prove a teaser.

Beyond this heavy weather question there seems to be no difference between Mr. Brown and myself, for he writes that in other respects "his view has been the natural and reasonable one, that, of whatever style, all yachts when pitted against each other, must be judged by their individual merits, just as two sloops would be when pitted against each other." C. P. KUNHARDT.

THETIS AND STRANGER.

SOMERSET CLUB, Boston.—*Editor Forest and Stream:* I hope you will allow me to write a few lines in answer to Mr. Edward Hawes's letter in your paper of the 11th inst. Mr. Hawes states that "we laid to in the bay," etc., which is not true. When we got to the bay the wind was so light that we had hardly steerage way. We were hove to several times from Pollock's Rip to Highland Light, twice reefing mainsail, once housing topmast and once changing jibs.

He goes on to say "the hands lying under weather bulwarks had their feet and legs in solid water, which swept this 'safe model' from stem to stern," which is again untrue. He ends up by saying, "All hands doubted if Stranger would live through the night." This is certainly without an atom of truth.

I would not trouble you, only statements like Mr. Hawes's are apt to mislead people living at a distance or on the other side, if left unanswered.

The signatures of Mr. Longfellow, who was with me and that of my sailing master, are attached as witnesses to the truth of my denial to Mr. Hawes's false assertions.

GEO. H. WARREN,
HARRY RANDALL,
Sailing Master Yacht Stranger,
C. A. LONGFELLOW.

A NEW YACHT BASIN FOR BOSTON.—Messrs. Lawley & Son have in hand a plan for the construction of a basin about 500x240ft. at their north yard for laying up yachts. The present wharf will be supplemented by two others, making a sheltered basin with a depth of 13ft. at low tide. On the piers storehouses will be erected for boats, sails and spars. The boats now lying at Mystic Wharf have been notified to leave in April as the site is needed by a railroad company. The plan, if carried out, will give such facilities to yachtsmen as no other port in the country affords.

A SHOAL DRAFT BOAT FOR FLORIDA WATERS.—Boston, Nov. 8.—*Editor Forest and Stream:* Your correspondent inquiring for a sloop in Florida may hear of a 24ft. skipjack, cat rig, built on purpose for and suited to the country, by addressing Wm. H. Reed, Canaveral, Fla. The boat is well built (by Briggs, near Tiverton, R. I.), planked lengthwise on bottom, and draws 18in., Babbit's slide rig, etc. Mr. Reed would probably sell her for $250 to $300, delivered at Titusville, which is the terminus of the J. T. & K. W. R. R. on Indian River.—CHAS. A. WELCH, JR.

PERSONAL.—Mr. J. Borden, Jr., of Fall River, has joined with Mr. G. F. Clarke, of the Boston Yacht Agency, under the name of G. F. Clarke & Co. Mr. Borden will attend to the yacht designing department.

COMET.—The sloop yacht Comet, of Newport, bound from that port to Colon, was nearly wrecked and put into Ruatan with mast, mainsail, boom and rudder carried away, and the cabin trunk stove in.

PUZZLE.—Mr. Jacob Lorillard has sold the Puzzle, steam yacht, to Mr. J. L. Mott, of New York.

AWIXA.—This yacht arrived at St. Augustine on Nov. 13.

MEASUREMENT IN ENGLAND.—At a late meeting of the Council of the Y. R. A. the following resolution was passed: "That a committee be appointed to report upon the working of the two measurement rules which are now in force, and to suggest any alterations to the same which may appear likely to have an advantageous effect on yacht building and yacht racing; and further, to report upon the present classification of yachts by tonnage and sail area, and to suggest such alterations or new rules of measurement and classification as may be desirable." The following committee was appointed, with instructions to secure the opinions of experts: Sir W. B. Forwood, Mr. F. Willan, Mr. G. B. Thompson, Mr. H. Crawford, Mr. W. Baden-Powell, Col. Reach, R.E., Mr. A. Manning, Mr. F. Taylor, M.P., Mr. W. G. Jameson, Mr. J. Scott and Mr. E. R. Tatchell. Two meetings have been held, and Messrs. Alexander Richardson, J. Beavor-Webb, Dixon Kemp, C. P. Clayton, W. Fife, Jr., and G. L. Watson have given their views. The committee will report the last of this month. Meanwhile, if we may judge from the *Field*, the British yachtsman is in a decidedly mixed state of mind as to the various points in dispute. The *Field* deals with the question, "Will a sail area rating produce a long vessel?" in its last issue; but after a rather lengthy discussion it throws no new light on the subject. The outcome of the subject will probably be a length and sail area rule or one of sail area alone.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

R. W. C.—I have a very well trained and valuable pointer, who has lost one of his eyes in a bramble thicket. May I ask you, as a favor, to tell me whether the putting in of a glass eye is practical, how to go to work to do it, and what the probable cost would be? Ans. It is practicable to put a glass eye in, but we do not think it possible to keep it there, as the irritation at first would cause the animal to scratch it out again. The probable cost would be $15 to $20.

BRAIDED FISHING LINES.

The great superiority of a properly braided line over a twisted or laid line, has increased the demand for braided lines enormously. This demand has induced a number of manufacturers, entirely unacquainted with the requirements of anglers, to put on the market a quantity of perfectly worthless goods. Many of these lines are undersized and short of marked length; nearly all of them are made of poor material and on old-fashioned machines. Anglers will please take notice that *all of our best braided lines—cotton, linen, raw silk, dressed silk, oiled silk, enamel, and polished waterproof tapers—are labeled with our full firm name and trade mark,* except the enamel fly lines on cards, which bear only our trade mark and the name of the Empire City Braid Co., whose agents we are.

If your dealer does not keep our goods in stock, or will not order them for you, send us 50 cents for our 180-page illustrated catalogue.

SMALL YACHTS.
Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.
By C. P. KUNHARDT.
THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.
All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.
The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.
The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.
The iron work of yachts, their gear, yawls, steering apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.
The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.
A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

CHRISTMAS PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of Christmas gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for Christmas. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Antelope and Deer of America.

By HON. J. D. CATON, LL. D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2 50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR. C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual of boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

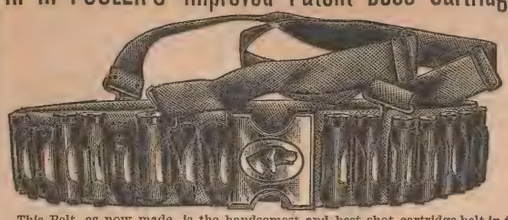
Fyshhe and Fysshynge.

By DAME JULIANA BERNERS. An elegant fac simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.



By "NESSMUK." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The Forest Waters the Farm,

OR, THE VALUE OF WOODLANDS AS RESERVOIRS. By ANTONIN ROUSSET, translated by REV. S. W. POWELL. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Forest and Stream Publishing Co., 39 Park Row, N. Y.

R. H. POOLER'S Improved Patent Boss Cartridge Holder and Belts.

This Holder is for carrying brass or paper shells without being crimped. Has side cut away, showing wad supporter.

This Belt, as now made, is the handsomest and best shot cartridge belt in the world. Has 3-inch woven canvas belt, 1½ inch double shoulder straps and large plated buckle. Will wear any sportsman a lifetime. The only practical Cartridge Holder in use. Will carry brass cartridges and positively prevent wads from starting on shot. Suitable for either paper or brass shells. Satisfaction guaranteed or money refunded. **Manufactured by R. H. POOLER, Serena, La Salle Co., Ill.**

Send ten cents in silver or currency for catalogue and sample cartridge holder, also a colored lithograph card of grouse shooting on the prairies.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, NOVEMBER 25, 1886.

VOL. XXVII.—No. 18. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six, and twelve months. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE ROD AND REEL ASSOCIATION.

THE change in the time of holding the tournament, from fall to spring, is one that has been urged by many members for the past year or two, and the experiment is certainly worth the trial. The Association is on a good footing financially and no doubt the next meeting will be a good one. It has been proposed to hold it in Prospect Park, Brooklyn, but the place has not been decided upon at present, nor will it be until Jan. 1, when the new officers may call a meeting. As Harlem Mere has been a successful and popular place we see no reason for a change, and it is well known, that while residents of Brooklyn freely go to New York to witness exhibitions, it is difficult to induce New Yorkers to cross the river for such purposes.

The Association has done a great deal of good in showing to anglers what is excellent in the different methods of handling the fly, and in educating the public in the rudiments of fly-casting, and yet there have been croakers who see no good in the tournaments, or who think that they should be actual fishing contests in which the man who took the most fish should be the victor. As well decry practice with the rifle at Creedmoor and demand that a test in hunting be substituted. Fly-casting tournaments are of the same nature as target practice, and as in the latter it is not necessary that the most skillful marksman should ever have seen a deer, it is equally unnecessary that the best fly-caster should have killed a trout. Excellence in the use of the weapon is all that can be considered in a contest of skill, and work in the field or on the stream is entirely another branch. The man who can cast a fly the greatest distance, and in another trial for delicacy and accuracy comes out ahead, may lack many qualifications which go to make an angler, but he has three of them, and the only three which can be demonstrated before judges. Angling contests will not become popular in this country, but fly-casting tournaments have met with favor.

It has several times been suggested that some lake or stream containing fish should be used for the meeting, but the presence of fish would annoy a contestant if one should strike when retrieving, and we do not believe that a dozen members could be got together at Greenwood Lake or elsewhere outside the parks of the cities.

At some of the meetings it has been proposed to make the Association a social club, and no doubt this would be a desirable thing to do, but it would necessitate an increase of annual dues for membership from three dollars to one hundred, at least, as rooms would be a necessity. As it stands, the National Rod and Reel Association is doing well, and has a career of usefulness before it. Its members are satisfied with its condition and its proceedings, and most, if not all, carping at it comes from persons outside its roll of membership.

THE A. O. U. MEETING.

THE meeting of the American Ornithologists' Union, held last week in Washington, was not characterized by any important action looking to other than the development of the several branches of its work already in progress. The officers elected for the ensuing year are as follows: President, Mr. J. A. Allen; Vice-Presidents, Dr. E. Coues and Mr. Robert Ridgway; Secretary, Dr. C. Hart Merriam; Treasurer, Mr. Chas. B. Cory; additional members of the Council, Prof. S. F. Baird, Mr. Geo. N. Lawrence, Mr. William Brewster, Mr. Montague Chamberlain, Mr. H. W. Henshawe; Editorial Staff of the *Auk*, Mr. J. A. Allen; Associate Editors, Dr. Coues and Messrs. Ridgway, Brewster and Chamberlain; Committee on the Migration and Geographical Distribution of Birds—Dr. C. H. Merriam, chairman; Messrs. J. A. Allen, L. Belding, A. P. Chadbourne, M. Chamberlain, Dr. A. K. Fisher, Mr. Thomas McIlwraith, Dr. Edgar A. Mearns, Dr. J. C. Merrill, Mr. Robert Ridgway and Dr. J. M. Wheaton; Committee on Protection of North American Birds—Mr. G. B. Sennett, chairman; Mr. E. P. Bicknell, secretary; Mr. W. Ductcher, treasurer; Messrs. J. A. Allen, William Brewster, M. Chamberlain, L. S. Foster, N. S. Goss, Drs. J. B. Holder and Geo. Bird Grinnell; Committee on Avian Anatomy, Drs. E. Coues and R. W. Shufeldt.

It was resolved to incorporate the Union, and a committee was appointed to draw up an act of incorporation and to draft a new constitution. The Committee on Migration reported progress, and some interesting extracts from its reports were read, treating of the movements of birds, and especially of the effect on the migrants of electric light towers in certain localities. As stated in our last issue, an interesting and full report was read by Mr. G. B. Sennett, Chairman, on the work of the Committee on Bird Protection. It was determined to hold the next annual meeting October 10, at Boston, Mass.

A PLEA FOR OUTDOOR LIFE.

ON the occasion of a national convention at Atlanta, Ga., the other day, the Rev. Dr. Tucker, of Georgia, made a speech which contained this plea for outdoor exercise and "communion with nature:"

* * * Let him have the benefit and the blessing, part of the day at least, of outdoor life. Let God's beautiful sky spread its canopy above him; let sunlight gladden him; let the breezes of heaven fan him; * * * let God's zephyrs kiss him; * * * let the breath of the morning refresh him; let the sparkling dewdrops dance before him; let the fragrance of the blossoms and of the fields and of the woods regale him; let him hear the rustling of the leaves, the grand anthem of the pines, the purling of the brooks, the chirping of the birds, and all the music with which nature fills the atmosphere of earth.

Beautiful sentiments. The Doctor need only have added: "Give him a gun or rifle to entice him into field and forest, or a fishing pole to lead him beside murmuring brooklets." Unhappily, the individual for whom the eloquent clergyman was pleading the enjoyment of outdoor life has no special taste for angling, and it really would not do to give him gun or rifle. The Doctor was addressing the National Prison Association, and was just then discussing the best disposition to be made of Georgia convicts. When the Doctor rhapsodized about the breath of the morning dew drops, fragrance of fields and woods, grand anthems of pines and the music of nature, he really meant to put the convict in a chain-gang at hard labor out-of-doors, to hedge him about with stockades, post sentries to watch him, and loose the bloodhounds on his track if he attempted to escape. In plain words, the Doctor delivered himself of a burden of bathos. There was never a more utterly ridiculous plea for outdoor life, we question if ever a serious speech on a serious subject before a serious body of men in which "the beauties of nature" were made to do duty in more gruesome mode. It would be interesting to know whether the orator who made this plea for outdoor life has ever investigated the actual condition of affairs in a Georgia convict camp.

STARTLING HUNTING STORIES.—November is the season at which wonderful hunting stories appear in the newspapers. This year these tales have to do largely with bears, and in the rural districts the squirrel and quail hunters seem to find it quite a common thing to slay bruin with their charges of number six or eight. We have known of perhaps a dozen cases in which deer have been brought down by men who were shooting quail or snipe, but that a bear should fall before these tiny pellets requires a favorable combination of circumstances not likely often to occur. The thing is possible enough, but has it ever really happened that a bear was killed with a charge of quail shot?

ADIRONDACK DEER.—We are informed by a gentleman who is well acquainted with the region, that the past season has been a very hard one on the deer of certain portions of the Adirondacks. The "three-deer" clause of the present law is very unpopular, and the provision which closes the season Nov. 1 is still more so. It is said that more deer were illegally killed last season in the northern counties of the State than in any season for five years back. These were killed mainly in June and July. Complaint is made that the game warden was unable to take measures to watch all the territory over which he had jurisdiction, and that he accomplished very little. Most of the deer illegally killed are said to have been shot before a jack.

ALASKAN TROUT.—Special attention is invited to Capt. Beardslee's letter on this topic, not chiefly because of the interest which attaches to the point at issue, but on account of the admirable spirit that pervades the communication. It is a practical and happy demonstration of the principle, too often obscured in newspaper discussions, that two gentlemen may differ as to their experience or express diverse views without one calling the other a gorilla or intimating that his paternal grand-parent was hung for arson. For its exemplification of amenities such as might characterize all newspaper controversy, "Piseco's" letter should have careful study.

COLORADO GAME.—The reports printed in our last issue of the outrageous slaughter of large game by Colorado market-hunters may well receive attention from all who are interested in preserving the species from extinction in the State. Prompt action must be taken to cut off the marketing of game. There is no alternative. If unchecked, market-hunters will make away with the last elk and the last deer in Colorado's parks. The citizens of that State may well follow the sensible and public-spirited example of Maine in conserving for the future the natural supply of large game. We are advised that this matter will be given the attention it deserves.

THE AMERICAN KENNEL REGISTER.—With the November issue the number of pedigrees recorded in the *Register* was brought up to 4311. This is a number which speaks equally well for the *Register* and for the increasing supply of well-bred dogs in America. The exacting nature of editorial duties connected with such a record can be comprehended only by one who has had actual experience, and we are disposed to commend the conductors of the *Register* on this score quite as much as upon its actual success as a journalistic enterprise. The public may safely be trusted to sustain such a useful publication, as indeed it is doing.

"NESSMUK'S" POEMS.—The subscription blank for "Nessmuk's" volume of poetry is given in our advertising pages. The poems printed in the FOREST AND STREAM have been favorably commented upon in England, and we have begun to receive subscriptions from across the water. An artotype cabinet-size portrait of the author will give added value to the book.

PET BEARS will grow in favor as popular fads now that the proprietor of the Cleveland, O., pet brute that manifested a fatal propensity to devour little girls has come out of court with a clean bill of health.

ANTIQUITY OF THE REEL.—Mr. A. N. Cheney, in a note elsewhere, calls attention to evidence coming from Japan that the angling reel was in use in that land in the eleventh century.

The Sportsman Tourist.

Address all communications to the Forest and Stream Pub. Co.

THE GREAT ROSEAU SWAMP.

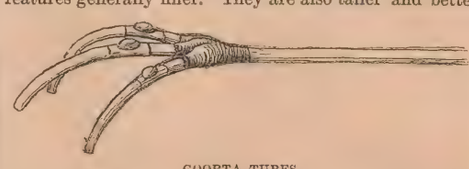
IF the readers of FOREST AND STREAM will examine a map they will discover that the entire northern half of Minnesota, with the exception of a few settled localities, is practically a wilderness, as much so as it ever was. The principal part of this vast area is allotted to Indian reservations. It is filled with forests, lakes and rivers, from which the resident tribes derive a very large proportion of their subsistence, the principal products being game and fish, furs, snakeroot, ginseng, blueberries and cranberries. The latter item alone is the source of a very considerable revenue. But wild as this portion of Minnesota is, as a whole it is populous compared with some isolated tracts to be found within its limits. The most remarkable of these is the Great Roseau Swamp in the northwestern corner of the State. This swamp is as tenantless as the Everglades of Florida. Ordinarily it is not a suitable dwelling place even for nomadic people. In its true inwardness it is a collection of sloughs, catch-basins and muskegs, filled with moss and peat, which constitute the feeders of those streams which are tributary to the Rainy River on the east and the Red River on the west. It occupies the crown of a sand ridge filled with gravel and boulders which was thrown up by an ice-shove along the shore of what was once a great shallow lake when the Red River valley was submerged by water, and holds the waters which it receives from rains and melted snows like a sponge, constituting an almost unfailing source of supply. Ordinarily these muskegs are as impassable as quagmires, and being skirted by fringes of willow, alder and poplar, hunting among them is wholly impracticable except when the leaves have fallen and intense cold fixes its grip on the land and freezes everything solid. The past year, however, has been exceptional. Early in last October a sturdy woodsman starting from Hallock, in Kittson county, by the old Roseau trail, traversed the entire intermediate country to the south shore of the Lake of the Woods with a two-horse wagon, carrying a couple of United States land agents, it being the first recorded trip of the kind. Probably there has been no year or time of year for a quarter of a century and perhaps a century when such a trip was practicable or possible; but this year a drouth has prevailed over all that region. For thirteen months there was scarcely rain enough to make mud. The whole country has been as dry as a bone. Catch-basins, which have hitherto afforded unfailing water supplies, were dried to their bottoms and the baked earth cracked. The moss became as crisp as dead autumn leaves and the peat as dry as tinder. Some of the small rivers which thread the adjacent prairie country at gracious intervals ran out of their beds, and settlers had to haul their scanty supplies for many miles.

Now, I think it is safe to state, in view of the physical conditions of the country and its peculiar adaptation to the wants of the wild animals which inhabit it, that there is no equal area on the continent east and south of Washington Territory which to-day harbors such an assortment and number of the indigenous animals of the country; and I mention it as a zoological phenomenon that there is no other known locality where so many of the genus *Cervus* are contained together as in this same Roseau Swamp. Within an area of less than seventy-five miles square are found moose, elk, caribou and the distinct varieties of blacktail (mule) and whitetail deer. The two latter, scarcely ever found together, here meet on the common boundary which separates their respective habitats. The caribou is seldom found elsewhere in company with either of them. The elk heroically contests the easternmost limit of his present range; the caribou occupies the most southern confine of his; while the lordly moose, noblest of the *Cervidæ*, stalks the middle ground of that great northern thoroughfare of migration which extends from Nova Scotia to Alaska without a break or interruption. Besides these five representative mammals, there are black and brown bears, and hares of three kinds, not to mention numerous species of *Mustelidæ* or fur-bearing animals. There are also two varieties of geese, and several of ducks, which breed in the tall grass of the swamps, which grows often eight feet high, besides a great many ruffed grouse and a few sharptail grouse. The country is not only adapted by nature to the different wants of all these creatures, but it has been protected by fortuitous circumstances, as well as by its inaccessibility, from the intrusion of game hunters. The rapid advance of human invasion into this far-off corner, which surrounded and closed in this great natural preserve on all sides, halted when it struck the borders of this swamp; and so we have a rare menagerie coralled and hemmed in, though fed and protected by the environment which keeps destroyers out. Even the red man does not venture here. As I have said, it is not a suitable dwelling place even for an outlaw or refugee. For a quarter of a century at least there have been few visitors to this wilderness except three or four families of Indians, who have a permanent village near Roseau Lake, and a small crew of loggers who have been cutting pine for some years past near the headwaters of the Roseau River, seventy miles east of the town of Hallock, in Kittson county. It has not been unusual in past years for bears and other animals to follow the belts of timber which skirt the rivers leading out of the swamp in the open prairie, and so unwittingly stumble into civilization. Once a big bull moose surprised the people of Hallock by running directly through the town on its way to the Red River, eight miles distant, and at another time a black bear disturbed the equanimity of the school children during the session, and was ultimately shot for his temerity.

As long as five years ago I described this phenomenal tract in some of the magazines or newspapers and called the attention of sportsmen to its advantages, but the locality seemed to be regarded as mythical by most persons; and sages shook their heads and said that I had town lots to sell because I suggested Hallock as an outfitting point, when there was no accessible way into the wilderness, except by the old Roseau trail. Nevertheless, corroborating testimony has been brought out of the woods year by year ever since; and this year more than ever by reason of the drouth and the fires. Moose meat and venison are almost a staple supply this fall on the tables of Kittson county, and trophies of the chase, in the shape of heads, hides and antlers, are scattered about the country. Referring to these I have seen a singular freak of nature which shows the horns of a moose and the horns of an elk on the same *os frontis*. One-half of this pair of antlers is of a moose and the other half of an elk, and each is perfectly developed. I have not been able to ascertain what the beast who wore these horns was like. I would not suppose that hybridity would manifest itself in the horns alone, though I should think that hybridity under the conditions of the present habitat of the two animals might perhaps be possible. Blacktail deer are quite common on the western outskirts of this domain, and as many as five carcasses have been brought in by two hunters as the result of a five days' hunt. Caribou are more frequently killed than elk, the moss barrens and muskegs being peculiarly adapted to their wants and habits. The foolish Indians this fall set fire to the tall slough grass, driving the big animals out of their lairs and the small game into such cover as the fire did not reach. The poor creatures were quite at their mercy. The land agents met a party of red men who had killed four moose and an elk, and were on the track of another. Two young men went in from Hallock, and after three days' absence brought in a fine yearling moose which weighed 400lbs. They found ruffed grouse huddled together in the thickets which the fire had left. If at any time the bush were well beaten a dozen rabbits would run out. Plover and sandpipers kept close to the dry water holes for lack of any other places more moist. The fate of all game might be deplorable if the proportion of hunters were greater. But the denizens of the Roseau Swamp are not to be exterminated now. Their immunities and prerogatives will be restored as soon as the blessed rain and melting snows fill up the empty sloughs and desiccated swamps, and hunting will be for years to come as good as ever. When November snows cover the ground so that the game can be tracked and before the severest cold gets its icy grip on the land, then is the most auspicious time to hunt. Hunting is done chiefly in the saddle, both on account of the wide range and the greater facility of moving and packing the carcass. It is believed by some people that deer and their kindred can be stalked more successfully on horseback than on foot, as the quarry is said to be less suspicious of approach. Usually there is a good month of fine hunting weather previous to Christmas time.

There are those who have doubted the presence of moose in Minnesota, yet within the past week two noble heads have been lying in front of a leading gun store in St. Paul, which were shot near Brainerd. The moose not only is found in Minnesota, but his range is nearly across the entire portion of the State lying north of the line of the Northern Pacific Railroad. Its occurrence is most frequent in the central part of Cass county, near Crooked and Eagle lakes and Willow River, and northward across the Rainy River boundary into the Canadian Province of Kewatin, which is a favorite stamping ground.

CHARLES HALLOCK.



TRAVELS IN BOON GAH ARRAHBIGGEE.

FROM THE DIARY OF JOSEPH GOATER.

EDITED BY F. H. TEMPLE BELLEW.

(Continued.)

* * * ALTHOUGH all the male inhabitants of the Arrahbiggee country are taught to be soldiers, saving only the learned class, who are at once priests, doctors, lawyers and governors, still there is a special class of warriors, a kind of autocracy, who are distinguished from the rest by doing no menial labor, such as gathering grain and fruit, building boats, weaving the gobwich, felling timber and the like. In this class the nose and forehead are higher, the eyes larger and the features generally finer. They are also taller and better

GOORTA TUBES.

built, indicating at some remote period the admixture of a superior race. The learned class have many of the same characteristics, which are preserved by intermarriage, so that the physical and mental traits, as well as the offices are hereditary. It is of the warrior and hunter class I now wish to speak. They are trained from their infancy upward in the use of all kinds of weapons, and in the practice of feats of daring and skill. While their studies under the direction of the Mullooch or learned class are almost confined to learning legends

NATIVE ENJOYING HIS GOORTA CUP.

of the loyalty and heroism of their ancestors, and to the art of making and improving weapons. For, strange as it may seem among a savage people, they devote much time and attention to the improvement of old arms, and the invention of new ones. The consequence is they have a greater variety of weapons than any other equally uncivilized people. Four times a year these warriors hold fetes of two and three days each, one to celebrate their emancipation, when a bridge which connected their country with what is their hell was swept away, and so released them from immediate communication with the evil spirits of that region, and gave them immunity from forays those demons, the legends say, were wont to make on their happy homes.

The second festival is in honor of the birth of Goorta the hero, who was instrumental in bringing about the afore-mentioned happy result. He is said to have had a thousand hands of metal and to have cast the bridge into the water, while his breath could blow away mountains.*

The third festival celebrated the birth of Mullooch, their Moses, Confucius, or Bramah. I will not say Mahomet, for their teacher was of a gentle and tender nature, opposed to war and bloodshed, and more after the pattern of our Christ than the pagan prophets. The fourth festival was in honor of their mothers, when all the males brought gifts and paid homage to their maternal relatives, mothers and grandmothers, if living, or to their graves if dead. If it so chanced that the male was too far away to reach his mother's grave by any reasonable amount of travel, he would borrow a mother from somebody else and so do homage to his parent vicariously. The Mullooch fete—a sober, dignified affair—was conducted by the learned class. While the Goorta festival, on the other hand, conducted by the warriors, was an uproarious, turbulent and altogether exciting piece of business.

It was all feasting, mock-fighting, games and sport. On this occasion I saw for the first time a peculiar festive cup that was as odd as it was ingenious. It was called the Goorta cup, after their great chief, and it was as much a point of honor to partake of it on his festival as it is with us to eat roast turkey on Thanksgiving or the English plum pudding on Christmas day. How shall I describe this three-ply beverage? In the first place imagine three tubes joined together at one end, and emptying themselves into a fourth—larger—tube like the confluents of a river. Fancy each of the three tubes provided with a valve, a slight pressure on which closes the pipe. Now imagine three gourds placed on the ground side by side, each filled with a different liquid, one sweet, the other acid and the third of vinous character. Now picture to yourself a naked savage lying on his abdomen with his head over the three gourds, with one of the Goorta tubes in his mouth and the ends of the other three immersed, one in each of the gourds. Then further imagine the savage sucking away with all his might at the liquids, stopping up the different tubes one after the other, as his fancy dictates, now sucking in the sweet, now the acid, and now two at once and now altogether; in short, playing a kind of gustatory symphony, and there you have an Arrahbiggee revelling in his festive Goorta cup. I could not help thinking, with a laugh, as I watched a dozen of these fellows lying down in a circle, like the spokes of a wheel, how royally drunk they would get trying to play Yankee Doodle in that fashion. I tried the instrument myself and found it produced the most novel effect, and was far from disagreeable. After all I do not see why we should not have tunes for the palate as well as for the ear.

*After the natives beheld me discharge my firearms, they called me Little Goorta, and held me in a jolly reverence second only to that they bestowed on their historic hero. I fancied, at times, this fable might be the tradition of some great engineering exploit in which gunpowder played a part, their hero being a Chinese.

Natural History.

THOSE MAINE MOOSE.

SEVERAL weeks ago the Portland *Press* published an account of the killing of a monster moose in the Rangeley Lake region. The story came to the attention of officers of the Department of Agriculture in Washington, and the following letter was sent to the *Press* from the Division of Economic Ornithology and Mamalogy of the Department of Agriculture:

To the Editor of the Press: DEAR SIR—I notice in the daily papers a clipping from the Portland *Press*, stating that "a mammoth moose" has recently been killed in the Rangeley Lake region. For years I have been collecting reliable measurements of large moose, but the biggest "bull" I have recorded is much smaller than the size mentioned in certain early accounts of the animal. Hence I am particularly anxious to secure trustworthy information of the size of this "monster." The height at the shoulder is the most valuable single measurement. Do you happen to know if accurate measurements were taken? If so, can you put us in correspondence with the person who made them? Very respectfully, C. HART MERRIAM.

A letter was at once sent to Mr. E. E. Thomas, who shot the moose, stating that accurate measurements were desired. This reply has been received, giving not only the height of the monster, but a hunter's graphic description of the chase:

KENNEBAGO, Nov. 5, 1886.—*To the Editor of the Press:* You ask for the size and height of the moose that I shot, and the particulars in regard to him. After the fishing season was over I hauled up at the little steamer Reindeer and started down the lake, then up the stream to Little Kennebago, and made my headquarters at the Wigwam (that is well known to all the sportsmen that visit the Kennebago Lake). I then paddled up and down the stream very carefully the first two days. I shot partridges that numbered over thirty. Then I says, "Enough of this small game," and stopped firing. On the afternoon of the second day I met my game as I was slowly paddling my way down the Kennebago stream that flows from one lake to the other. About three-fourths of a mile down the stream I heard something walking in the water, and to my great surprise a large cow moose walked out on the bar about twenty rods ahead. My rifle was on her in a second, but before I had time to pull the trigger a better specimen made its appearance from the same quarter, and the bearer of a splendid set of antlers was then my mark. The first bullet struck his neck but missed the bone by one-half inch. This was unexpected, and as he turned his head slowly around and began to think of the way to go I put a bullet through his heart. That finished him. He went about four rods and fell. The other moose walked slowly away, and I then went to the wounded moose as he lay thrashing in the water, and waited for him to be quiet enough to use the knife. Then, to my surprise, the old cow came quietly walking back, and came up within six rods of me. She was not half so pretty as the one that lay in the water. The long bristles on her back looked very much like those of a porcupine, and her nose turned up in a rather ridiculous manner. I swung my hat and shouted so loud that I think your editors might have heard me if you had been out in the open air. The Maine law gives a man but one moose a year, and fines him $100 for every other one killed the same year. But the cow left and I was glad. I camped that night with him, and the next morning a party going up the stream helped haul him out of the stream. He stood 18½ hands high (6ft. 2in.), and weighed 850lbs.—E. E. THOMAS.

Capt. Thomas, however, has a rival who has also shot a very large moose. This is a letter received from Councilman Elwyn W. Lovejoy, of Lowell, Mass.:

LOWELL, Mass., Nov. 1, 1886.—*To the Editor of the Press:* In your issue of the *Press* Oct. 23, 1886, you have

an item "Maine's Jumbo Moose Killed." While I do not seek for publicity, I do feel that undue praise has been accorded the shooter of the moose by your article, and for that reason only I am inclined to write you. I send you this slip from the Lowell *Morning Mail* of Oct. 16, 1886, which describes the animal which I shot:

Mr. Lovejoy and his guide occupied a "crow's nest," a platform in a tree, four days, until, after this patient waiting, this magnificent bull moose appeared below about 11 o'clock in the forenoon, Oct. 7. A shot from Mr. Lovejoy's Winchester entered behind the fore shoulder, making a mortal wound, but three other bullets were put into him before he fell with a crash into the undergrowth. Mr. Lovejoy drew his knife across the creature's throat to finish him, and the magnificent animal, a veritable monarch of the forest, was secured. The task of dressing him, however, was no sinecure. The animal was one of the largest ever killed in the Parmacheenee region, and weighed between 1,200 and 1,500 pounds. * * * The head of the moose, which was uninjured in killing him, was preserved intact, and is an unusually handsome one. The spread of the antlers is less than sometimes found on a moose of this size, but it is rarely that they are found so symmetrical and perfectly developed. Their spread is 39in. The head weighs 60lbs. divested of flesh.

I had as guide Aldana Brooks, of Upton, Me. Any person desiring to know more about it can write him or John Danforth, Camp Caribou, Me., an old guide and hunter, known personally by many hunters and by reputation to all. I brought the head to Lowell, and have it mounted now. I came out from Parmacheenee via Magalloway River, Upton and Bethel, thence by the Grand Trunk and Boston and Maine Railroads, and many hundreds of people saw the head of my moose while in transit to Lowell. None competent to judge set his weight under 1,200, and most of the guides estimated him more. Danforth said, "Not less than 1,200 pounds." Who do you think has got "Jumbo?" I shot mine Oct. 7, 1886, about 10 miles from Parmacheenee Lake. Respectfully yours, ELWYN W. LOVEJOY.

SHORE BIRD NOMENCLATURE.

Editor Forest and Stream:

In your issue of Nov. 4, under the heading of "Shore Bird Nomenclature," Mr. Murdock says, "The 'blackbreast' is one of the names for the golden plover (*Charadrius dominicus*), not for the black-bellied plover (*C. squatarola*), which, so far as I know, is universally known as 'beetlehead' from Cape Cod northward." I have passed quite a number of seasons along the Cape Cod coast in collecting shore birds, and my experience with the gunners along the Cape—and I have talked with a good many—is that the golden plover is called and known by them as the "green plover." Mr. Murdock is mistaken when he says, "For instance, a thoroughbred Cape Cod gunner from Orleans to Chatham calls the golden plover a 'toadhead,' and seldom speaks of a 'summer yellowleg.'" I am aware that one or two gunners call the golden plover a "toadhead," but I am sure that nearly all of the gunners of Orleans, Chatham and other towns along the Cape call the golden plover the "green plover" and the yellowlegs "summer yellowlegs." A greater yellowlegs is called a "winter yellowlegs," as it comes along late in the season and stops late in the fall.

Mr. Murdock again says that he believes the young redback sandpipers are called on Cape Cod "winter oxeyes." I have always heard them called by the gunners "crooked-bill snipe."

The Hudsonian curlew is known along the Cape as "spot rump," the willet as the "humility," the sanderling as a "bullpeep," the adult black-bellied plover as a beetlehead," the young black-bellied plover as a "pale-belly," the robin snipe as a "redbreast," the red-breasted snipe as a "brownback," the turnstone as a "chicken plover," the Hudsonian curlew as a "jack curlew," the Esquimaux curlew as a "doobird," the piping plover as a "mourning bird" or "pale ringneck," the semi-palmated sandpiper as a "peep," and the least sandpiper as a "bumble-bee peep." J. C. CAHOON.

CAPE COD.

"COON CATS."—Boston, Mass.—*Editor Forest and Stream:* In your last issue I noted a short comment on an article headed "Coon Cats," and it seems to me that certain statements therein need qualification somewhat, perhaps. The statement that any hybrid is "impossible," presupposes that enough absolutely proven facts exist to base an opinion of this sort upon, whereas, in no branch of natural history is there more doubt than in this whole subject of attraction between sexes, conception, maternal impressions on fœtal life, delivery under different surroundings. In fact, where connection is possible impregnation might be also supposed to be possible, until enough facts proved the reverse, I believe.—JOHN DIXWELL, M.D. [The general statement that hybrids are impossible is, of course, too broad; but the words as written were intended to apply only to the particular case in question. Coon cats and rabbit cats are often spoken of, but the animals supposed to hybridize are in these instances so widely different in their nature that it is scarcely too much to say that conception between them is impossible. No one would imagine conception possible between a lion and a cow or a bear and a horse. The coon belongs to the family *Procyonidæ* and the cat to the *Felidæ*. Both are carnivores, but beyond this they have nothing in common. Hybrids are known to occur only between species which are very closely related. A most familiar example is that between the horse and the ass, but even here the progeny is unfertile, though both species belong to the same genus. We have seen a hybrid between the domestic sheep and the mountain sheep, another case where the two species were within the same genus. Instances are not wanting in which animals of different families have mated, as in the case of the male elk (*C. canadensis*) and the female domestic cow; but we fail to recollect a case in which such mating was followed by conception. It may be set down as well established that animals of different families will not breed together.]

WEAPONS IN GAME.—Sacramento, Nov. 7.—*Editor Forest and Stream:* John Simon, of Landing, Yolo county, lately extracted from the breast of a wild goose that he had shot a curious arrow-head. It is of the finest ivory and nicely carved. As there are no animals found this side of the Arctic from which ivory is taken, it is apparent that the goose thus honored must have received its wound somewhere in that far-off icy region. Possibly the shaft was winged from the bow of some resident of that mysterious land about the North Pole, which so many adventurous whites have sought in vain to reach. We have all read of various kinds of arrow-heads in use by the natives of different parts of the continent, but this is the first instance in which I have heard of ivory being used for arrow-tips. It would be interesting to know the true history of that arrow-head.—SANCHO.

MORE ALBINO SQUIRRELS.—Decatur, Ind.—Six weeks ago a fox squirrel was killed near Winamac, Indiana, which attracted considerable attention from its color. The tail was that of an ordinary fox squirrel, as were also the legs, feet, ears and under part, or abdomen, while the back and sides from root of tail to tip of nose were almost a pure white. The squirrel has been mounted and is now in possession of Mr. R. O. Perry, of the above named place.—T. W. B. Sacramento, Cal.—Recently, while hunting in the foothills of the Coast Range, James Lewis, of Yolo County, killed a snow-white squirrel of the gray squirrel species. It is considered quite a curiosity.—SANCHO.

SNOWY OWL IN ILLINOIS.—Six miles from town, Nov. 13, I killed a large snowy owl, flushed from some dead grass on a creek bottom. The bird was a very large female, 5ft. 1in. from tip to tip; plumage nearly white. This is the first instance of this species being captured in this county. The weather has been very mild all the fall, and no snow has fallen. I think this is very early for this bird to be migrating southward. The specimen is mounted and in my collection.—H. A. KLINE (Forreston, Ill.).

NO FABLE—For I witnessed it myself. Two sparrows of a belligerent character separated from the flock, and engaged in a terrific combat. They struggled and fluttered to the ground, where they were quickly captured by a vigilant cat, who had watched the battle from its inception with a fixed determination to use all her energies for its suppression. Blessed are the peacemakers.—S. R. H. (Bucyrus, O.).

EAGLE MEASUREMENTS.—Madison, Wis., Nov. 15.—I recently received a letter from a friend in Nebraska stating that he had shot a gray or young bald eagle a few weeks ago that measured 10ft. 3in. in extent and 40in. in length. It proved to be a male bird. This we believe to be only 1in. less in extent than Audubon's "bird of Washington."—C. F. CARR.

THE BEAVER IN MICHIGAN.—Central Lake, Mich., Nov. 11.—I am told that a beaver was brought into the village of Elmira, twenty miles east of this place, yesterday, the first I have heard of in this region for a long time. Deer are very scarce.—KELPIE.

Game Bag and Gun.

COTTONWOOD LAKE.

GRAND HAVEN, Mich., Nov. 8.—The past three weeks have gone "like a dream of the night," and I can hardly realize that I have once more been to the land of the Dakotas. Even the hope of going had almost been abandoned, but fortune favors the brave (hunter), and unexpectedly business shaped itself so that I found I could have two weeks of unalloyed pleasure.

I was very desirous of taking a hunting boat with me, as I had felt the need of it very much during my former trips to Cottonwood Lake. The time was too limited to send it by freight. If only I could take it in the baggage car of the "limited express" of the Chicago, Milwaukee & St. Paul R. R., was the thought that comes to me, and I resolved to "try it on." This was on Saturday, I was to start the next Tuesday. A hurried note was written to Major Heafford, assistant general passenger agent at Milwaukee, explaining the situation, and by return mail, Tuesday morning, came an order from Mr. W. D. Carrick, assistant baggage agent, directing "agents and baggagemen to pass in baggage cars for Mr. ——, to Redfield, Dakota, and return, a small hunting boat." I have never had the pleasure of meeting Mr. Carrick, but on inquiry I find he is one of us, and enjoys an outing with rodd an gun. "Why," said an acquaintance of his, "I believe, if the road would allow it, Carrick would send out a special baggage car with every hunting party leaving Milwaukee." A fellow feeling makes us wondrous kind, and judging from the treatment I received on this trip, I think conductors and baggagemen on this road must all be lovers of field sports, and it could hardly be otherwise, since from August to November their trains daily flush great coveys of chickens and grouse, and the honk of geese and gabble of brant are heard from all the many lakes which are located along the line.

I left Chicago at noon Wednesday. Thursday evening at 8 o'clock found me at Redfield, where I was delayed until Friday evening, when I found a farmer whose "claim" lies near Cottonwood Lake, and he consented to take me and my boat to the lake. Friday night found me exchanging salutations with my old friend William Sutton and his good wife and family. My coming was entirely unexpected, but I was met by that hearty welcome which makes one "feel at home" and which no one knows better how to give than this family. After supper Mr. S. and I, over our pipes, recall the pleasant hours we have had together in the past, and discuss the probabilities for the hunting of the few days which I am to spend with him. The first flight of geese has gone, the bright, warm weather and south winds are delaying the last flight, still there are some left, and brant are coming in in great flocks. Ducks, as usual, are plentiful. Altogether the outlook is favorable. I unpack my gun and lay out shooting toggery ready for the morrow, with the resolve that no time shall be wasted.

Saturday dawns bright and clear, and I launch my boat and start for a six-mile cruise around the lake. The wind is from the S. W. and quite fresh. I take lee of the west shore and paddle leisurely along, not expecting any shooting until I reach the tall rushes a mile or more below; but suddenly, and as usual, unexpectedly, a mallard rises from the grass and reeds along shore; with a startled quack, quack, he makes off as fast as wings can carry him. It's a pretty, straightaway shot, and although he has a good start before the paddle is exchanged for the gun, he drops to the first barrel. Two more birds rise before the rushes are reached; the first gets away, notwithstanding both barrels call after him, the last, a blue-winged teal, comes down at the first call. Now we come to the rushes, paddle is exchanged for push-pole and soon the ducks begin to rise. I score several misses, for it is quick work to drop the pole, pick up the gun and get a shot before the birds are beyond reach, but I am well satisfied with the sport, and return for dinner with a very fair showing of ducks and an appetite unknown before for many a day. Among the ducks killed was one canvasback, the first I ever shot on this lake. I saw a number of them during my stay, but they were always well out in the open water and so shy that I never succeeded in getting near enough to them for a shot. Saturday evening I added three white brant to the day's score and felt well satisfied with the day's work.

Sunday Major Howell (from the town of Howell, fourteen miles west from Cottonwood) dropped in on us about dinner time, and insisted on my visiting old friends at his town. Monday spent with him, so no hunting was done. The Major was a candidate for County Treasurer, and was very much engaged with what he termed "missionary work." I left him Tuesday morning just as he was starting out with his pockets well filled with what he called "tracts," but which looked for all the world like what we designate as election tickets back in the States. (I have had a note from the Major since my return, in which he says he "got there in elegant shape.")

Tuesday evening I returned to Cottonwood, shooting a half dozen grouse and chickens on the way, and closed the day with four more geese.

Wednesday morning early a party of four of us went to the cornfields to try for geese, but were not very successful, getting only five, two of them falling to my little 12-gauge. One of the party, who was shooting a very fine 10-gauge 10-pound English-made gun, had expressed many doubts about my being able to "reach them" with a 8¼-pound 12-gauge, but the results of the morning's shoot rather astonished him and gratified me. I am a very enthusiastic American, and, while not detracting at all from the shooting qualities of foreign-made guns, which are too well known to be denied, am just "set enough in my ways" to think that just as good guns are made at home. At any rate, this little 12-gauge Damascus Remington is good enough for me.

I had intended to keep a record of each day's shooting, but Mr. Sutton's son Wesley and I gave up the attempt to keep a correct score. We shot every day all we wanted. The four days' shooting netted over twenty geese and brant, and a goodly number of chickens and grouse sandwiched between the morning and evening shooting on the lake.

Saturday came all too soon. I had promised to be home for election (Tuesday), and must start Saturday night in order to get there, so the gun is cleaned and put in the case, flannel shirt and shooting coat affectionately folded away, while the lines of an old poem, which always ring in our ears at the close of a hunting holiday, come to us again:

"We linger while we turn away,
We cling while we depart,
And memories unknown till then
Come crowding round the heart.
Let what will lure us on our way,
Farewell's a bitter word to say"—

to geese and ducks. Soon we are bowling over the hard prairie road toward Redfield. Eight o'clock P. M. finds me aboard the train, and on Monday evening I am recounting the pleasures of my trip at my own table at home. S. C. G.

ITEMS FROM GEORGIA.

AUGUSTA, Ga., Nov. 18.—On account of the protracted drought and warm weather very little hunting has been done about here; but several showers have fallen of late and a cold wave has passed over us. This has brought out the dog and gun, and Bob White is being bagged freely. I had just an hour's sport this afternoon and bagged four quail in four consecutive shots. Only one covey was found on account of the lateness of the hour. My faithful pointer dog Dan (A.K.R. 3931) made every point true and staunch. There is a peculiarity about this dog not generally found. It is his habit when he finds birds, and you are not near enough to see him, after remaining for a time on point he will back off and come to you with such signs as to inform you of the fact. I have known him to do it twice on the same covey in a test. He did the same thing this afternoon. He is a wide ranger, but always comes back in a given time. Being off longer than usual this afternoon, I told the young man with me that "Dan had birds." We took his direction over a small hill to find him. When we came to the brow of the hill he came up to me wagging his tail. I then followed him a short way and he led me directly to the point on two birds he had in the brush. He does this frequently when the birds lay well.

Much game is now coming into market. Deer, turkey, duck, woodcock, quail, etc., are daily seen in our streets and in the market. One person killed ten turkeys on a trip down the river last week, and ducks are plentiful.

In a recent number of the FOREST AND STREAM I asked how many broods of quail were hatched in a season. You replied, "Two, and sometimes three." I am convinced of the correctness of your answer. I took a short ride with my gun and dog on the 15th of October last. He pointed in a stubble field, when I immediately dismounted and went to put up the birds. When I got to him I found young birds running all over the ground. They could not have been more than two or three days old. They had no wings and made no effort to fly. Of course I did not shoot at the old ones, but rode off.

Another question I wish to ask is this: Can you or any of your readers inform me in what places quail can be found at certain hours of the day, say beginning at 8 o'clock in the morning? I want to know where the best places are to hunt them at a given hour. Most every one has a theory for himself, and I ask this because I have been requested to do so, and for general information.

J. M. W.

SACRAMENTO, Cal., Nov. 7.—Our open season has been upon us now for nearly six weeks, and reports from all quarters represent small game as very plentiful. Geese and ducks are everywhere and the foothill section abounds in quail. We have had a couple of good rains and the leaves are falling, which means that the quail hunter's time has come. No frosts have yet occurred in northern California, although they have had several severe ones in the southern section. Still, the days are cold enough to allow one to do vigorous work without discomfort.—SANCHO.

CANADIAN BACK LAKES.

SOME of your readers might like a few notes of a canoe trip lasting a month on the back lakes of Canda, and as many of them annually cast about for a route on which to spend a few weeks of camp life, combining canoeing, shooting and fishing, it might be the means of supplying them with the necessary information. Commencing at Laidlaw's landing, near the head of Balsam Lake, I went down through it to Camerons Lake, past Fenelon Falls, into Sturgeon Lake and nearly to its foot; returning went up the Scugog River, past the Farm of Lindsay into Scugog Lake and up Scugog Lake to Port Perry at its head, taking the train from there back to Toronto. The distance paddled was about seventy miles in a straight line from point to point in the route, but of course the paddling to and fro to shooting and fishing grounds would perhaps double or more than double that distance. My outfit consisted of a canoe, built by English, of Peterboro, 16ft. long, 31in. beam and 12in. deep, with a good deal of sheer at each end, after the fashion of the birch bark—a good point. Having a flat floor with fine ends, it carried a large load, paddled easily when loaded and was steady enough to stand up in and shoot. A marquee tent 12x12 with a bell behind, made of factory cotton, with a fly to go over it of the lightest factory cotton, which only costs five cents a yard. This is a great protection to a tent, and when well stretched no rain will come through the tent; it also keeps it cool, warding off the sun and giving a free circulation of air between the two. I think this arrangement preferable to having a single tent of heavier material. A large waterproof blanket in which my bedding was rolled up when moving formed the ground work of my bed at night. A sailor's canvas bag, painted lead color, which made it quite waterproof, held my clothes. An old champagne basket, costing twenty-five cents, covered with oilcloth, contained the grub. I had also an axe and small spade, 12-bore gun, box holding 300 cartridges, split bamboo trout rod, trolling line with spoon, jack lamp (using coal oil and giving so strong a light that I can read a letter by it at night 100ft. off), some wax candles; two large tin pails, fitting into each other, the smaller one containing, ranged round the inside, separate tins, to hold tea, coffee, sugar, salt and pepper, and in the space in the center a teapot—a very good contrivance, as the larger pail serves as a waterpail, and if wanted the smaller one, by taking out the loose tins and teapot, can be used as a pail also.

My camp stove is the best style I have ever seen, being extremely light but very complete and useful. It has two holes on the top for cooking, same size as a No. 8 stove. The fire is in the upper part, with an oven underneath. The oven roasts beautifully, and is heated by turning a damper at the back, which sends the heat over the top of the oven, then underneath it and into the pipe. I have roasted a large mallard easily and well in it in less than an hour, besides using the two holes on the top for other purposes. The telescoping pipes fit into the fire place. The oven holds the frying pan, a wasting pan and a broiler, so that when the stove is packed up it is all self contained, and yet is so light that it can be lifted easily with two fingers. I had a tin plate sewed into the side of the tent, with a hole in the middle to allow the pipes to go through, and some additional lengths of pipe, and on a wet or cold day put the stove inside the tent, when with water and wood inside also I could be warm and comfortable, and independent of what the weather might be outside. I had also two tin pails tapering to the bottom, which fitted into the holes on the top of the stove, going below it about two inches, and by using them and the oven at the same time, I could have three cooking operations going on at once. The stove is made of sheet iron and costs complete about $6. It is decidedly the best camp stove that I have met with in an experience of forty years.

I had with me a pure Clumber spaniel puppy, six months old, bred by your correspondent, Mr. Mercer, of Ottawa, Ont., which I was anxious to initiate with camp life and its accompaniments. She exhibited qualities, young as she was, that hold out good promise of her making one of the finest dogs I ever saw. Her sire, Johnny, is a litter brother of Newcastle, who has won, I believe, many first prizes at exhibitions in his class; he (Johnny) is a noted dog for his questing and retrieving qualities, and his daughter will not, I think, belie either her immediate or more remote ancestry.

I left Toronto on Aug. 30 by the afternoon train on the Midland Division of the G. T. R., which runs to Coboconk at the head of Balsam Lake, stopping at a small station called Kirkfield, to which place I had some days previously sent by freight my canoe and camping traps. The next day a friend who lived in the village went with me to the Drowned Land on the Talbot River, which runs into Lake Simcoe, a noted resort for woodducks and black ducks. This drowned land extending about five or six miles or more in length, is formed by a dam built across the river at Bolsover, setting the water back, and covers many thousand acres. Here we intended shooting the next day, Sept. 1, on which day the season for duck and snipe shooting commences. During the evening another party of four arrived, and pitched their tent close to ours, and during the night several other local sportsmen put in an appearance, so that in the morning the river was well lined with guns. We had fair shooting in the morning, but the number of guns seemed so effectually to have scared the ducks that after that morning very few remained, most of them having left for safer quarters.

Having promised to wait at Kirkfield for a friend who intended joining me there, from Toronto, I remained at the Drowned Land till Saturday afternoon, killing a few ducks every morning and evening, and enjoying the beautiful weather and the camp life. On Wednesday morning I shot a woodduck, which fell into the river behind me. I was standing on the bank at the time, about 20yds. from the edge. I took the puppy to the bank, and pointing to the duck, said, "Go and fetch dead, Joe," Fortunately just then the duck, which was only winged, gave a flap, and the puppy saw it at once and swam out to it. This was the first bird that she had ever attempted to retrieve, and as the duck on her approach began to struggle, she swam round it two or three times, but appeared afraid to take hold of it and began to return to the shore. I ordered her very emphatically to go back and fetch it, when she at once returned to the bird, swam round it again once or twice, and at last took hold of the point of one of its wings and swam to the shore, towing the duck behind her. As soon as I saw that she was bringing the duck I walked back to the place where I was standing when I fired, and when she reached the shore and got the duck on the land she took it up and brought it to me. This was not bad for a six months old puppy. After that she brought every bird that I sent her for without the least hesitation. But I did not overtask her, not wanting to keep her, at her age, always wet. The teaching was what I wished an opportunity to give, not to make her retrieve every bird. In another year, when full grown and strong, she will be able to do that without the injury to her health which might result from such a course at present. On returning to the camp morning and evening after shooting I always gave her a duck to carry from the landing to the tent, and that practice I kept up all the time I was out. After the first few times, the puppy of her own accord always picked up a duck without waiting to be told, and marched quite proudly to the tent, carrying the duck and looking back every now and then to me with a perfectly self-satisfied air. Though I never before owned one, I had often heard that one of the peculiarities of the Clumber spaniel was, that they took naturally to retrieving, and certainly if the majority of the breed are to be judged by my puppy, they are honestly entitled to their reputation. She is very tender mouthed, carrying a bird for long distances without ruffling a feather. I think it is a pity that this breed of spaniels is not more generally known and used. Their great power gives them a decided advantage over most of the other breeds of spaniels in carrying birds in heavy ground, and their hunting mute is another point in their favor. Their noses are excellent, and their beauty and high general intelligence make them pleasant companions both in the field and about home.

I believe that there are only two families of these spaniels in the Dominion, one in Halifax and one in Ottawa; but I feel confident that as their usefulness and splendid hunting and retrieving qualities become more generally known, they will come to the front as they have not yet done, and will be in great demand by sportsmen in general. At present hardly one Canadian sportsman in ten ever saw one or knows anything of their qualities and capabilities. For snipe, woodcock and partridge shooting, and for retrieving ducks I consider them unequalled by any breed of dogs, and I believe that they would also be excellent dogs to shoot quail over. They hunt so close to the gun that their flushing the birds without pointing would not be of any consequence, and in finding scattered birds after the bevies had been flushed and marked down, I believe they would not be excelled by the very best pointers and setters. If you only consider that for about 200 years this breed of spaniels has been kept absolutely pure by the dukes of Newcastle, and that during that time each successive generation has been used for hunting and retrieving, and if you believe that such habits will, in the lapse of time, become from such constant use almost second nature, you can easily understand why the Clumber spaniel of to-day, if pure bred, should be a dog that almost naturally, and without teaching, takes to the ways of his ancestors.

I returned to Kirkfield on Saturday afternoon, to find a letter from my friend in Toranto, saying that the tyranny of business would prevent him from joining me that evening. And on Monday morning I had my canoe and traps loaded in a lumber wagon, and drove four miles to Laidlaw's landing, on Balsam Lake.

That afternoon I went into camp alone, about three miles down the lake, near McNishes Creek, at the mouth of which there is a considerable extent of drowned land, where last year at this time there were a great many woodducks and quite a number of black ducks. The next morning I was on the shooting ground before daylight, but much to my disappointment, I saw only two or three ducks and did not get a shot. Evening produced the same result, so that point of my route, where I expected some fair shooting, turned out barren. I cannot account for the absence of the ducks this year unless they had all been shot off, which seems almost impossible, though strongly suspect that they had been constantly shot at by people in the neighborhood since Aug. 15, fifteen days before the open season. This would have driven them from the restricted territory of the shooting grounds

This is one of the hardships and disappointments that the sportsman who comes from a distance to shooting grounds and who respects the law, has to undergo. In out of the way parts of the country, unless the government appoints game wardens who will do their duty, it is perhaps unavoidable. Wealthy corporations of sportsmen, who own or lease shooting grounds, can afford to employ men to watch them; but the rest of the country where game is to be found is practically left quite unprotected, and in too many instances the man who respects the law and on the opening of the season at some expense and trouble goes to a point where he has a right to expect shooting, finds, on reaching his destination, that local shooters have anticipated him by a fortnight or three weeks, and have either killed or driven away all the game. This is particularly the case with ducks which, if persistently shot at day after day on ground of not great extent, will leave it entirely. It is different with field game which, of course, may be killed off before the time, but unless it is, it does not leave the locality where it was reared. What is to be the remedy? In Manitoba the government appoints game wardens all over the country who will and do prosecute people who shoot out of season. I do not think that any salary is attached to the office, but there there is no difficulty in finding plenty of men who are quite willing to accept the office, and the system works well, no ill feeling following the prosecution of offenders by the game wardens, who act *ex officio* and in a public capacity. Why could not the same system be adopted in Ontario? I feel satisfied that in Ontario no difficulty would be found in getting men to act as game wardens, and one or two prosecutions, with the knowledge that it was the duty of the game wardens to protect the game, would very soon effectually put a stop to the shooting, which is systematically carried on in many places for two or three weeks before the expiration of the close season. I think that if the matter were represented to the Ontario government by a strong body of sportsmen, the object would most likely be attained. Is it not worth a trial?

My camp was pleasantly situated and good fishing in the lake close to it. Not being pushed for time, I remained in it till Wednesday, when I started for Cameron's Lake, the next below Balsam in the chain. I was sorry to leave pretty Balsam Lake where, although I had been disappointed in my expected shooting, I had much enjoyed my two days' sojourn. It was a paddle of about seven miles to the foot of the lake where the river which connects it with Carmeron's Lake commences, at a pretty hamlet called Rosedale.

At the landing, which I made about noon on a beautiful sunny day, underneath a fine spreading oak on a bench sat an old white-haired hale and handsome man, talking to two others lying on the grass at his feet. On approaching I saw that the old man was blind. He turned out to be the postmaster, and had a small store in which the post-office was close by. He told me that he had been perfectly blind since ten years old, the result of an accident. He was most intelligent and answered all my questions without the least hesitation. On my saying that I wanted my milk pail filled, and wished to get a loaf of bread, he at once rose saying, "Come with me to the post-office and my old woman will attend to your wants," which I did, and found his wife a comely, nice elderly woman, who did as he said. I gave her a twenty-five-cent piece in payment. The store was somewhat dark, and she said, "Is this a twenty or twenty-five-cent piece?" "Give it to me," the old man said, "I will tell you." He took it between his thumb and finger and feeling it for an instant only, said at once "It is a twenty-five-cent piece." How very acute the sense of touch becomes in the blind. I never saw it more strongly marked than on this occasion, and what a wise and merciful arrangement it is that makes up in some measure for the loss of one sense, by increasing the delicacy and power of another. I found that I had to go down the river two miles to a dam and lock, thence make a portage, as the lock was out of repair and not used. This was not pleasant news, being alone, but as there was no other way I had only to proceed. The portage was not a long one, only about 40yds. around the dock, but the unloading singlehanded, reloading, hauling the canoe over, and carrying all your traps on a very warm September day, was not by any means a pleasant task. About three milse below the dock, I was told, I would come to Cameron's Lake; and on the right hand side, where the river entered the lake, I would find a nice camping ground and some duck shooting. Some distance below the dock I came to a place where the river turned in three different directions, or rather where there were three rivers; one kept on to the right, another to the left, and still another went straight on, and they all appeared to be of about equal size and volume. Here was a puzzler. Which was the proper one for me to take? I came to a stop and tried to think the matter out by theorizing on the direction of each, but as I had no map with me (a great oversight) I could come to no satisfactory conclusion, and as the evening was approaching, it was getting time to be in camp, I was, however, surrounded on all sides by drowned and submerged land, where no camping place was to be found. What was I to do? If I went on and took the wrong route I would only be losing valuable time, and would either have to spend the night sitting in my canoe or go back to the dock and camp there. At this critical moment a most unearthly sound smote on my ear, making me almost jump upright in the canoe. It was repeated in a few seconds, and I then recognized it as the escape of steam from a high-pressure engine, and from around a point close by in the river on my left appeared a steamer with a barge load of cord wood in tow. The barge had gone aground just around the point, hidden from me, and the steamer being ready, was commencing to start with it again. I waited till she came up to me, when they said my route lay to the right; the river to the left was the Burnt River, and the one straight before me was its course to the lake; the one to the right was the continuation of the river which came from Rosedale. Thanking them for a proffered tow, which was declined, and very glad at finding myself relieved from my somewhat disagreeable dilemma, I paddled on. Soon I came to the mouth of the river, where it enters Cameron's Lake. Here on the right hand side I found a very nice camping place, sheltered by the woods on three sides and open to the lake; and as evening was coming on I lost no time in unloading the canoe, putting up my tent and stove and preparing supper.

The next morning before daylight I was awakened by the pattering of rain on the fly of the tent, the first that had fallen since I started; so instead of getting up to have a shot at the early woodducks, as I had intended, I turned over in my blankets and enjoyed a snooze till about 7 o'clock, when I rose and breakfasted. I had left the stove standing in front of the tent the evening before, but now brought it inside, put on the additional length of pipe, which reached three feet above the ridgepole, and with a pail of water and some wood inside, was quite independent of the weather. It partially cleared up at half-past 10, and as the mouth of the river, only 110yds. from the tent, looked like a good place for bass, I determined to give it a trial. Catching some small frogs, I put my rod together, using the bait tip, and was very soon anchored just where the river enters the lake. A growth of weeds prolonged the point which formed the end of the eastern bank, and dropping my frog just clear of them, in less than five minutes I hooked a 3lbs. bass, which on the light bamboo rod gave me fine sport for some minutes, when he consented to allow the landing net to be put under him; and in less than half an hour I caught two more, both considerably larger than the first, the last the largest, and weighing, I am sure, over 4lbs. Three finer or handsomer bass it would be difficult to produce. I was much surprised to find two of them full of roe and the third of milt. If this is general, should not this season be a close period for these fish? I did not fish for nor catch any more bass on my trip, so had no further opportunity for observation on this point. If my half-hour of fishing at this point be a fair sample of the sport here, few better bass fishing resorts are to be found.

As it commenced to rain again I went back to the tent, and keeping up a good fire in the stove was quite comfortable. Between three and four in the afternoon it partially cleared off, and having been told that close to where the Burnt River joined the Gull, there was a small lake surrounded by drowned land and bog, which could be entered by a canoe and was a good place for woodducks, I started to see if I could find it. I was successful, and it turned out to be just as described to me, except in the point that the ducks were very scarce, there only being three in it and they all got away unshot at. I was quite uncertain whether the ducks would fly in there in the evening, and as it was some distance from camp and threatening to rain again, I thought it best to get back,

When I got near the camp it was 6 o'clock and a very gray and lowering evening. Not a hundred yards from the tent there was a patch of 40 or 50 acres of bog, marsh, pond holes with lilies, patches of black muck and tall reeds, inclosed between the mouth of the river and the main land, a bay, in fact, that looked a likely place for ducks to fly into, and since it was so near the tent, I pushed the canoe into it, startling three woodduck as I did so, which went away without being shot at. After waiting until half past six without any ducks coming in, I was in the act of raising the paddle to leave when I saw a woodduck coming toward me. It came within shot and I knocked it down, and had hardly put a fresh cartridge into the gun when two more came in, and from then till seven, by which time, the evening being so dark that it was impossible to see to shoot, I am sure not less than one hundred ducks flew into the place. I had inadvertently stumbled into their evening roosting place, and in the greater part of an hour's shooting I knocked down seven, five of which I got next morning, as it was too dark to find them then. If it had been a fine, clear evening, giving a good bright background of sky to shoot against, I am sure I could easily have killed fifteen or twenty, as they flew all round me, paying no attention to me standing up in the canoe, and many times plumping down in the reeds within a few yards; but when they got between me and the background of woods which lined the marsh, in the bad light, it was impossible to see them with sufficient distinctness to cover them with the gun.

This was one of the happy chances that sometimes come to the duck shooter. Many years ago, when on a shooting trip with Tom Wallace, the now celebrated paddler, our trip extending from Rice Lake down to the drowned lands below Campbellford, on the Trent River; in the heart of those drowned lands one Sunday afternoon he found a place which, from the signs, he thought the woodducks would fly into in the evening to roost, and we determined to try it, on the chance of his being correct in his supposition. It was about two miles from our tent, through drowned land all the way, and to reach it by daylight (to be later than that would have been useless) we had to leave the tent about 2 o'clock A. M. Any one who has ever tried it will know how difficult it is to make one's way through drowned land, in a canoe, in the dark, and how he ever managed to find his way to the place I never could understand, but we did get there just as daylight began to show, and in time for the shooting. We had hardly taken our places at some little distance apart, when Tom's suspicion was verified by duck after duck pitching down and flying round our heads in all directions, and I never had as good shooting as I had on that occasion for a couple of hours. I forget now (it was about 25 years ago) how many ducks we killed, but it was a goodly number. It was in the old muzzle-loading days and though we each had two guns, if we had had breechloaders I dare say we would have doubled it. My little evening's shoot on Cameron's Lake brought the occasion back forcibly to my recollection. The ducks must have all left the place before daylight, for I was in it next morning some time before that but did not see a single duck.

It was now Friday, and as I had promised to meet my friend the next day at Sturgeon Point, about twelve miles away, with Fenelon Falls to pass at the foot of the lake, dividing Camerom from Sturgeon Lake, I had to strike camp and proceed. I was sorry to do so, as by remaining I would have had some good shooting and fishing, but I was anxious to keep my appointment. I had a reach of four miles across Cameron's Lake to cross after leaving the shelter of the west shore of the lake to get to the falls, and as it was blowing freshly from the N. W., and my canoe was heavily loaded, I hesitated a little at leaving the weather shore. I went out about quarter of a mile, but found the sea too heavy for me and turned back. In half an hour, however, I fancied that the wind was lulling and the sky to windward looked less windy, so I again made a start. When about half way across the wind freshened up a little, which also freshened up the old sea, and I was almost sorry I had made the venture, but by dint of hard paddling, I reached the landing at the falls, with only a little water in the canoe.

Crossing the wide reaches of these lakes in a loaded canoe, if there is any wind or even appearance of wind, is a thing to be always undertaken with great caution. The lakes are generally shallow and it does not take much wind to get up a nasty choppy sea, which will soon find its way over the gunwale of a deeply loaded canoe, with only about three inches of freeboard, and being swamped even half a mile from the shore is neither pleasant nor safe; but it is a dilemma very likely to occur if one be caught in such a position. I was afterward told that Cameron's Lake bears the reputation of being particularly treacherous.

The falls at Fenelon are about 30ft. in height, and constitute one of the finest water powers in Canada. A dam is built across them, and the Government are building fine granite locks. These when finished will prove an important link in the proposed Trent Valley Canal, which if ever built is intended by means of these chains of lakes and rivers to connect the Georgian Bay with the lower end of Lake Ontario, and thus avoid the dangers of the navigation down Lakes Huron, St. Clair and Erie, and the upper part of Lake Ontario. But the railways seem to be competing so successfully now with water carriage, that it is unlikely, feasible as the plan seems, if it will ever be carried out.

The town of Fenelon Falls, of about 2,000 people, is prettily situated on high ground round them, and is in direct communication with Toronto by rail. I got a carter to portage my canoe and traps to the river at the foot of the falls (quite a short distance), and started at 4 o'clock in the afternoon for Sturgeon Point, about seven miles. When half way there, following the western shore of the lake, which as the wind was still westerly was the weather shore with smooth water, I found myself on an arm of the lake, on the opposite side of which, unfortunately, Sturgeon Point and its hotel lay, and of course it was necessary to cross the lake to get to it. It was still blowing pretty fresh, but as it was only about 1½ miles across, I thought that there would not be fetch enough in that distance to get up a sea that would be dangerous. I would have camped on the side I was on that evening, as I was a day ahead of time, and waited till next morning to cross, but the whole western side of the lake where I was, as far as I could see, was bordered by a deep fringe of drowned land, through which I did not think it would be possible to get with a loaded canoe, so there was little choice left for me. By the time, however, that I had got half way over, I found that I had miscalculated the force of the wind, and its power of getting up a sea even in that short distance, and the canoe commenced to take in water fast. The arm of the lake which I was crossing also opened out to the full sweep of the lake for about 8 or 9 miles from the S. W., and as I proceeded and opened that out the wind seemed to draw more in that direction and bring a larger sea with it. It was impossible to turn back, so nothing was left but to push for the eastern shore as fast as possible, and I fortunately succeeded in reaching it before the canoe took in water enough to sink her. I was so hard pressed, however, that I had to beach her at the nearest land. I had no time to look for a soft spot, so seeing a skiff hauled up on the shore I pointed the canoe for it, with the notion when the skiff was hauled out the canoe might also find a safe landing place. I was lucky in doing so, and was glad to find that instead of grounding and striking heavily on a hard bottom, of which I had been afraid, as with the heavy load she had in she might have knocked a hole in her. She slid easily with the way she had on nearly half her length out on a smooth piece of wood. It was a lucky hit. I was glad to find myself safely ashore, for it had been beach her or swamp. There was no alternative, and a few minutes more would have sent the craft down.

TORONTO, Canada. W.

[TO BE CONTINUED.]

QUAIL IN SOUTH CAROLINA.

SUMTER, S. C., Nov. 15.—As I stated in a former letter, the open season for quail began on Nov. 1. I have utilized the beginning of the season by going out with dog and gun six times, spending a few hours only in the field each time. I bagged quail as follows: Nov. 1, sixteen birds; Nov. 2, nineteen; Nov. 4, nine; Nov. 6, five; Nov. 9, twenty-eight; Nov. 10, twelve; making a total of eighty-nine quail within ten days. I find abundance of game of this kind; but the dry weather has made the work very hard on the dogs. Sometimes I had to ride almost a mile to water them at a well, all the branches and creeks being dry.

My experience on the 10th led me to believe that a horse's skin is tougher than the skirts of a saddle. I had hitched my pony on the border of a patch of high weeds, the dogs being down on a covey of birds. On being flushed one of the birds flew toward the horse, and I let fly at him. The bird tumbled and the horse pranced considerably. On examining into the condition of affairs, I found that I had put eight or ten shot into the saddle skirt, some of them going through, and about twenty shot (No. 8) into the pony's skin. The distance was 50yds., and though the saddle skirt was penetrated, only a few shot went entirely through the horse's skin. With the point of my knife, and by catching hold of the impacted hair, I easily took out most of the pellets. The pony still pays no attention to the report of a gun, and does not seem to know it was a gun that wounded her. C. C. BROWN.

P. S.—Being attracted by some of the advertisements in your columns, I have just ordered a complete hunting outfit from two of your advertising patrons. B.

FIRST LESSONS.—I.

AT last, one Christmast day, I was the proud possessor of one of the best guns in town. All the day was spent in thrusting into every imaginable position, sighting and following invisible, monstrous birds and game. Naturally, before and after each heavy discharge the breech had to be opened and closed. With the gun I was also given a complete outfit, and so after my admiration for the gun had settled but deepened, I examined and experimented with every article, from the primers to the jointed cleaning rod. I then devoted my time to all the books on guns and hunting I could get. After several days thus spent I became fully convinced that I knew everything worth knowing, from cleaning and keeping the gun to shooting quail in full flight.

A few days after I made arrangements with a firm friend to go rabbit hunting for my first trip, as they were "nothing at all to shoot and as thick as hops, easy hunting, too, after this here snow." The books had said that on a trip when you would be gone all day, you should take a pocket alcohol stove, coffee, big piece of raw beefsteak, eggs and a kettle or can to boil the coffee and eggs. I was firmly convinced that this was the proper thing to do, but on C.'s advice I restricted the provender to bread and butter and cold meat.

The morning was a fine wintry one, clear and cold, with new fallen snow on the ground which crunched and groaned as we stepped, and I thoroughly enjoyed the long bracing walk in the beautiful outdoor air; never before had I felt so strong and happy as I did then. I resolved to say nothing about my being a tenderfoot until I saw how I succeeded.

Climbing through a barb-wire fence we entered from the road into a large extent of timber, of great trees of oak and hickory. Here and there were bunches of hazel brush and at short distances great trees had fallen to the ground. C. said, "When we come to the brush we'll each take a side of it and make a good bit of noise walking, to scare the cotton-tails up and give us a show; and mind you, each little heap of brush or dead branches you come to, kick it, for they are apt to be in just such places."

Seeing a dead log near him he walked to it and bestowed a kick thereon, at which I saw a bunch of something gray with a white tip come running toward me. I stood perfectly still, gun at my side and mouth open looking at the wonderful bounds it seemed to make with such a steady, even movement; at last, as it swerved to one side at sight of me, I was aroused by hearing C. yell, "Give it to him now; he's right by you." So I guessed it was a rabbit and cocked my gun, threw it up to my shoulder, pointed it somewhere toward the rabbit, shut both eyes and pulled away. I then felt as if I had stepped on my nose. Putting my hand up to it I found that I had a peeled nose. Then I heard somebody laughing. It was C. There he stood, holding his sides and doubled up. He said, "You are a brave one. I'll bet you never shot a gun before. Not only missed the rabbit, but didn't have sense enough to hold the gun tight to you." And around he danced, while all I could do was hold my nose, and my tongue too. But the dance ended and C. came to me with the inquiry, "Honest, now, have you ever shot a shotgun before? If you have not, just say so, I won't make fun of you." So I told him I was at my first experience, and in reply he made the prettiest little speech I have ever heard. "Well, I tell you, old fellow, what it is; that strikes me just right, for we're in for many a picnic; as I know you'd rather have me to put you up to all the tricks than anybody else, even if I do say it, and I'll teach you; so at it we go. The reason you got your nose skinned, then, was because you held the gun loose. You must always hold it as tightly as you can against your shoulder. Keep both eyes open, and the next cotton-tail you see shoot at him just as if you were throwing at a chicken on the run, ahead, so as to be dead sure of gettin' it. But mind, I am near you, so always look out and don't have any accidents around."

All this time I was sitting on the log, while C. was standing in front of me? At the end of his "speech" I jumped up, knowing that, though he did not have polish, he had a true heart, and was a firmer friend than ever I had had. That thought has never yet changed. Feeling cheap at the delay I had caused, I started for the clump of hazel brush near by and took one side, while he took the other. Going slowly along like him, he looked closely into the brush and at intervals kicked it. In a very short time I saw one of the large-eyed, pretty things start ahead of me and run to C.'s side. I shouted to him, and then heard a click and the sharp sound of the gun on the cold air. Of course I had to ask if he "got it," and hearing that he had, I had to satisfy my curiosity by running through the brush and finding out all the details, after which I returned to my side, having decided that I was fully able to do the same as had just been done. I was quickly rewarded for my determination, for by some strange good luck I chanced to see a rabbit a short distance from me at the foot of a clump of hazel brush, sitting straight up, his ears erect and his large, mild eyes open.

As the smoke cleared away I was astounded to see the creature I had just admired giving his last kicks in the blood stained snow. How exultant I felt as I walked to him, and how I trembled as I took a stout cord and tied his hind legs and then threw him over my shoulder—a mode that C. said was better than any of "those there plaig taig" game bags. I felt like rolling in the snow and yelling and dancing, but collecting myself I went on thinking of my great "haul," when right out from some dead and fallen snow-covered branches against which I had dreamingly walked, a great white-tipped fellow bounced, whereupon my excited nerves and muscles in some way worked and shot my gun (as it all flashed so quickly I couldn't believe I did it). I had seen fur fly and the old fellow keep on, but going to where the shot struck in the snow I saw the pinch of brown hair lying near a spot of blood. I looked closely and walked fast, seeing here and there a drop of blood, and running down a deep ravine, came to where he had taken shelter in a little cave, and there I pulled him out, "stone dead." Retracing my steps with two rabbits I seemed to walk on air. I was raised still higher by hearing my companion say, as he saw me, "That's it, old fellow, keep it up and you'll soon be up to all the dodges."

Pointing to a large treetop near by, which had tumbled to the ground, he said, "There are a lot of them in there, for I saw the tracks. We'll each take a side and pop away at the first one that shows himself outside." Walking around directly opposite each other and kicking the brush, we would scare first one and then another out, and I thought there never would be an end to the shooting. Getting started a little way I would shoot at them, but out of four shots missed everyone. This lowered my self-estimation most woefully. At one time I saw two come out one right after the other; being nearer C. he cocked both hammers and killed both in what seemed to be be almost one shot. Both rabbits turned completely over and never moved. How I wished that I was able to do such a thing.

By a small stream near by I gathered twigs and branches while C. started a fire; scraping the snow from a big rock in front of it, we toasted our bread and warmed our meat, and how good that meal did taste! while by breaking the ice over the creek we got a most delicious drink, and then sat in front of the fire getting rested and warmed. Looking at my companion's string I saw that without a bit of commotion he had secured six during the morning, while I, with all my big thoughts and estimations, had but two. After thoroughly enjoying ourselves by the fire we again started on our trip. Plodding along without seeing anything to shoot we were highly pleased upon coming to an old field that the summer before had raised nothing but an abundant crop of weeds. On seeing the place C. exclaimed, "I'll go over there into the hollow, while you walk through and drive them toward me. You can see them sitting still and so shoot one out of a hundred, while the ones you miss will come down by me."

The weeds stood straight and stiff, reaching above my knees, while on the ground a thick growth of grass formed a warm home for the game. I had gone but a few steps when in a hollow of the grass I saw two long ears erect. Banging away I was put a little out of humor to see the long ears jump out and put toward the deadly hollow. Walking in a zig-zag path through the field many and many were the chances I was offered, all of which I tried though the biggest half I lost. But when I had finished the field I had added six to my load of two, while my instructor had thirteen. He had stood back from the bank a little way, where the vale was narrow and deep, and running along at the bottom the game had given him excellent chances. Reaching a road we gladly accepted the offer of a ride on a "bob sled," given us by a jolly old farmer. We handed over to him five of our trophies, upon which he remarked, "There's sumthing out on my place that beats them, all hollow; and that's pheasants. I'll be in town a week to-day, and just you fellows meet me at town, come out, stay all night and next day go hunting and we'll go halves on the crop you raise." As C. seemed to think it was a piece or rare good luck I consented to go.

Planning a surprise for the folks, I smuggled the rabbits into the back door and there drove a bargain with cook, I to clean the game and she to make "the best stew out." Then I took gun and game bag and slowly dragged myself into the sitting-room, whereat I was besieged on all sides to know where the game was, how many I got, how many did I leave and didn't I get even one; and mother said, "Well, never mind, you couldn't expect anything the first time." How near I did come to bubbling over with glee.

Supper called and all at our seats; father remarked:

"Ah, I guess we have chicken broth in the large dish," while the rest appeared to assent. But I broke in with:

"Father, I'd like a little of my rabbit stew, if you please."

"What! your rabbit stew! Why, that's what it is; I thought you didn't get anything."

"I didn't say so."

"No, but you didn't show us any or tell us. How much did you pay for them, or did C. give them to you?"

"No, sir; I shot every one of them myself, and there's more yet hanging out doors."

"Well, well, I guess the boy'll make a hunter," was the paternal encouragement.

Supper over I willingly described my day's adventures and then went to bed. And oh, how I did sleep that night. As I rolled under the coverings I was conscious of being more tired and sleepy than ever I had been before. Falling asleep, I suppose I seemed to again start on the same rabbit hunt, going to the "bresh" every rabbit that I saw fell before my deadly gun. Rabbits were tied all over me and I was almost weighted down, but I walked bravely through the drifts.

NEWFOUNDLAND CARIBOU HUNTING.

Editor Forest and Stream:

I have read in your valuable newspaper of the 21st ult., an article entitled "Caribou Stalking in Newfoundland," over the signature of J. E. Collins, Toronto. From the tenor of his experience in caribou hunting, the ignorant would almost imagine that Mr. Collins had had good sport, or what he would consider "fine fun potting the caribou." It seems to me that Mr. Collins's account is rather far fetched, caribou being so scarce in the peninsula of Avalon, where Mr. Collins had "such good sport," that the Legislature have been obliged to pass a special bill prohibiting the shooting of caribou on the peninsula for some time.

To me, as a sportsman, Mr. Collins's article is most nauseous. When a man boasts that he and his one or two companions have murdered twenty-two caribou in two days, and "did as many more to death on the marsh," he has mistaken his vocation, and surely ought to have been a butcher. Moreover, at the time that Mr. Collins boasts of his exploit, the time was in the spring, the stags had no antlers, the hinds were heavy with fawn, and the meat not worth eating, as the poor animals are half starved at that season of the year. I have had as much caribou stalking on the island of Newfoundland as any one man, and have crossed the country from sea to sea half a dozen times on shooting excursions, and have shot over every inch of the peninsula of Avalon. You will, therefore, I am sure, allow me to say that I protest against Mr. Collins's article. Any sportsman in quest of caribou shooting on this island can do no better than read the following charming books: "Sport, Travel and Adventure," by Captain W. R. Kennedy, of the Royal Navy, or "Chiploguorgan," by General Dashwood, of the British Army.

BANNERMAN HOUSE, ST. JOHNS, Newfoundland, Nov., 1886.

ADIRONDACK GAME.

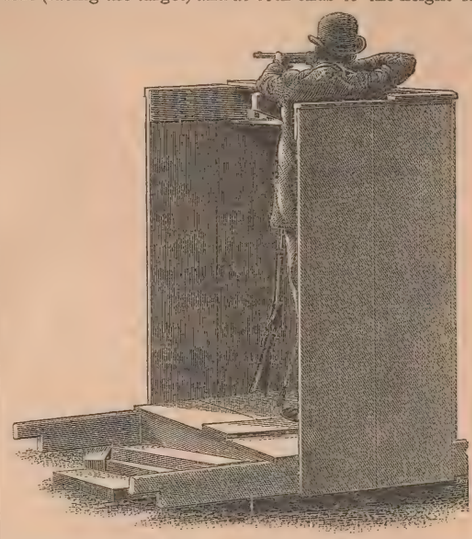
Editor Forest and Stream:

The larger animals seem to be somewhat on the increase in the Adirondack region, for within the past few weeks a remarkably large number of bears have been killed there and traces of panthers and wolves are not infrequently seen. G. M. Gifford killed a large black bear near Houseman's mills the other day and only a day or two previous one was shot north of that place. A bear was killed near Belfort, Lewis county, recently by two hunters from Croghan, and about the same time an old bear and a cub were shot near Richter's Corners in the same county and two others escaped. Albert Griffin, of Fine, St. Lawrence county, the other day killed three bears in one day and claims to have seen two more. Not long since James O. Waldo, of Northwestern Oneida county, went out to look for squirrels, taking his hound with him, thinking perhaps he might start a fox. He had not been gone long when the dog started a bear, and as bruin came within close range Mr. Waldo fired both barrels of his gun at him and succeeded in bringing him down with BB shot. The bear was a male, in good condition and weighed 307lbs. This is the first bear that has been killed in that neighborhood for many years.

A huge bear was seen near Chateaugay Lake the other day and was fired at by several persons but escaped unharmed. Many others have been seen near the outskirts of the Wilderness of late. A panther was seen in the town of Pinckney, Lewis county, last week, and it is not long since one was seen and heard near East Macomb, St. Lawrence county. It has been reported, on what appears to be good authority, that the one last spoken of attacked a farmer by the name of Henry who was in the woods searching for his cows. Mr. Henry was badly scratched, and it is said that he would probably have been killed had not his dog attacked the panther and continued to fight the animal until his master got out of the woods. The dog barely escaped with its life. One day last week a panther was seen crossing a pasture near Worthville, Jefferson county. A large wolf was killed in the northern part of Oneida county not long ago and a number have been seen this fall in various parts of the Adirondack Wilderness. Several well-known guides are arranging to make life a burden to the wolves and panthers this winter and will doubtless succeed in thinning them out.

UTICA, N. Y., Nov. 13. PORTSA.

ON THE WAY.—On the train from Philadelphia, Pa., Nov. 15, 3:50 A. M.—Our party of four left Philadelphia yesterday at 11:20 A. M. We are traveling westward toward our old camp ground, where we hope to kill a deer before a week has passed. In our car (the smoker) four races are represented—Caucasian, American, Mongolian and African. Sportsmen largely predominate. With the exception of our party they carry shotguns and heavy bags of loaded shells. Our party is armed with rifles. In the baggage car just in front there are fourteen dogs, setters and pointers. At Harrisburg there was such a large influx of gunners that it was found necessary to add a special car to our train. We are now threading our way between low mountains and along the banks of the beautiful "Blue Juniata." It is bright moonlight and the scenery is inspiring to one who is accustomed to spend fifty-one weeks in each year in an office. Trains from the westward pass us laden with snow. In a few hours we will meet our guide at a railway station with team to haul us and outfit ten miles into the mountains. —E. A. LEOPOLD.

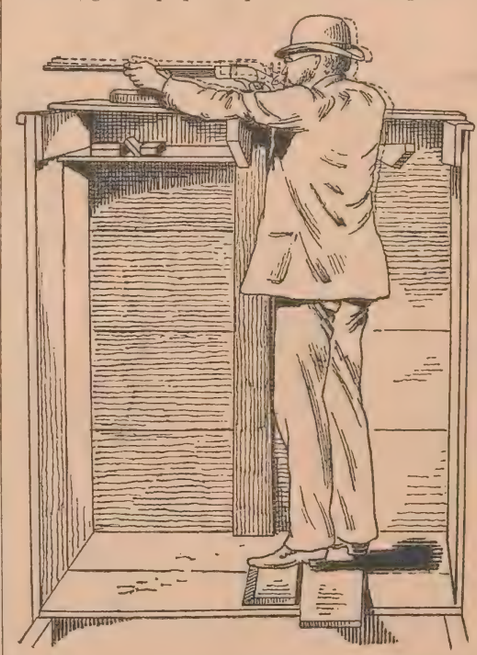


A SIMPLE RIFLE REST.

Editor Forest and Stream:

In response to requests for diagram of my rifle rest, I send the inclosed illustration and repeat description given in your issue of Aug. 12 last:

Although I have long since given the subject of rest shooting some attention, I have not, until lately, had a rest for testing rifles that suited me. Last year I determined to make one according to my own ideas, and it proved so satisfactory that I intended to send a cut and description of it to the FOREST AND STREAM before this, but have procrastinated.



This rest consists first of a platform about 5ft. long by 3ft. wide placed lengthwise with the target. This platform is boarded up on three sides, viz.: on the right hand side (facing the target) and at both ends to the height of

about 5ft. From the top of these sides a covering of boards is so placed that when the shooter stands on the platform the right arm, the left arm and the left hand rest on the covering, allowing the shooter to take same position as when shooting off-hand.

There is plenty of room in this box-like arrangement for ammunition shelves, gun holders, etc. Almost any one can improvise a rest of this kind at very little expense by using a large box made of inch boards without a covering.

Stand this box firmly on its side and cut away the top boards to get the proper shape for an off-hand position.

The dotted lines indicate the recoil as shown in the very excellent instantaneous photograph taken at the instant of firing.

There should be a movable blocking for the left hand to rest on, for it needs to be higher than the part which hold the arms. It is desirable to have the rest made high enough for the tallest person that is likely to use it, and then regulate the height you require by standing on some plank blocking of the right thickness. Sand bags can be used for the arms and hand to rest on, but I doubt if there is any advantage in using them with this rest. One object in having the rest boarded up on three sides is to protect the shooter from the wind, for it must be understood that this is an outdoor rest.

The trouble with most rifle rests is that they disturb the natural position of the body, either by cramping some of the muscles or by pressing against the body in such a manner as to allow the heart beats to affect the holding.

My rest should properly be called an "off-hand rest," for while it gives, as nearly as possible, perfect steadiness, it disturbs the off-hand position as little as possible.

There are so many riflemen who learn to shoot in bad positions that this rest will not be comfortable to some. Those who will appreciate it most are the riflemen who shoot with the left hand well out on the barrel, the right elbow elevated and the butt of the rifle against the shoulder (not on the arm), or in other words those who hold the rifle about the same way they hold a shotgun.

MIDDLEFIELD, Conn. WILLIAM LYMAN.

OHIO CONVENTION OF SPORTSMEN.

COLUMBUS, O., Nov. 12.—*Editor Forest and Stream:* At an informal meeting of representative sportsmen of Ohio, held at the Niel House, Nov. 9, it was resolved that a State Convention of sportsmen be called on Jan. 12, 1887, for the purpose of forming a State Association for the better protection of fish and game and for still further perfecting of the laws. All shooting and fishing clubs, either individually or collectively, and all lovers of the sport are earnestly and cordially invited to be present. The convention will be held at the City Hall, in Columbus, and will be called to order at 8 P. M. Reduced railroad and hotel rates will be obtained.

John A. Turley, Portsmouth.	Dr. L. E. Russell, Springfield.
C. A. Barton, Portsmouth.	Hon. J. Stranahan, Chagrin Falls
Henry Best, Dayton.	Chas. Lane, Bellefontaine.
L. K. Buntain, Dayton.	Mellville Brothers, Sandusky.
Dr. W. Shepard, Columbus.	H. C. Culbertson, Cincinnati.
C. H. Damsel, Columbus.	W. B. Shattuc, Cincinnati.
T. S. Tappan, Bellaire.	Percy W. Leavitt, Akron.
W. A. Gorbey, Bellaire.	H. E. Messerly, Greenville.
Chas. Wendt Kenton.	J. H. McElhinney, Ruggles.

A local committee of arrangements was appointed consisting of Chas. H. Damsel, Geo. L. Graham and Joseph A. Webb. All communications should be addressed to GEO. L. GRAHAM, Secretary.

GAME PRESERVING IN BRITAIN.

V.—THE GAME OF THE MOORS.

Snipe.

WE are fortunate enough to count four varieties of snipe in these islands, but of these but two are found in sufficient quantities to afford us any sport. The four species consist of the common snipe (*Scolopax gallinago*), the jack snipe (*S. gallinula*), the great snipe (*S. major*) and Sabine's snipe (*S. sabini*). One or two other snipes have also on various occasions been observed in Britain, but their occurrence is purely accidental and we cannot with any reason include them in this category. The above four differ but very slightly in habits, and if those of the common snipe be first detailed, then it will only be necessary to point out where the others differ from it in appearance, habit and haunt.

The common snipe, full snipe or heatherbleater, is very generally distributed throughout the length and breadth of this kingdom, its scarcity or plentifulness in various localities depending upon the character of the country. The favorite haunts consist primarily of marsh land in its many various forms, nearest meadows, peat mires, the banks of small streams and ditches, along the small water courses intersecting fields, osier beds, and, in fine, any low-lying, water-saturated ground. Occasionally they are to be found upon ploughed land, and severe weather will at times send them to all kinds of unlikely places. When you consider this great variety of haunt, you will readily see what a wide field of agreeable locality there is in Britain for this game bird, which, though much of a kidney with the woodcock as far as migratory habits go, appears to be less affected by the conditions apparently so conducive to the latter's remaining and increasing with us. Some seasons snipe are far more plentiful in Britain than in others, and there have been occasions when they have been in almost excessive plentitude if such be possible of so delightful and enticing a game bird.

The common snipe, which is monagamous, breeds with us, the pairing being begun in February, usually a little later, the chief mating of the birds occurring toward the end of March. The nest which is, as is usual with moor fowl, a very rough and tumble affair, is usually placed upon some small knoll of ground sheltered by a tuft of sedge or heather, the site being invariably well chosen so as to run off any moisture, for, although frequenting wet ground, our snipe loves to lie dry and also possess a similarly characterized nest. The eggs are usually four but occasionally five in number.

Snipe move about a good deal, according to the atmospheric conditions prevailing, wind alone, but more so wind and wet combined, tending to cause them to disperse over large areas, while cold, sharp, calm weather apparently has the opposite effect. They feed at various times upon various places, but the food is always found in rivers, bogs and wet ground, and consists of such worms and insects as are found in the spongy soil and growth of such places. Occasionally they will feed very largely at night-time, particularly when rough, wet weather is succeeded by a calm moonlight light. The common snipe is what might be termed a semi-solitary bird. It does not form into flocks, but great numbers will be found in close proximity to one another, each individual or each couple of birds at the same time holding but little communication with the remainder of the wisp, as we term such quantities of this game bird.

The jack snipe, or, as we familiarly term them, "little jacks," although not quite so plentiful, as a rule, as the common snipe, is equally widely distributed over these islands, but is only a winter visitant with us. It is generally held to be of even more solitary nature than *Scolopax vulgaris*, but this is doubtful. Indeed, taking him all round, I fancy rather the reverse is the case. I have found more jacks in company than ever ordinary snipe, and their assembling in flocks at the time of migration tends to show a seeming disposition upon their part to hobnob together.

Curious little things they are, but despite their diminutiveness—they are the smallest birds we shoot for sport in Britain—they afford good fun, and I have many a time enjoyed excellent sport among them on the Dartmoor mires as they flutter about much like a butterfly in a wind storm, as we say in the West.

The solitary snipe, great snipe, double snipe, is an occasional visitor to these shores in winter, and is what its names imply—a big, solitary snipe. It is rare among its kind, and only met with by chance when we beat for others of its race and other moor game.

The same may be said of Sabine's snipe, sometimes called the black snipe. This species is held by some to be but a variety of the ordinary snipe, but I think it is a distinct bird; but its rarity renders this difficult of decision. MOORMAN.

ENGLAND.

GAME IN SULLIVAN COUNTY.—Monticello, N. Y., Nov. 8.—Ruffed grouse and rabbit shooting is good here; 22 rabbits and 14 ruffed grouse were the best score made in a day by one gun. Foxes are also very plenty.—C. F. KENT.

THE "PET BEAR'S" OWNER DISCHARGED.—Cincinnati, O., Nov. 16.—P. W. Curran, the saloonkeeper at 1002 Sheriff street, whose pet bear killed Henry Dornbroech's little girl last Monday, was arraigned in the Police Court yesterday afternoon on the charge of manslaughter. Sergeant Bradley of the police force, Henry Huffman, and the child's father, described the killing of the girl and her wounds. Dornbroech testified that he had long thought the animal dangerous. He had taken every precaution to keep the child away from the bear's den. He said the bear bit a man named Perry very severely last spring. Dr. Carl Bock swore that he warned Curran that the bear should be guarded after its attack on Frank Perry on June 1. For the defense James Ramsey, a colored employe of Curran's, testified that the bear was always good-natured. It was so familiar that one night it came to his room and climbed into his bed. The witness got up. Ramsey said that the Dornbroech child was often found in the bear's yard, and on several occasions he had carried it home. A cook at Curran's place also testified that the bear was very tame and often played with its owner. William Fleury said that a week ago he saw the little girl sitting in the bear's den and had carried her out. Dr. S. K. Barber said he was part Indian and loved bears. He then related a number of amusing stories concerning Curran's bear to show that it was tame and playful. He saw the bear bite Perry last June. Perry and another man were fighting with chairs and the animal, who had taken boxing lessons from Curran, took part in the fight. The defendant's testimony did not differ from that of the other witnesses. Judge Hutchins, in summing up, said: "This is an important affair, and no one deplores it more than the defendant. I saw him when he was arrested, and he felt the child's death keenly. Mr. Curran was the owner of the bear, and is charged with manslaughter. The charge is brought on the theory that the owner is responsible for the death of the child. If a man owns a vicious, dangerous animal, whether a bear or dog, and he knows it to be vicious, and does not take proper care of it, then in law he must be guilty of negligent homicide. It must be a case of gross negligence, however. Bears are not unfrequently owned by people living in large cities. They are trained more or less. I am satisfied that this bear was a sort of pet, and that Mr. Curran trained him from a cub. I think that he took precautions to guard against any dangers. The bear might have been a dog tied up or a precipice. The child, not arrived at years of discretion, might have been in as much danger from either as from a tame bear. I think that the guardians should have more carefully looked after the child. The defendant is discharged."

NORTH CAROLINA RESORTS.—Charleston, S. C., Nov. 14.—*Editor Forest and Stream:* Being a regular reader of your paper, which I subscribe for through my newsdealer here, I desire to answer your query "Information Wanted," and signed "Mar." The mountains of western North Carolina will furnish your correspondent with air and scenery, ideas and diet different, I am sure, from many places he can go to, the first two, I will venture to say, equaled only by some of the scenery on the continent of Europe. The second two he will find to perfection, for the ideas of the people will be new and the diet will be of the plainest, but good, such as pure milk and butter, plenty of chicken legs and good bread. I am really giving a sort of description myself, which I did not intend to do; but in conclusion suggest to your correspondent to write to Mr. M. S. Farmer, Flat Rock, Henderson county, N. C., which is about ten miles from the French Broad, and also where I have a summer house. Farmer is a keen sportsman, knows every inch of the ground within fifty miles, and will gladly give any information, I am sure. For myself, I am up there from June to Oct. 20 and will assist in any way to give "Mar" a pleasant time, and he can be sure of a hearty Southern welcome.—MILBANKE.

Sea and River Fishing.

Address all communications to the Forest and Stream Pub. Co.

ALASKAN TROUT.

LITTLE FALLS, N. Y., Nov. 20.—*Editor Forest and Stream:* I have read with much interest the letter of Dr. Street in your issue of 18th, an interest not lessened by the fact that the statements therein contained are apparently in direct refutation of those made by me in my paper forming part of the Orvis-Cheney collection, "Fishing with the Fly," which was to the effect that from personal experience and collected information I was convinced that the *Salmo* family of Alaska would not rise to the fly. Against this grave accusation the Doctor enters a very strong protest, stating that he in two seasons took from the rivers and lakes of Alaska nearly 1,000 trout with the fly. The facts stated do most certainly "justify him," and me too, "in holding a contrary opinion to that given by" me. While the "personal experience" remains the same, the information given by Dr. Street not being among that collected, nor having had any other of the same nation, I naturally accepted such evidence as I had. As naturally, having no theory to sustain, I now accept with thanks the Doctor's statements and congratulate him on the excellent sport which he has had, but which I missed.

The world moves, the accepted truths of one decade are upset and shown to be errors by those of the next. Men believed honestly that the "sun do move." Now they know it don't. But even errors have their value, by the increased value they give to the truths which explode them. As in this case, the simple fact that Alaskan trout will or will not take the fly is of but slight importance to the angling fraternity, who, as a general thing, don't have to go there and probably don't care whether they do or not; but from a scientific point of view the question whether from any cause a family of fish are in one part of our country entirely devoid of an instinct and habit, which in all others govern them, is a matter of interest to all of us, and when so generally an accepted belief in regard to the matter is so completely demolished it seems to me that it is well worth while to pursue the subject further, analyze the opposing statements and evidence, and find if the real truth does not lie somewhere between. To this end, and this only, I shall compare the Doctor's views and mine, criticising freely both sets in the interest of truth, and in so doing hope to smooth away some of the sharp edges of the issue between us.

First, then, the Doctor fishing certain waters finds there a situation entirely different from that which I found while fishing others. My fishing grounds extended from Sitka, in lat. 57° 02', to Chilkhat, in lat. 59 20, over 100 miles to the northward, entirely in Alaskan waters; his from the boundary line upward, but stops short of Sitka by 80 miles. As Sitka is but 142 miles north of the boundary the Doctor's belt thus comprises a width of about 60 miles, in regard to which the information given by him stands almost alone and is thus valuable. Perhaps somewhere in that belt stands the shield, of which he, from the southward, saw the golden side, I, from the northward, the reverse of baser metal. The Doctor has added weight to my testimony that (until his advent) the belief that the Alaska trout and salmon were "guilty as charged," was universal and strong. All of the information which I collected was to this effect.

As for my personal experience, I have spent many hours experimenting, not trying to catch trout: for I had but to put on a salmon egg and be at once one of the several who, at the same time fishing from the same pool, kept a trout in the air continually. With a full assortment of flies of all styles and pattern, and trying every device known to me, I failed to get a rise. Once only did I get a trout on a fly; the pool was clear and the trout all nose down hunting and rooting for eggs, as plain to be seen as though in the glass tank of an aquarium. I trimmed a red-ibis to as near a resemblance to a fresh egg as possible and let it sink among a lot of eggs; several trout swam to it as it struck bottom and one got hooked. I tried it again and again and failed. I looked upon this exception as proving the rule. Joining thus in the general opinion I made the accusation; and in so doing have evidently made it too sweeping. I should have included only Alaska trout in the vicinity of Sitka and to the northward, where every stream is glacier-fed.

As bearing upon the possibilities of difference of latitude producing a difference in the action of the trout, I will quote from a letter written by me on Christmas, 1879, and published March 4, 1880, in FOREST AND STREAM: "Study of the letter of 'C. R.,' in your issue of Oct. 30, helps me to another nice little point in natural history. He describes (writing from Portland, Oregon) very correctly the salmon trout (*Salmo spectabilis*), of which I have caught bushels this summer, but which, in September, grew very scarce, and in October disappeared altogether from our streams (those near Sitka). Coincident with our loss was 'C. R.'s' gain, for in the streams near Portland he says they begin to appear in September and continue throughout October; therefore that the salmon trout migrate in the fall to the southward seems fairly deducible, but 'C. R.'s' trout take flies, ours will not." And other authorities show that in the streams of Oregon and Washington Territory these trout take the fly.

Now if, as I presume possible, the bulk of the fish taken by Dr. Street were the *spectabilis*, we have the boundary line of the fly-taking habit carried much further north, and it would be interesting to learn from him how far, also in what month he found them, and if he noted any variation from month to month in their numbers or habits. I should also like to know if he caught in the streams any of the *clarkii*, which species, as identified by Dr. Bean, is the one which is found near Sitka, only in the little lake back of the town, in regard to which I quote from a letter to FOREST AND STREAM, dated Sitka, June 1, 1880, published Sept. 9: "About the 20th of May, very beautiful trout were taken in large numbers from a little lake just back of the town, which on my chart is christened Piseco. The habits of this trout are peculiar; every spring for about ten days they are plentiful close to the shore among the lily pads, and will bite on anything except a fly." Mr. Street quotes from the *Alaskan:* "However, some one must have educated the trout up there too, if what I saw in Alaska last spring be true. It was to the effect that the fish in the lake near Sitka were then rising to the fly." I cannot claim very strong basis for my belief and statement that they would not, for I confess that I did not try them as thoroughly as I did the *spectabilis* in the stream.

It was the first trout fishing of the season. We were hungry for trout, both as fishermen and hungry men, for sometimes our stock of eatables in Sitka was a very limited one; and that season the ducks were gone, ptarmigan unattainable, and even our stand-by, venison, scarce. Several of us did try flies, but as the trout lay among the pads three casts out of four were fouls, and we soon gave up and caught our trout on bait. A few days after they came the *spectabilis* began to run into the creeks; fishing for them was far pleasanter, and I for one deserted the lake. As far as our experience goes we could not get any of them on flies. If others have since, they deserve reward for their patience.

I afterward learned a few facts in regard to this trout which I had intended giving to FOREST AND STREAM, but being out of the country when I received the letter from Major Wm. G. Morris, the collector at Sitka, I laid it aside and forgot it.

During the summer after I left the Major put a good boat on the lake, found these trout in the deep water and caught great numbers of them, all on salmon eggs. We found none of these trout in the streams near Sitka, although in classifying my specimen Dr. Bean wrote as follows: "*Salmo clarkii*, a non-migratory trout from the fresh waters of British Columbia, Oregon and Washington Territory."

My description of this trout was as follows: "Specimen caught May 27—Length, 9¼in.; depth, 2⅜in.; weight, 5oz.; colors—back dark brown, growing lighter toward median line, at which there is a logitudinal purple stripe extending from opercle nearly to tail; below the median line olive green, lightening to silver white on belly. The entire tinted portion has a beautiful golden iridescence, so much so that when looked at from the rear, being held in sunlight, the fish seems to be gilded. Excepting the belly, the surface is profusely sprinkled with oval black spots, which mark also the dorsal, adipose and caudal fins; the pectoral, ventral and anal fins are yellowish, tipped with crimson; tail nearly square, but not so square as the *fontinalis;* it has hyoid teeth."

The *spectabilis* I describe, "Somewhat slimmer than the *fontinalis*, one of 13in. weighing just 12oz., back of olive green, dark on top, shading down at the median line so that the transition from the green to the silver white of side and belly is not abrupt. In the green portion are pale yellow specks. The head resembles somewhat that of the *fontinalis*, but is longer, tail forked from head to junction of tail, form somewhat that of a mackerel;" this when fresh run in from the sea; after a short period in fresh water crimson specks, similar to those on the *fontinalis*, develop and the fish grows much bulkier, appearing much like one of our brook trout, that but for the forked tail I thought him one.

Now it would be interesting to know if Mr. Street caught in any of the streams the *clarkii*, if they took the fly, either in lake or stream, and where was the stream in which Mr. Hallock caught a trout on a fly, it could not have been near Sitka, for to fish the outlet of the lake in either of such streams involved a long and heavy trip up the mountains.

Evidently Dr. Street has fished very thoroughly and successfully a region of country slightly known, and carelessly included by me in my recorded denunciation; he has shown plainly that I was not justified in so including it; so better late than never, I now except this belt of country, sixty miles in width and at the utmost as many in breadth, and to be on the safe side and anticipate a possible correction by some one of the enterprising men who have penetrated to the extreme north of Alaska, and perhaps fished its streams, I will except about five hundred thousand more square miles of the Territory in regard to which I have no personal knowledge. This, with the Doctor's 3,600, leaves me but a small reserve, for with the dozen streams alone, each say five yards wide and fished from one to three miles from their outlets. I think fifty square miles would be as high as I can claim to know anything about.

If the Doctor has, as I hope and think likely, made and preserved notes of his experience, I cannot but think that they would, if given to your columns, prove not only very interesting but very valuable.

Probably the views that I entertain as to the causes of the failure of the trout I fished for to rise to the fly would be either confirmed or disproved. These are, first, to the fact that all of the streams I have fished originate from, and are fed by glaciers; to these the trout come for the sole purpose of feeding on the salmon's spawn, coming with the salmon and leaving with them, the salmon seeking such streams to get to their cold heads to spawn. Here, busily engaged in hunting for and feeding on the eggs which rest on the bottom, the trout pay no attention to anything on the surface.

In that part of the country flies and insects of all sorts are very scarce, and probably not enough fly over any one stream in a day to give a single nip to even ten of the countless trout, and if by any accident they should notice a real or artificial fly skittering over the surface it would probably scare them. Now if the streams fished by Dr. Street further south have warmer water, and the insect tribe is more fully represented, as is the case in Washington Territory somewhat further south, it may be that "he is right and I am right." I for one should be very glad to add to my knowledge of Alaskan ichthyology that which Dr. Street can furnish, and hope he will.

L. A. BEARDSLEE.

ANTIQUITY OF THE FISHING REEL.

Editor Forest and Stream:

In that incomparable work "Sport with Gun and Rod" there is an article by the editor, Prof. Alfred M. Mayer, entitled "On the Invention of the Reel."

Prof. Mayer states the first mention of the reel that he has been able to find is in Barker's "Art of Angling," London, 1651. There is no mention of the reel in the first edition of Walton, 1653, but he refers to it in the second edition, 1655, as something used by others, although he seems to have had but a slight personal knowledge of its use. The American editor of Walton, Dr. Bethune, says in a footnote in the American edition of 1847 (for my copy of which I am indebted to Prof. Mayer) that "the history of the reel is a fine subject for the angling archæologist. Its origin is as yet in deep obscurity." During the past summer I cut from a newspaper a slip, the contents of which go to show that the reel antedates Barker's mention of it at least 600 years and seems to lift its origin from obscurity. I was so interested in the newspaper cutting that I neglected to note the paper from which I took it, but think it was the *American Art Journal*. This is it:

"In some notes upon an exhibition of antiquities, which was opened in Tokio on the 1st of November,* the Japan *Mail* writes: 'There is one room, the contents of which alone will amply repay a visit. Its walls are entirely covered with pictures by the old Chinese masters. Two of them, gems from an antiquarian standpoint, hang inside a case which stands at the entrance. They are by painters of the Sung period—Baian and Riushomen—and, apart from their merits as works of art, one of them establishes the fact that reels were used by Chinese anglers in the eleventh century. What is there that Chinese civilization did not possess?'" Since first reading the above extract I have but little more than glanced at the American and English angling journals, and it is possible that mention has already been made therein of the fact quoted, still I trust it may prove interesting and novel to some, at least, of your readers. If the writer in the Japan *Mail* had given a description of the reel of the eleventh century as it appeared when delineated by Mr. Baian or Mr. Riushomen, he would perhaps have gratified an angler's natural curiosity, but had he done so there is no guarantee that the reel would not have been patented in America inside of a month thereafter. A. N. CHENEY.

*1885 probably, as I cut the extract from the paper early in 1886.

TROUT MARKINGS.—The trout in C Pond, in C township, Maine, have, in addition to their red spots about as many black spots as a landlocked salmon. In other respects they are no different from other trout in adjacent waters. What is the reason that these fish have the black spots? Last September while fishing in Rapid River, opposite the old Oxford Club house, I caught a landlocked salmon that had two rows of red spots on each side. I caught several trout at the same place and two more salmon that had only the black spots. Was that fish a hybrid or are they occasionally found with red spots? The fish was in every other appearance like other salmon.—S. J. GERRISH (Lancaster, N. H.).

CENTRAL LAKE, Mich., Nov. 11.—The "herrings" made their appearance to-day.—KELPIE.

THREE FISHERS.

LAST Decoration Day the Lawyer, the Railroad President and the Editor were whipping the surface of a little lake in Sullivan county, New York, where, they had been told confidentially, "they grew to enormous size." It is needless to say to what "they" refers. The Lawyer and the Editor now and then hooked a fish, but, as it appeared, prematurely; for it was evident, in the case of each, that the word "enormous" could not be applied with precision except to its appetite. The Railroad President wielded a pole (by no stretch of courtesy could it be called a rod) and did great execution among the lily pads. The casts of his companions and finally his— But this is how it happened: The Editor, from his inherent desire to instruct the ignorant, showed the Railroad President how to handle his pole; to depend on wrist rather than biceps for force and precision, etc. It must be confessed that the R. P. was not a very apt pupil. The pole would be sent over the shoulder with a rush, and then back again would it come, the line swishing and the leader snapping in their efforts to follow the contortions of the tip, and the flies threatening each moment to wing their way in different directions. In despair the Editor exclaimed in a double-leaded voice, "Turn your head and see that the line is fully straightened out before casting!" Flushed with excitement and conscious that all eyes were fastened upon him, the Railroad President, nervously pulling out two or three extra yards from his reel, braced himself, and with a mighty roll of his arm sent the line singing back over the water. Turning his head to see that all was right, he reversed his arm, nearly capsizing the boat and— Great Scott! His leader, a brown-hackle (it was yell-oh! now), was fast in his nose! Trying to smother their laughter, the Editor produced his office shears from his boot, the Lawyer his (s)quills, and out came the fly. This time a red-hackle. Gentle reader, the fish of "enormous size" was landed, but not without the help of the gaff. F'LIN.

MINNOW EXPERIENCE.—Richmond, Va., Nov. 17.—I notice in the FOREST AND STREAM of Nov. 4 are interesting statements made by "Piseco" in regard to how long minnows will live confined in glass jars without change of water. I wish to add my experience in regard to how long minnows can be kept alive without water. About three weeks ago I went fishing for silver perch, and having only a few small creek minnows for bait, did not wish to encumber myself with a minnow bucket, and wrapped the bait in a dry handkerchief, stuffed it in my pocket and went to the pond. I was greatly surprised when I reached the pond to find that, although nearly two hours had elapsed since I put the minnows in my pocket, four-fifths exactly were alive and swam off lively enough when put on the hook. The few that died were very small and were stuck firmly to the handkerchief, all moisture having been absorbed from their bodies. If any of my "brethern of the angle" have had similar experiences I would like to hear from them through the FOREST AND STREAM.—SIMON PETER.

BLACK BASS IN MAINE.—Our comments on the clamor for a change in the laws of Maine to allow black bass to be caught in May were copied into the Maine papers. We took the ground that no black bass should be taken before June, and in Maine the middle of that month would be early enough. Mr. John Mead, the well-known artist and angler, writes to the Bridgeton, Me., *News* as follows: "The FOREST AND STREAM is near the mark, only the close time for bass and white perch should extend to July 10, which is quite soon enough for "the law to be off" in this State, as the fry need a mother's care to that date. In regard to many Maine sportsmen clamoring for the total extermination of the bass, it does not agree with my observations on this question. My calling brings me in contact with many sportsmen, and I have failed to discover such a class. It is the 'chumps' who complain, and very unreasonably it seems to me. I have never heard a good reason set forth in favor of extermination."

SENSIBILITY OF FISHES TO PAIN.—Noting the articles "Sensibility of Fishes to Pain," I append an experience. While fishing at Indian Pond, Me., last June, with a fly, I hooked and landed a trout, the lower jaw bone being broken and a piece gone, the wound was fully three-quarters of an inch long by one quarter of an inch deep and bleeding. The guide with a hand line had struck the same fish and lost him less than ten minutes before. The weight of the fish was 3lbs. 9oz.—D. W. H. (Hartford, Conn.).

NINETY MILLION SHAD FRY.—The Bulletin of the United States Fish Commission states that 90,000,000 shad fry were hatched and distributed last summer. The catch of adult shad on the Atlantic coast last season is estimated at something less than six millions, therefore fifteen young fish have been planted for every one captured. The entire cost of hatching and transporting the fry, sometimes across the continent, has been less than $20,000, about $220 per million, or about forty-five young fish for one cent.

ENGLISH AS SHE IS SPOKE.—Tourist—"An' now me letter of credit is cawshed, can you direct me to some spot in this blawsted country that will equal Pipe-weed-under-Tay-copse-Herefordshire-heath, North Staffordshire, England, for a flip at a salmon?" Banker—"I seldom fish myself, but I understand that Mud-creek-over-against-Bill-Simmonse's-mill-pond, Knox county, over-the-left-and-under-suspicion-Maine, United States of America, four-hands-round is a fair sporting ground."—*Tid-Bits.*

DON'T SUFFER COLD TO ACCUMULATE on cold until your throat and lungs are in a state of chronic inflammation. Attack the first symptoms of pulmonary irritation with Hale's Honey of Horehound and Tar, and achieve an easy victory. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

FIXTURES.

DOG SHOWS.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Dec. 8.—First Annual Field Trials of the Irish Setter Club, at Salisbury, N. C. W. Dunphy, President, Peekskill, N. Y.

Dec. 13.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4311.**

THE WESTERN FIELD TRIALS.

[From a Special Correspondent.]

FIFTH DAY—*Continued.*

BRIDGEPORT AND KING NOBLE,

beaten by Lufra, came to the front to run for second in All-Aged Stake. Sent off in grass after a little delay, Bridgeport surmised that game was around and commenced drawing, but King outgeneraled him by taking the body scent and pointing staunch. Mr. Barker flushed and Judge Merriman shot and missed. The dogs remained quietly. Casting off, Bridgeport got a point, and birds were flushed but not shot. King wanting something bigger, wheeled around and pointed what proved to be a fine covey of chickens. When birds flushed the sportsman from Denver shot and missed. Dogs were sent away to where birds were marked, the handlers being instructed to hunt them carefully. After being shown the exact location they sent their dogs on with poor judgment, letting them go wild, and flushes were made, as the quail did not give out much scent after dropping in the grass. Bridgeport got a couple of flushes and a point. When King was brought up to back he was brought close and stopped by low word from his handler; dogs then did some roading, and after casting around for the body scent, birds flushed wild ahead of King. The ground was then worked again, but nothing found save a slight scent by Bridgeport. Barker now came in for his share of demerit and flushed two birds. The dogs were then ordered up to permit Judge Briggs to shoot a prairie chicken. Mr. Van Horn showed him where the bird was marked, and when the noble, strong bird sprang into the air it sailed away with the shot from two barrels after it, but not a feather was ruffled. The judge looked much chagrined, being a good shot and wearing a medal won at a shooting tournament. He remarked, "Well, he looked as big as a blanket." Sending on, a flush was made by the judges, and Bridgeport was also charged with one. After being cast away Bridgeport made a grand point on a covey; and flushed, with dog very steady, were easily marked in a cornfield near by. Stafford shot and missed. In the mean time Bridgeport was very steady to wing and shot. Sent away, Bridgeport made a fine point and King was sent up in open ground to back, which he failed to do. Meantime an old hen was seen to get away from the spot. Casting into the corn where the covey were marked soon a flush was made by Barker. Dogs were most too hasty, as there was not much cover, and another was flushed. Bridgeport then made a fine point, and a single was flushed and shot by Stafford. King, sent on to retrieve, did it well. Bridgeport wheeling around, cast away to south and soon established a fine point. Stafford went on to flush. Bridgeport moved and Stafford stopped to command and picked up a dead bird, the wounded one he had shot at before, and throwing it out in the cover it was finely retrieved by dog. King is a grand dog in the open to find game, but appears to have almost too much speed in a cornfield to prevent flushing where the scent is very slight and the birds wild. Sent off to grass, King getting away with his grand style. Bridgeport came up and backed finely, and this time did so much better than when he was down with Lufra when he refused to back on sight. Birds flushed and Stafford shot, King sent on retrieved. Judges took time to consult, and the race was so close that it was with some little hesitation each could make up his minutes, and after finding that King had naturally the best hunting qualification but lacked the education and experience in cover on quail that Bridgeport has, they were compelled to award the heat under the rules to Bridgeport.

ROD AND BRIDGEPORT,

both handled by Stafford, were sent away and permitted to hunt as they pleased, as he could not show any favors nor make any noise that might attract one more than the other. Soon Rod had a flush charged to him though he had made game fifty yards from that place. Soon another was flushed and killed and retrieved in good shape by Rod. Now Bridgeport came to a good point and Rod backed grandly. Rod moved in to grass where Bridgeport stood, probably on a rabbit scent. We noticed that Rod seems to improve every day he runs, but burrs soon slow him down. Various places were tried and still no birds were raised or scented. After a time the corn was tried and Rod made a very excellent point, and Bridgeport again redeemed his lost character and backed. The judges here consulted and sent the dogs on. Coming up to a slough a bird was flushed, but soon Bridgeport came to a good point and was steady. Dogs called up after being down about three hours, and judges give the heat to Rod, and the day's work ended.

SIXTH DAY.

Considering the short time to finish the Derby it was concluded to divide the third money in the All-Aged stake between Cornerstone, Bridgeport and Dick T.

THE DERBY.

SPOT BELTON AND TRIXY.

At 9 A. M., J. I. Case, Jr.'s belton bitch Spot B. (Dick B.—Belle Belton), handled by C. N. Barker, her trainer, and Trixy, handled by Gleason, were put down on grass to try the qualities of speed, ranging, quartering and style of Trixy, as they knew what Spot would do, as she had run in the All-Aged three heats. Spot went away as usual and Trixy was doing some good work, and at the slightest scent put her nose to the ground and pottered. Grass drawn blank, as was a portion of a cornfield. Getting off on a pasture, Spot still going fast, Trix warming up showed more speed and ambition. Next we tried a cornfield, where near the edge dogs made game, and roading up flushed a single. Spot cast off slowly soon stood. Trix and Spot now commenced roading, as birds had been no doubt feeding around the entire field, Trix going one way and Spot the other, Judge Briggs following Trix and Judge Merriman Spot. Judge Briggs had the misfortune to run on to the covey and flush them, but it was much better to have them flushed than not to find them at all. Being marked in grass, dogs were sent away to find. Going too fast as usual when on to the freshly flushed birds Spot flushed and dropped to wing. Spot now concluding no doubt she had disgraced herself enough got on hot scent and dropped flat on the ground, Trix not being asked to back that position. Barker flushed bird and both dogs were steady. Moving on Spot got a flush, but further on got a fine point, standing erect with tail high. Trix came around and backed finely, but made rather poor style, as she set down with head erect. When Gleason shot both dogs were steady to wing and shot. Gleason whistled Trixy off when she got on scent and drawing would have soon located; and dogs were ordered up without her getting a point at 10 A. M.

DILLSEY AND TANSY.

The liver and white pointer Dillsey (Meteor—Dee), owned by Col. C. W. Hughes, of Dallas, Tex., and handled by her trainer, W. B. Stafford, was put down against Tansy, a liver, and sister to her opponent (both being sisters to Rod, the winner of second in the All-Aged Stake, and Malite, the winner of the Derby last year), handled by A. J. Gleason and owned by J. N. Simpson. Sent away in open grass, Dillsey cast away and made a little burst of speed; mean time Tansy was following and not working independently. Getting a little scent they brisk up for a time, but after some minutes get burrs in their feet and seem to lose all courage; and the pointer men are much disappointed that their pups do not show more dash and vim to hunt where there is no game. Birds not found where scattered, and they tried to find them where the former covey had been flushed. After the dogs succeeded in flushing two birds, but doing nothing at catching the scent in the dry grass, they were sent away to a new field to find birds marked by spectators. Tansy seemed to have a roving manner and flushed a bird after having the exact locality shown to handlers. Stafford going up flushed another. Tansy getting up to some tall grass pointed, failed to locate, roaded and lost. Dillsey crossed the road and made a good stand, and Tansy, being in full view, made a good back. Stafford put up bird and shot but did not kill, the orders from the commencement being that no birds need be killed, as no retrieving was required from the puppies. Both dogs were steady to shot and wing. Tansy on crossing over flushed a snipe, not having the benefit of the wind. Dillsey ran on into the high weeds and made a point. Tansy's notice being directed that way ran in and got a point also. Casting on a few rods Tansy got a stand and Dillsey made a fine back. Gleason put up birds and shot, dogs were steady to shot and wing. Dogs sent in to burry corn, and then judges ordered them up and out.

RUBY BUCKELLEW AND BESSIE B.

The orange and white setter bitch Ruby Buckellew (Buckellew—Brimstone), owned by T. W. Stoutenberg, of Davenport, Iowa, and handled by A. J. Gleason, against Bessie B., a belton setter bitch (King Noble—Elsie Belton), owned by F. H. Bull, of Racine, Wisconsin, handled by her trainer, C. W. Barker, were put down at 11:10 A. M. on open ground, Bessie getting away lively and showing her merits superior to Ruby, though Ruby was doing some nice close quartering, though she watched her handler too much. Bessie soon gets the admiration of all the friends of King Noble who saw him run, as she is a good second to him and no doubt will be as fast when she is as old. Sent away through pasture and a small grass patch where cover was high, Ruby got into some sand burrs that about used her up. Bessie kept going back and forth through the burrs, and no other dog during the trials came near her in this except the running of Cornerstone in the first heat he was down, when Gleason so cruelly ran him without taking out the burrs. Ruby's feet being cleaned by handlers, she got away better and began to show some more intercst in the chase. Judge Whipple just at this point very unceremoniously rode his horse up to and flushed a fine covey. Bessie came around and made a good point on the place and Ruby backed. The birds could not be located, but were left alone after Gleason succeeded in tramping on one. By this time Bessie was doing all the work that amounted to anything, Ruby lagging. In high cover Bessie wanted to point so badly that she stood a barn fowl, when the old blue hen skipped. Changing now to opposite side of the draw and making a cast down the skirt of some high grass, Bessie made a good stand. She roaded up a few feet with head high and stood again. Birds flushed, shot fired, both dogs steady. Sent off to find covey again, the birds scattering so much that they were hard to find in the high dry grass, and Bessie kept up that same grand movement, but all that was raised was a bird by Gleason. The judges ordered dogs up at 12:25 and made for the farm house for pumpkin pies, while Judge Briggs had his eye on getting a bowl of pure cream.

BRUSH JR. AND TRAVELER.

Brush Jr., an all red Irish setter owned by G. D. Dehart, Kansas City, Mo., handled by trainer Gleason, against Traveler, a liver and white pointer dog (Meteor—Dee) owned by J. W. Blyth, Burlington, Iowa, also handled by Gleason, were sent away at 2 P. M. Traveler had the best of the speed, and both made a little burst, but getting into cover began to weaken, and Brush commenced the foot scent business. After getting down to it a little slower yet, Traveler going into a thicket pointed, and after a little steering around Gleason flushed and getting rattled killed the bird, which Traveler retrieved well. Sent on to follow the covey the burrs put them to disadvantage; sent up a draw the dogs and the FOREST AND STREAM'S reporter flushed, sharing about equal in it. Sent on to try a weedy swale the judges flushed a bird after the dogs had passed. Soon Traveler did some bad work by flushing, and Brush, not to be left out, went and did the same thing. A little further on Traveler scored a fine point, and the whole covey flushed in the weeds and the edge of corn, and while the dogs stood very steady another covey got up back of the judges. Dogs called up. There were three coveys flushed inside of 75 yds., and yet the pen and printer's ink will leave the history of birds being scarce at the Abilene field trials of 1886.

MARKSMAN AND CORNERSTONE.

Marksman, a handsome Llewellin black, white and tan setter dog (Doncaster—May Queen), now comes up for a bye, and runs it off with Cornerstone. Mark is owned by C. B. Donaldson, handled by Gleason, who had six dogs out of the nine entries that filled. Sent away at 3 P. M., Traveler got up some life in the crowd of judges, reporters and others by going off a little faster than the last two braces. He is, in our estimation, the third in speed of all the entries run. After a little search Mark came on to a scent and stood and Cornerstone made one of his grand backs. The dog moved and a bird was flushed. Marksman gets around now in rather a slow manner and with all that makes a flush. After a trial with Mark of backing and to shot, the dogs were ordered up. The judges soon made up the list of winners, and when they announced Bessie B. first, Spot Belton second and divided the third between Dillsey, Traveler, Tansy

and Ruby, everybody threw up their hats and shouted for the owners of the first and second winners, the young gentlemen from Racine, Wis.

NOTES.

There could possibly have been only one change in the winners; and that was the winning dog's good luck and the other dog's bad luck.

Mr. Merriman was always to the front and most of the time on foot, but he is well used to such exercise, the other two gentlemen came from their offices, Mr. Whipple from the cashier's desk and Mr. Briggs from the editor's chair. To say that it was pleasure is missing the mark.

There are some grand things connected with the trials. The speed of two fast dogs and the pointing and backing of the most stylish were much to be admired, but the long hunt for birds and pottering work done by most of the puppies was not pleasant by any means, but very tiring.

The decisions have at all times been received with satisfaction, and the judges had but little difficulty in settling in their minds the winners of each heat, save one, and that was settled according to the judgment of all the judges.

The scarcity of birds and the mammoth supply of sand burs were the poor features of the meeting and it is to be regretted, yet the management did all they could to have the trials on what few birds were to be found.

Two winners out of three dogs run is a fine record for Chas. Barker, who came here with the dogs belonging to Messrs. Case and Bull, of Racine, Wis. This is his first experience; he has done well.

F. H. Bull was the happiest man on the ground when Bessie B. won the first place, and well he might be, for he received the congratulations of all the gentlemen present.

Mr. Merriman is a splendid judge of a dog, both in the field and on the bench.

H. H. Briggs, editor of the San Francisco *Breeder and Sportsman*, accompanied Mr. Merriman to his home and attends the Southern field trials, and if he doesn't have some fun, then we miss our guess.

Mr. Nesbitt started for the Southern field trials with all his dogs. He takes the winning dog, Lufra, along, and also that grand bitch Natalia, who was beaten here by poor luck. She is to some people a pocket edition, but she gets there when there are quail to be found. She will come to the front yet.

The Henry House was the headquarters for the dog men, and the accommodations and table were of the very best. Those who were there last year missed the clever young man, Chas. Estes, who then stood behind the counter. He was very ill and not able to meet his many old friends.

The Graphic Kennels' five entries were all withdrawn from the race, owing to the fact that their feet were in such a condition as to unfit them for going through. They were brought here and put to training, got into hedge brush and used up their feet.

During the heat between Nellie and Spot a jack snipe was flushed. This was too tempting to be missed. Dogs were ordered up and judges Merriman and Briggs, taking the handlers' guns, proceeded to bombard the poor little bird. After flushing three times and firing three shots each, the snipe was numbered with the slain and retrieved by the reporter. This little incident reminds us of a similar incident that happened at the trials last year, when Judge Sterling grassed the bird at the first shot. When interest was lagging Gleason broke the monotony by shooting an owl.

Judge Whipple sprained his back yesterday while assisting Mr. Campbell to put Thos. Mosher on his horse, from which he had fallen, being overbalanced by the immense Henry House sandwich which he had in his hand.

Mr. E. E. Pray walked up to Mr. J. I. Case, Jr., and said, "I'll give you two hundred dollars for that dog." Mr. Case said, "No, sir." "What will you take?" asked Pray. The young man, who was much in love with his dog, said, hesitatingly, "Two hundred and fifty." "I'll take her," said Pray, and the dog was sold. When Mr. Barker learned this he exclaimed, "Great heavens, you have not sold Spot, I would as soon have parted with one of my children." Mr. Case, being a kind-hearted young man, wanted Pray to let him off, but Pray said no.

Nesbitt has proved to be a prophet as to the dogs he has had here during the last two meetings. Last year when he arrived in town he was confident of winning with Trinkett's Bang, and this year with Lufra. Having won both and having a "newcomer" at home make him feel very proud.

PHILADELPHIA CLUB TRIALS.

[From a Special Correspondent.]

THE third annual field trials of the Philadelphia Kennel Club, which began Monday, Nov. 15, and ended Thursday, the 18th, at Frederica, Kent county, Del., have been very successful and satisfactory. The club's first attempt at holding a field trial was in November, 1884, at Rio Grande, N. J. Many objectionable features were encountered, while the density of the cover, to which the birds would always break, made it such a hardship to follow and watch the dogs that it was given up as a place for future trials. In 1885 the club leased 3,000 acres at Beesley's Point, N. J., and stocked the grounds. This being made known by the local papers, gunners selected the locality and many birds were killed by poachers and pot-hunters, and when the trials were run few birds could be found, and these had taken refuge in almost impenetrable brier swamps. So the meeting of 1885 was less successful than its predecessor, as only the puppy stakes were decided. In 1884 a members' stake only was run. In 1885 the members' stake was dropped, an all-aged and a Derby being substituted, some members objecting to being obliged to compete for honors in the field against professional handlers. This year an all-age, a members' and the Derby stakes were announced, the all-age having seventeen entries, the members' eleven and the Derby eight.

As all the ground in the neighborhood of Frederica is posted and the law of this State is very strict, quite a number of birds had accumulated, and a member of the club secured the shooting privilege of enough land to give ample room for the trials. Frederica is within three hours' ride of Philadelphia, part of the route being by stage. The club has found excellent accommodations at the Delaware House, Mr. C. Call, the proprietor, doing his utmost to please, while the good madame took a great interest in the affairs and saw to the comfort of dogs and owners. A survey of the grounds to be gone over being made showed them to be in excellent condition, the rain of the previous week leaving it sufficiently moist all over. The cover was plenty, but not too dense. Sand burrs and Anthony thorns were only found in places, while birds were comparatively plenty. It was intended to start early Monday morning, but owing to the train being delayed several hours with many of the members and their dogs, it was nearly 2 o'clock before a start was made. Among those present were noticed Messrs. James A. Stovell, Col. B. Ridgeway, W. H. Child, Chas. T. Thompson, E. Comfort, G. Schreiber and Lawrence Shuster, of Philadelphia; also E. W. Jester, of St. George's, Del.; C. J. Peshall and Percy C. Ohl, of the New Jersey Kennel Club; I. Merryweather of Trenton, and many others.

THE ALL-AGED STAKES

were first drawn, thirteen of the original seventeen having filled and were on the ground. The drawing was as follows:

VOLLEY (Col. B. Ridgeway), lemon and white English setter bitch (Antic—Princess Mix),

against

MOLLIE BAWN (Chas. T. Thompson), red Irish setter bitch (Glencho—Biddy).

CREOLE (I. H. Roberts), red Irish setter bitch (Grafton—Meg),

against

GROUSE (M. Richardson) liver and white English setter dog (Grouse—Leda).

CASSINO GLADSTONE (E. Comfort) black and white English setter bitch (Gladstone—Countess Druid),

against

KNOT (G. Schreiber), liver and white English setter dog (Grouse—Flora).

VICTORIA (James E. Stovell), red and white Irish setter bitch (Berkley—Nora),

against

WEE CLARA (E. W. Jester), snuff belton English setter bitch (Count Noble—Dashing Romp).

LEIGH DOANE II. (W. H. Child), red Irish setter bitch (Chief—Leigh Doane),

against

BRUCE (I. H. Roberts), red Irish setter dog (Elcho—Norem).

NELLIE (Chas. Thompson), red Irish setter bitch (Glencho—Bess),

against

JESSIE (I. H. Roberts), Irish setter bitch (Elcho—Noreen).

DAISY (I. H. Roberts), red Irish setter bitch (Chief—Leigh Doane), *a bye.*

It will be noticed that out of the 13, 10 are bitches, while 8 of the 13 are red Irish setters.

Mr. C. J. Peshall was selected judge, and Mr. Percy C. Ohl was also requested to assist. Mr. Peshall having to return to New York Tuesday, the work was left with Mr. Ohl, who gave even the beaten ones satisfaction. Particular interest was taken in these trials, because the competition was so divided between the red Irish and English setters. The result is such that I think in the trials of 1887 but few red Irish will appear, as the English setters here showed themselves far superior in every way to their red competitors. Mr. James Stovell's white and red bitch Victoria, supposed to be by Berkley—Noreen, who ran one good heat in the All-Aged Stakes, and is winner of second, gives indication of her dam having at some time at least played with an English setter.

The heats were sometimes run a little out of order to expedite matters, and at times two braces were run at once in different localities under different judges, but the heats will be written in their regular order. At 1 o'clock the party left the hotel with dogs on chain, followed by the 1,463 inhabitants of Frederica. A mile walk brought the judge to a halt, and he, having been informed about where a bevy was known to rise, sniffed the air, took its direction, and ordered the dogs,

VOLLEY AND MOLLIE BAWN,

cast off so they would hunt the likely cover to the leeward. Volley was handled by Jim Shewbrook and Mollie Bawn by Predmore. The cover, however, disappointed us, and an hour was given to this pair, when they were ordered up without finding game. They continued this heat Tuesday morning, when they were cast down at 8 o'clock in an open field, which, with several large peach orchards, were gone through. Volley made a wide cast, and going into some sedge grass, made game, roaded into the edge of a piece of woods and established a point. Mollie Bawn, who was quite a distance away, was ordered up, which occupied fully five minutes, the little bitch remaining steady in a very uncomfortable position. Mollie backed to order. No birds being flushed, the dogs were ordered on. Volley moved but a few feet and pointed. Mollie and her handler going around her flushed a bevy. Several more were then flushed by the company. Volley soon had more located, when she dropped. Mollie Bawn came up and went all around the bitch, who remained steady. Two birds were soon after flushed from her point, which Mollie had run over. Soon Volley again pointed. Mollie Bawn being ordered up, passed by Volley, challenged and then pointed; she then moved a few feet and flushed. No birds were shot. All the flushes had been made in thick cover. A spin in the opening was indulged in, when the dogs were ordered up and the heat given to Volley. Down one hour.

CREOLE AND GROUSE

were cast at 2:30 o'clock Monday afternoon in an open field. Grouse made a wide cast and soon pointed in a cornfield; Creole made a good back; ten birds were flushed to order and one killed by Shewbrook and nicely retrieved by Grouse. The birds going into a thicket were followed there, and both dogs did some pretty work, each roading in in a very commendable manner for about 100yds., when, coming to an opening, a bird flushed wild in front of both dogs. The dogs were again cast down in a cornfield. Creole soon challenged and pointed. Grouse coming up, the bitch moved on, drawing carefully. Grouse at this moment pointed. Judge Peshall ordered him to be brougot around to back the bitch, who was now pointing. In this attempt the birds were flushed in front of Grouse. The birds were again followed to the thicket. Creole soon pointed in a clever manner and was backed by Grouse; the bird was flushed to order and killed by Predmore. Creole was ordered to retrieve; the place was a rather bad spot to retrieve from. It could have been done so much better that, upon figuring up, the heat was awarded to Grouse. Down one hour and forty minutes.

CASSINO GLADSTONE AND KNOB.

This heat lasted until some birds were found, which were well located by Cassino Gladstone; Knob refused to back, but forged ahead and flushed. Cassino soon located another bevy; Knob again distinguished himself by rushing in and flushing. This ended the heat. Down thirty minutes. Judged by Col. B. Ridgeway.

VICTORIA AND WEE CLARA.

Victoria, handled by Shewbrook and Wee Clara by E. W. Jester, were put down at 8:20 Tuesday morning in the field where the Volley—Mollie Bawn heat was decided and immediately after that heat. After a hunt of an hour or more Victoria winded game, roaded and came to a decisive point in among some stumps. Wee Clara was delayed some ten minutes in getting there, Victoria holding her point in a superb style, which Wee Clara backed on sight. Shewbrook was ordered to flush and killed. Two birds were stopped; both dogs dropped to shot, and Victoria ordered to retrieve brought in both birds in a very handsome manner. Wee Clara behaved elegantly, dropping to shot and remaining until ordered up. Wee Clara did not have a chance to distinguish her good qualities, as these were the only birds found. The dogs were here ordered up by Mr. Peshall and the heat given to Victoria. Down one hour and ten minutes.

LEIGH DOANE II. AND BRUCE,

both dogs handled by Predmore, were cast down in a ragweed field and judged by P. C. Ohl. On starting they showed but little style or speed, but afterward warmed up and ran better. The dogs were dropped into a thicket. Leigh Doane here made game and was roading carefully when a bird flushed wild. Leigh Doane then pointed. Bruce being called to back, did so to order. Leigh soon moved from her point, and going a short distance dropped on another point. Bruce backed to order. A single bird flushed wild away to the left of where the dogs were working. Following this bird up Bruce soon pointed, Leigh backing. No bird could be flushed. Ordered on, Bruce went willingly, the bitch held steady and refused to move, and from the long grass a bird was flushed and missed. Another bird was pinned by the bitch and flushed wild, but was killed. Leigh dropped, Bruce unsteady. Leigh retrieved in good shape. At 9:50 this brace were ordered up and the heat given to Leigh Doane. Down forty minutes.

JESSIE AND NELLIE,

like the brace just run, both handled by Predmore, were put down and taken up three times. When first put down we thought a team of crackers had been reached, for they quartered and ranged so well. Jessie made a wide cast in a 300-acre field, and a lark was flushed, which caused Jessie to range in Roderigo style, but the style was not appreciated in these parts, and Jessie was so informed in a striking manner. These dogs were completely off their nose. A bevy of birds having been seen by the judges running on the ground, the dogs were brought on to the trail almost immediately behind them. No attention was paid by the dogs. Running ahead Jessie flushed a single bird, which started the bevy. The bevy was followed into a low wet swamp, where the dogs again flushed. Later on, when Grouse and Cassino Gladstone were hunting under Peshall's judging, Jessie (who was under P. C. Ohl's judging), seeing Grouse pointing, ran up ahead of him and flushed the bevy. This ended the heat, as Jessie was declared to be the poorest of the two. With this heat the first series closed, Daisy having a bye.

Summary First Series.

Grouse beat Creole.
Volley beat Mollie Bawn.
Cassino Gladstone beat Knob.
Victoria beat Wee Clara.
Leigh Doane II. beat Bruce.
Nellie beat Jessie.
Daisy a bye.

Second Series.

GROUSE AND VOLLEY,

both handled by Shewbrook, were put down at 3:30 P. M. in a branch where two birds flushed wild, and dropped again about 50 yards further up; the dogs were taken to where the birds were marked; Grouse soon located them, challenged and moved on a little further; going under some tall saw grass he stiffened; Volley was brought around and immediately backed on sight; the bird was flushed to order and killed in Shewbrook's usual manner, which he says he can't help on account of the gun shooting so hard; the bird was nicely pointed and retrieved to order by Grouse in good style. After some 5 minutes more hunting the heat was declared won by Grouse; down 15 minutes.

CASSINO GLADSTONE AND DAISY.

Daisy, handled by Predmore, Cassino Gladstone by Mr. Comfort, were put down at 4:15 in some open fields which were hunted, and then a stage ride of a mile brought us to a choice piece of ground. Darkness coming on the dogs were ordered up before it could be well hunted. This same brace were put down Wednesday morning at 8:15. The sun was obscured from view and the atmosphere damp. The prospect for finding birds were good. Cassino had a good move while Daisy was very tardy. They had been down about fifteen minutes when a bevy was flushed in front of Predmore. Daisy was making game at the time, but moving so slow her handler was compelled to urge her. The bevy broke for cover except one bird, which was marked down close by. This bird both dogs pointed at the same time; it was flushed to order and killed by Comfort. Cassino refused to retrieve, but Daisy did it in rather an indifferent manner. Going into some long grass, two birds were flushed from ground which Daisy had gone directly over. Cassino being so superior in style, ranging, etc., and more stylish on her points and evidently of better nose, the heat was given to her.

The third heat between

VICTORIA AND LEIGH DOANE II.

was commenced Tuesday morning, Victoria handled by Shewbrook, Leigh Doane II. by Predmore. They were put down at 10:30 o'clock and a great deal of interest was manifested in this heat. The dogs were cast into the timber, where the birds had broken to from Victoria's point, which decided the heat in her favor when down against Wee Clara. Victoria, knowing where the birds had broken to, had an advantage in this respect over Leigh; it would have seemed better to first hunt them elsewhere. Almost on entering the timber a bird was flushed in front of Victoria, who stood to wing. After moving on 25yds., another bird was flushed in the same manner and she again stood to wing; then moving a step or two pointed. Leigh was working cautiously near by when the bird that was pointed flushed. Soon Victoria again pointed; the bird was flushed to order, but not shot at on account of the close proximity of the spectators. Leigh pointed and Victoria was called upon to back, which she refused to do, but forged ahead. Leigh then roaded a few steps and again pointed, Vic not getting any scent of the bird, which was flushed from Leigh's point, though not shot at. As they were unable to find any more birds, and as it was near noon the dogs were ordered up. They were put down again at about 3 o'clock. A kind-hearted farmer having flushed some birds, told us were they could be found in an open field. The dogs had hardly got into it when a bird flushed in front of Victoria. Going a little further, Victoria pointed and was nicely backed by Leigh. Victoria made a slight move, but became steady to order; the bird to order was flushed again and blown to pieces by Shewbrook; both dogs dropped to shot. Vic then went on and flushed. She made another cast and again flushed. Leigh then pointed and Victoria refused to back, although the point was considered false, no bird being found at the time (half an hour afterward a bird was flushed from the spot). They were then cast over a large field, but no more birds were found. At 3:15 they were ordered up and Victoria given the heat by Mr. Peshall, Victoria having considerable more style. But we think it was difficult to decide this heat at this time.

Summary Second Series.

Grouse beat Volley.
Cassino Gladstone beat Daisy.
Victoria beat Leigh Doane.
Nellie, a bye.

Third Series.

GROUSE AND CASSINO GLADSTONE.

This was a short heat, Grouse soon finding a bevy and pointing it handsomely. This was a bevy flushed by Jessie in a previous heat. No more birds were found, but Grouse was awarded the heat after being down thirty minutes.

NELLIE AND VICTORIA

were put down in some timber where a bevy had been flushed. The dogs were unable to find any birds. Secretary Comfort located, pointed and shot a woodcock in here. A quail was also flushed by Predmore, who handled Nellie. A single was then pointed by Vic, which Nellie acknowledged. The bird was flushed to order. Nellie then pointed falsely. Nellie was pottering on foot scent. Victoria made a cast and taking the body scent roaded nicely and pointed a bevy, which decided the heat in her favor. Down one hour. This ended the third series, the summary of which is as follows:

Grouse beat Cassino Gladstone.
Victoria beat Nellie.

Fourth Series.

GROUSE AND VICTORIA,

Grouse handled by Shewbrook, Victoria by Predmore, were put down in cover. Grouse soon pointed running birds and was backed by Victoria. Grouse going on again, pointed, and was again backed unsteadily by Victoria. A bird was flushed and killed and retrieved by Grouse. Another point was made by Grouse, while Victoria flushed, They were

ordered up and the heat given to Grouse, who also wins first. Grouse was in no condition to run in this heat, as he was like Mark Twain's "Leaping Frog." Some kindly disposed person had given the dog a breakfast sufficient for six dogs. We wonder if this could have been done intentionally. By consent, the judge placed Victoria second, Volley third, saying that if there were a fourth, it should be Creole.

THE MEMBERS' STAKE

had eleven entries, but by some misunderstanding they were drawn before the Derby, and in consequence several of the members were absent. As the dogs in this contest had to be handled by the owners, only four dogs competed. They were four good ones and ran a capital race. They were drawn as follows:

E. Comfort's Cassino Gladstone against E. W. Jester's Wee Clara.

L. Shuster's Clementine D. against James A. Stovell's Victoria.

The three English bitches all ran at their best, while Victoria was handicapped by being run in the All-Aged Stake under her handler and then suddenly transferred to her owner.

CASSINO GLADSTONE AND WEE CLARA.

Mr. Jester's bitch has only been with him for a few days, having just come up from Tennessee, and as she and the dog Sportsman had formed an alliance some weeks ago, she could not be expected to do her best field work. However, her performance was very commendable, and while she also had a very sore foot, she ran a game race, as this heat was by far the best of the meeting. The dogs were ordered down at 10:30 under Mr. Percy C. Ohl, who continued as judge throughout the trials. After passing through some timber and some stubbles where the dogs ranged, quartered and moved well, both having good style; but Cassino, carrying a very high head and a pretty easy way of going with a merry tail action, was a little the better mover. After being down 20 minutes Cassino jumped into a point on the edge of the woods; Wee Clara, who was to the left and ahead out in the opening, also was pointing. In front of Cassino birds were flushed; Wee Clara's point proved blank; she was pointing where the birds had been. Following the game into the thicket a number flushed wild. It had now begun to rain, but the leaves were still dry, and five or six inches deep. Ability to work among these on a bevy just flushed, and to find the birds by stylish points without making any errors, can be appreciated. Cassino G. succeeded in getting several points in succession which were beautiful, and were acknowledged by Wee Clara in a manner equally as good. The photographer who had followed the trials the day previous would have been well rewarded if here. The last point was got by Wee Clara; coming on the scent in a long wet jungle, she dropped to point, in which position dogs are not generally well backed, but on this occasion Cassino Gladstone did not spoil her score (which would have been perfection had she been taught to retrieve), as she backed in fine style. The handicap referred to and Cassino's good fortune in locating and getting the points, won her the heat. Down 50 minutes.

CLEMENTINE D. AND VICTORIA

were put down after lunch Wednesday. It was Clementine D.'s first appearance at the trials; she was too fat for work, but strong and in good heart and spirits. The brace had been down only a few moments in an open field when Victoria made a point, which was claimed by her owner, and Clementine D. was brought around to back, which she did cleverly. No birds were flushed. The dogs roaded carefully and ranged well. Clementine made a wide cast, and, coming around with the wind, suddenly came to a point in a crouching position. Victoria hardly had an opportunity to back when the birds flushed near Mr. Shuster, who shot, but missed. Going to a thicket, another point was claimed by Mr. Stovell for Victoria; this was also a false one. Moving on, a bird was flushed in front of Victoria, who soon again pointed. Shuster was working toward the point with Clementine when the bird flushed; Shuster killed and it was retrieved by Clem. Clem then pointed; Vic refused to back, but forged ahead and came to a stand, and a point was claimed for her, but no bird could be put up. Then, after another false point for Vic, we went to another piece of timber, where Vic pointed several times, but they were not claimed, nor did she have game. Here Clementine D. soon located birds and pointed, Vic again forging ahead. Clementine D. was then called away to give Vic a chance to point; but after roading a few yards she flushed two birds. They were then ordered up and the heat given to Clementine D. Down one hour.

Second Series.

CASSINO GLADSTONE AND CLEMENTINE D.

were put down in some open timber, going through a thicket to an open field, where Clementine wheeled suddenly to a point; before Cassino could back a single flushed wild. Cassino seemed off her nose in this heat and ran over a bird that Mr. Shuster flushed, shot at and missed. Going down a steep wooded hillside Cassino pointed and was backed; the bird flushed to order and was killed by Mr. Comfort; Cassino would not retrieve; Clementine brought it cleverly. Some more birds were soon flushed which Cassino should have pointed. She shortly again caused two more birds to flush. They were ordered up at 3 o'clock and the heat and first prize awarded to Clementine D. Mr. Ohl was requested to place the second and third, but he insisted upon the deciding heat to be run, which brought for the

Third Series

CASSINO GLADSTONE AND VICTORIA.

Both these dogs had been hunted a great deal during the day, and in this heat Victoria was a quitter, while Cassino was full of game. Cassino was awarded the heat and second place, Victoria third, at 4:30 P. M., when the trials were over for the night.

THE DERBY

with eight entries, of which five came to front, was speedily disposed of with the exception of one heat between Volley and Daisy, this heat lasting over three hours. The competitors were drawn Wednesday night in the following order:

DUKE WIND'EM (M. Richardson), lemon and white English setter dog (Rebel Wind'em—Leda),

against

VOLLEY (Col. B. Ridgeway), lemon belton English setter bitch (Antic—Princess Mix).

BEGORRA (Chas. T. Thompson), red Irish setter dog (Blarney—Lady Clare),

against

LURAY III. (I. H. Roberts), red Irish setter bitch (Chief—Leigh Doane).

DAISY (I. H. Roberts), red Irish setter bitch, *a bye.*

An early start was made, and after a mile and a half walk the first brace in the first series,

DUKE WIND'EM AND VOLLEY,

were cast down in a large field bordered by timber. Volley went off at a rattling pace, quartering systematically in the woods and ranging wide in the opening. Duke Wind'em in the meantime was jumping about, looking for something to play with. The brace were ordered up, after being down five minutes, and heat given to Volley. Both dogs were handled by Shewbrook.

BEGORRA AND LURAY III.

were put down in the same field, but would not range; and the handlers were ordered to separate, as the dogs liked to play. They refused to range further than a few feet; though cunning Mr. Shewbrook kept his animal running, by allowing him to run over to the other dog and then whistling him back. Jim was rather taken back when Mr. Ohl ordered him to cast his dog to the other side, and as Begorra absolutely refused to hunt the heat was awarded to Luray III. Time, ten minutes.

Daisy had a bye.

Second Series.

DAISY AND VOLLEY

were put down at 8.30. Volley continued her good style of going, while Daisy did fairly well in this respect. The wind had commenced to blow a gale and rain began to fall, which so increased that shelter was sought for a few moments, when another start was made. Going through some timber a bevy was flushed by the guide. These birds were followed toward the edge where they had gone. Volley, going through some grass, flushed several birds; she dropped to wing. Then several more birds flushed wild. The red dog was working well and challenged from where a bird rose. Storm had now developed into a cyclone and was accompanied by thunder and lightning, and the birds would not lie for the dogs. Shelter was again sought in a cabin. After a wait of thirty minutes we again attempted to settle the heat, which a creditable piece of work on the part of Volley would have done, she being by far the best dog, but as the red bitch had not made any mistakes, and as Volley soon again had another bird or two flushed close to her, a good piece of work at this junction by Daisy would have won the heat. A beautiful point was soon established by Volley, which Daisy backed to order, and as she required command to remain steady, the bird was flushed and killed; both dropped to order. Volley then retrieved in a splendid manner (though this was not required in the Derby). Dogs ordered up and heat and first honors awarded to Volley.

Daisy was given second, while third went to Luray III. At 1 o'clock Thursday the trials were a thing of the past, and a start was made for home. The prizes are handsome pieces of plate for first, second and third in each stakes.

The members and all present were well pleased with the trials. Mr. Percy C. Ohl's assistance and satisfactory manner of judging was so favorably commented upon that on Thursday evening he was made the recipient of a very handsome cake presented him by the good Mrs. Call. This provender was started home for Thanksgiving.

We would suggest this locality as being a very favorable one for field trial purposes. Birds could be increased by stocking, although they were found in sufficient number to decide most of the heats in less than 1½ hours. ENGLISH.

[While returning from Frederica, Mr. Ohl was thrown from a runaway stage, but sustained no serious injury; he has in consequence given up his Southern trip. The Frederica cake was in the same conveyance, and when they found it in the debris of the splintered coach no one could tell whether it was cake or star dust.]

THE EASTERN FIELD TRIALS.

THE eighth annual meeting of the Eastern Field Trials Club commenced Nov. 18 at High Point, N. C., with the Members' Stake. There were seventeen entries for this event, seven more than last year. The work of the dogs, upon the whole, was creditable, some of it being first-class. Messrs. J. W. Orth, of Pittsburgh, and B. Waters, of Chicago, judged the first three heats, and Messrs. Orth and J. O. Donner the remainder. The judging gave satisfaction to all.

On Wednesday we had a nice rain, which left the ground in fine condition. On Thursday the weather was clear, but there was a strong breeze from the northwest and birds were hard to find, as they did not move much. On Friday, however, the weather was all that could be desired and birds were plenty and readily found, and the stake was finished before night. There were quite a number of spectators and much interest was manifested in the work of the dogs. Following is a list of the entries:

BRANDON (J. O'H. Denny, Pittsburgh, Pa.), lemon and white English setter dog, 4yrs. (Royal Rock—Nellie).

GLOSTER (Edward Dexter, Boston, Mass.), black, white and tan English setter dog, 2yrs. (Dashing Rover—Trinket).

BUCKELLEW (W. A. Coster, Flatbush, L. I.), orange and white English setter dog, 6yrs. (Druid—Ruby).

BRIMSTONE (H. E. Hamilton, Hackensack, N. J.), lemon and white English setter bitch, 3½yrs. (Gladstone—Swaze).

SLOCUM (John Simpkins, New York), black and tan Gordon setter dog, 6yrs. (Turk—Beauty).

BANG GRACE (Jas. S. Breese, New York), lemon and white pointer dog, 2½yrs. (Bang Bang—Grace).

LUCIA (D. S. Gregory, New York), liver and white pointer bitch, 5yrs. (Croxteth—Belle).

COUNTESS GLADSTONE (J. R. Henrichs, Pittsburgh, Pa.), lemon and white English setter bitch, 3½yrs. (Gladstone—Countess).

CLIFFORD (J. O. Donner, New York), black, white and tan English setter dog, 3½yrs. (Emperor Fred—Fairy Belle).

POCAHONTAS (F. R. Hitchcock, New York), lemon and white pointer bitch, 3½yrs. (Tramp—Grace).

BEN DARLINGTON (J. W. Orth, Pittsburgh, Pa.), 2½yrs. (——Fly).

FANNIE W. (B. F. Wilson, Pittsburgh, Pa.), blue belton English setter bitch, 3yrs. (Sig—Bessie).

MODESTA (R. C. Cornell, New York), orange and white English setter bitch (Jester—Mojeska).

CORINNE (Geo. T. Leach, New York), Irish setter bitch, 3½yrs. (Peter—Countess).

PENDRAGON (Geo. T. Leach, New York), black, white and tan English setter dog, 3½yrs. (Count Noble—Floy).

DASHING NOBLE (J. R. Henrichs, Pittsburgh, Pa.), black, white and tan English setter dog, 3yrs. (Count Noble—Dashing Novice).

GLENCLAIRE (J. T. Walker, Palmyra, N. Y.), Irish setter dog, 2½yrs. (Glencho—Nora).

Slocum, Ben Darlington, Fannie W., Modesta and Glenclaire did not start. The others were drawn to run as follows:

Bang Grace against Pendragon.
Clifford against Dashing Noble.
Buckellew against Gloster.
Pocahontas against Countess Gladstone.
Lucia against Brimstone.
Corinne against Brandon.

BANG GRACE AND PENDRAGON.

Leaving the hotel at 8:40 the first brace were put down in a stubble field near the town twelve minutes later. Bang Grace ran in the Derby last year and divided third. Pendragon ran in the Derby two years ago but was unplaced. They started off at a fair rate of speed with Bang a trifle in the lead; he also had the best of it in ranging and quartering, Pen showing the most style. After beating out several stubbles and likely-looking places without a find, we swung back to the starting point and turned east to some woods where a bevy had been seen to go, but we failed to find them. We then worked up a hill where Pen dropped on point to a bevy which flushed wild as the judges came up and just as Bang caught the scent and half pointed a few yards beyond Pen. Turning down a run to a branch Bang dropped very prettily on point to a nice bevy. Pen came up but could not see him and also pointed nicely. Mr. Breese flushed the birds to order and scored a miss. Following after them Bang pointed twice and Pen backed him, but it was evidently a running bird, which they failed to find. We then went for the first bevy, but after a long search had to give them up, as only one was found, and that was flushed by one of the handlers. We then beat out considerable ground without a find, and nothing was done except that Bang pointed and Pen backed him. He soon discovered that no bird was there and turned, and seeing Pen he backed him. We then beat out a large stubble without result. Pen was tiring and could hardly raise a gallop. Bang was going well but not very fast. Turning into some woods Bang half pointed, and Pen came round ahead of him and pointed. Bang moved on a short distance and also pointed, but was not quite rigid. Mr. Leach to order put up the birds and gave it to them right and left, and winged a bird with his second barrel. Pen sent to retrieve did so, but bit the bird badly. Following the birds Pen was the first to find and secured a point which Bang at once honored. The bird was flushed to order and Pen was unsteady to wing. Bang then flushed a bird and dropped on point to another one, which rose as the judges came up. Pen then pointed a single, which Mr. Leach to order flushed and killed. Bang sent to retrieve did so nicely. They were then ordered up and the heat was awarded to Bang Grace. Down two hours and a half. This was a long and tiresome heat, and no very brilliant work was done. Pen was not in good condition, and toward the last of it could scarcely be urged beyond a slow trot. Bang ran fairly well, but not in the form of last year.

CLIFFORD AND DASHING NOBLE.

This brace were put down in a stubble field at half-past 11. Clifford ran here in the Derby two years ago and divided third with the pointer Drab. Dashing Noble ran last year in the Members' Stake, but was not placed. Both started off well at a good rate of speed and ranged wide. Dash made a cast across wind and jumped into a stylish point, which Clifford at once honored in capital style, the two dogs making a beautiful picture. Mr. Henrichs to order put up a large bevy and brought down two, Dash retrieving one of them nicely. Following them into the woods, Dash scored a false point, which Clifford backed a few seconds and then moved up and again backed indifferently. A short distance further on the spectators flushed a bevy, which was followed but not found, except one that flushed down wind in front of Clifford. We then beat out a corner of the woods, and, as Clifford was suffering from dysentery, Mr. Donner requested the judges to decide the heat, which they did in favor of Dashing Noble. Down twenty-six minutes

BUCKELLEW AND GLOSTER.

This was the next brace and they were given a spin in the stubble where the last brace started. Buckellew is well-known to our readers, having run in the Members' Stake the past three years. It is due to him to state that he has had but very little work this year, and was soft and not under as good discipline as he has always been when run. Gloster made his first appearance in public. He is a heavily marked black, white and tan of medium size, very well formed, and has quite a turn of speed, he is also a wide ranger and shows considerable hunting sense in looking over the likely spots; he has a very gamy, taking way of going and is quite stylish when on game. Added to this he appears to have a good move, is staunch on point and backs in elegant style; he is also a good retriever. Both started off at a good rate of speed, Gloster being the fastest. Working over the stubble to some woods, Gloster ran into two outlying birds which flushed, he then pointed and held the rest of the bevy which Mr. Dexter, to order, put up but did not shoot at. They settled in the woods and the dogs were taken round to get the wind. Gloster was the first to find, pointing it in good style. Buck refused to back and pointed alongside. The bird was flushed to order, and Gloster soon had another one pointed. As the judges came a bird flushed and flew over Gloster and he dropped to wing, but soon drew on a step or two and resumed his point and a few seconds later the bird rose. This was very well done. Turning back Buck flushed a single. Gloster then pointed and Buck, to order, backed him. Gloster moved on in time to escape the penalty for a false point. We then turned toward the Model Farm where lunch was awaiting us. Gloster made a cast and pointed where some doves had been seen, and as nothing was found he was given the benefit of the doubt. Meantime Buck got in a nice point to a bevy which Mr. Coster, to order, flushed and missed. Following them Gloster made a stylish point and Buck was called up to back. As he came up a single flushed near him and he stopped to order. Several more then got up and Mr. Dexter "set the iron on him," but the bird still lives. Gloster soon made another good point to a single that was flushed to order. They were then ordered up and the heat awarded to Gloster. Down 51 minutes. This was a good heat and greatly enjoyed by the spectators. It was now nearly 1 o'clock and we went to lunch.

POCAHONTAS AND COUNTESS GLADSTONE.

This brace was put down after lunch in a grass field. Pocahontas ran in the Derby two years ago. She has greatly improved in speed and range. Countess has never appeared in public before. She is a small white bitch with lemon ears, a rapid and easy mover, with considerable style. Like many of the entries, she was greatly handicapped by not being used to her handler. Both started off at a rattling gait, with not much to choose between them in this respect. They are very nearly of a size and similarly marked and it was difficult to tell which was which when they were at a distance. After a short turn in the open they were worked round to where the last bevy had settled, but the birds were flushed by the spectators. Following them up some of them were flushed by the handlers and horses, and nothing was done with them. Taking a turn through an orchard grown up with tall weeds we worked down to a branch where Countess made a nice point to a single that soon flushed and she was a little unsteady to wing. Crossing a fence both pointed but soon moved on and Countess flushed a single, while Pocahontas located a bird, but Countess coming down wind and not seeing her flushed it and made a jump or two, but stopped to order. This was hard on Pocahontas, as the judges did not see the work. We then took quite a turn without result, except that Countess made a false point. Then on a hillside Pocahontas made a point and Countess worked in ahead of her. Pocahontas then moved on and again established a point, when Countess again drew ahead and flushed the bevy and was unsteady to wing. Working through some woods Pocahontas pointed and as the judges came up several birds rose and Mr. Henrichs winged one with his second barrel and the rest of the bevy rose. Countess caught the running bird and retrieved it. Pocahontas then got in two points, Countess flushing the first bird and Mr. Hitchcock to order put up the other and killed it and Pocahontas retrieved it in nice style. They were then ordered up and the heat awarded to Pocahontas. Down one hour and twenty minutes.

LUCIA AND BRIMSTONE.

Both of these dogs have run before; Lucia last year and also in 1884 in both the Members' and All-Aged Stakes. Brimstone was in the Members' Stake last year. She was drawn to run against Lucia then and won the heat and repeated the performance on this occasion. The heat was very unsatisfactory, as Lucia was coming in season and was off in nose, while Brim was badly cut up by the briers and did not let out at all. They were put down in some weeds, and considerable ground was worked over without a find. Going down wind Lucia turned at the lower end of a pea patch and half pointed, and was drawing nicely toward us when a large bevy flushed in front of the horses. This was unfortunate, as she would undoubtedly have established a point had they not been disturbed. The birds flew across the creek, and in following them Mr. Donner, who was in the lead, rode into the mud and from that into the mire. This was the first bit of fun that had come to us, and that it was keenly enjoyed a

glance at the faces of the spectators was ample proof. After considerable floundering and some wonderful gymnastic feats amid a shower of mud, the hero of the episode came out of the scrape without a scratch. He lost his pet silver powder flask, however; but under the excitement of the moment did not discover that it was missing until we had gone some distance and crossed the creek and stopped to take an observation. As it was useless to go on without the sinews of war, a liberal reward was offered for the missing ammunition, and Morgan, stripped to the waist, started at full speed on the back track, but a man and brother of lighter mould than Morgan no sooner saw him fairly under way than like a cyclone he rushed through the cornfield straight across country and got there and grasped the coveted prize with a grip that caused the sides of the flask to almost meet. Some one suggested that the horse had stepped upon it, but this was at once overruled as sheer nonsense. As Morgan returned his face was a study for an artist, and the lucky finder no sooner caught a glimpse of it than he lit out for the woods. While the search for the flask was going on we finished the heat. The spectators had flushed a bevy which settled between us and the other bevy, and as we came to them Brim put up one, and taking a few steps pointed another, which Mr. Hamilton, to order, flushed and missed. Lucia then scored a flush and soon after a point to a single that Mr. Gregory, to order, put up and killed very cleverly with his second barrel, and Lucia retrieved it well. Brim then got in a good point at a bunch of briers, Lucia came up, and refusing to back, tried to work ahead, but the briers were too heavy, and with a jump over Brim she tried the other side; but this was just as bad, and she then crawled under Brim, when the latter moved up a little and again pointed. Lucia then found an opening and worked in a step or two and the bird went. We then turned into some pine woods, where Brim soon pinned one and Lucia backed her unsteadily and was dropped by order. The bird was flushed to order and the heat was declared in favor of Brimstone. Down fifty-eight minutes.

CORINNE AND BRANDON.

Both of these dogs ran here last year, Corinne in the Members' and Brandon in the All-Aged Setter Stake. They were put down in a stubble field and worked down to a run and then up to the edge of a weed field, where Brandon pointed and Corinne backed him. The bevy was running and both dogs did considerable roading, and finally Brandon made a cast and again pointed where they had been feeding, and Corinne joined him and both worked for some time on the scent; both pointed after a while just as the bevy flushed near the spectators. Following them into some pines Brandon soon had one fast, and Corinne backed him nicely. Mr. Denny to order put up the birds, but did not shoot. Brandon soon had another one which handler to order flushed and missed. Brandon dropped to shot and before they were ordered on Corinne pointed a single that Col. Leach flushed, but as they were not under judgment this did not count. She soon had another one, however, which was flushed to order but not shot at. She then took a few steps and pinned another, Brandon backing to order. The bird was put up to order and the dogs ordered on, when Brandon made a short cast and dropped very prettily to a single that Mr. Denny, to order, flushed and missed. Both then alternately pointed and roaded running birds. Brandon failed to locate, but Corinne roaded out her bird and pointed it nicely, and Col. Leach, to order, flushed and killed it and Corinne retrieved it in good form. She then spoiled all by roading up a bird that she should have pointed, as it was under her nose and the wind was in her faver. They were then ordered up and the heat was awarded to Brandon just as he pinned a bird that his handler flushed and missed. Down thirty-eight minutes. It was now nearly 5 o'clock and we started for home, having run out the first series with the result as follows:

First Series.

Bang Grace beat Pendragon.
Dashing Noble beat Clifford.
Gloster beat Buckellew.
Pocahontas beat Countess Gladstone.
Brimstone beat Lucia.
Brandon beat Corinne.

Second Series.

BANG GRACE AND DASHING NOBLE.

Friday morning there was every indication of a beautiful day. A few white fleecy clouds were floating high in air and a gentle breeze from the northwest was just stirring the top of the grass. Starting from the hotel at half past eight we arrived on the ground in fifteen minutes, and the dogs were at once put down in a stubble field. Dash had shown signs of game before he was taken from the chain, and as soon as the word was given he jumped into a beautiful point not ten yards away. Bang also was on time and responded with a gamy point just behind him, as he caught the scent before he had time to back. Mr. Henrichs very gracefully stepped in front, and as the bevy rose he singled out one, and the next morning it graced a slice of toast, Dash having brought it to him very nicely. This was a very good opening and augured well for the day's sport. Dash then made a nice point where the bevy had been feeding and Bang backed him handsomely. They were then worked over a sedgefield, where both went well, Bang much better than in his previous heat. Coming to a stubble Bang made a cast, and, finding scent, pointed and then drew on a few steps and located a large bevy in fine style. Dash, coming toward him down wind at speed, dropped to back just a second before the birds flushed. Bang was just a trifle unsteady to wing. We then turned back for the first bevy into some sprouts, where Dash made a point, and as the handlers came up a bird flushed near them. Dash still held his point, and a few seconds later the rest of them got up. Soon after Dash flushed one that he should have pointed, and a little further on Bang made a point that Dash at once honored in fine style. One bird flushed as Mr. Breese came up, but Bang held his point and several more got up, and then all of them went, Mr. Breese scoring a miss. We then took a turn to get the wind, and as we came to the birds Dash scored two good points, from which birds were flushed to order. Bang then pointed, but soon drew on and got too close and put up the bird and was unsteady to wing. Dash then got in another nice point and Bang backed him. The bird went as the judges came up, but Mr. Henrichs did not see it and stepped in to flush, and as he came back false point was written plainly on his countenance. A word from the judge, however, changed his looks of chagrin to a smile of triumph. Bang then made a point and Dash backed him. Mr. Breese put up the bird to order and both dogs were a trifle unsteady with the balance against Bang. They were then ordered up and the heat awarded to Dashing Noble. Down thirty-two minutes.

GLOSTER AND POCAHONTAS.

After a wait of fifteen minutes for this brace, which had been taken in a wrong direction, they were put down in the same field where the first brace started. Gloster was off at speed, while Poker, as she is called, started rather slow, but soon went better. Gloster made a point in a thicket, but soon moved on. When the judges passed there three birds flushed wild some distance away, but we did not think that Gloster could have been pointing them, as they were down wind. He then made a cast along the edge of some woods, and while at speed whirled round on a nice point to a large bevy. Poker coming down wind toward him flushed one and stopped, and soon the rest went. Taking the dogs round to get the wind Gloster ranged too wide and fast for cover, and when we came to the birds he scored a flush. Poker then pointed a single that Mr. Hitchcock flushed to order and hit, but it got away, the remainder of the birds getting up soon after. Soon after Poker flushed a bird that she should have pointed, and a little further on two more got up a few yards in front of her. They were then ordered out to the edge of the woods, when Gloster made a stylish point to a single, and Poker also pointed the same bird, which flushed as Mr. Dexter came up. We then beat out considerable ground without a find, and the dogs were taken up and we went back to the first field and turned down a branch, where Gloster found a bevy, and alternately pointing and roading, he did some very nice work. Finally he established his point and would not move when ordered on by Mr. Dexter, who walked up a bird near him. He then drew on and again pointed in capital style. Mr. Hitchcock flushed a bird and killed it, and Gloster retrieved it in good form. They were then ordered up with Gloster the winner. Down fifty-two minutes. Gloster then made another point, and Mr. Donner, just to show the boys how it was done, took the gun and bravely marched to the front. Although his step was firm his nerves were not quite steady, as he only winged his first bird, but the smell of blood and powder at once restored his faculties, and amid the enthusiastic plaudits of the admiring crowd, he set the iron on his second victim and covered himself with glory by killing it dead as a herring.

BRIMSTONE AND BRANDON.

This brace were put down in a field of sedge and weeds and worked up a ditch past where the Members' Stake finished last year to a stubble field, where both dogs challenged, and Brandon made a short cast ahead and dropped on point, Brim backing to order. Mr. Denny to order put up the bevy and killed one, which Brandon retrieved nicely. As they were sent on an old hare flushed under their noses and both started for it. Brandon dropped to order at once, but Brim took a few jumps more and then came back. Following the birds down to some pines near a branch, Brandon made a point and his handler to order flushed three birds, but did not shoot. We then beat out a side hill and the grass along the branch, but did not find them. Finally, after a long search, we swung back to the place where Brandon had found, and he again made a nice point to some birds that Brim went in and flushed, and the heat was decided in favor of Brandon. Down thirty-nine minutes. This finished the second series with the following result:

Second Series.

Dashing Noble beat Bang Grace.
Gloster beat Pocahontas.
Brandon beat Brimstone.

Third Series.

DASHING NOBLE AND GLOSTER.

This brace was put down in a clover field and worked down to the branch where the heat between Gloster and Pocahontas was finished, then turning down the branch to some woods we swung up the hill, but missing Gloster a search was made for him. After a short time we saw him down near the branch on an elegant point. As we were looking after him and waiting for his handler to come up two birds flushed and he dropped but soon straightened up on point to the rest of the bevy, which rose when the judges came up and kicked in a brush heap. This was a very good piece of work. Following up the birds Gloster made a nice point to a single that his handler flushed to order. Dash then made an excusable flush down wind and at once stopped on point. Gloster came round and backed him in elegant style. The bird ran away from the point and Dash saw it and turning his head watched it but remained staunch, while his handler stepped in and put it up and crippled it, and it was not ordered retrieved. Working down the hill Dash made a point which Gloster at once honored. Mr. Henrichs put up the bird and secured a very neat miss. We then worked up to the top of the hill and through a field of weeds down to a branch. We again lost Gloster, but soon found him down the branch on point. Dash came up but did not back. Mr. Dexter flushed the birds to order, and much to his delight a cloud of feathers floated back from his second barrel, but the bird kept on. Working in their direction Dash made a point, but the bird flushed before we came up. He soon had another one fast that his handler to order flushed and missed. Gloster then made a point which Dash refused to honor, and soon after Dash flushed a bird, and they were ordered up and the heat was awarded to Gloster. Down 58 minutes. Gloster was scouring during the heat, and toward the last of it was not going so well as he had previously done. This finished the third series, Braudon having a bye. Following is the result:

Third Series.

Gloster beat Dashing Noble.
Brandon a bye.

Tie for First Place.

GLOSTER AND BRANDON.

This brace was put down after lunch to decide first place. Gloster appeared to be a little better and started off in good form. Working out a field of sedge and brush Gloster swung up to the edge of some sprouts and pointed, and as his handler stepped in to flush he drew on a short distance and again pointed just as the bevy rose. Mr. Dexter got on this time and winged a bird that Gloster retrieved in good form. After considerable search we gave up the bevy and swung back and turned through a cornfield to some sedge where Brandon dropped on point, and as his handler went ahead to flush he drew on after him, but he was going in the wrong direction, as Gloster coming round down wind put up the birds below where Brandon had pointed. Both then did some pretty work where the bevy had been feeding, but of course it did not count. Taking the dogs round to get the wind we turned into some sedge and pines, where Brandon got a point and a few seconds later Gloster also pointed. Mr. Denny, to order, flushed and missed and Gloster was just a trifle unsteady, but at once dropped to order. A little further on Brandon scored a flush and dropped to wing and Gloster backed him. Gloster then got in a good point to a single that his handler, to order, flushed and missed. A little further on one got up near Gloster and he stopped to wing and another one rose. He then made a few strides and dropped on a fine point, which Brandon at once honored. They were then ordered up and the heat was awarded to Gloster, and he was declared winner of first prize.

Ties for Second Place.

BUCKELLEW AND DASHING NOBLE.

These two were selected by the judges as the best of those beaten by the winner, to run a heat to decide which should contest with Brandon for the second place. After a wait of an hour for the dogs that had been taken in a wrong direction, they were put down in sedge near a branch and worked down toward the teams. Both started off well, Dashing Noble having a trifle the best of it in speed, but in range Buck was ahead and made the first point to a bevy. Dash came up on the upper side and also pointed, and the bird flushed as we came up. Then, in some weeds, Dash made a point and Buck backed him. Henrichs, to order, flushed and killed a bird, Dash sent to retrieve struck the old scent and made a cast, and the bird was retrieved by a boy who was undoubtedly an epicure as he kept the bird. Buck was on the go and would not turn to whistle, and in consequence he got a taste of the whip, and after this he ranged further than ever. Working into some pines Dash pointed just as a bird rose in front of him. Buck then made a point and Dash backed him, Mr. Coster to order flushed the bird but failed to kill. Buck then flushed one that he should have pointed and soon after he made a nice point to a single and was handsomely backed by Dash. Coster was on him this time and grassed his bird neatly, and Buck retrieved it well. Then taking a turn down the branch and over a knoll and down a branch, Buck made a wide cast, while Dash crossed the branch to a bit of stubble and pinned a bevy in fine style. Buck was called up to back but refused although cautioned twice, and went up and half pointed alongside. Mr. Henrichs to order flushed and killed, and Dash retrieved well. This ended the heat in favor of Dashing Noble. Down forty-seven minutes.

Final Tie for Second Place.

BRANDON AND DASHING NOBLE.

The owners announced that they wished to divide second and third, but objection was made and the dogs were cast off for the final heat. After a few minutes Mr. Henrichs was taken sick and requested the judge to decide, as he was unable to work his dog. Dash was doing well enough, however, as just then he pointed a bevy just a second before it flushed. They were then ordered up and the heat was awarded to Dashing Noble and he was declared winner of second prize, the Sanborn Cup. Dashing Noble had been selected by Mr. Sanborn, just before his death, as his Derby entry last year. The judges announced that Brandon was the winner of third prize. This finished the Members' Stake. Following is a complete

SUMMARY.

First Series.

Bang Grace beat Pendragon.
Dashing Noble beat Clifford.
Gloster beat Buckellew.
Pocahontas beat Countess Gladstone.
Brimstone beat Lucia.
Brandon beat Corinne.

Second Series.

Dashing Noble beat Bang Grace.
Gloster beat Pocahontas.
Brandon beat Brimstone.

Third Series.

Gloster beat Dashing Noble.
Brandon a bye.

Final Tie for First Place.

Gloster beat Brandon and won first prize.

Ties for Second Place.

Dashing Noble beat Buckellew.

Final Tie for Second Place.

Dashing Noble beat Brandon and won second prize.
Brandon won third prize.

THE DERBY STAKES.

HIGH POINT, N. C., Nov. 20.—Following are the starters in the Derby. The race will be a hot one, and will probably last through the week:

ENGLISH SETTERS.

PAXTANG (T. W. Seiler and G. W. Porter, Pittsburgh, Pa.) liver and tan dog, May 9 (Count Noble—Fate Gladstone).

SWATARA (T. W. Seiler and G. W. Porter, Pittsburgh, Pa.) black, white and tan dog, May 9 (Count Noble—Fate Gladstone).

FRED W. (Sanborn Kennels, Pittsburgh, Pa.), black, white and tan dog, Feb. 18 (Count Noble—Spark).

GAY GLADSTONE (T. M. Brunsby, Marietta, Ga.), black white and tan dog, July 22 (Gladstone—Miss Clifton).

DAN NOBLE (Pittsburgh Kennels, Pittsburgh, Pa.), lemon belton dog, June 15 (Count Noble—Lewis's Nelly).

TALLEYRAND (Wm. Bowdre, Memphis, Tenn.), black, white and tan dog, June 1 (Paul Gladstone—Lady Rake).

BEN HUR (C. P. Stewart, Memphis, Tenn.), black, white and tan dog, May 25 (Paul Gladstone—Lottie).

CASSIO (Memphis & Avent Kennels, Memphis, Tenn.) black, white and tan dog, April 28 (Count Noble—Lizzie Hopkins).

NAT GOODWIN (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, June 1 (Roderigo—Bo-Peep).

CHANCE (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, June 1 (Roderigo—Bo-Peep.

ALLIE JAMES (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan bitch, March 17 (Mingo—Twin Maud).

JEAN VAL JEAN (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, March 17 (Mingo—Twin Maud).

HUSTLING HANNAH (Whyte Bedford, Horn Lake, Miss.), black and white bitch, Feb. 2 (Ben Hill—Zoe).

KEYSTONE (P. H. & D. Bryson, Memphis, Tenn.), black, white and tan dog, June 27 (Gladstone—Sue).

GOLDSTONE (P. H. & D. Bryson, Memphis, Tenn.), black, white and tan dog, June 27 (Gladstone—Sue).

HARI KARI (Edward Dexter, Boston, Mass.), blue belton dog, June 11 (Don Nillson—Tchula).

ROI B. (Wm. Bowles, Memphis, Tenn.), black, white and tan dog, June 1 (Paul Gladstone—Lady Rock).

KID (W. A. DeWitt, Pelham Manor, N. Y.), black and tan dog, Feb. 26 (Sprain—Gypsy).

BOB H. (Dr. R. J. Hampton, Athens, Ga.), black and white dog, March 31 (Count Noble—Belle Boyd).

BRIDE (John Hunter, New York), black and white bitch, Aug. — (Sam—Brick).

MAVIS (J. S. Clark, New Brunswick, N. J.), black, white and tan bitch, March 1 (Gladstone—Lavalette).

POINTERS.

RAPIDAN (W. C. Thompson, Butler, Pa.), lemon and white dog, Aug. 22 (Vandevort's Don—Nellie Bird).

DOLON (John S. Wise, Richmond, Va.), liver and white dog, May 17 (Meteor—Beulah).

HECTOR (F. R. Hitchcock, New York), black and white dog, June 20 (Priam—Hops).

SPRINGBOK (Capt. C. E. McMurdo, Charlottsville, Va.), liver and white dog, June 10 (Mainspring—Curfew).

FLY (James P. Swain, Jr., Bronxville, N. Y.), lemon and white bitch, Jan. 29 (Rush—Eria).

RUE II. (Bayard Thayer, Boston, Mass.), lemon and white bitch, May 22 (Bang Bang—Rue).

RAPID B. (Bayard Thayer, Boston, Mass.), lemon and white dog, May 22 (Bang Bang—Rue).

CONSOLATION (C. H. Odell, New York), lemon and white dog, Jan. 29 (Bang Bang—Grace III.).

Messrs. B. F. Wilson, D. C. Bergundthal and J. O. Donner will act as judges for the Derby, Mr. Donner taking the place of Elliot Smith.

WINSTED SHOW.—*Editor Forest and Stream:* From present indications the second annual bench show of the Western Connecticut Poultry Association will be a success. Numerous requests for additional entry blanks are coming in. It has been decided since issuing the premium list to make champion classes for fox-terriers and bulidogs. Intending exhibitors need have no fears of such experiences as Mr. Belmont complains of at Stafford, for we have a competent staff of judges (Messrs. Watson, Tallman and Elmore). Shall issue a catalogue and for general management of show reference may be had to last year's patrons from Baltimore, Philadelphia, Jersey City, New Haven, Hartford, etc. There will be a champion class for greyhounds.—FRANK D. HALLETT, Superintendent.

IRISH SETTER FIELD TRIALS.

PEEKSKILL, N. Y., Nov. 17.—*Editor Forest and Stream:* The entries to the Irish setter field trials closed on the 15th inst. as follows, viz:

Mr. I. Henry Roberts, Morristown, N. J.—Bruce (Elcho—Norcen), Jessie (Elcho—Noreen), Lunay III. (Chief—Leigh Doane), Daisy (Chief—Leigh Doane), Creole (Grafton—Meg).

Mr. George G. Leach, New York city—Corinne (Peter—Countess).

Mr. E. W. Clark, Philadelphia, Pa.—Blarney (Bruce—Luray).

Mr. James A. Stovell, Philadelphia, Pa.—Victoria (Berkley—Nora).

Clare-Reeta Kennels, Palmyra, N. Y.—Glenclair (Glencho—Clare).

Mr. Wm. H. Pierce, Peekskill, N. Y.—Kildare (Glencho—Nora).

Mr. R. C. Vanhorn, Kansas City, Mo.—Patsy D. (Lord Dufferin—Queen Bess).

Mr. Max Wenzel, Hoboken, N. J.—Ready (Chief—Yoube), Jersey Beauty (Chief—Doe), Tim (Biz—Hazel), Catfoot (Chief—Fashion).

Mr. Jean Grosvenor, Boston, Mass.—Banker (Glencho—Zelder).

Messrs. Parrott Bros., Bridgeport, Conn.—Gerald (Glencho—Zelder).

Mr. Wm. H. Child, Philadelphia, Pa.—Leigh Doane II. (Chief—Leigh Doane).

Mr. Chas. T. Thompson, Philadelphia, Pa.—Molly Bawn (Glencho—Biddy), Nelly (Glencho—Bess).

Dr. Wm. Jarvis, Claremont, N. H.—Lorna (Elcho—Rose), Elcho, Jr. (Elcho—Noreen).

I am in receipt of information from Salisbury, N. C., that birds are in abundance, and in behalf of the club I have secured about four thousand acres of suitable land to hunt over. The hotel accommodations are first-class and everything points to a successful meeting.

The Irish setter field trials at Salisbury, N. C., are postponed to Dec. 8, on account of the large entry of the Eastern Field Trials Club, which, it is supposed, will last during the week. WM. DUNPHY, President.

THE FOX-TERRIER CLUB STAKES.—The entries in the Stud Dog Stakes for 1887 were published last week. We here repeat the conditions: The Stud Dog Stakes for 1887, of $2 each, p. p., with a cup added by the President of the Fox-Terrier Club, to a subscription of $10 each by owners of fox-terrier stud dogs, whose get alone shall be qualified to compete. The get in competition to consist of a brace, dog and bitch, whelped after January 1, 1886, which may be the property of different owners. The winning brace to receive one-half of the stakes and one-half of the subscription, the cup and half of the subscription going to the subscribing owner of the brace's sire, one-quarter of the stakes to go to the second best brace, the remaining quarter reserved by the Fox-Terrier Club toward advertising and printing. The death of a subscriber not to disqualify the get of his stud dog, nor the death of the dog. Subscription to close on or before Nov. 1, 1886; entrance to the stake to close as hereafter to be announced. The stake to be competed for in the autumn of 1887, in New York; six subscriptions to fill. For the renewal of this stake subscriptions will close Jan. 1, 1887. The stake to be competed for at the spring show of the Westminster Kennel Club, New York, 1888, and to be published in the W. K. C. Premium List, and entries to the stake to close with the regular entries for the W. K. C. Show of 1888. The following is also announced: Second American Fox-Terrier Club's Crand Produce Stake of 1888. For competition by the produce bitches entered with the Secretary after Dec. 1, 1886, until Aug. 1, 1887. Entry fee for bitches to be one dollar each. The entries to be made prior to the bitches whelping. Fifty dollars in cash presented by the American Fox-Terrier Club, with two handsome silver cups added to this stake by members of the American Fox-Terrier Club. The competition and classes to be divided for dogs and bitches. Competitors' entry fee to be $3 for each exhibit. Entries for the exhibits will close with and in the same manner as the entries to the Westminster Kennel Club's spring show of 1888, at which show this stake will be judged. Blanks and other information can be procured by addressing Fred Hoey, Secretary, Long Branch, N. J.

"AMERICAN KENNEL REGISTER."—With its coming number the *American Kennel Register* closes its fourth volume. Its convenience and its value to owners and breeders of dogs are shown by the number of animals registered during its existence, and by the fact that a number of fraudulent pedigrees have been exposed in it, whose manufacturers might never have been detected except for the vigilance of the *Register*. Owners who desire to enter their dogs so as to have them in the fourth volume of the *Register* should send in their entries without delay, as at the close of the year there is always a great rush, and no entries can be accepted after Dec. 1.

CALIFORNIA TRIALS.—Sacramento, Nov. 7.—Next month the Pacific Coast Club's field trials take place, and an interesting and successful meeting is anticipated. Some of the dogs are getting work, while others are awaiting their masters' opportunities to go afield.—SANCHO.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Eclipse of Keystone, Beaufort of Keystone, Cricket of Keystone, Terry of Keystone, Lotta of Keystone, No-No of Keystone, Pride of Keystone and Robert le Diable, Jr. By R. E. Westlake, Olyphant, Pa., for liver and white ticked pointers, five dogs and three bitches, whelped Oct. 18, 1886, by Robert le Diable (Croxteth—Spinaway) out of Beau Beau (A.K.R. 4053).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Jersey—Agrippa. Frank Crane's (Scranton, Pa.) imported mastiff bitch Jersey to R. E. Westlake's Agrippa (A.K.R. 449), Oct. 13.

Mamie—Royal Prince. A. H. Moore's (Philadelphia, Pa.) English setter bitch Mamie to his Royal Prince, Nov. 16.

Bell Mont—Argus. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Bell Mont (Shot—Judy) to his Argus (Argus—Zealah), Nov. 1.

Twinkle—Dandy. C. T. Brownell's (New Bedford, Mass.) pug bitch Twinkle (Dandy—Judy) to his Dandy (imported Ned—Didy), Nov. 15.

Belle—Scotson. J. D. Shotwell's (Rahway, N. J.) collie bitch Belle (Strephon, A.K.R. 2730—Olivia, A.K.R. 2728) to J. Van Schaick's Scotson (Dublin Scot—Flurry II.), Oct. 20.

Ruby Fidget—Belgrave Primrose. J. A. Benden's (Troy, N. Y.) fox-terrier bitch Ruby Fidget (Ruby Tyrant— ———) to John E. Thayer's Belgrave Primrose (A.K.R. 3801), Oct 25.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Beau Beau. R. E. Westlake's (Olyphant, Pa.) pointer bitch Beau Beau (A.K.R. 4053), Oct. 18, eight (five dogs), by Hempstead Farm Co.'s Robert le Diable (Croxteth—Spinaway).

Cremorne. R. E. Westlake's (Olyphant, Pa.) pointer bitch Cremorne (Flake—Lily), Oct. 31, six (one dog), by Westminster Kennel Club's Bang Bang; all since dead.

Chloe. C. T. Brownell's (New Bedford, Mass.) Gordon setter bitch Chloe (Reed's Flash—Jude), Nov. 14, six (five dogs), by his Argus (Argus—Zealah).

Judy. C. T. Brownell's (New Bedford, Mass.) pug bitch Judy (imported Dad—Twine), Nov. 1, seven (five dogs), by his Dude (Dandy—Punch).

Richmond Olive. John E. Thayer's (Lancaster, Mass.) fox-terrier bitch Richmond Olive (A.K.R. 2699), Nov. 15, five (four dogs), by his Mixture (A.K.R. 2697).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Mark. Lemon and white pointer dog, whelped March 31, 1885, by Glenmark out of Zanetta, by W. F. Todd, Portland, Me., to C. R. Whitten, Augusta, Me.

Nickle Plate. Lemon and white pointer dog, whelped April 10, 1886, by Bang Bang out of Zanetta, by W. F. Todd, Portland, Me., to W. F. Sawyer, Woburn, Mass.

Highland Lassie. Brindle deerhound bitch, whelped September, 1885, by Bran out of Lorna II., by John E. Thayer, Lancaster, Mass., to G. Batten, Philadelphia, Pa.

Sport II. Black and tan Gordon setter dog, whelped April 28, 1886, by Sport out of Nell, by W. J. Geary, South Boston, Mass., to H. H. Robinson, Hudson, N. Y.

Gladstone. Black and tan Gordon setter dog, whelped April 28, 1886, by Sport out of Nell, by W. J. Geary, South Boston, Mass., to S. A. Ellis, Harwich, Mass.

Bessie. Black and white ticked setter bitch, age not given, by Mingo out of Fausta II., by J. Tenny, Haverhill, Mass., to H. L. Tibbals, Port Townsend, W. T.

Barney. Red Irish setter dog, whelped Aug. 27, 1886, by Glencho out of Magg, by Gem Kennels, Chardon, O., to A. L. Garford, Elyria, O.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

D. C., Schenevus, N. Y.—My hound breathes like a horse with heaves. At times he holds his nose out and pants, and it seems hard for him to get his breath; does not have much appetite and gradually growing poor, has a bad cough and sometimes coughs until he vomits. Has not been well since last summer, when he had a hard run on a hot day. Ans. Give the dog five drops of tincture of belladonna three times daily in water. Give five drops of Fowler's solution of arsenic in the food night and morning.

Rifle and Trap Shooting.

BREECH VS. MUZZLE.

Editor Forest and Stream:

I have been somewhat amused for the past month or two by reading the various articles that have appeared in your paper under the above heading, especially those by C. L. S. of Fort Clark, Texas, Mr. Burns of Jamestown, N. Y., and Mr. Clapp of Geddes, N. Y. As Messrs. Burns and Clapp have made some statements which I consider susceptible of proof, it might be as well to discuss the matter. Mr. Burns states first, that there were no muzzleloader hunting rifles used in your trajectory trial; second, that the Merrill rifle was beaten in accuracy by 27 out of 32 breechloaders used; third, that the Romer rifle was ahead of the Maynard .40-cal. just .004 of an inch, that being the difference between 5 shots each from the two rifles upon the 100yds. screen in the 200yds. range.

Now I call upon Mr. Burns to state specifically, first, why the muzzleloading rifles used were not hunting rifles; second, to make good his claim that the difference between the heights of the shots upon the screen at 100yds. in a range of 200yds. shows the accuracy of the rifle.

Mr. Clapp first attempts to turn from the rifles to the ammunition, and claims that if the ammunition were changed "the results would be that the breechloader would come out ahead. Just so; there's the rub. Why do not the American makers of breechloaders change the ammunition and use enough of it to obtain flat trajectory and decent killing power? Simply because they cannot without causing their rifles to scatter wildly, as he has correctly quoted from the Massachusetts Arms Company; also to kick severely. That is the rub. The muzzleloader can use most of it with good effect, both as to flat curve and accuracy both combined in the same shot. That is just what the muzzleloaders at the FOREST AND STREAM trial did do, beat in flat curve and accuracy also. Mr. Clapp also quotes from the FOREST AND STREAM Trajectory Report, and states that he will not impute to it an iota of unfairness or a particle of prejudice. Just so. I will follow suit. He says of the Ballard .40-70, "This arm is of the fine close-shooting, patched bullet weapons, and so far as compact bunching of the shots in the target seemed to be *fully equal* to the *high charged* muzzleloaders in the test. Italics are his. I will put the italics on the word *seemed*, and then see how it will read. It will be noticed according to that version that the report does not say that it did, but that it seemed to.

Now comes the conclusion of the whole business. If your correspondent had studied the FOREST AND STREAM's report to find out the facts of the case, one-half as closely as he has to find a loophole for escape from being beaten so badly by the muzzleloaders, he would have learned many important facts of which I am afraid he is now ignorant. He should also have made a visit to the office of FOREST AND STREAM and inspected the targets, screens, data, etc., of the different rifles used in the trial, which are there on file for that very purpose.

He would then have learned that the Romer rifle beat the Ballard .40-70 almost one-half in accuracy, about the same as it did in trajectory. He would also have learned that it beat the Maynard 40 about two-thirds in accuracy, and he has already learned that it beat it for trajectory.

Mr. Burns would also have had an opportunity to account for shot No. 5 of the Maynard series at the 200yds. range, something which he has not as yet done. He will find that it was a dropper, flopper, unaccountable or goose egg, as they are variously termed, and that at 50yds. it fell 3.10in. below the mean horizontal line of the other shots. That at 100yds. it had fallen about 6.30in., that at 150yds. it had missed the screen altogether and had to be thrown out, as its trajectory could not be obtained and another shot, No. 6, fired to make out the series of five. That is a good record for the boasted accuracy of his favorite, 1 out of 5 a goose egg, 2 out of 10, 4 out of 20 and so up. The muzzleloaders can and did do better than that. There were no floppers for either of them in their trial.

Now, a few words in regard to some other statements of Mr. Clapp and I am done for the present. He states that a home-made breechloader made some good shooting, and quotes it in favor of the breechloader. I should quote it against the breechloader as advertised and sold in this country. Why did he not give the name of the maker? Was it that of a celebrated muzzleloader maker who lives at Syracuse, N. Y.? Poor recommend for the breechloader, I should say, if it has to be made by a crack muzzleloader maker in order to get a good one. He also asks why, at Vernon, Vt., no muzzleloader made a string of less than 9in. and his home-made affair at another time and place made 7. Good logic that, it strikes me. Why did he not state what the breechloaders made in the same trial and at the same time? Not to his purpose, I think. He also makes the unblushing statement that on all the ranges of this country no muzzleloader is ever seen. He appears to read FOREST AND STREAM partly, not wholely surely, or he could hardly have failed to notice the recent shooting of Mr. Wm. Hayes, of Newark, N. J., with his little muzzleloader, making the best on record, and who is now champion of this country at that kind of shooting. G. J. ROMER.

RANGE AND GALLERY.

REVOLVER SHOOTING.

THE remarkable advance that has been made in rifle making and rifle shooting is about to be repeated in pistol making and pistol shooting. The ingenuity of fire arm inventors is being brought into requisition, and the demand now is for a revolver that will shoot as well as a rifle at 50, 100 and 200yds. To obtain this desideratum it will be necessary to have the barrel, sights and ammunition of the pistol as near perfection as is possible to make them. A large number of officers in the regular and volunteer military force of Great Britain have turned their attention to practicing with the revolver with astounding results, and now in this country among the volunteer organizations those officers who desire to become accomplished shots with the pistol are giving a good deal of time to practice. We see no reason why a pistol may not be made to shoot with accuracy at 200yds. and do more execution than the best rifle in use 20 years ago. During the coming season there are to be some interesting matches, and we look forward to some scores as surprising as those made at short range with the rifle. The pistol shooting of the olden times, upon which such men as Capt. Paul, John Travis and Recorder Hackett made national reputations, is thrown as far in the shade nowadays as the shooting of the old flint lock musket of half a century ago.

The veteran Conlin is keeping abreast of the times and has selected a number of the best revolvers now in use for his patrons, and the crack shots of the metropolis are trying their hands at the various targets. Capt. Ira A. Paine, the champion professional shotgun and pistol shooter, has been making some remarkable shooting at Conlin's gallery. The following are some of the best scores made at Wimbledon with revolvers at 20yds. In the meeting of 1886, with some of the best shots made in this city in the gallery of James S. Conlin, up to the present date:

BRITISH REVOLVER SHOTS.—Possible 36.

Commander Scott, Royal Navy	35
Major Glendouwyne, Welsh Reg't	35
Capt Oxley, 1st V B Royal Fusiliers	35
Lieut Hunt	34
Lieut H C Blair, 78th Canada	34
Lieut Straker, 3rd West York Reg't	33

The arm used is the army revolver; the target is 11½in., counting from 2 to 6, bullseye 3 1-6in. across; from center of bull to edge of 5-ring, 2⅝in., each ring is 1 1-16in. apart. Six shots to the string.

REVOLVER SHOOTING IN THIS CITY.

Capt. Ira A. Paine, .32-cal. S. & W. revolver, 6 shots, 70, possible 72.

Frank H. Lord, split two cards in 3 shots, hit two ¼in. bullets in 3 shots.

George Bird, split six cards in 10 shots, cards placed on edge.

Señor A. Fernandez, three full scores of 5 shots each, 75, possible 75.

D. A. Davis, three full scores of 5 shots each, 75, possible 75.

H. W. Wickham, at the "word," S. & W. pocket revolver, 49, possible 50.

Pierre Lorillard, Jr., 7 shots, S. & W. .32-cal., rim-fire, 41, possible 49.

Charles F. Jones, 6 shots, S. & W. .32-cal., 9in. barrel, 35, possible 42.

Dr. E. E. Marsh, 269, possible 300, S. & W. pocket revolver.

Juan Frederico Centellas, 14 shots at 23 paces, with .38-cal. Colt measuring 17½in.

J. T. B. Collins, 10 shots at French target, 58, possible 70.

P. J. Lauritzen, 5 shots, .32-cal. S. & W. pocket revolver, 23, possible 25.

J. B. Miller, 6 shots, Massachusetts Ass'n target, 63, possible 72.

A. L. Brennan, 6 shots, French target, 33, possible 42.

W. C. Southwick, 6 shots, French target, 32, possible 42.

Maynard Bixby, 6 shots, Mass. Ass'n target, 64, possible 72.

Dr. J. S. Howe, 6 shots, Colt .38-cal., Creedmoor target, 27, possible 30.

H. F. Worthington, 6 shots, French target, 30, possible 42.

D. A. Davis, 60 shots, S. & W. pocket revolver, 273, possible 300.

F. J. Rabbeth, 10 shots, Mass. Ass'n target, 86, possible 120.

B. URLSYE.

BOSTON, Nov. 20.—A good number of riflemen gathered at the Massachusetts Rifle Range to-day to shoot in the summer series and revolver matches. All of these matches will close on Thursday (Thanksgiving Day). Following are the scores made to-day:

Rest Match.

J Francis, F	10	10	10	10	10	10	10	10	10	10—100
D L Chase, F	10	10	10	10	10	10	10	10	9	10— 99
S	10	10	10	9	10	10	10	10	10	10— 99
J M Munroe, F	10	9	10	10	10	10	10	10	9	10— 98
S	10	10	10	10	10	9	10	9	10	10— 98
G W Martin, F	10	10	9	10	10	10	10	10	10	9— 98
H Severance, A	10	10	10	10	9	9	9	10	10	10— 97

B G Warren	80 79 78 78 77 77 76 74 74 73—766

BUFFALO, N. Y., Nov. 13.—The annual shoot of the Seventy-fourth Regiment took place Oct. 27. J. M. Garratt won first prize, the Penfold regimental badge; E. S. Gager second, the Brock and Wiener badge. In the subscription match Col. P. P. Beals took first with a score of 45 out of a possible 50; J. M. Garratt second, score 38; G. A. Rogers third. A four point wind was blowing across the range. The Bay View Rifle Association held its fall meeting Oct. 26. A number of matches were shot, the principal being the Laflin & Rand, the first prize was the Laflin & Rand gold medal, value $200, the second was the Laflin & Rand silver medal, value $75, and the third a life membership, valued at $25. The attendance was small, owing to the weather; it rained nearly all day and a cold, uncomfortable wind blew in gusts across the range. Conditions, 10 shots, 500yds.:

Corp R E Emblige	2555554042—37
Pvt J M Garratt	4343554242—36
Col P P Beals	3555532032—33

BULLARD RIFLE MATCHES.—The dates for the matches have been changed in order to give more time for entries and preparations. The first match takes place Jan. 10-15, inclusive, and the second match Feb. 1-5, inclusive.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WELLINGTON, Nov. 20.—The Wellington Gun Club had a large attendance at to-day's shoot: Snow, Schaefer, Stanton, Wilson, Swift and Shumway were the first prize winners. There will be the regular Thanksgiving day shoot at the grounds next Thursday.

THE PROPOSED INTERNATIONAL MATCH.

BOSTON.—The Executive Committee appointed by the National Gun Association met at the Parker House last Saturday to take the initiatory steps toward bringing about an international rifle contest in this vicinity next summer. This tournament originated at the suggestion of a number of Western and Southern shooters, and its object is to bring about a competitive trial of skill between British and American marksmen. It was proposed to have teams of either five or ten men, with two alternates, which will be chosen at large from the two countries, and each team is to shoot at 100 Ligowsky clay-pigeons, one-fourth to be shot each day. The rules of the National Gun Association to govern the match in all material points. It is also proposed, if the efforts to bring about the contest are successful, to have an individual championship match for the Ligowsky $250 diamond badge. At the meeting yesterday there were present C. W. Dimick, Boston; J. S. Sawyer, Cambridgeport; C. M. Stark, Winchester; O. R. Dickey, Boston; and by proxy, Judge M. R. Freeman, Macon, Ga.; James N. Frye, Boston; H. W. Eager, Marlboro; E. A. Folsom, New Haven; Dr. W. H. Vincent, Montpelier, Vt.; D. Kirkwood and Wm. Lloyd, Jr., Boston; W. S. Perry, Worcester. In addition to these there was Col. J. E. Bloom, of Cincinnati, O., who came to consult with the committee as to the various details.

As a result, the following resolutions were passed:

Resolved, That the general committee be increased by the addition of the following gentlemen: Mr. Tinker of Providence, W. L. Davis of Worcester, E. W. Buffington of Fall River, F. M. Ames of Bay Ridge, L. I.; Dr. Gerrish of Exeter, N. H.; W. I. Ritch of New York city, E. J. Wardwell of Boston, T. G. Strater of Boston, A. F. Adams of Boston, Col. Farrington of Portland, Me.; A. G. Courtney of Syracuse, N. Y.; R. B. Organ of Chicago, J. Von Lengerke, New York; Captain West, St. Louis, Mo.; A. N. Rowe, C. B. Reynolds, editor FOREST AND STREAM; L. C. Bruce, W. T. Hill, Aurora, Ind.; F. Drake, Bradford, Penn.; C. F. Chamberlain, Cleveland, O.; George S. Ladd, San Francisco, Cal.; W. H. Allen, Brocton, Mass.; Mr. Weymouth, Fitchburg, Mass.; R. F. Schaefer, Boston, Mass.; John Whetstone, Cincinnati; J. F. Breitenstein, Keokuk, Ia.; C. A. Bragg, H. Fitzgerald and A. J. Rust, all of Philadelphia; C. P. Richards, Du Quoin, Ill.; Mr. Palmer, Savannah, Ga.; E. A. Crawford, Tallahassee, Fla.; A. Meaders, Nashville, Tenn.; Mr. Hazlett, Washington, Penn.

Resolved, That we cordially indorse the international challenges as already issued, and that we hope for an early acceptance of the challenge in order to give opportunity to all contestants to prepare for the match.

Resolved, That the tournament be held on the grounds of the Wellington Gun Club, June 1, 2, 3 and 4, 1887. Or if this should be found impracticable on said grounds, that a committee of four on grounds, to wit, Messrs. Dimick, Sawyer, Eager and Tinker have full power to select other suitable grounds.

Resolved, That the secretary be instructed to send a copy of the challenge, with an earnest appeal for its friendly reception, to the Prince of Wales and the prominent sportsmen of England.

Resolved, That Messrs. Stark, Dimick and Gerrish be appointed a committee on hotels, and if suitable terms can be made at the Quincy House, that the same be designated as the headquarters of the visiting sportsmen to this city.

Resolved, That two distinct series of matches be held at the tournament, viz.: One open to all comers and the other barring all champion shots, subject to the decision of the majority of the executive committee, the entrance fee to the latter matches being $1, and at the former, or main matches, such amounts as the executive committee may deem proper.

Resolved, That the committee on prizes take necessary steps to procure an international challenge cup, valued at $500 to be competed for.

Resolved, that the executive committee of the National Gun Association, Judge M. R. Freeman, chairman, be authorized to select the American team for such international match.

Resolved, That the National Game Association be urged to cooperate with the committee and the National Gun Association in making a truly national success out of the international match.

Resolved, That J. N. Frye, 15 Pearl street, Boston, be appointed permanent secretary of the executive committee, and that all communications be addressed to him.

Sub-committees were appointed as follows: On press, Messrs. Frye, Dimick, Wardwell; general executive committee, Messrs. Frye, Wardwell, Sawyer, Dimick, Stark. This committee was given the full powers to act with reference to the programme, rules, transportation, reception and other matters not specially provided for. Committee on prizes and soliciting of subscriptions, Messrs. Frye, Sawyer, Dimick, Stark, Wardwell, Dickey, Strater, Adams, Kirkwood, Eager, Davis, Buffinton, Tinker, Allen, Folsom Schaeffer.

The meeting then adjourned. There is a general feeling of confidence among those interested that a British team will surely meet an American team in Boston next June, as a result of the pending negotiations.

NEWTOWN, N. Y., Nov. 9.—North Side Gun Club of Long Island. Pigeons, 5 ground traps, handicap, shot under club rules. Badge, one money prize:

Barlow	1111111—7	Terrett	1110111—6
Manning	0101111—5	Lyon	1111110—6
Tiems	1111010—5	Duryea	1110111—6
Dr James	1111000—4	Riker	1100001—3
Merkens	0110100—3	Dr Franz	1111111—7
Tapken	1010111—5	Kroger	1110110—5

Ties on 7; Barlow 111—3; Dr. Franz 011—2.

SPRINGFIELD GUN CLUB.—The regular shoot of the Springfield Gun Club was held on Nov. 11, at New Dorp, Staten Island. It was the second shoot for the Dr. Mylin's cup, at 25yds. Winner of last shoot, Mr. Jas. T. Davis, handicapped 1yd. The following is the score:

Jas T Davis	0	1	1	1	0	1	1	0	0	1—6
Wm Schwindt	0	1	½	1	*x	0	1	½	1	0—5
M Englert	1	0	1	0	½	½	1	1	½	1—6½
H Englert	0	1	1	0	1	0	1	0	0	1—5

*Fell out of bounds. ½ counts for second barrel.

BROCKTON, Mass., Nov. 16.—A glass ball and clay-pigeon shoot was held to-day upon the grounds of the Brockton Gun Club, the principal event being the badge match for the clay-pigeon team badge of Massachusetts State Glass Ball Association, now held by the Brockton team. Results:

Brocktons.		Wellingtons.	
Allen	1111111100—8	Stanton	1111111011—9
Baker	1111111110—9	Schaefer	0111110001—6
Wright	0110100001—4	Buffum	1111110011—8
Bartlett	1111101101—8	Swift	1111101111—9
Tirrell	0101101011—6—35	Wardwell	1111101111—9—41

LONDON, Ont., Nov. 16.—A pigeon shooting tournament was held to-day near this city, which was largely attended. The gold medal was won by John Payne, of Strathroy, who killed 8 birds out of 10, J. L. Evans taking second prize, B. Drake third, G. Graham fourth, N. Simpson fifth and J. Richardson sixth, each of the last-named four killing 7 birds each. A couple of sweepstakes were improvised and small prizes given, but the scores were not good.

BOSTON GUN CLUB.—The tournament of the Boston Gun Club was held at Wellington on the 18th in spite of dreary conditions of wind and rain. During the contests the wind was so strong that close holding was an impossibility, and at one time it seemed as though the club's building would collapse. Representative shooters from about every trap-shooting club in New England were present, all being particularly interested in the shoot for the diamond badge presented by the Lowell Cartridge Company. In this match Stanton, of the Wellington Club, proved the winner after an exciting contest, shooting off with Ross of the Massachusetts Rifle Association on a score of 17 each out of 20. The records in the various matches shot are appended:

Five clay-pigeons—G. A. Sampson first, W. L. Davis second, Swift third and O. Ross fourth.

Five Peoria blackbirds—C. M. Stark and T. J. Beaudry divided first, Davis second, Sampson third, Eager fourth.

Five metal Macomber metal targets—Stark first, Davis and Daw second, Stanton and Mitchell divided third, Ross and Webber divided fourth.

Three pair double birds, clay-pigeons—Ross and Swift divided first, Stark and Stanton divided second, Webber third and Davis fourth.

Seven Peoria blackbirds—Eager first, Stark second, Ross third, Beaudry and Daw divided fourth,

Five clay-pigeons—Nichols, Keene and Ross divided first, Stanton and Beaudry divided second, Tinker third, Wardwell and Swift divided fourth.

Seven blackbirds—Ross first, Eager second, Daw and Wardwell divided third, Nichols fourth.

Seven Peoria blackbirds—Stark, Stanton and Nichols divided first, Eager second, Wilbur third, H. Swift and J. F. Swift divided fourth.

Ten clay-pigeons—Ross and Stanton divided first, Wurms second, Nichols and Stark divided third, Keene and Swift divided fourth.

Ten Peoria blackbirds—Beaudry and Wilbur divided first, Stark second, Wilson third, Wurms and Swift divided fourth.

Seven clay-pigeons—Stanton and Stark first, Beaudry and Eager second, Wilson and Nichols third, Davis fourth.

Five clay-pigeons—C. Wilbur first, Gore, Swift and Keene second, Wardwell, Beaudry and Stanton third, Webber fourth.

Three pair Peoria blackbirds—Eager and Stanton first, Tinker and Wurms second, Stark and Wardwell third, Gore fourth.

Five clay-pigeons—Stanton, Swift and Wurms first, Eager second, Stark third, Keene fourth.

Seven straight-away Peorias—H. Swift and Wilson first, Stanton and Wardwell second, Beaudry and Dana third, Eager fourth.

Five clay-pigeons—Wurms and Stark first, H. Swift second, Ross and Gore third, Eager and Mitchell fourth.

The "miss and out" was won by Messrs. Eager, Swift, Beaudry, Keene, Ross and Stanton in the order named.

Diamond Badge Match.—Individual contest for Climax diamond badge, at 10 clay-pigeons and 10 Peoria blackbirds:

	Clay-Pigeons.	Blackbirds.
C M Stark	1011101110 7	1101111111— 9—16
Sampson	1000011011—5	1100001001— 4— 9
Eager	1001110101—6	1110101001— 6—12
Ross	1101111111—9	1110011111— 8—17
Webber	1101100100—5	1001010011— 3— 8
Davis	1011000111—6	1110101001— 6—12
Wardwell	1010110000—4	1111101011— 8—12
Beaudry	0111001100—5	1111111111—10—15
Stanton	1111111011—9	0111011111— 8—17
Keene	0111101100—6	0110001100— 4—10
Wilbur	0010100111—5	1111111111—10—15
Nichols	1011101011—7	0111010011— 6—13
Wurms	1101111110—8	1111001011— 7—15
Daw	1011111010—7	1111001111— 8—15
Wilson	0000111011—5	1010111111— 8—13
Swift	0101001111—6	0101101111— 7—13
Mitchell	1111001101—7	1000110111— 6—13
Longly	1111101100—7	0110001101— 5—12
Tinker	0111110101—7	1100111000— 4—11

In shooting off the ties, 10 birds, Stanton won the badge.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE ASSOCIATION AND THE CLUBS.

THE idea of uniting all the clubs to the Association, as proposed by Mr. Colin Fraser in the FOREST AND STREAM of Oct. 28, is one that naturally commends itself as the best for all parties, and many are now in favor of it. It would seem best for the Association to be made up not only of individuals devoted to its interests, but of a number of strong clubs working in harmony, and on the other hand a club is far more prosperous as a part of a great organization than if it struggles along in an isolated position. Few will be disposed to question the desirability of the proposed union, but its practicability at present is a far different matter.

Most canoeists know that in the first year of the A. C. A. the membership was partly by clubs, the leading ones joining the Association as a body. This plan was soon found to work badly, as there were some members in each club who declined to join the Association, and whose dues were consequently paid by the club, a most unsatisfactory state of affairs, as these unwilling members were of no value to the A. C. A., and the payment of their dues became a burden on others. A general objection was made on the part of the clubs, and at the second meeting the constitution was so changed as to recognize individuals only. This plan has worked very well, but with many large and powerful clubs interested in A. C. A. work and foremost at the meets, it would seem as though their existence should be officially recognized, and their aid as organized bodies rather than as chance groups of individuals should be enlisted by the Association. Some of them, the Mohican for instance, have become powerful factors in the A. C. A., and yet they do not appear officially in the records.

If the question were only between individual membership on the one hand and a membership by clubs on the other, it would be simple enough; but the trouble is that there must for a long time at least remain a large contingent of non-club men, whose interests must be equalized with those of the clubs. To say that all of these should join clubs is very well, but many of them are beyond the reach of clubs and must remain so, while others prefer, for reasons of their own, to retain a cherished independence and to belong to no club. Again there are clubs all of whose members will not join the Association, and which consequently cannot join in a body, so those who wish must join simply as individuals.

What is wanted is to receive the hearty coöperation of as many clubs as possible, offering some inducement to them to join, and at the same time to protect the rights of every non-club man, without forcing him to feel that he must join a club on the one hand or lose his voice to a certain extent on the other. This intention has been shown in the only transaction in which the clubs are now recognized by the A. C. A., the nomination of officers. The representation in the nominating committee at the meets is made up of one member from each club with three members at large who are not club men. On a small scale this plan works very well, but it would be very difficult to apply it to the Association generally. If all the A. C. A. members belonged to clubs as well the voting might be by clubs instead of individuals, and this would possess the great merit of giving a voice to every man, whether present or not, as in the main the vote of each club, cast by the one representative present at the meet, would express the views of its members. This would at once secure what is imperatively needed, a feeling that a man is a part of the A. C. A., and has a voice in its councils, whether or no he attended a meet. The question of representation of large and small clubs might be arranged by giving a single vote to each club of say 15 men or less, with an extra vote for every 15 added, putting a direct premium on a large membership and so stimulating each member to bring new men into his club.

The adoption of the scheme of divisions now in progress is already working to extend the A. C. A. in new localities. Small clubs have grown up unnoticed, no members being present at the meets, but the news of these gatherings, both annual and local, has spread widely, and the new men want to join them. There have been more local meets this year than ever before, and even now we hear rumors of small meets to be held next spring in new localities and by men thus far unknown. Not only is a local Canadian meet assured, and a grand salt-water meet of New York and New England canoeists, but a meet is talked of on the Passaic River, and perhaps another on the Potomac. All of these act in two ways to recruit the clubs in each locality through the publicity given to canoeing and the desire to attend such meets regularly; and also by awakening an increased interest among the older members in friendly meetings and inter-club contests of all kinds, whether at a local or the A. C. A. meet. These changed conditions make it possible to secure a much larger club membership than in 1880-81, as most canoeists now are willing to join the Association as soon as they see that while they cannot go to it, it is so extending as to come to them in the form of frequent local or division meets, and an A. C. A. meet near at hand once in three or four years.

Probably in two or three years, if canoeing maintains its present promising growth, there will be a very large number of clubs whose members are all joined to the A. C. A., and which can take part in a scheme of club representation; but this state of affairs does not exist at present, and it is difficult to see how a club representation could prevail and yet give a fair and equal voice to every unattached member.

The first scheme of the organizers of the Association, a central body composed of clubs and individuals, was crude and incomplete, but the late changes make possible a more perfect system. The Association itself is subdivided into various geographical divisions, each under its vice-commodore; these, in turn, are made up of members who are largely united in smaller bodies, the clubs. Thus a perfect system of government is possible, the clubs with their commodores forming the divisions under their A. C. A. vice-commodores, all united in one national association under a commodore. This is in accordance with natural laws and the sooner the plan can be put into operation the better; but as we have pointed out, there are obstacles which cannot be avoided all at once. "Slow but sure has been" the motto of the A. C. A. in making changes, and in accordance with that policy the scheme of divisions is now working itself out smoothly and without jar or friction. When it is fairly complete the plan of uniting the clubs must follow, but not until then. The subject is as yet a difficult one and worthy of the consideration of all friends of the A. C. A.; but judging from the successful manner in which difficult matters have been handled in the past, there is every ground for confidence that the matter will be successfully dealt with in good season.

Editor Forest and Stream:

I haven't been to an "experience meetin'," as they used to call them out West (my old home) for some time, but an earnest and careful perusal of your canoeing correspondence in the last few numbers has awakened a feeling within me very much akin to what one experiences under the influence of one of those good old-time affairs. And like the timid ones who wrestle with themselves so long before they find courage to speak out in meeting, I've "been a-rastlin' and a-hesitatin' and a-doubtin'," until seeing as how the old uns don't seem to be a-getting very much comfort out of their communings with each other, I've struggled on to my feet for the purpose of casing my mind, if nothing else come of it.

I didn't get to the meet at Grindstone this year, and so have received all my information as to what went on there at second hand from the newspapers. There was a Washington canoeist there, though, but as he is one of the old school of paddlers, and won't or can't tell us anything about it except what a glorious time he had, he might as well have stayed away, for all the benefit his visit does the rest of us. So I'm going to tell you just how the meet and its results appear to us who are not A. C. A.'s—haven't seen the crack racers and don't know any of the big men who sail them, or who run the Association.

First, I think the establishment of branch divisions is a good idea, and if a few of your good sailors with their fast craft will come on here next summer and help us get up a meet on the Potomac or Chesapeake, you'd find plenty of material to work with. The nearest canoeist to the south of us is a regular out-and-outer who lives at Staunton, Va., I think, and has appeared in print more than once. But Virginia and Maryland have numbers of young men who would come into the ranks if an annual meet was established within reasonable distance of their homes. On a recent cruise, when the writer, in company with three other members of the Washington C. C., was working along down the trail of the dear old Coot, we ran ashore at Old Point and into a whole nest of admiring and enthusiastic young men, who were all ready to buy canoes and start off at once, to judge from their expressions of interest and the number of questions they asked. They were most of them stopping at the elegant Hygeia, and the rough costumes of the canoeists contrasted strongly with their band-box appearance, but they didn't seem to mind that much, and had it not been for the big rollers I believe several of them would have been willing to try the reach with us across to Willoughby Spit, which we were about to make. On inquiry I found they were mostly Virginians, from Norfolk, Petersburg, Richmond, Lynchburg and other places, all of which places have good, and some delightful water for cruising. So if any self-consecrated A. C. A. men feel like coming this way next spring or summer, we will insure them a good time, and they can also do a little missionary work in a promising field at the same time.

In this connection I'd like to, if I may be so bold, indorse what Mr. Colin Fraser says in his recent letter about club membership of the A. C. A. We have two good-sized clubs here—about fifteen members in each—but I don't think a single member of them has united with the A. C. A. since these clubs were organized. The man who went to Grindstone this summer happened along in a Canadian trip and was made a welcome and happy guest; and another member, Lorna, joined the A. C. A. before he came to Washington. But the trouble is Grindstone is too far for us, and the trip with boats takes more time and money than most of us can spare. If we belonged as clubs we would doubtless make a strong effort to be represented, but as it is, we don't feel much incentive that way.

Now we'll go about and try you on the other tack, and I'll try to make this a short leg. Pecowsic—decapitating that word you'll find a suggestive phrase ow-sic, or cockneyized, how-sic. And how sick she has made somebody. Not you, Mr. Editor, nor "R. W. G.," or the redoubtable lad with his Lassie; but somebody—at least it looks that way to a greeny. Nobody would have the cranky three-master for a gift apparently, but all of us—I beg your pardon for including myself, but I'm with you in the wish—would give our old boots to go to wind'rd of her, as "R. W. G." puts it. Seems to me while everybody is looking for the coming canoe, it might be well to stick a small-sized pin down somewhere about the neighborhood of that boat.

Now we've been sort of bushwhackers down here in our canoeing. Not being A. C. A.'s we built canoes regardless of limits, regulations or anything else but our own sweet wills. Our canoes are mostly all 16ft. long and over, and from 32 to 40in. in beam. And we have centerboards, heavy and light, and keels—rockered and otherwise—and all sorts of rigs, Mohican, lateen, leg-o'-mutton and sprits; and several of us carry (I must confess it) jibs, for appearance sake and other reasons (?), and one of us has a canoe cutter, that is, cutter-rigged, with mainsail, staysail or jib and jib-topsail, and 160lbs. of iron on her keel. And among them all is a little 16ft.×32in. V-shaped canoe, that threatens to throw you out of her every time you get in, and is sailed by a quiet, lame little fellow, who can't swim a stroke, that has gone through the hardest cruises and the biggest blows, along with her flat-bottomed and heavy-keeled and boarded companions, without shipping near so much water as they, and never once spilling her crew, and always manages to get to camp among the first arrivals.

I think I've read that the Pecowsic is V-shaped, have I not? Well, if she is, the pin can be stuck somewhere about there in my opinion.

I've just come in to-night from a little spin over the course with our commodore in his big, flat-floored, Mohican-rigged canoe, (with a 3in. keel by the way) and as we had lots of the peculiar flawy wind that is found sometimes in the neighborhood of our boat-house, we had, as the Commodore expressed it, a lively time of it. Considering the temperature of the water on this 30th of October, I don't like to have such a lively time at this season of the year. Who's afraid? Neither of us, but we're both married men with families, and we're just educating our wives up to the appreciative point, and an involuntary bath with the possibilities of resulting colds, coughs, or worse ills, is not to be thought of just now.

The moral of all of which is—might not it be possible that skimming dishes for sailing canoes will have to follow in the wake of their larger type, that even you, Mr. Editor, think, must à la Chinese, go?

SKIPPER.

TORONTO C. C. RECORD.

Editor Forest and Stream:

I do not think in general that the average record proves anything, but if others take advantage of it, it is only fair to point out by the following extract from the Toronto *Globe* how the Toronto C. C. stands:

The Toronto Club sent four members down and they returned with five first prizes, three seconds and one fourth. This fourth prize is probably the most important of the lot, as it means that Mr. W. G. McKendrick, secretary of Toronto C. C., was fourth in a list of sixty-one entries for all the record races, obtaining a record of 33.28 in five races out of a possible 50. The first prize man had 36.76.

	Points.	Races.
W G McKendrick	33.28	5
M F Johnson	20.00	2
W A Leys	17.28	5
D B Jacques	15.72	3
Total	86.28	15

Or an average of 21.57.

	Men.	Points.	Races.	Average per man.
Toronto	4	86.28	15	21.57
Brockville	6	82.04	12	13.34
Brooklyn	4	73.03	13	18.26
Rochester	6	70.69	12	11.78
Mohican	5	58.24	8	11.65
Royal Military College	3	43.68	7	14.56
New York	3	36.78	7	12.26
Hartford	2	40.85	5	20.42

Messrs. Leys and Jacques also won the Lachine challenge cups for best and best open tandem canoes at the races of the Lachine Club, which took place just before the American Canoe Association meet.

B.

CANVAS CANOES.—Cloverdale, Sonoma County, Cal., Nov. 3.—*Editor Forest and Stream:* Have been for the greatest part of my life an enthusiastic canoeist and camper and read with much pleasure your paper. In your columns I have seen more than once inquiries about canvas canoes and would suggest they write to the Ontario Canoe Company, of Peterboro, Ontario, Canada, who build the most shapely and durable canvas canoes to be found and which have made trips of hundreds of miles on such rivers as the Saskatchewan, coming through all sorts of hardships safely. Hoping to again find myself on the beautiful Canadian lakes or somewhere where there is water enough for canoes.—GEORGE B. MOWRY.

AMERICAN CANOE CLUBS.

THE proposal to join the canoe clubs of the country to the American Canoe Association has met with the approval of many, and has directed attention to the subject of the American canoe clubs. Of course, the leading clubs are known to all, but there are many whose members never attend the meet, and which are unknown to canoeists at large. Before considering the scheme for a union it is desirable to know the strength of the clubs, and also their number. The following list was sent us by a correspondent, and we publish it with a request for information. Some of the clubs have disbanded and there are some omissions, and any aid toward making a full and correct list with number of members will be welcome:

Amsterdam, N. Y.	New York, N. Y.
Allegheny, Pa.	Northampton, Mass.
Arlington, N. J.	Newton, Mass.
Brantford, Canada.	Ottawa, Canada.
Brockville, Canada.	Oswego, N. Y.
Bayonne, N. J.	Oakland, Cal.
Buffalo, N. Y.	Paterson, N. J.
Brooklyn, N. Y.	Pequot, Stonington, Conn.
Bobcaygeon, Canada.	Philadelphia, Pa.
Boston, Mass.	Pittsburgh, Pa.
Circleville, Ohio.	Peterboro, Canada.
Connecticut, Hartford, Conn.	Potowonok.
Crescent, Trenton, N. J.	Perth Amboy, N. J.
Cleveland, Ohio.	Portland, Oregon.
Cincinnati, Ohio.	Potomac, D. C.
Chicago, Ill.	Pappoose, Chicago, Ill.
Cygnet, Manchester, N. H.	Pollywog, Bethlehem, Pa.
Capital City, Harrisburg, Pa.	Quaker City, Philadelphia, Pa.
Crescent, Mauch Chunk, Pa.	Rochester, N. Y.
Deseronto, Canada.	Rondout, N. Y.
Dayton, Ohio.	Royal, Halifax, Nova Scotia.
Essex, Newark, N. J.	Royal Military Col., Canada.
Evanston, Evanston, Ill.	Rutherford, N. J.
Fulton, N. Y.	Ruckawas, Dayton, Ohio.
Galt, Canada.	Saguanore, Lynn, Mass.
Guelph, Canada.	San Francisco, defunct.
Harrisburg, Pa.	Shattemuc, Sing Sing, N. Y.
Hawkeye, Dubuque, Ia.	South Boston, Mass.
Harvard, Mass.	Springfield, Mass.
Hartford, Conn.	Sandusky, Ohio.
Hamilton, Canada.	Susquehanna, Harrisburg, Pa.
Irrawadi, Davenport, Ia.	St. Lawrence, Canton, N. Y.
Iowa, Des Moines, Ia.	Toronto, Canada.
Ianthe, Newark, N. J.	Tippy, Chicago, Ill.
Jabberwock, Springfield, Ill.	Toronto, Ohio.
Knickerbocker, N. Y.	Ubique, Norwood, Canada.
Kenwood, Ill.	Union, Boston, Mass.
Lake St. Louis, Canada.	Vesper, Lowell, Mass.
Lake George, defunct.	Warren, Pa.
Lawrence, Mass.	Winoski, Duluth, Minn.
Lindsay, Lindsay, Canada.	Watertown, N. Y.
Miami, Cincinnati, Ohio.	Washington, D. C.
Mohican, Albany, N. Y.	Winchester, Mass.
Machimoodus, Moodus, Conn.	Waltham, Mass.
Mystic, Winchester, Mass.	Western C. A.
Newburgh, N. Y.	Younandio, Rochester, Canada

THE A. C. A. DIVISIONS.

Editor Forest and Stream:

Mr. Colin Fraser's article on the A. C. A. and clubs is certainly a very good one. Why do we lose our old members? he asks. There's the kink. Mr. Fraser believes that they are unable to attend the annual meet. Well, this may be. I think that the distance has something to do with this, the time it takes to get there and back. Then again, some do not like the same old camp.

Division meets would indeed increase the membership, and they can be so arranged as to bring together canoeists within a radius of one hundred miles. For instance, let the Central Division hold a salt-water meet somewhere on Long Island Sound, supposing the clubs below mentioned all belong to the A. C. A., and take it for granted that the following clubs would be represented. New York, Knickerbocker and Brooklyn would be expected to turn out in full force. Then the clubs in vicinity of New York, Bayonne, Ianthe, Newburg, Rondout, Mohican, Boston, Hartford, Springfield, Crescent, Philadelphia, Quaker City, Potomac, Washington, and others too numerous to mention. Taking New York city as the center, the average distance to the meet would be about one-fourth the distance that it is to Grindstone. The A. C. A. general meet could be held further north. This would give the Canadian brethren the same advantage of distance, etc., as it would the Eastern men.

With these advantages no man can say that it takes too much time to go and return, and as the camp can be held at another place next year there will not be very much room left for excuses. Under the conditions named, I do not see why the A. C. A. cannot become a much larger and powerful organization.

I am no A. C. A. member, but I have heard of the A. C. A. before I ever heard of canoe clubs, and would have been a member, in fact had my two dollars ready to mail to the secretary-treasurer, when the question arose of "What benefit would the A. C. A. be to you? The best part of your ten days will be consumed in going to and from the meet" (then at Grindstone). That settled it. I concluded that I would wait until the meet would move further south, where I could enjoy my vacation otherwise than in a railway car. I shall endeavor to bring Mr. Fraser's scheme before my canoe club at the next meeting, and encourage all members to join. And if some day it should happen that there will be a salt-water meet, there'll be three new names on the list, and possibly the whole roll of membership of the Quaker City C. C.

STILETTO.

QUAKER CITY C. C.

THE Quaker City C. C. held a meeting at the residence of the commodore on Nov. 11, at which Messrs. Munchen and Golze were elected active members and the names of two members were dropped from the roll.

Cupid, Rambler and Dart were the most active canoes this season. Cupid, the vice-commodore's canoe, could be seen every Sunday with her racing rig of 85ft. Mohican sails, the club burgee and sailing signal showing to advantage. He is often hailed as "Ace of Clubs" on account of the clover leaf on mainsail. The Cupid is 14ft. 4in.×32in. The Rambler 14ft. 4in.×31in., with 55ft. balance lugs, and Dart, a Raritania paddling canoe, were often in company with Cupid.

The secretary-treasurer's canoe, 14ft.×30in., with 95ft. balance lugs, was actually in the water three times this season, viz: On Decoration Day and Fourth of July cruises. Did this canoe ever stay right side up under so much sail? Oh, yes, the secretary blocked her up one day on shore, and she really stood up under both sails while she was being tinkered with. This canoe carried 70ft. mainsail double reefed on Decoration Day cruise and upset by an accident. On Fourth of July cruise carried 25ft. mizzen (stowed oftener than set). A member of the club carried the mainsail once, upset, and condemned it. The secretary is negotiating for Mohican sails and is wondering if they are as "upsetable" as balance lugs.

Com. Leary could be seen now and then in the Scamp, sporting a handsome set of Mohican sails of 75ft., his brass work nickle plated and everything done up "shipshape and Bristol fashion." This canoe upset but once under the able seamanship of the commodore. Rumors are afloat that he will have smaller sails on his next canoe. The Frolic is the most diminutive clipper about the canoe club and is now owned by a new member. Her length is 11½ft.x27in., and is so light that she can be carried a considerable distance on the shoulder without fatigue. The commodore and vice-commodore are negotiating for cedar canoes by a local builder, the vice having sold his canoe in August. The commodore's canoe will be 14ft. 6in.x30in., somewhat like the Snake, and the vice will have a Sunbeam, with 85ft. Mohican sails. The total upsets under sail were, Rambler 5, Cupid 3, Vixen 2, Scamp 1. Scamp complains of too much canvas, Rambler and Vixen of balance lugs, high masts, etc., and will have Mohican or lateen. Cupid has just enough and has experienced some heavy weather, this canoe has been paddled but once for trial, the crew invariably carrying a half paddle when sailing. The reefing gear for sails were discarded, not working smoothly, and the canoe only being reefed twice during the whole season's work.

The racing that was expected to be done fell through on account of members not being on hand. The race days would find two sailors and one paddler on hand. Regatta committee or timers not present, although a good course was mapped. Nevertheless we will try again early in the spring.

The cruising record is not what it should have been. The club took a short cruise on Decoration Day. Dart and Frolic paddling, Scamp, Vixen and Rambler sailing (Scamp and Vixen each used tandem), cruising down and not up river, as was stated in the daily papers, returning Tuesday evening. A few mishaps and a lot of solid enjoyment were the results of this adventure. Fourth of July club cruise, starting on the afternoon of the third, under command of the Commodore, Scamp, Vixen and Cupid sailing, Frolic and Dart (used tandem) paddling, we started up the river, Rambler and two unattached canoeists cruising down stream. This was purely a paddling cruise, it being a calm most of the time. We camped at one spot for two days, but made the most of it and started home on the 5th about 4:30 P. M., expecting to reach the club house at 8:30; and we got there too, all but one, at that hour. A good sailing breeze sprung up, this one getting off first double reefed. Out in the stream the wind was blowing pretty strong and he happened to be in this blow; he luffed, or at least tried to, but the rudder would not work, having somehow got afoul. "Not luffing he slipped along at a spinning rate, did he not?" "Oh no, he only upset."

After wringing him out, a friend lent him his mattresses in exchange for the wet ones. The fleet then started out, Frolic staying in camp with the victim of the upset, and cruising home in company the next day. Cupid, with her 85ft., was hailed by the wet man on shore: "Better double reef," and by others on the shore, "Wait until we see him upset," "Better take in mainsail and set mizzen;" at these remarks he generously took in his 20ft. mizzen. The wind held until about Tacony, when it suddenly died out and he was left with his half paddle; but not long, soon a steam launch came puffing along. Cupid managed to get a tow and got home long before the others. This cruise was one of the most enjoyable of the season. Besides the club cruises short trips were made by individual members, starting Saturday evening and returning Monday morning. The winter tinkering has already commenced. The Rambler is in the owner's cellar for new deck and interior fittings, new sail plans are prepared for nearly all sailing canoes, especially the balance lug, and at this writing there is a paper in preparation to be read at a camp-fire which we will hold at an early date in December. STILETTO.

CANOEISTS ON SNOWSHOES.—About fifteen members of the Toronto C. C. gathered around the club room stove on the 16th ult. for the purpose of forming a snowshoe club out of their members as a means of keeping them together during the long winter months. Mr. Colin Fraser held the chair, while Mr. J. L. Kerr handled the quill. After many nominations and much lobbying and intimidation, some members threatening to withdraw their "tobacco supply," Mr. Geo. Sparrow was elected president, Mr. A. Anderson secretary, and Mr. D. B. Jacques whipper-in. After the business of the meeting was disposed of, refreshments were brought forth from the lockers by one or two members and for the next half hour the talking was very limited. The table being cleared and the evening yet young, some one proposed that we should have a debate on light versus heavy centerboards, and at it we went, Messrs. Neilson, Jacques and Kerr for the heavy and Messrs. Fraser and McKendrick for the light weights. Mr. W. A. Leys, in the chair, listened attentively to each of us for five minutes as we tried to convince the other fellow that he was "away off," and when the leaders had summed up he divided the honors among us. The great question, "Which sail is the best?" will be debated at the next social meeting, Nov. 30. The club are talking "new club house" and limiting the club membership to forty, there being now thirty-two active members. Will G. McKendrick has sold his canoe Mac to Mr. A. Anderson, a new member of the club, and her sail plan is being altered for next season's campaign.—WILL G. MCKENDRICK, Sec. T. C. C.

WASHINGTON C. C.—The last race of the championship series will be sailed on Thanksgiving Day, with a camp-fire in the evening. The canoes of the club are of various sizes; of wide beam and with deep keels and centerboards, and an attempt is now being made to rate them under the Tredwen time allowance. Washington is peculiarly situated on a river with variable winds. The trips "up river" are made by way of the canal with long carries, necessitating a Peterboro or other light canoe, while "down river" squalls are heavy and frequent, requiring a decked canoe of good sailing qualities. The club are busy now ceiling up the ladies' room of the club house as a winter meeting room. With a stove and plenty of books and papers, photos, etc., there will be a cosy place for winter canoeing.

SPRINGFIELD C. C.—The winter quarters of the Springfield C. C. will be at Calla Shasta, on skates in winter, easily reached by way of the Connecticut River or by snowshoes. The present cabin boasts a meeting room, kitchen and sleeping room, but it is proposed to build a larger house next year. Every Saturday night the canoeists meet at the cabin, sometimes being joined by visitors from the Hartford C. C.

Yachting.

THE CONSTRUCTION OF RACING YACHTS.

IN perusing your remarks at the end of my paper of last week, I notice you say that I overlook the fact that cutters, on account of their sectional form, can be built lighter and stronger with the same sizes of material than centerboard sloops. Although not jotted down, it was still kept in mind. This is an attribute, the possession of which is of great importance to the cutter, and were it not for the detrimental effect of an element more than counterbalancing this advantage, hers would be easily the fastest type.

This element is no other than the loss of windward ability resulting from the waste of energy of the propelling power when striking the easily yielding sail plane of the cutter. Except in light airs, when it is an advantage, this militates largely against her performance and turns the scale in favor of the sloop. And this in spite of the benefit derived from the lighter spar plan and hamper characteristic of the cutter.

If you say Galatea is underrigged, I can reply with equal justice that Mayflower is likewise lacking. Galatea can carry a larger spar plan to no more advantage than Mayflower can do the same. Although their performance in light airs would be improved, in all round work it would effect speed detrimentally. Have we any reason to suppose that Galatea is not as heavily sparred as any other vessel of her type? Her designer surely knew what he was about when he planned his masterpiece, with the data and lessons of the Puritan-Genesta races last year fresh in his mind.

In view of the record what show would Ives have with Mayflower under like conditions of weather as in the Cup races? The same baseless excuse might be urged to palliate her defeat and with about as much sense.

I gladly accept your correction in relation to the stowage of Galatea's ballast, but your strictures do not alter the fact that her spar plan was cut down in her first season (1885) with improved results, and not until her ballast was restowed, lowering her center of gravity, was her original and present sail plan put on to her. In the face of her first performances when oversparred, is it not natural to suppose that she would now be oversparred if her original sail area was increased? What she have any more stability than at first, and with no more stability could we reasonably expect her to do much better? No, the possibilities for speed of Galatea's form have been exhausted unless she be built lighter. Then and not till then will she be able to lug a larger spar plan and attain a higher standard of merit in all-round racing than ever was hers.

With the lessons of the past to sustain my position, I think I am justified in reiterating my claim that under the existing rules of measurement at least the cutter will soon be out of the lists forever with the DEEP DRAFT CENTERBOARD.

[The advantages which the keel boat has over the centerboard in point of construction are by no means confined, as our correspondent intimates, to the extreme narrow type, but are just as apparent in the boat of moderate beam, hence his objection as to stability, even if well founded, does not affect the question. The solid undivided keel and the entire cross floors at every frame are as much a part of the 4-beam as of the 6-beam boat, and when we come to sizes under 60ft. there are also the deck beams, whole and undivided from side to side, against the necessarily weak construction of the cabin house. The form of the extreme narrow cutter, approaching that of a box girder, with its nearly vertical sides, is in itself the strongest that can be had and far superior to that of a 3½ or 3-beam boat with flatter floor and hard bilge; but even the latter form may be made much stronger in a keel than in a centerboard boat. The sail plan carried by Galatea this season is the same as her original one in area, but besides the restowage of ballast noticed we understand that her original spars were much heavier than the plans called for. She failed to carry sail at first and was cut down without the advice of her designer who was then absent. This year, under his supervision, her ballast was lowered nearly a foot and she received new spars of the original length, but lighter and thus far she has shown herself fully able to carry even more. Mayflower was certainly over-rigged in the Eastern race and could not stand up; and even now after all that has been done in the way of more lead below and lighter spars aloft, she has all that it is safe for her to carry for even moderate racing weather. In fact in the late races she frequently sailed at as great an angle as Galatea. Her big rig was just the thing for the light weather, and probably in heavier weather she would have paid for it, while Galatea, with a rig that might have been just right for some of the winds we have had this year, was certainly handicapped in the absurd drifts which spoiled every race. It does not follow on either hand that Mr. Burgess put too much canvas on Mayflower, or that Mr. Webb put too little on Galatea. As it was the former was right, the latter wrong, but had the season been blessed with harder winds the case would very probably have been reversed. The proportioning of sail spread is a very delicate matter in any case, as so much depends on the coming season, and the matter is still more difficult when the designer is new to the climate his boat will race in. What the future may bring forth is a difficult matter to predict, but taking the season through there is no reason for the friends of the cutter to be ashamed of their performance or to anticipate the speedy extinction of the type.]

CRUISE OF THE COOT.

XXIX.

IN company with a small schooner I got under way Sunday afternoon, and worked five miles down to the mouth of the Scuppernong, anchoring for the night under the point on the western shore. The schooner had loaded up with 30,000 herring in bulk. These she was to carry up the Chowan and paddle out to small country dealers. For freight she received 30 cents per thousand. The schooner was about 36ft. on deck, with 13ft. beam, and drew 3ft. She was built at Hatteras "on the banks," where shipbuilding on a small scale comes to the natives as second nature. Cost about $400 and was owned by two young men, who, when freights were good, cleared enough during the three months' fishing season to flourish round the banks the rest of the year, indulging in a little clamming, oystering, or scratching a garden patch for variety sake. They sculled alongside the Coot, and in conversation I found them intelligent and well-meaning. They told me that by industriously working all the year, freighting crops to Norfolk and carrying oysters, they could easily earn a thousand dollars, with expenses not over a third of that sum. This would leave three hundred apiece as an annual dividend upon a mode of life which was little else than pure pastime. Why did not they do it, save money, and become bloated capitalists locally? "Because there is no need of it," was their reply. Ambition to progress and prosper they had not, for the modest surroundings among which they had been reared had blunted their desires and they were content to exist along in ease, free from the strife of competition for wealth, just as their forefathers had done. The sea supplied them with fish, the banks with ducks and game, and a little freighting in spring kept them in clothes and groceries. They were healthy and content. Why should they wish for more? This was their view of life, and I did not care to shake their faith by needlessly whetting their appetite with tales of the wonders of great cities. They wished they were bound east for Manteo, like myself, for there were to be great times at the county seat of Dare during "vote week," which was then progressing.

Monday at sunrise we got underway and in a light southerly wind cleared out of the river, the Coot piloting through the narrow channel to sea, as it appeared that with the aid of my charts I was a more reliable pilot than the crew of the schooner. They felt their way with a pole, but after touching once or twice were glad to see the Coot run their lee and give them the true lead into deep water. The schooner hauled up to cross the Sound, while the Coot jibed over to port and steered parallel to the coast, keeping just clear of the numerous pound nets extending across the shoal water to a depth of 10ft. The wind held a nice wholesail strength all day and being off shore the sea for once was smooth in the usually turbulent Albemarle. After a run of 18 miles the boom was got in to round Pear Tree Point. When the wide mouth of Alligator River had been opened the wind drew out ahead and the yacht beat in, pitching in a lively way to the tumbling sea which rolled plump out of the mouth. After 3 miles to windward had been accomplished, the Coot was run into Fort Landing for a harbor. This is a perfect little pocket with islands and pretty shores, the Little Alligator emptying into the harbor. This tributary has 10ft. of water and more, but only seven can be carried up to Fort Landing. The town consists of a steamboat wharf, a store and a farm house, with pigs and chickens to make up the number of inhabitants. At least that is all that could be made out from the Coot's deck and I did not go ashore to make further investigation. Probably there is good farming country back of the fringe of woods alongshore, and Fort Landing is the shipping point for the surrounding country produce. A propeller from Elizabeth City plies up the Alligator and puts in occasionally to this pretty retreat. Having started the lacing jack from the gaff, the evening was spent in effecting repairs and enjoying a golden sunset, which bathed the foliage in beautiful hues till twilight deepened into darkness and the bright light kept company with the twinkling diamonds overhead. Bright and early we got out next morning and put in a delightful day turning 10 miles up the broad bosom of the Aligator against a moderate wind and light sea, running back during the afternoon and coming to anchor in South Lake, a confluent on the eastern shore, for the night.

The Alligator is really an arm of Albemarle Sound, rather than a river. It is twenty-three miles long and four to five miles wide, with a very even bottom at ten feet, barring the Middle Ground shoal in the mouth, which has but four feet and is a bad spot in heavy weather, the Government beacons being down during my visit. From the head of the Alligator there is a tortuous stream, up which a small boat can ascend some twelve miles to an alleged canal, intended to lead into the great Matamuskeet Lake, a shoal fresh water pond twelve miles long and three wide, in the center of Hyde county. By means of this canal direct steam traffic to Fairfield was contemplated, with a view to reaching the rich corn belt of the peninsula. But the enterprise was never carried through, otherwise the Coot might have sailed into the lake and out of another canal into Pamlico Sound, traversing the heart of one of the wealthiest and most populous tracts of land in America or elsewhere.

The shores of Alligator River are swampy and the interior of the peninsula forming Dare county to the eastward is all low, covered with a dense growth of timber. This great stretch is uninhabited, except a few spots on the water's edge where colonies of fishermen have cleared their modest homesteads or where sawmills have been erected. The peninsula, which contains about 350 square miles, is known as the Roper timber grant and the shooting privileges over this magnificent preserve have been secured by the Kittyhawk Sportsmen's Club, whose stock is selling at three hundred per cent. To this tract all the natives pointed as virgin ground, filled with large game, deer and bear being abundant, with ducks feeding in great rafts during the season in the adjacent waters. Hawks and eagles I saw in plenty. One "king of the species" settled on a stump and eyed the passing Coot with haughty contempt. Although but a few fathoms away, he did not budge at my shouting and "shooshing," so I fired a block of wood at his majesty, when he slowly rose upon the wing in a great circle and disappeared beyond the trees. If the other eagles are like this one in disposition, they would make poor sport, for they don't know enough to get out of your way. Perhaps this fellow was aware that my gun was down in the cabin with the lock off and the cartridges all wet. Such is conduct speaks volumes for the seclusion of these forests which have so far escaped the wholesale invasion of pot-hunters and bloodthirsty city cockneys. In the hands of the Kittyhawk Club, Dare county will long remain the great game park it is at this day.

The wind had got into southeast once more and blew fresh when I made sail in the morning for the passage across Croatan Sound, the county seat, Manteo, being the destination. A small boat can make a cut off by passing up Alligator Lake and through the Haul-Over passage into Haul-Over Bay. But the chart gave no soundings in the passage, and I concluded to round Durant Island, rather than ground and have to return. Wind and sea were favorable out of Alligator River, and after hauling by the wind, the water was smooth along the northern shore of Durant Island. There are two shoal but snug harbors on the island, which afford good refuge from a blow. I took a board or two inshore, anchored and tied down two reefs to meet the increasing violence of the southeaster. Threatening clouds overhead made things look ugly, but after experiences in Albemarle I looked upon the smaller Croatan as of little account. When Croatan Lighthouse had been opened, the bold northern headland of Roanoke Island stood out upon the horizon with a string of odd-looking sand hills rising from the sea like islands to represent the ocean beach or the banks." The Coot was headed right across the five-mile gap with the wind hauling. But under close reef the Coot would stand a deal as long as the water was not too rough. After getting out from under the lee of the mainland the channel sea was struck, and it was no joke. The little Coot pitched and wallowed in the trough and nigh drowned herself out. The seas broke aboard and sent the water streaming across decks several inches deep. Luckily the force of the blow was taken nearly abeam and the yacht was comparatively dry aft, otherwise the passage would have been a continuous shower bath of cold and vicious spray for the skipper and steering would have become a hardship in the cutting dust. Down Croatan the seas were lashed into foam as far as the eye could reach, the Sound looking like a seething cauldron or great tide rip of forbidding breakers. But the Coot was

logging the knots and fathoms at a great rate and speedily lifted the land ahead. Fruitless search through the glasses was made for the beacons marking the way into Roanoke. With the exception of one small red can buoy a mile out from the northern extremity of the island the beacons had ceased to exist. A great shoal with 1 to 3ft. stretches out from the island, so that the land must be given a very wide berth before hauling up into Roanoke Sound proper. Right ahead on the beach the hotels of Nag's Head were prominent white objects against a background of brown sand hills, and seeing a wharf jutting out from the beach, I steered for it, knowing that deep water was sure to be in that direction. Then flattening in, the yacht was able to lay down about mid-channel till Shallowbag Bay had been opened. A shoal spit runs out from the northern point of the harbor and was marked by some local stakes. These were interpreted right and left to starboard. There is about 4ft. in the bay, with pretty bold, marshy shores. A few boards sufficed to lift the Coot up to the town, where the anchor was let go. A creek turns in to the northward, along which several stores and oyster houses are located. This creek affords good anchorage for less than 4ft.

With the exception of a ridge and the headland mentioned along the western or Croatan side, the island of Roanoke is low ground, the southern extremity demoralizing into "salt mashes." It is parcelled out in small farms, upon which a population of fishermen, boat builders and local magnates support themselves in fair comfort, the climate being generally mild and healthy. Oyster culture has been tried, but the bottom is either too soft and muddy or hard sand, and the enterprise has been abandoned. In the sound there are, however, some native beds, from which the people derive their own supplies. Game there is scarcely any on the island, squirrels in the western ridge being the only article left for occasional practice of the old-fashioned muzzleloaders in possession of the natives. Ducks are plentiful in season, but all the stands in Roanoke Sound have been leased to the Kittyhawk Club.

Manteo is a clean little place with a court house, neat dwellings, a doctor's door plate, the shingles of opposition lawyers, a schoolhouse and some well-stocked country stores. The postmaster presides over the chief establishment, and will sell you anything, from a saddle or beans down to needles and face powder. He handed over my bulky mail from New York and a pair of 60c. topping-lifts for my pantaloons, said gear dissolving into its basic constituents in a few days. Rum there was none, for rum is happily tabooed in Dare county.

The following forenoon was calm. In response to my whistling for wind, a northerly air set in at 2 P. M. and after dispatching letters the mainsail was got on the Coot. Slowly she was wafted out of Shallowbay and down the somewhat winding channel of Roanoke Sound. After picking your way past some little island patches of sand and grass to the eastward, you steer smartly across for the Roanoke shore, and hold it all the way down with 7ft. of water or more. The chart is on too small a scale to give more than a general idea, but as the channel has well defined banks, shoaling abruptly from ten to two feet, a pole will enable you to feel your way until sure of the trend of the "slew." You can take 5ft. through, but a pilot is desirable in that case, as there is shoal water at the southern end. When half way down the Coot was suddenly met by a fresh southerly wind coming up, and was obliged to beat down to the end of the island. This was nice sailing, the water being smooth. For the night the yacht was sailed into one of the deep arms which intersect the marshes abreast of Bodie's Island light tower, which rose like a great monolith from the low sand bank separating the sound from the ocean. Anchor was let go in 12ft. off an old fish boiling factory, which was fortunately odorless for the time being.

While getting underway next morning, two natives, who had seen the Coot's spar rising above the high reeds of the marshes and smelt something out of their usual run of local canoes, picked their way across the marshes from a farmhouse in the distance. They took up position in the old fish house and watched my proceedings with a great deal of interest. As the wind was again in the southwest I asked them what they thought the day would bring forth.

"Well, it will blow stiff by noon time and the sea will run high for your boat. Where are you bound?"

"Across the Sound to any harbor I can make."

"Then you had better try for Stumpy Point. You won't be able to get round the Long Shoal against the sea in the afternoon. That you will have to do early in the morning, before it breezes up."

"All right. But suppose it comes on heavy before noon and I cannot weather Stumpy Point?"

"Then you can cut and run for the Roanoke Light. You will find good harbor there in the marshes. Where are you from?"

"New York."

Upon this announcement one of them drew a long whistle, and added, "I guess you know what you are about. Got any charts?"

"Yes."

"You are all right."

By that time the Coot was clear of the reeds and going for the red can buoys showing the best water into Croatan. Everything went well for an hour. Then the wind piped up as expected and the sea rose simultaneously. I could only keep up to W. S. W. and prepared for a dusting. But the wind held steady at whole sail strength, and, after two hours of pretty wild jumping, the opposite shore was made. Being pretty bold I could make short hitches down to Stumpy Point, partly protected by the easterly trend of the shore. Without any trouble the point was made, and then, with sheet slacked, the Coot rushed into the haven.

Stumpy Point Bay is a circular pond of two miles diameter, with only 3 to 4ft. of water, the bottom being very even. It is a well-known port of call for light-draft vessels bound South. Here they usually await a fair wind from the northward to carry them over the sixty-mile run across the Pamlico sea when bound to Core Sound, or the seventy-mile run to Neuse River Light when making for New Berne. Small vessels do not care to beat across Pamlico, for the seas are so high and steep as to make the feat almost impossible. Sometimes a fleet of thirty sail will collect at Stumpy Point during the prevalence of southerly gales. To enter the harbor, keep midway between the two points, as a reef runs a third way across from the eastern tongue of the mouth. The chart is not very reliable in these shoal waters, as they are not classed as properly navigable, and the sands shift to some extent. The bay is dotted with neat little fisherman cottages all round. Each dwelling has two or three acres of cleared land, upon which corn, potatoes and peas are grown for home consumption. Cattle and hogs in considerable numbers roam the surrounding "poquosin," and chickens and eggs are a drug in the market. Oysters and clams abound. Deer, bears and birds are shot *ad lib.* and fish are scarce deemed worth catching. Shadding from February to May is the principal pursuit and the "money crop" of the colony. Each family has its outfit, consisting of a "kunner," nets and stakes, worth $150. When the shad commence to run, the nets are strung to a line of stakes in shoal water. These stakes are to be met with all over Croatan. The shad are caught by the gills, the nets being lifted daily while the run lasts. The fish are sold to dealers for spot cash, about 15 to 18 cents, or packed in ice and shipped to commission merchants in Northern cities. With the disappearance of shad the native counts up his gain, three, four or five hundred dollars in cash, and rusticates the remaining nine months. He tinkers a little round the house, scratches his land and gathers his small crop, and goes into clamming or terrapin catching to break the monotony of his existence. He has plenty to eat, is well clothed, rears children wholesale for the army, knows no world's care and cares for no wordly knowledge. He has solved the problem of life to his own liking, and is satisfied and happy with his lot after his way of thinking. Few people indeed are so favored by nature as these denizens of Carolina's lowland realm. The summer heat is tempered with cooling winds off the sea. The winter is mild. Fuel can be had for the trouble of collecting. Sickness is scarcely known where the water is salt, despite swampy surroundings. If the shad only run, all else will take care of itself. As a boy he gets next to no schooling, but he learns from nature's great book, and is more of a man for that. He is bred afloat, can sail a kunner or skipper a schooner by the time he can toddle. He swims like a rat by hereditary instinct. He becomes bold, self-reliant, quick-witted and stalwart in pursuit of his avocation. He marries early, knows not what strong drink is like, lives up to his marriage vows, votes according to his convictions, respects old age, and lives himself to see three generations gather round the family hearth.

Who will say that he does not fill the true aim of life as well as the fretting, grabbing, contending hordes, desperately struggling in the maelstrom of great city life after wealth, wealth, which not one in a thousand is destined to attain, those beaten in the fight, broken in spirit, sinking into early graves, failures in themselves and to the world alike?

The Coot was rounded up in Stumpy Point Bay after standing in to the eastern shore as far as sounding with the oar would permit. Sail was stowed and I went below to start up the coffee. While this savory article was simmering on the stove and I was feeling round for the solitary cup supposed to hang on a nail under deck, there was a rude bump alongside which brought me out of the cabin in a jiffy. A big green bedaubed "kunner" had hitched on with her painter, and a man at the helm with four little urchins on the thwarts were peering under the sail and awaiting developments. The man was civil enough. Said he had been out after a load of wood and saw me beat down the coast. The Coot was such an odd looking contrivance in his eyes that he had ventured to find out something about her. So he got the usual explanation and description, and I discovered him to be one of the big bugs of the colony, that is to say, one of the most successful fishermen and by marriage related to pretty much everybody in the place. Happening to mention my desire to haul the Coot out and put a shoe under the keel in wake of the centerboard where the keel had been chafed by grounding on rocks before the boat came into my possession, he at once recommended his cousin, by marriage, as a first-class boat carpenter. He also promised to muster the young men of the place and pull the Coot on the beach at Mr. Martin's house, the first in the line of dwellings. "Now is the time while the southerly wind is on. If it blows from the northward, nearly all the water in Stumpy Point Bay will be blown out and you will ground right where you are." The cousin came off after a while and agreed to do the job, wages $1 per day. He had only "picked up the trade," but thought himself quite equal to the task. Would I just as lief wait two days, for he was making a coffin for an old gentleman of ninety-six years who was expected to die soon. So two days I waited and then there came the funeral to which I was respectfully invited, but which I was

ungracious enough not to attend. The fourth day the funeral had been forgotten and the boys collected to pull me out. Mr. Martin mustered four sturdy sons, who with an assortment of uncles and cousins made quite a little army, all generals for the occasion and no high privates in the rear rank. Mr. Martin, to whom I am indebted for many little kind acts during my stay, broke out some large tackle blocks, captured from a wrecked vessel on the banks, and also pulled down some round gum tree poles from his fence for rollers. My best anchor cable was rove off as a fall, the anchor planted in the field ashore and after much planning and counterplanning all hands clapped on and gave a heave. Of course the anchor pulled out and came tearing up to the fence, turnips and all. The Coot was far heavier than they had supposed. Meanwhile some one sung out, "Here they come. Dick's ahead. I told you so." Whereat everybody dropped the fall and scampered off to see Dick ahead.

This fourth day happened to be devoted to a match between Dick's kunner and Bill's kunner, and Stumpy Point society was in a fever of excitement, women, children and all. Be it known that Stumpy Pointers have a name and fame all over Pamlico as the keenest sailors on the Sound, and what I saw convinced me of their right to pre-eminent distinction in the line of boat handling. "That's a Stumpy Pointer," the people elsewhere would say, when they pointed out a particularly smart kunner. "Must be a Stumpy Pointer," I was told further along when a kunner made the place during a furious storm in which no one else ventured out. Now what Stumpy Point does not know about racing, it cannot learn elsewhere, not even from New York or Boston sharps. Stumpy Point is up to all tricks of the trade, and as for the "standing committee" of critics which belongs to every racing community pretending to high rank, the whole population of Stumpy Point resolved itself into experts for the occasion.

"Serves Bill right. I told him he hadn't bags enough for a day like this."

"Bags enough? Why Bill's got plenty and to spare. I tell you bags don't make a boat go."

"Six at 75lbs. is enough for any kind of weather, but you see Bill lights her out too much." So quoth a third.

"Lights her out? Well, I should say so. Just look at him now, most up in the wind," chimed in number four.

"You can't tell Bill how to sail a boat. It's Dick's bottom. She's been out and slushed only an hour ago. You can't expect Bill to beat him with a dirty bottom."

And so it went on, just like the "prominent yachtsmen" nearer home. As my crew were pulling the Coot out as a favor—they would not take any pay—I stood by disconsolately watching the sun sink lower, and afraid my craft would stick on the mud all night. There was nothing to do but to put a good face on matters and appear to be deeply interested, or my reputation as an ardent boat sailor might suffer. "Bags," I said, "what, you don't race with shifting ballast I hope." This fell like a thunderclap among the crowd and all turned for an explanation.

"Dick's got eight and Bill's got six and Bill's got one sore arm, so he can't shift 'em but keeps 'em in the bottom of the boat."

Familiar old topic, thinks I, now for a sermon. They listened intently and admitted it was hardly fair for Dick to shift when Bill couldn't follow suit, and were delighted to learn that among hundreds of boats in Boston shifting ballast is prohibited, and in New York, horrors, just look at the kind of traps this reprehensible practice begets! wherewith I dove into the Coot's cabin and sallied forth with a volume of "Small Yachts," holding up to their gaze the plans of a noted sand bag racer. "Is that the kind of thing you want to encourage? That's what you will come to if you keep on shifting bags. You will have to keep one honest boat to do your work in, and a silly machine for your racing. Keep fast your ballast and the best boat will result, and will win the races, too." The worthy Stumpy Pointers were completely floored by the sandbagger, and couldn't believe such a ridiculous thing in existence. So the standing committee got an insight into the other side of the story, and if they have not called a meeting to abolish bag tossing, it will not be for lack of missionary efforts, and Stumpy Point may yet arrive at that depth of moral turpitude which fails to discern any disgrace in a capsize and confounds a counterfeit sandbag presentment with an honest boat.

By this time Dick and Bill were shut out by a point, and peace once more reigned in the land. The anchor was again planted and stakes driven in front of the flukes. All hands clapped on the fall and after a vast deal of persuasion and numerous new schemes, the Coot was hauled, pushed, pried, and slewed half way out on the rollers, when Dick and Bill again hove in sight and the crowd burst away once more to take it all in.

"Good for Bill, he's gained on him."

"No he ain't. That's only the way you are looking at them."

"Dick's got him sure. Bill can't close up before the finish. It's off old Mills's house. He's there to watch them."

"What's Dick up to now? What's the matter with his jib sheet? Give me that boat and I will knock the tar out of any kunner round the Point."

"Tell you what it is. It's been a breezin' outside. The dust must have flown clear over them."

"That's where Bill got him. Bill's kunner is the best boat this side of the marshes (Roanoke Marshes) in a sea."

The standing committee palavered and counter-palavered long after the race was over and Dick had scooped $5. The sun sank below the trees, and it was nightfall when the Coot had, with a great expenditure of labor and a great deal more talk, been landed high and dry upon the rollers, ready for "my cousin" to get to work on the morning of the fifth day. Five days to haul out; how many more to finish the job and get her afloat?

About noontime the worthy shipwright sauntered along and immediately departed for dinner. At 2 he once more appeared with a 2in. plank of heart pine. Under my directions the chafed portion of the keel was cut out one side and a strip nailed up in good shape. The seventh day was spent in fitting the other side, and all was pronounced well. The local artificer was a good workman, but like his neighbors, took life easy and held time lightly. He asked for $1 a day and got it, a jack-knife and some prime Seal of North Carolina besides. The latter he at once tried in his pipe and expatiated upon its fine flavor throughout the community, so that I had several other applications for the delightful article. The eighth day was devoted to sending out invitations for the crowd to assemble. The ninth day they had not got quite ready. The tenth day saw the Coot afloat, for luckily Dick and Bill were not announced for another match. The yacht was scrubbed down fore and aft to rid her of the shore mud carried aboard by many visitors, the breaker was filled, some potatoes exchanged for eggs, and everything got in shape for an early start in the morn to round the dreaded Long Shoal before the breeze strengthened to a gale at mid-day. How I got caught on the Shoal and in how many pieces the Coot had to be collected the other side of the Shoal will make the burden of the next chapter. C. P. K.

SIRENE.—This open boat, built by McGlehan this year for Messrs. Doremus & Outwater, has made a very good record for a first season, as the following list shows. The Sirene is jib and mainsail rigged, 24ft. 3½in. load waterline, 10ft. 10in. beam and 24in. extreme draft, 14in. forward. She sailed in the following races: June 14, New Jersey Y. C. open regatta—Won in her class, defeating Geo. B. Dean 11m. 59s., also made best actual and corrected time over course. June 26, Greenwich Y. C. first pennant regatta—Won in her class, defeating Brahmin 14m. 38s., also made best corrected time over course. July 5, Larchmont Y. C. annual regatta—Distanced by mistaking course. July 24, challenge race with Brahmin, Greenwich Y. C.—Won by 7m. 31s. Aug 21, Open regatta, Sound Beach, Conn.—Won in class, defeating Adele 3m. 8s. Five starts, winning four first prizes and twice made best corrected time, once best actual time over course.

LONG ISLAND SKIFFS.—*Editor Forest and Stream:* In answer to correspondent wishing address of builder of sailing skiffs, I will say that for the best work and models with reasonable prices, send to Frank E. Wicks, Amityville, L. I.—JACK. . . Atlanticville, Nov. 13.—If your correspondent will write to Winer & Bros., at Centre Moriches, Long Island, he will learn all about the Long Island skiffs.—E. A. J.

A DINNER TO MR. BURGESS.—On Nov. 19 the Massachusetts Society of Natural History gave a dinner to Mr. Edward Burgess, who has just resigned the office of secretary to the society, which he has held for ten years. A number of noted naturalists were present. Mr. Burgess was presented with two silver salt cellars, each in the shape of a nautilus, the name Puritan being on the shell of one and Mayflower on the other.

CINDERELLA.—This yacht is now hauled out at City Island, where she will receive more lead on her keel under Mr. Smith's supervision. Her bowsprit has been sawed in two lengthwise and a core removed, the two halves being then glued together with a cement made of cheese and lime, which is said to be very strong.

CORRECTION.—*Editor Forest and Stream:* In my last letter it should read: "Who refuse to concede Clara's victories," instead of "who concede." I have to be very particular, or else I will be charged with some dastardly attempt to undermine the stability of the republic.—C. P. K.

THE MAYFLOWER FOR SALE.—Gen. Paine has offered to sell the Mayflower for what she cost him, as he has not the time to devote to another season's racing. As yet his offer has not been accepted.

THE CLYDE CHALLENGE.—A dispatch from London states that a yacht to be named Thistle has been commenced in Glasgow to challenge for the America's Cup.

SEAWANHAKA C. Y. C.—The fifth and last annual meeting will be held at Delmonico's, on Nov. 29, at 8:30 P. M. Five candidates for membership are proposed.

MAGNOLIA.—Mr. Fairman Rogers's steam yacht left Newport on Nov. 21 for Norfolk, where her owner and family will join her.

Three new Hunting Scenes in Water Colors, by the author of the "Tight Shell" and "Trying for a Double," for the Walls of Your Rooms.

"A Side Shot" (over decoys), Redheads and Canvasbacks,	-	Size 15x22,	Price $2.50
"Stopping an Incomer" (Blue Bills),	- -	" 11x14,	" 1.50
"A Lost Opportunity" (Mallards),	- -	" 11x14,	" 1.50

Or the three will be sent by mail to any address, postpaid, on receipt of $5.00.

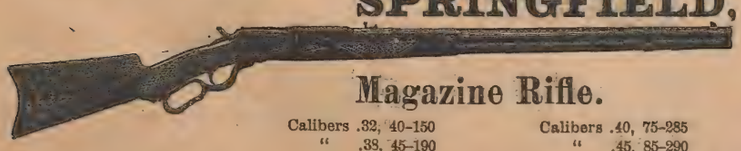
YOUR ATTENTION IS CALLED TO THE FOLLOWING PRESS NOTICES IN GENERAL:

FINE WATER COLORS.

In 1879 Mr. C. A. Zimmerman's two water colors, "The Tight Shell," and its companion, "The Double," were published, the one representing a hunter's dilemma, and the other a much more agreeable situation. It is doubted if a more popular pair of pictures ever saw the light. The entire edition has long been exhausted, and the purchasers and others have been clamoring for more of the same sort. Instead of another edition of these two, Mr. Zimmerman determined to publish three entirely new subjects. These have been seen upon the artist's easel, and they are named respectively "A Side Shot," "Stopping an Incomer" and "A Lost Opportunity." The first portrays a cosy ambush or "blind," surrounded by a most tempting flock of decoys—a number of canvasback ducks are "drawing" to the "stools," and present an inviting "side shot" to the half-concealed hunter in his sneakbox. The whole picture is drawn with a true artist-sportsman's grasp of the situation. "Stopping an Incomer" illustrates in a spirited manner a well-known difficult shot; the shooter, in the picture, is evidently no novice, as the "well-killed" falling mallard indicates. "A Lost Opportunity" is scored by a shooter who is staggering homeward under a fine back-load of game. "Enough is as good as a feast" must be his motto, for he does not even glance up at the swiftly flying Blue Bills fast disappearing in the stormy sky; even the spaniel retriever partakes of and reflects his master's manner and feeling, and is very willing to go to camp. There is a quality in these pictures which is very apparent to the connoisseur and to the casual observer as well—a sense of motion in the appearance of the birds and the naturalness of scene that is seldom seen on paper or canvas. Mr. Zimmerman has apparently no rival in the new direction that he has struck out for himself in water-color painting, and that the fact is appreciated by picture buyers is seen in the high prices paid for the work.—*Art Department, St. Paul Daily.*

There are few, if any, more welcome literary guests to the fireside or library than *Scribner's Monthly.* Its neatly printed pages, exquisitely illustrated, always afford such choice reading that none can peruse without pleasure. The October number, 79, an advanced copy of which has been received, will be of absorbing and special interest to the citizens of St. Paul and the State at large, for it contains an article from Mr. Charles A. Zimmerman, of this city, upon "Field Sports in Minnesota," which is profusely and charmingly illustrated with original pictures by the author. It very seldom happens that one and the same individual can accomplish the double task of being a pleasing writer and a talented illustrator of his own lucubrations. But Mr. Zimmerman happily combines these qualities in a degree so eminent that all must read his article in *Scribner* and admire his illustrations with intense gratification. Of course the subject of Minnesota field sports is one in which Mr. Zimmerman is completely at home. He reveals in them theoretically and he practises them assiduously. He is a "crack shot" at anything that wears feathers—even when worn inside glass balls—and he is an adept in the study of game birds and all their peculiarities of habits, plumage and flight. Added to all this, he loves a "bird dog," and admires nature in her ever-varying moods, and it is, therefore, little wonder that his devotion to shooting has become an enthusiasm. It is this very enthusiasm that constitutes the charm of Mr. Zimmerman's contributions; it is this which gives vigor to his pencil in his pictures. Both the text and the pictorial accompaniment are true to life, while the ludicrous side of the sport is happily depicted.—*St. Paul Daily Globe.*

In one of the windows of Nims & Co. is exhibited a charming original water-color drawing, representing a duck-shooting scene in Minnesota, by C. A. Zimmerman, of St. Paul. The selection of the landscape, the location and pose of the figures, the flight of the ducks, all indicate knowledge of duck shooting, while the treatment of the composition, its drawing and fidelity to nature, show that the author is not only inspired by the unerring instinct of the experienced sportsman, but also by the artistic instinct of the educated artist. Mr. Zimmerman has more than a local reputation, for his recent article in *Scribner's Monthly* upon "Field Sports in Minnesota" has published his ability to the world. His illustrations in that interesting article are very clever, spirited and beautiful drawings, worth the careful notice and study of sportsmen and lovers of art.—*Troy Daily Times.*



Mr. C. A. Zimmerman, of St. Paul, is well known over the Union as both an artist and a sportsman, the productions of whose pencil always meet with universal favor. In a visit to his studio last week, no less than three superior pictures were found lately completed. "Stopping an Incomer" is just what its title indicates: A gunner is paddling along a bank of rice, and coming toward him he spies two mallards; the paddle is dropped, the gun taken up, and as the smoke issues from the muzzle the old drake towers up in his death agony. "A Side Shot" also tells its own story very forcibly: A flock of decoys are on the water; to them come flying along the branch ducks of all sorts, and as a flock of canvasbacks pass a clump of rushes the sportsman gives them "a side shot" with telling effect.—*St. Paul Pioneer Press.*

"Canadian Sports," "Bay Shooting," "Canvasback and Terrapin," "Caribou Hunting" and "Deer Hunting on the Au Sable" are some of the titles that meet the eye in its pages. Mr. Zimmerman, who knows more about it than any other man, has written of "Field Sports in Minnesota."—*Century Magazine.*

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the eld of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their elations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

CHRISTMAS PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of Christmas gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for Christmas. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR. C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

The Forest Waters the Farm,

OR, THE VALUE OF WOODLANDS AS RESERVOIRS. By ANTONIN ROUSSET, translated by REV. S. W. POWELL. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual of boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Fyshhe and Fysshynge.

By DAME JULIANA BERNERS. An elegant fac-simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

RABBIT HOUNDS.

A large lot of English beagles, 14 to 16 inches high, dogs and bitches, well broken; $15 each. Pups from 6 mos. to 1 yr. old, $8 each. Satisfaction guaranteed. WM. W. SILVEY, 135 South Eighth st., Philadelphia, Pa. oct7,tf

POINTERS FOR SALE.—AT THE LATE Waverly show, every prize but one in the puppy classes (21 entries) was won by Nick of Naso puppies. (See report this issue.) Nearly 5 mos. old; just right for the field. GEO. L. WILMS, 142 Monticello ave., Jersey City, N. J. sep25,tf

WHITE BULL-TERRIER YOUNG ROYAL Prince (A.K.R. 2102). Fee $15. Pups by Royal Prince and 50 bull-terriers for sale, dogs, bitches and puppies, white or colored, large or small kinds; all first-class stock; state what you want. J. W. NEWMAN, 87 Hanover street, Boston, Mass.

DO YOU WANT A DOG
DOG BUYERS' GUIDE.
Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them
Mailed for 15 Cents.
ASSOCIATED FANCIERS,
237 S. Eighth St. Philadelphia, Pa.

SETTERS FOR $10 EACH.

A large lot of English setters, taken in exchange for other dogs, will be closed out at this remarkably low price. They are of both sexes, excellent looking, are guaranteed not gunshy and to have fair nose. Ages from 6 to 15 mos. If on inspection they should not prove satisfactory the money will be returned. ASSOCIATED FANCIERS, 237 South Eighth st., Philadelphia, Pa. sep2,tf

PRIZE AND PEDIGREE ENGLISH MASTIFFS.—Mr. James Hutchings, 25 Gandy st., Exeter, England, has several grand ones for sale, brindles and fawns, including stud dogs brood bitches and puppies. Tourists' inspection invited.

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sept22,tf

Claire-Reeta Kennels.

PALMYRA, N. Y.

Irish and Gordon setters for work as well as show
dec17.tf

DOGS FOR SALE.

Setters, pointers, spaniels, foxhounds, beagles, dachshunde, Newfoundlands, German tiger mastiffs, fox-terriers, Scotch terriers, Skye terriers, Yorkshire terriers, bull-terriers, bulldogs, pugs, French poodles, St. Bernards, mastiffs and black and tan terriers. Pups of all the above breeds constantly on hand. Those desiring to purchase will do well to consult me. WM. W. SILVEY, 135 South Eighth street, Philadelphia, Pa.

English Setters Boarded.

Warm and healthy location and personal attention given. As I employ no attendants, only a limited number will be accommodated.

Address H. J. PIERRE,
Winsted, Conn.

IMPORTED ROUGH-COATED ST. BERNARD dog Monarch, 19 mos. old, by Brampton Monarch out of Princess Nell. He combines the blood of Cardinal, Barry, Sultan, and is perfectly marked. Sold only for want of room. Address or apply JOHN ELLICE, 164 Summit ave., Jersey City Heights, or 81 Dey st., N. Y. nov18,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 2, 1886.

VOL. XXVII.—No. 19. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

WHAT CONGRESS SHOULD DO.

ANOTHER session of Congress opens, and we await the action of that body with regard to the National Park. For years this beautiful and wonderful spot has been neglected by our lawmakers. Beggarly appropriations have been made for its care and preservation, but even these have been cut down to a point where they are insufficient to provide any adequate protection for the forests, the game and the natural wonders.

The summer of 1885 saw a Terrritorial statute of Wyoming in force in the reservation, and although many things were done illegally under color of this law, the fact that for the time being it was believed to be the law, had, no doubt, a most excellent effect on those who were disposed to violate the regulations of the Secretary of the Interior.

These regulations are now far more respected than they were two years ago. This is due in large measure to the earnest and faithful labors of the late Superintendent, Col. D. W. Wear. He organized his force of assistants, infused into them something of his own energy, instructed visitors to the Park as to what was and what was not permitted, and inspired in many of them an interest which would never have been aroused except by his own enthusiasm. His year of office did more for the Park than the term of any other man has accomplished.

Congress cut off the appropriation and Col. Wear and his efficient force of assistants were turned out of office. Troops took their place, but cannot do their work. Capt. Harris and the officers of his command are able, intelligent and anxious to do all that they can for the reservation, but their men cannot perform the work set for them. However good their intentions, they have not the knowledge of the region or of the mountains which would enable them to meet the lawbreakers on their own ground and capture them, nor have they an adequate comprehension of their duties.

It remains to be seen whether Congress will at this session enact a suitable law providing for the government of the Park. Such a bill was introduced by Senator Vest during the last session of Congress, was referred to the Committee on Territories of the Senate, was favorably reported, and now awaits action. It is a good bill and one which ought certainly to pass. There is no intelligent opposition to it. The worst danger that it has to encounter is the apathy of a body which declines to interest itself in anything that is not of personal or political advantage to its members.

The interest in the Yellowstone Park has never been so great as it is to-day. Last season tourists visited it in numbers never equaled. We are informed that the hotel registers recorded the arrival of over eight thousand guests, and besides these there were the campers who did not go to hotels and of whose number there is no record. A very large proportion of those members of the Grand Army of the Republic who attended the meeting of that association at San Francisco, returned by way of the Northern Pacific Railroad and visited the National Park. Every one who went there came away filled with enthusiasm for the beautiful region.

The destruction of forests, of game and of natural curiosities which took place during the last month or two while the Park was open to travel emphasizes the crying needs of the reservation. A large force of competent, practical mountain men is required to constantly patrol the reservation during the tourist season. Besides this the Park should be enlarged and the roads should be constantly improved.

The Yellowstone Park has in Congress two staunch friends who have made strenuous efforts to bring about legislation looking toward its proper guardianship and government. Senators Geo. G. Vest, of Missouri, and Chas. F. Manderson, of Nebraska, have shown an intelligent interest in this reservation which entitles them to the warmest gratitude of all intelligent people. The earnestness and energy which they have shown in this matter belongs to the highest order of statesmanship. It is cheering in these days of political narrowmindedness to observe now and then some breadth of view, some disposition to look ahead and provide for the future. Long after the names of a hundred Senators of to-day are forgotten, Messrs. Vest and Manderson will be remembered for the good fight which they have made to save the people's Park for the people's use.

We believe that Senators Vest and Manderson will keep up the good work that they have so ably begun and that they will try to carry through the Senate the bill which is now before it. We are convinced that before long Congress will awake to a comprehension of the earnest feeling which the public has on this subject, and that it will see the importance of providing some form of government to replace the chaotic condition of things now existing in the Park.

"NESSMUK'S" POEMS.

THE subscriptions for "Nessmuk's" forthcoming volume of poems now number 500.

To give full opportunity to distant readers to secure the book at advance subscription rates we have extended the time for closing the $1 subscriptions from Nov. 15 to this date, Dec. 2. The blank is repeated elsewhere, and orders sent on that blank will be accepted at $1 per copy. This is the last time the blank will be printed. With our next issue the price will be advanced to $1.50.

The portrait, cabinet size, which is to form the frontispiece, will be an artotype. Proofs have been submitted to us. They are more faithful than a photograph, and are eminently satisfactory and pleasing.

DEATH OF JOHN CONROY.—To many a reader of FOREST AND STREAM will come a pang of regret with this announcement of the death of Mr. John Conroy, who was years ago well known by his connection with the fishing tackle trade, and who through his life was esteemed by them as an angling friend. Mr. Conroy died at his residence, New Brighton, Staten Island, Nov. 25, in the eighty-third year of his age. He was the founder of the fishing tackle house which has been known for more than half a century under the successive titles of John Conroy (1830), J. & J. C. Conroy (1840), J. C. Conroy & Co. (1864), Conroy, Bissett & Malleson (1875), Conroy & Bissett (1881), and the present house, Thomas J. Conroy (1883). Himself a devoted angler, he spent much time in following the pursuit, and to him anglers owe the invention of the balance handle reel now in such universal use. He had taken no active part in business since 1863, though long after that it was his custom to meet and chat with his friends at the store in Fulton street. He was one of the old-fashioned men whom George Dawson so well distinguishes in his "Angling Talks" as "the simple wise men."

THE AUDUBON SOCIETY now numbers more than 16,000 members, and the present rate of increase is rapid. The movement is receiving due approval from the press of the country, and many indications give proof of its growing influence. Some of the New York milliners have adopted as a rule of business to furnish no feather trimmings the use of which is disapproved by the SOCIETY. Some idiot has been writing to one of the daily papers taking the AUDUBON SOCIETY to task for its alleged attempt to discourage the use of ostrich feathers, an attempt, it need not be said, which has existence only in the fancy of the scribbler. The SOCIETY has distinctly stated, and the same is set forth in its certificate of incorporation, that its protective efforts are confined to American wild birds not used for food. This field is certainly broad enough, and it is one concerning which there is little opportunity for disagreement of opinion, save with respect to certain species of birds popularly believed to be noxious vermin. It would have been impracticable to frame a suitable provision restricting the use of game plumage. This is all the more a pity, since dealers who now support the SOCIETY'S work nevertheless encourage the employment of game birds' feathers, and the natural result has been the stimulation of market-hunting shore birds. A great London feather dealer has cunningly taken advantage of the growing sentiment in favor of wild bird protection in England to push his stock of plumage, including "all the game birds of the world." It may not be out of place to repeat our warning, that this is a subject legitimately belonging to sportsmen, who will find it to their interest to discourage the wholesale potting of snipe and other game birds for millinery purposes.

THE PROPOSED INTERNATIONAL TRAP MATCH.—The proposition of the National Gun Association to arrange an international competition in trap-shooting is one which should be received with favor in this country and abroad. The great interest which has attached to such matches in the past might well enough be renewed on the occasion of a test of the skill of America and Great Britain. The interest in international rifle shooting is, for the present at least, languishing; and there are no indications of its speedy renewal. In the interim trap-shooters should have their inning. The Association did a wise thing, at its Boston meeting, in enlarging the committee of arrangements and making its membership more truly national in character. Experts at the trap are so numerous that a selection for the required team would be made with difficulty, not because of a lack of proper material, but because of the abundant supply. The team should be made up of members from different States and the men should be in the strictest sense of the term amateurs. Such a team can more easily be gathered together here than in Great Britain, where the conditions are more complicated, trap-shooters being divided among many grades of society, where social distinctions are more clearly drawn and more stringent than they are in this country. But as the riflemen have again and again surmounted this difficulty and have sent over strong teams, there is no reason to suppose that the trap-shots could not arrange matters with equal felicity.

LEROY LYMAN, a famous hunter of Coudersport, Pa. died last week from the effects of an encounter with a savage bull in a barnyard. Lyman had had many exciting adventures in the woods and was reputed to have come safely through repeated scenes of great peril in his hunting expeditions; and that he must succumb at last to the attack of so ignoble a foe was said to have embittered his last hours. Among other peculiarities of his character was a strict adherence to the doctrines of the Seventh Day Baptists, holding which he did much of his hunting on Sunday.

A POOR SEA SERPENT.—A few days ago the daily newspapers of New York had long accounts of a wonderful fish taken at Flushing, on the north shore of Long Island. It had long claws and large eyes and was thought to be the sea serpent, etc. It now turns out to be an "angler," *Lophius piscatorius*, sometimes called the fishing frog, but it served the purpose of making a sensation. As the fish is not much of a swimmer and lies in the mud, it would make a very poor sea serpent, even for a pic-nic ground on the Sound.

EVERYBODY OUGHT TO KNOW IT.—Write on one side of the paper only.

LAKE ST. FRANCIS.

PROBABLY no river of the world is worthier of admiration and respect than the St. Lawrence. It carries to the sea the flood of waters of the greatest lakes; it bears them deeply and gently from the outlet of Lake Ontario through a thousand islands; it tumbles and rushes them with the current of a mill race in white-capped waves down its rapids; it sweeps them along banks lined, on the left, with white cottages and ancient country seats, and on the right with forests and fields; down by the stately cities of rich Montreal and ancient Quebec, flowing them between the lofty and precipitous rocks of the lower river, and pouring them at length into the broad arm of the ocean. What world-traveled man can ever forget it? It is calm, it is strong, it is mad, it is majestic and it is beautiful. To the writer, in late October weather, it seemed doubly enchanting. Set in the russet frame of autumn foliage, the blue of its clear, fresh water came out in deepest hues. It was a worthy pathway for the daring discoverers from *la belle France*, whose spirits, restless in the old world, longed for lands that were new—for Cartier, Champlain, La Salle, Frontenac, Charlevoix and the rest. On its shores the red man—Huron and Iroquois—hunted and lodged long before them, and afterward and now the Briton—English, Scotch and Irishman—held and holds a wrested possession, permitting to the home-loving French their numerous and vested rights. These races, together with the plentiful progeny of their intermarriage—"Canucks" and half breeds—inhabit the river, tilling broad farms, boating and rafting, or engaged in trade in the great cities. In religion, the church of Rome never had more faithful children, clinging to every ancient superstition, than are found here, and cheek by jowl with these are as sturdy Presbyterians as any in Cromwell's time. Such, faintly and briefly indicated, is the nature, the history and the charm of the St. Lawrence. Add to this that your correspondent was in quest of good hunting ground on the wide territory of the river, seeking it, too, with all the equipments that serve to furnish success with comfort and even luxury, and there is no honest sportsman—and they are all honest—who would not envy his lot, if envy ever found place with such a person.

Lake St. Francis is a great widening of the St. Lawrence, about forty-five miles above Montreal. It is, approximately speaking, twenty-five miles long and from six to seven miles broad, very shallow for the most part, with devious deep channels, the lines of the true river, which is navigated by craft of all kinds under the guidance of trained pilots. The lake furnishes fat feeding ground for those strong-winged birds whom sportsmen love to pursue—ducks and geese. The people of Lancaster, a little village of county Glengarry on the north shore of the lake, will tell you that from the time the migratory flocks of Canada geese, of ducks—redhead, broadbills, bluebills, black duck, whistlers, widgeons and the rest—lift themselves on the approach of winter from their wild breeding places in Labrador and start away in earnest thousands of miles for the Chesapeake and the Carolinas, they rest but once, and then at Lake St. Francis.

The Ruth, a modern steam yacht of rich and complete appointments, having a small arsenal of guns and ammunition aboard, and larder and cellar (?) teeming with subsistence and cheer, cook and cabin boy, left the port of Oswego one cloudless morning of last October for this happy hunting ground with the owner and two supercargoes, the happy hunters. After a breezy voyage across Lake Ontario, touching at Cape Vincent, we slid through the Thousand Islands, which, with their silent and tenantless hotels and cottages, were (to paraphrase Hood) like "a banquet hall deserted, whose guests were fled and garlands dead and all departed."

At Alexandria Bay we took in decoys, boats and boatmen Chauncey and George, and steamed on to Ogdensburgh, arriving there late in the afternoon and spent the night, taking a pilot and drawing a breath, as it were, before taking the rapids. Again the sun rose cloudless, and as we sat at breakfast the craft began her swift run down hill. In her pilot house an old pilot of the river, Capt. Savage, home ruler and "agin" Sir John Macdonald, had the wheel, and as we swept by islands, beyond shoals and down rapids—the Gallon and Rapide du Plan—he discoursed volubly on the old "R'yalists," the political discontents and wrongs of Canada and annexation. It was only when the breakers of the Long Sault hove in sight that the maxim of the sea "Do not speak to the man at the wheel" was in force by silent consent. To us who had made the passage—safe enough, but always thrilling—years ago, this seemed like a new experience. The situation commands silence, and, as we shot through the narrow passage of the South Sault between the high, rocky and wooded banks and heard the roar of the mighty current and saw and felt its unleashed power, even the skipper's eyes, accustomed as they were to such surroundings, lit up with excitement.

In early afternoon we swept into the calm and placid Lake St. Francis, and as we steamed quietly along lazy ducks, reluctantly taking wing at our intrusion, curved back in long flights upon our wake. By dusk we had a sure anchorage in clay bottom under the lee of the shore and to the musical swish of the light waves along the Ruth's sides we discussed dinner and our prospective sport with keen appetites. A short interim of talk and tobacco precedes an early to bed.

It was early to rise of course, and while the streaks of dawn first began "to lace the eastern sky" the writer was well on the way to a little island far off on the horizon amid stream. It was hardly large enough for the shooting box, now empty and closely barred, which some enterprising officials of the Grand Trunk Railroad had erected on it. Soon were our decoys out and we were ensconced behind a stone blind topped with bushes. Down the river Point Monié begins to take shape in the dusk of the morning and away to the east the spire of the French village of St. Ancien rises out of the mist. "Mark," whispers Chauncy, to whom a sunrise is no novelty. "Mark," is the reply. "They are swinging." "No." "Yes." "Let them come right on." "Broadbills." "Take them as they hover and then again."

Bang, bang, bang! The writer in his excitement fails to let off his second barrel, but, notwithstanding, contemplates with swelling breast one of the three victims as his own. Scarcely has Chauncey retrieved the dead and slid the skiff back in its hiding place among the rushes, when, like a bolt from a gun, a whistler shoots down from mid-air and scatters the water right and left as he settles himself among the decoys. As the form of the gunner rises above the blind, in consternation the duck staggers to his wings and is well under way before the tyro sees fit to cut loose at him. It is in vain, but Chauncey's five drams and sure aim drop him like a shot. Here comes a half dozen, fairly dusting the surface of the water in their rapid flight. They have yellow bills and yellow legs, and as they throw their heads back and tails forward to light one is reminded of a line of soldiers presenting arms. Three fall at the double report, and three swerve and get away. They are sawbills, a worthless crew. Now a pair of butterballs, a crested male and the female, bowl into the decoys and are dispatched quicker than one can say "Jack Robinson." Again a swift-flying flock of redheads coming down the wind drop their lofty line of flight to view this feeding ground, and, discovering the lurking foe, climb into the skies again, all safe but two that have dropped to the guns like clods of earth.

All the morning hours the feathered tribe come trailing up the river, now so far off on the distant shore, now so low, hitting to all appearances the tilting waves with their wings, that the lure escapes their observation, but perhaps the third lot, a single, a pair or a bunch, sweep in as though on an invitation to dinner for which they were late. We have thirty or so by 1 o'clock, and having whanged away enough spare the rest and take the long row to the yacht, where dinner is just going on. Hard tack and cold bacon would have been toothsome after so much out of doors, but when it came to "both soup, mate and fish," as a Hibernian once remarked of a dinner, no wonder all hands were "floored" at the end. It was mild enough to sit on deck before going to bed to smoke and chat, to watch the stars, "the patins of bright gold," to listen to the loon off in the stream with patient regularity uttering his liquid and prophetic cry, and to feel the cool breath of the wind.

So the days came and went, this one spent patiently sitting in the skiff amid tall plumes of wild rice, the next behind a blind on some rocky point of land; to-day rainy and cold, to-morrow fairer than summer and nearly as soft. An Indian summer seemed abroad much of the time. Far to the east and to the west the river and the sky were inseparable; islands embowered with trees losing their footing in the stream, floated above its bosom or sank away until only their leafy crowns were visible above the surface. The light wind died out and a stillness so deep pervaded the water, the islands and the marsh that the paddle dip of some Indian's canoe making the circuit of his muskrat traps on the far distant shore fell on the ear sharp and distinct.

The best day's score for two guns was fifty ducks and with that came an end. The Ruth weighed anchor, took pilot and turned her prow against the current and toward home. As she plowed the waters of the lake the feathered broods apparently celebrating her departure, rose in clouds before her and settled again in swamp and cove to the business of feeding and visiting, to be unmolested, perhaps, even until more nipping frosts and storms of snow should come to urge them on "to sunnier lands where blow the fairer blossoms of a balmier weather."

G. T. C.

Oswego, N. Y.

J. C. HUGHES.

ANOTHER good man has gone over to the majority, leaving behind him a host of sorrowing friends. Josias Charles Hughes died at his residence in New Westminster, British Columbia, on the morning of November 8. He was born at Omemee, Ont., on May 15, 1843, and was so only about forty-three years of age. He was one of a party of about twenty who left Peterboro, Ont., on March 12, 1862, to seek their fortunes in British Columbia. He reached New Westminster early in May and soon after was employed as express messenger for Deitz & Nelson's express between that city and Yale. This position he held until 1867, when the firm obtained an interest in Moody's mill at Moodyville, and Mr. Hughes was transferred to that place, where he remained until 1876. While at Moodyville he was in 1871 elected as one of the representatives of the district to the first popular Legislature and afterward received the appointment of Government Agent at New Westminster. This position he held until two years ago. Last summer he was appointed Indian Agent at Fort Simpson on the Northwest coast, near the Alaskan boundary. During a visit to this place the first symptoms of his final illness made their appearance.

Mr. Hughes was a prominent Mason, being Past Grand Master of the lodges at New Westminster and Moodyville.

He was a keen and untiring sportsman and an ardent lover of nature as well as a close observer. He was a frequent contributor to Forest and Stream, and in years gone by his pseudonym "Mowitch" was well known to all our readers. Of late years he has written over his own name. He was, we believe, the first to suggest the explanation of the well-known fact that a deer killed in water while wearing the summer coat will always sink, while one wearing the autumnal coat will float. Mr. Hughes explained that this difference was due to the greater amount and buoyancy of the longer and thicker hair. His fondness for outdoor life gave him exceptional opportunities for observation and study, and he made many interesting additions to our knowledge of the habits of the birds and mammals of the Northwest coast. Long association with Indians had given Mr. Hughes a thorough knowledge of these people, and it is most unfortunate for the Canadian Indian Service that he was not spared to carry out his work at Fort Simpson. He had returned from his place to get his family and got as far as Victoria on his return journey when his illness became so severe that he was obliged to return to Victoria, where he died.

It is with a sense of personal bereavement that we pen these lines, for it was our good fortune to know Mr. Hughes intimately and to have taken part with him in more than one successful hunt. He was a man of most genial nature and was everywhere popular, and not only this, but he was admired, respected and loved by all who knew him. He leaves a wife and three children.

Izaak Walton's Clock.—The London *Fishing Gazette* says that at the late sale of the property of Mr. Maas, a clock, which had belonged to Izaak Walton, fetched nearly $350. It was marked "I. W.," with inlaid letters, and was bought by Mr. Maas some time ago for $125. Documentary evidence is said to exist which proves that the clock once belonged to Walton.

BUFFALO HYBRIDS.

MR. C. GOODNIGHT, of the cattle firm of Adair & Goodnight, Palodura, Armstrong county, Texas, has written to Mr. William King, of this city (of trap-shooting fame), the following, in reply to Mr. King's inquiries on the subject, and we are indebted to Mr. King's courtesy for permission to publish them:

I have been among the buffalo for thirty years. When I first came to this country they were here by thousands, so numerous that we had to keep them back to secure feed for our cattle. In 1878-79, the years of greatest slaughter in this part of the western country, they were so thinned out that their ultimate disappearance was then clearly foreseen.

In the spring of 1879, at the suggestion of Mrs. Goodnight, I roped and brought in a few calves to domesticate and preserve as mementoes of the past. We have now nine in our little herd, being the largest number I know of anywhere. They were not gathered up for profit, but merely to experiment with and for the amusement of ourselves and others who might chance to come here. I hope, however, to make some experiments with them, and am trying some at present with rather poor success. The buffalo will not breed to the domestic cow unless they are reared together, when they readily cross. My observation is that the dun cows are more likely to meet his fancy than red ones. Out of hundreds of trials, however, we have never succeeded in having more than one hybrid. That was a cow calf, the offspring of a buffalo bull and a domestic cow. When grown it was bred to a Hereford, but without issue. Bred to a buffalo it gave birth to a bull calf, which, in appearance, closely resembles a pure buffalo; so near is it that only an expert judge could detect any distinction. This only proves the purity of the buffalo blood, which we knew before.

The domestic bull will take no notice of buffalo cows, unless it be raised with them; and this is difficult to accomplish, for the buffalo will not regard any young but their own. Their own they defend with the ferocity of a grizzly bear.

I now have some half polled Angus cows with the buffalo, and hope in the course of a year or two to have some results. The half-breed cow above alluded to is a rather peculiar appearing beast, resembling domestic cow very little, and buffalo not very much. She is a striped brindle, and is more docile than the others. If home reared buffalo beef be ever eaten it will be a long way in the future, and then more a matter of luxury and curiosity than as a staple. It will be very expensive. Buffalo are hard to breed, breed more slowly than common cattle, are difficult to handle, and are dangerous pets. One cannot go afoot among them when they have young any more than one could go into a bear's den. When in season they are very savage. At no time are they very safe for strangers or women. The wild buffalo is a thing of the past on this continent.

C. Goodnight.

A Golden Eagle in Connecticut.—Stamford, Conn., Nov. 9.—*Editor Forest and Stream:* I recently heard a rumor of the capture of an eagle near this place. On further inquiry I learned that the bird had been purchased by Mr. J. Schaler, a taxidermist of this place. On Sunday the 6th inst. I called on Mr. Schaler and inquired as to the truth of the report. I found him at home and quite willing to exhibit his prize, which is alive, the only injury received being a broken wing. The bird is a very large golden eagle (*A. chrysaetus*) in full plumage. The head is golden brown, breast black, legs feathered to base of toes, claws large, eyes dark brown, bill hooked and of a dark color the same as claws, feet yellow, tail of a grayish white bounded by a dark band at end of feathers, back dark color. Could not obtain measurements, but should think height between 2 and 3ft. Mr. S. says that its spread of wing is nearly 6ft. Since capture has been fed on young chickens and sparrows.—Inquirer.

"Coon" Cats.—*Editor Forest and Stream:* Your correspondent, "G. D. C.," of Hartford, Conn., wants to know the origin of the Maine coon cats. I can tell him in a few words: For years the Maine sailing ships traded in the Levant, and many of the officers and men brought Angora cats home with them. These cats interbred with the common cats and hence the variety of color and marking. The coast inhabitants, ignorant of the true name of the new cat, naturally called it after the animal it most nearly resembled, Rockland, Me., is overrun with these cats, and if "G. D. C." will write to Shipping Commissioner Randlett, of that place, he can get any number for two dollars a piece. I have a fine tortoise shell Angora I bought from Mr. Randlett last year, and having been in Rockland a few weeks since am sure he can furnish more at short notice.—A. C. H. (New York, Nov. 25).

The Audubon Society.—Minier, Ill.—*Editor Forest and Stream:* In looking over the names of the eminent men who have sent in their approval of the Audubon Society, none has given me more pleasure than the name of John G. Whittier. As president of the Forestry Congress of America his remark on "our forests and birds" delighted me. I regret he had not left out the second and third words in his second paragraph. Please ask him to eliminate them, and then let me take out all the poetical fancy, and let all "the shooters of birds, the taxidermists, and the fashionable wearers of their feathers" really feel what the poet imagines.—Geo. W. Minier.

Buffalo Extermination.—The La Moure (Dakota) *Progress*, of Nov. 21, says: "A herd of five buffalo have been seen by several persons in the hills in the western part of the county, and numerous parties have come across their trail. We shall probably hear of the capture of some of these rather scarce animals this winter, as two or three hunting parties are already making preparations to that end." So it goes. Whenever a surviving buffalo makes his appearance in any locality the whole region turns out to try to kill it. What a shame it is that these animals have had no protection, until now they are as rare as the aurochs of Europe, and like that species are found only in preserves.

A Reasoning Lobster.—While at Bird Island, Buzzard's Bay, Massachusetts, I noticed what seemed to point at reason rather than instinct in the lobster. One had his home for the time in a hole under a rock, where the water was about five feet deep. Thinking to catch him, I made a noose at the end of a fish-line and by means of a stick spread it carefully around the hole; then let down a piece of menhaden, holding it six or eight inches away in front. The lobster soon reached out to take such a nice morsel, when, by jerking the string, I had him noosed around one of his big claws near the end; but after I had him half out of his hole the string slipped off and he went back. However, I had no doubt of catching him the next time, so spreading the noose as carefully as before, and again letting down the piece of menhaden, I awaited results, when, instead of boldly putting out his claws as before, he first put his feelers through the noose and with a waving motion felt the string all the way around, then pushed one claw under the string and grabbed the bait. Three or four times I tried him with the same result. He first carefully felt the noose all around, then rooted one claw under the string and secured the bait. I finally had to give up all thoughts of getting him, and came away firmly believing that until this fellow dies of old age the lobster will not be exterminated in our waters.—*Willard Nye, Jr., in Bulletin U. S. Fish Commission.* (New Bedford, Mass., May 10, 1886.)

A Game Dinner.—The bill of fare of the twenty-first annual game dinner, given by John B. Drake, of the Chicago Grand Pacific Hotel, included the following: Blue Points. Soup—Venison, hunter style; game broth. Fish—Trout, black bass. Boiled—Leg of mountain sheep, ham of bear, venison tongue, buffalo tongue. Roast—Loin of buffalo, mountain sheep, wild goose, quail, redhead duck, jack rabbit, blacktail deer, coon, canvasback duck, English hare, bluewing teal, partridge, widgeon, brant, saddle of venison, pheasants, mallard duck, prairie chicken, wild turkey, spotted grouse, black bear, oppossum, leg of elk, woodduck, sandhill crane, ruffed grouse, cinnamon bear. Broiled—Bluewing teal. jacksnipe, blackbirds, reed birds, partridge, pheasants, quail, butterball duck, English snipe, rice birds, redwing starling, marsh birds, plover, gray squirrel, buffalo steak, rabbits, venison steak. Entrees—Antelope steak, rabbit braisé, fillet of grouse, venison cutlet, ragout of bear, hunter style; oyster pie. Salads—Shrimp, prairie chicken, celery. Ornamental dishes—Pyramid of game, en Bellevue. Boned duck, au naturel. Pyramid of wild goose liver in jelly. The coon out at night. Boned quail, in plumage. Redwing starling on tree. Partridge in nest. Prairie chicken en socle. Among the guests was Long John Wentworth, who had been present at the first dinner, thirty-one years ago.

A Pugnacious Coon.—Malvern, Ark.—A young man in this neighborhood, a few mornings since, put his little brother upon his horse and sent him to the branch near the stable to water. Soon the boy came back running the horse, and said that a coon came down the bank of the branch while the horse was drinking, and jumped upon the log beside him and bit and scratched the horse so that it nearly threw him off in trying to get out of the branch and up the bank. The young man looked at the horse and found the blood trickling from several rakes and scratches on one of its forelegs. He and the little boy went to the branch, taking a large dog with them. The dog followed the track of the coon and soon came up with it and gave battle, and after a few moments succeeded in killing it. But after the coon was dead the dog could not get rid of it, the coon having seized him by the under lip and would not let go even after life was extinct. The young man tried to get the coon's jaws open but could not, so he cut the head off and the dog went to the house with the coon's head hanging to its lip. After going to the house the young man tried again to pry the jaws open, but finally was compelled to unjoint the head before he could succeed in getting it loose.—Lew Willow.

That Pet Bear.—The Cleveland *Leader* reports: The sequel to the story of Rosa Megchael's terrible death from an attack by a bear was presented in the Common Pleas Court yesterday. Suit was brought by Henry Dornbrak, her administrator, against Patrick W. Curran, the owner of the bear, to recover $10,000 damages for the death of the child. The petition sets forth that Curran was the owner of a ferocious black bear, which he knew was liable at any time to break from his confinement and injure persons. Curran is said to have neglected to take any precautionary measures, despite the fact that only last June a man was fiercely attacked and seriously injured by the bear. On Oct. 25 Rosa Megchael, while in the yard at No. 1000 Sheriff street, fell a victim to the ferocity of the animal and was almost instantly killed. The affair is charged to Curran's alleged carelessness, and he is asked to pay adequate damages.

Feeding Time of Quail.—In your last issue "J. M. W." asks for theories in regard to where quail may be found at certain periods of the day. I have observed that before frost has come quail seek their feeding grounds at daylight; but when heavy white frosts occur they do not run until the sun has caused them to vanish. After feeding in the morning quail retire to cover, staying sheltered there until the waning of the afternoon, when they again feed; after this, if early yet, they may take to shelter, as I have found them do. Now they will go to open field and with heads in and tails out rest for the night. These are my theories and if wrong I hope soon to be enlightened by some more accurate observer.—Onojutta (Juniata county, Pa.).

Shore Bird Nomenclature.—Taunton, Mass., Nov. 27.—I have read with considerable pleasure the contributions to the subject of shore bird nomenclature. Every year I spend several weeks on Cape Cod, and my experience has been gathered in gunning and talking with Cape Cod gunners from Monomoy Point to Provincetown and from Chatham to Wood's Holl. With the addition of the fact that on the south shore the greater yellowlegs is called (probably on account of its peculiar whistle) the "cu-cu," my experience coincides with J. C. Cahoon's in every way, and I was much pleased to see so complete a paper on the subject.—Cohannet.

Game Bag and Gun.

AN ODD SHOT AT GROUSE.

Editor Forest and Stream:

I notice a statement in a recent number of your good paper that ruffed grouse are scarce in Maine this year. I returned a few weeks ago from my twelfth annual hunt in the Maine woods and can report that I not only never found ruffed grouse half so abundant as this year, but heard everywhere that I went similar reports from others. My own hunting was done, as always, in Piscataquis county, but I talked with sportmen, lumbermen and farmers in many places, and all gave the same testimony. So plentiful were the birds and so tame that we shot them every day with our Winchesters, and of course taking nothing but head shots. With a small dog and shotgun one could on almost any day of my hunt have bagged in a short time all he could carry. When I left Brownville the storekeepers were paying but eight cents apiece for them, and they were selling in Bangor (so I was told) at 25 cents a pair. Every small boy who could command any kind of a gun and a few cents for ammunition was bringing in partridges.

Singularly enough, for the first time in many years I did not see a single "spruce" partridge, though this may be no proof that they were scarcer than usual.

While I am speaking of grouse I may as well tell of the singular way in which I killed one fine specimen last year and of which I have often thought when reading your ever entertaining "That reminds me" column.

I was returning to camp unsuccessful from a deer hunt on the head waters of Ebeeme River, when a few feet from the path I saw a noble cock partridge standing with ruff and crest erect, as lovely a sight as one could wish. My weapon was a Winchester .45-60, the bullet of which, if it struck the body of the bird, would leave it a shapeless and worthless mass of mingled feathers and flesh. I wanted that bird and aimed at the neck and fired. The bird simply settled a little in the leaves but made no other motion whatever, and I supposed I had not touched it. Its settling so in the leaves piqued my curiosity and I advanced to it without firing a second shot. To my amazement it did not stir, and yet its eye, turned full upon me, was bright, and every moment I thought it must surely take wing. In a moment more, however, the membrane half closed over the eye, and I saw that the bird was dying. I picked it up, but could find no feather ruffled and on its whole body no trace of blood or of the slightest wound. Wondering if it were not a case of actually scaring the bird to death, I arrived at camp and again, assisted by the cook of a lumber crew operating near, I examined the bird with all possible care, but without finding any trace of wound, save one tiny speck of blood which somehow appeared on one of my fingers after handling the bird. It was altogether too fine a specimen to waste and I proceeded to carefully skin it and only then discovered the cause of death. On the lower part of the back where the skin is stretched tight over the bone a very small red spot appeared when the skin was removed, and on careful dissection a tiny fragment of lead, no larger than half the head of a pin, was found, which had passed directly through the spine and had cut the spinal cord.

Whether some intervening twig or fine knot had split off this particle of lead from the bullet or not I cannot say, but a more beautiful specimen for skinning and the taxidermist's art was never seen than I obtained with my big Winchester, and the bird now occupies a post of honor in my house and looks as he did when I first saw him, full of life and beauty in his native woods. C. H. Ames.

Boston, Mass., November, 1886.

HUNTING IN THE TRANSVAAL.—I.

Sabie, Lydenberg Gold Fields, South Africa, July 29.—I had a present to-day of a watch dog bitch and one puppy; I am going to improve the breed and raise deerhounds. What we require most is the foxhound to follow wounded game, and to improve our breed of pointers. There is not a foxhound in the Transvaal. With good dogs we are able to keep our larder stocked. We are often very hard pushed for powder, which comes very high. I have been back four weeks from my hunting trip. I had a first-class hunting trip; killed 65 head in 10 days. Robert could not get away at the same time. I took Beck, my old mate, and about 20 Kaffirs and pack ox. We left the wagon and oxen 3 days from here and walked from the wagon 5 days into the fly country, with pack ox and boys to carry beef out. We killed 5 giraffes, 2 lions, a buffalo gnu (what we call blue wildebeest), koodoo-zebra, hartebeest, wild boar, impallah, and a riet-bok, but were unlucky in not seeing black rhinoceros or white, although the spoor was plentiful. When we got to the game we made a camp. Beck took one good boy and I one—very small though—so that we shouldn't get lost. The style of hunting is this: To go away at sunrise in different directions and look for game. When we find, if it be a troop, fire and follow on as fast as we can; we get another shot, tear on again, never look at the dead ones, but leg it as best we can, until we feel satisfied, then come back and get the dead ones. One day I had 4 boys with me and killed out of a troop of 7 giraffes 3, and wounded 2 so badly that, had it not been sundown, I'm sure we could have bagged 5. The 4 Kaffirs only got 1 bullet in, and that was into a wounded one I ran past and wouldn't waste another shot on. When I pulled up shirt and trousers were soaking with perspiration. It is certainly very hard work shooting on foot, but you get into such splendid condition. Although you may be knocked up at night, in the morning you are as fresh as a daisy, and have a rousing appetite. The Kaffirs are very poor shots; except the game is within 40 yards they are bound to miss, and they have no idea of a running shot.

The lions were swarming; nearly every day the boys would see two, three or four. I only saw one and killed him. He has a good skin and splendid mane; a very old fellow and fat as a pig. He got our wind and was trotting off, so we trotted after him, knowing that he would stand, look back and give us a good shot. They go very leisurely. He stood at about 100yds., and my little boy with my Martin fired close to my ear the very instant I was pulling the trigger of the Express, and I missed him; of course the boy also missed. However, we ran on again and he soon gave us another chance and I brought him down. You can tell at once when they are wounded; they go no further, but stand and roar continuously, and you have a good shot next time. I ran in to about 70yds. and put an Express hollow bullet into his ribs, when he fell over. Then I went close up and put a bullet through his head.

One day two of the Kaffirs following on the spoor of a troop of buffalo, got two dead buffalo, killed by lions; they followed on to the troop and shot a big buffalo. It began to bellow and one Kaffir took another direction (he says by accident, but the fact is he was afraid of the buffalo). The other boy (an old hunter) was going to give it a finishing shot, when a big lion came bounding out, and caught the buffalo by the nose and threw him down and stood on him. The boy fired at the lion but missed. Lion goes away and the boy goes up and cuts off the tail, and was just looking about where to cut next when he sees the lion come on again. He fired and missed again; the lion runs off. The boy comes to the camp for some of the other boys to assist him, but it got dark and they lost the place.

I had three young boys with me that day, and we followed a wounded giraffe too long and lost our whereabouts. The boys were very determined to find the camp, and we walked for three hours after sundown. Just by accident we came to near the dead buffalo, and to hear the lions feeding and fighting and roaring was well worth a long walk and a sleep out.

The boys would go no further. They made half a dozen big fires and we slept in the center. We had had no water since the forenoon, and nothing to eat since before sunrise. I couldn't describe the row the brutes were making, it was terrible. I proposed to go nearer and sit up a tree and listen and perhaps get a shot, but my boys wouldn't hear of it. It does not matter for lions or hyenas as long as you can make a fire, and there is always plenty of wood. The hyenas are strange animals, they are in hundreds round your camp every night, howling and laughing, and to a stranger very alarming; they are fierce-looking and come within a few yards, but are great cowards. The wild dogs can drive them off a carcass and the dogs are much smaller. The lions ate our pack ox, but it was through the carelessness of two boys, so I made them pay £8 between them; we intended killing it on getting home, as it would have died from the fly. Five dogs we took down are dead already. Beck enjoyed himself immensely and shot well. W. S.

[For the foregoing extracts from a private letter we are indebted to a Canadian correspondent.]

HINTS TO TRAPPERS.

The following instructions are furnished by Wm. Macnaughton's Sons, fur commission merchants, 79 Spring street, New York. They will be found useful to one who may wish to preserve furs.

Cased Skins.—Ermine, fisher, foxes, lynx, martin, mink, opossum, otter, skunk, must be "cased," that is, not cut open. In skinning, cut at the rump, and turn the skin inside out (like a glove) over the body of the animal, leaving the pelt side out. Then, after scraping, cleaning and drying, turn the skin back again while it is soft and easily managed, leaving the fur side out. Then put a thin board inside the skin, cut the natural shape of it, stretching the skin to its fullest extent, but not so much as to make the fur thin. Too much stretching spreads the fur over a large surface and makes it thin and lacking in richness. A liberal supply of good boards should be kept on hand. Stand or hang in a dry, airy, shady place. Keep out of sun, away from fire and smoke. Remove board when fairly dry. Never use bent sticks, bows or anything irregular in shape or that yields. When the above are "opened" they have a Southern appearance that lessens the value greatly.

Open Skins.—Badger, bear, beaver, cats, raccoon, wolves, wolverine, must be "open," that is, cut open up the belly from rump to head. After scraping, cleaning and drying, stretch a uniformly oblong shape to the fullest extent of the skin, but not so much as to make the fur thin. When thoroughly dry, trim off legs, shanks, flippers and any little pieces that spoil appearance of skin, but leave on heads and noses.

Beaver are sometimes stretched almost round, but appear very much better stretched oblong. Value by the skin, never by the pound. They rapidly lose heavily in weight. They bring most sold by the skin.

Muskrats must be "cased," but with fur side in. Chop off the tails as explained. Skin at the nose and make rumps square. Round tails have less value and do not sell well. Muskrats must not be injured by shot or spearing. Trap them.

Skins that have dried without proper care can be treated same as fresh, green skins. Otherwise they have no value. Dissolve a handful of common salt in a pail of fresh water and apply frequently with brush or rag (to pelt side only, as it spoils the appearance to wet the fur) until the pelt becomes perfectly soft. Then handle as explained. The same with "open" skins.

Trap Furs.—Spearing tears the pelt. Shot cuts the pelt and shaves off the fur. Both do bad injury and lessen selling price. Do not cure with alum or salt. It injures them for dressing and spoils their sale. Do not dry skins at a fire or in the sun or in smoke. It often burns them, when they then spoil and ruin on being dressed. Dry in the open air where shady. Meaty skins often "burn." The meat and fat on them "heats" and "burns" them, and they then go to pieces and rot on being dressed. Skins should be attended to at once, when fresh, and every particle of fat and flesh removed when it can be done easily and without tearing or injuring the pelt. Too much warmth curls and spoils the top fur or hair. Never stuff furs of any kind; dry and stretch as explained. Do not stretch out the noses and make them pointed. It gives a Southern appearance and lessens value. Do not cut off heads, ears or noses, or mutilate in any way. It lessens value and injures sale. Remove as much of bone from tail as possible, otherwise the tail rots. The pelt should be as clean and smooth as a piece of paper. Skunk with the white stripe (or any portion) shaved out, blackened or tampered with must be collected at half price.

Fur-bearing animals must not be killed till they have at least a fair growth of fur. Stop trapping as soon in early spring as the fur begins to shed or becomes thin or a little faded. These too early or too late caught furs are a disgrace to fur trappers and collectors and a wasteful, worthless slaughter.

DEER IN THE NORTH WOODS.

Editor Forest and Stream:

Having returned from a camp out on the Beaver River in the Adirondacks, I will report in relation to the same and the working of our present game law. The first half of last month was spent in exploring the country north and west of Moose Lake, taking in Twitchell Lake and the country drained by its outlet. Until recently this section has been noted for its abundance of game, chiefly owing to its being inaccessible for most parties to reach by the ordinary way of travel. Deer could be seen at all times of day during the summer or fall months feeding in and around the lakes and many ponds, and the trout were so plenty that the sport often became monotonous within a few hours. That the above was not an illusion may be seen in old sign still in existence, too deeply imprinted by well worn paths and the cropping off of brush and foliage to be soon obliterated. But what a change. I visited Twitchell on the 13th of last month and found that a road at no small cost had been opened from the South Fork seven miles over to the lake. Two houses for the accommodation of summer guests had been erected, with a supply of skiffs, jacks, etc., in store, and several times during the day I heard the baying of hounds on the hills south of the lake in pursuit of game. The next morning I took the trail and came out to the South Fork, scarcely seeing the track of a deer around the lake or on my way out. In fact that whole country has been completely stripped of its game, but not by the still-hunter, as there is not a camp in all that section.

After this I tried still-hunting on the leaves. Let us now see how this law works. I go several hundred miles in October for a few days' recreation. It is dry, warm weather, and the ground is covered with a coating of crisp leaves and sticks. After jumping up some half dozen deer, and firing at each as they run, from one to five shots, just owing to the distance off when first seen, and to the density of the woods, I succeed in bagging one. Several others are hit, some quite hard, but they all scurry away on the dry leaves, mix up where tracks are plenty and I soon lose the trail, give them up and go for others. Now I have no chance for a choice, I take the first one presenting a shot, be it large or small. Well, I skin out and hang up the saddle, replenishing my larder from the fore quarters. The weather turns damp and muggy, and the green flies swarm, the saddle will spoil if kept wrapped in the hide, and if opened will be covered with fly blows in an hour's time. A week later, after shooting at several more, another small one is secured, shot through one ham; and is hung up to dry. After several more running shots a third one is secured. By this time the first saddle is so near spoiled, that I dare not risk it three days on the road in transportation. So I take the last one killed, telling a neighbor where he can find a stale saddle at the camp, and by going a mile east can find what the pine martin, ravens and venison birds have left of the second one.

Now I claim that this summer hunting for deer is all wrong. True, the quota can be filled, but in doing so a wasteful extermination must necessarily follow. To compel a man to hunt (if at all) upon the leaves, wounding and losing three deer to get one, is a shame. A horse will trot a mile in less than two and one-half minutes. It takes a vital shot to kill a deer in twice that time. If you wound a deer it is going as fast and far as its strength will permit. If it lives only one minute it is capable of putting at least one-third of a mile between it and the hunter. The question is, how many hunters are expert enough to follow a deer for that distance on dry leaves; or how many would think of doing it if they could? Secondly, it gives the hunter no choice whatever to pick out his game. He is compelled to take that presented as he hunts through the woods looking for any and all. Third, it is killed at a time of year when it can neither be kept, transported home, nor utilized to any advantage. No other State in the Union has, I believe, so inconsistent a game law as this. The clause limiting the number to three deer is all right. But if it allows the killing of three, why not allow the sportsman to ship them home for use? and if it is lawful to kill three in August, September or October, when it is doubtful about keeping even one, would it be any worse for the hunter to wait and kill his three deer in November when it could all be saved? I think not. In fact, I never thought it economical in any sense of the word to hunt deer except on a good snow, then the fawns are all weaned and bucks and does are in prime condition. A good snow is very essential in assisting one to pick out, follow and get a shot at a nice buck instead of a small doe or fawn, and more essential still is it when a deer is wounded, as it can then be followed up and secured by a second shot. Thus he is quite sure of securing the three first deer shot at, or at least seriously wounded, and those only that he cares to bag, while on the other hand he is groping, as it were, in the dark, shooting at and wounding several undesirable specimens to slip away and die where he succeeds in bagging one. I am acquainted with no still-hunter that ever preferred October to November for hunting deer. To have the time extended for one month, or the latter month substituted in the place of the former, would in my opinion be sanctioned by every still-hunter throughout the State, and at the same time save at least one-half the number of deer placed *hors de combat* during October, as the law now stands. CAP LOCK.

FREWSBURG, N. Y., Nov. 9.

THE SITUATION IN MAINE.

IT is pleasing to note that the position of the FOREST AND STREAM on the Maine game warden murder is being fully sustained by the entire newspaper press of that State. If ever an incident—a tragedy—was making public opinion, it is that one. The Portland *Transcript*, one of the most popular journals in the State, and one having a wide circulation, says editorially: "The cold-blooded murder of the two game wardens at Wesley is the legitimate outcome of the lawless opposition to the preservation of game which exists in various parts of the State, and which has hitherto shown itself in many outrages perpetrated on those whose duty it is to enforce the game laws. It calls for the vigorous action of the State authorities to insure the arrest and punishment of the perpetrators of the crime. The lawless element must be taught that the game laws, enacted for the good of the whole community, are not to be set at naught by those who would exterminate the wild animals of our forests for the sake of temporary and petty gain. * * * In the hunting season the pursuit of game is open to all who choose to engage in it in a proper manner. All have an equal chance, but those who unlawfully hunt the deer with dogs, which drive them from the State, are not content with this, but are as reckless and selfish as those fishermen who blow up the fish with dynamite and thus slaughter more than they can use."

The Lewiston *Journal* and the Portland *Press* are both equally outspoken in their denunciation of the terrible crime, and in this they are closely followed by the Augusta and Bangor papers. It is now understood that Governor-elect Bodwell will, in his inaugural, call especial attention to the persecution of those who attempt to enforce the game laws, and also to the value of the fish and game to the people of the State. And it is expected that he will recommend further legislation in the direction most needed—in the way that shall lead to the more perfect enforcement of the admirable code of laws already on the statute book. He will, it is understood from good authority, touch upon the value of the summer visitors to the State, and will mention the fact that it is the fish and the game which may or may not exist in the State which forms the chief attraction. The fish and game may exist in abundance sufficient for the reasonable sportsman, who desire to fish and hunt in the proper season, but it will be exterminated if left to the poacher, which it is almost impossible to reach under the stinted provisions which now prevail for the enforcement of the laws. To say nothing of Governors past, it is now hoped that Maine has one who is not lukewarm on the subject of fish and game protection. It is also believed that the inaugural will contain a recommendation that legislation put a stop to the foolish killing of game and birds that annually takes place in the so-called shooting matches at Thanksgiving time.

So it is plain that the prospects are excellent for first-class legislation in the way of the enforcement of an excellent list of game and fish protective laws in about the only State where there is enough of the nobler game fish and larger game left to be worth protecting. If Maine should create an extra warden to attend to about every poacher who will dare to go down there from any other State next season with the intention of breaking the fish and game laws it will tickle the FOREST AND STREAM immensely. Besides if some legislation should be made that should look toward the lumber camps in winter, where it is usual to serve dried up moose and deer meat to the poor French Canadian laborers as often as it can be caught, why this would give the poor fellow who does the catching a chance to make the acquaintance of a game warden in the season of deep snows, when it is easier to catch moose and deer than it is to chop logs. The proprietor of the lumber camp may also be made to feel that the State has appropriated money enough to enable the game warden to make him a social call several times during the winter. Then it is also possible that the Tobique Indians who infest the borders of Maine for the sake of crusting deer may be made to feel that there is a power able to reach them, even when the snow is the deepest and the crusting the very best. It is all a question of the means to do it with, and the noble moose, deer and caribou, and the gamy trout and salmon of Maine will be preserved for the future pleasure of everybody who is willing to fish and hunt within reasonable bounds. Give the present able and earnest Commissioners of Maine the money and some of the first woodsmen in the State will suddenly turn game protectors. And woe be to the Tobique Indian, the lumberman or Boston or New York poacher when such a woodsman gets on their tracks. It is only a question of the money to pay that woodsman with, and Maine can afford to grant it. It will prove a mighty paying investment, and the returns from summer visitors will come back in millions of dollars. It is an absolute truth that Maine's fish and game can easily be made worth far more to the people of that State than her lumber.

McFarlan, one of the game warden murderers, has crept into his own town and surrendered himself to the officers, and he is now confined in Machias jail. It seems to be generally thought by his neighbors that as he did not actually do the shooting he will escape punishment; but the fact of his being in the company of Graves, who did the shooting, and the fact of his hiding with him for several days, will be used against him by the prosecution. One report says that he was heard by the boy who saw the shooting to urge Graves to shoot. If the boy swears to this in court, McFarlan must suffer the punishment of an accomplice. The murder has set the true animus of the section where it took place into a blaze, and there are newspaper accounts of the terrorizing of the friends of the game laws by their neighbors of a contrary belief. There are accounts of the tying of a boy's hands behind him and taking of his gun away for the reason of daring to be in the woods gunning; and accounts of firing four or five rifle shots very close to a boy who had been cutting hoop poles. These boys are understood to be sons of those friendly to the enforcement of the game laws.

SPECIAL.

ARKANSAS GAME NOTES.—Malvern, Ark.—Game of all kind except quail is scarce in this neighborhood. Immediately after the first of September, the dogs are turned loose and every deer in the hills is driven to the swamps in the eastern and southern part of the State, and we hardly ever see the sign of one after the first two or three weeks of September. There are a few turkeys, but they are very shy and hard to find. We had a cold spell about the first week in November, and a good many ducks and geese came from the north and furnished good sport along the rivers and bayous for a few days, but the weather since has been warmer and they have gone again. Quail are very plenty in the woods and fields and furnish the surest means of sport we have. Wolves have been very numerous this fall and have destroyed large numbers of sheep and hogs. The farmers have poisoned them upon every opportunity until they are becoming beautifully less. Probably they have kept the deer from increasing much during the summer. A hunter a few miles north of here, a few days ago, killed a very large animal of the cat kind, which the hunters generally pronounce to be a Mexican lion.—LEW WILLOW.

ATLANTICVILLE, L. I., Nov. 26.—A young swan was shot and killed by one of the Jackson gunners to-day. It was a beautiful specimen and I believe the first swan that has ever been shot in the waters of Shinnecock Bay.—OLD GUNNER.

THE CANADIAN BACK LAKES.

[Concluded from page 345.]

I SOON relieved the canoe of her load, and while doing so a man came down to the shore and kindly lent me a hand. He said he had a small tent close by, and had been here for a fortnight fishing. The trolling for mascalonge was excellent; had killed a great many fish, some large ones; a day or two before he had caught one that weighed over 25lbs., and that morning he had got hold of a monster, but it had broken away from him after a severe struggle. From his account, and also from what I heard from others, I should say that this part of Sturgeon Lake, the reach between Fenelon Falls and Sturgeon Point, must in the proper season be a very paradise for those fond of mascalonge fishing. I found that I was three miles from the hotel, and thinking that the wind would go down with the sun, and as it was full moon, I determined not to pitch my tent but wait, as it was about half past five, and paddle around to the hotel by moonlight.

On the rising ground above the lake shore was a nice brick farm house, built beside a large old rambling wooden one, with verandahs around it, but evidently unoccupied and falling to ruins. I went up to the farm and got my milk pail filled, and the puppy and I made a hearty supper of bread and nice sweet milk. At the farm I had seen the owner for a moment, and he now came down to the lake shore, and, lighting his pipe, we sat together on a log and talked for an hour and a half. We then adjourned to the fisherman's camp near by and talked for another hour, by which time it was 9 o'clock, and the wind instead of falling had rather increased, which made paddling to the hotel that night quite an impossibility. The farmer said, "You have not put up your tent; you had better come up to the house and have a bed." "Thank you," I said, "but I can't leave my traps lying about on the lake shore all night with no one near them, so I will sleep in the canoe." "Well, you know best. You are welcome to the bed, but I must say sleeping in a canoe seems to me a queer way of taking pleasure. Good night."

I pulled the canoe a little way from the shore, stood my dunnage bag up near one end, spread the fly of the tent over it and each end of the canoe, the height of the bag raising it sufficiently, spread my blankets in the bottom, slipped under and lay down with the puppy at my feet; and slept without moving till six next morning. On waking I found it a beautiful still morning and the lake quite smooth. So loading the canoe I paddled round to the hotel in time for breakfast.

In talking to the owner of the farm the evening before I remarked the old wooden house, and asked him to whom it had belonged. He said, "This is the old Langton homestead. I purchased the farm from Mr. Langton when he left it. You of course know that he afterward became Auditor General. But he did not understand farming. And he got men to act as foremen for him who had been only accustomed to cultivating a few acres of land in Ireland. They knew nothing of the country and its ways, nor of farming on a large scale, and they could not make it answer. The present owner of the property, however, I heard, had been most successful, and now owned over 300 acres there, this being one of the finest farms in that part of the country. And certainly the appearance of the large and comfortable brick house he had built, with the commodious barns and the number of fine cattle seen, would tend to corroborate the statement; but he was a practical farmer, and the evening I was there his wife and daughters were milking the cows themselves. Forty years ago there were only about three families, all gentle people, who had settled on the shores of Sturgeon Lake, the Langtons, the Dennistowns and the Dunsfords. It was then only accessible by Peterboro, and a long water carriage from there; and it was verily in the backwoods in every sense of the term. After a trial of a few years they all left, finding the thing virtually impracticable, came out to the front again and adopted the various professions, some took to law and became judges. Mr. Langton became Auditor General, and so on. How different that same part of the country is now. It is tapped by railways from Lake Ontario at three or four different points, and has many fast and comfortable steamboats running all over the waters where, when these families settled there, was only seen the bark and log canoe. The journey to the front (meaning any of the towns on Lake Ontario), which then used to take days, can now be made in a few hours. Had those early settlers been able to pierce the future, and could they have known what the present state of the country and the present value of their farms would be, they might not have given them up as they did and fled back to a better settled portion.

My friend from Toronto joined me at the hotel on Saturday evening, by boat from Lindsay, but by some blundering a canoe which was to have been sent from Lindsay to meet him, did not turn up, so we were compelled to wait at the hotel till Monday morning, when he had to go back by the steamer to Lindsay for it. On his return we started down the lake in the afternoon for Emily Creek, about four miles on the south shore, expecting to get some shooting there in the evening and next morning, but the wind which still blew freshly from the west, made the lake too rough to cross to the south shore, so we were obliged to camp on the north shore opposite the creek, and lost the evening shoot. The next morning we were up long before daylight and crossed the lake, but the shooting proved very poor. There were few ducks, and these were wild and flying high, which made our bag a very sorry one. We returned to camp, had breakfast, and decided to follow the creek about twelve miles up to Emily Lake, in which it takes its rise. Crossing the lake to breakfast, my friend killed a nice mascalonge, which made a very welcome addition to the meal. By the time we had breakfasted, struck camp and loaded the canoe, the forenoon was well advanced.

We crossed the lake, which was pretty rough for our loaded canoes, safely, but only by careful paddling, and went up the creek about six miles, where, finding a nice camping place, we decided to remain for the evening and see if any ducks flew up or down. Not a bird was seen in the evening, which led us to doubt if there were many at the lake, and what my friend was told by a young farmer who shot a good deal, decided us not to go on the remaining six miles in the morning, but to return to the mouth of the creek again and try the evening and morning shooting there. This we did, but without any success, the ducks being as scarce and wild as on Tuesday morn-

ing. I understand that they had been shot a great deal there for the previous fortnight, which had driven them away and made them wild. Good bags, however, had then been made. There is a very nice camping place at the mouth of the creek on the west side, and the trolling on the bay is said to be good.

This brought us to Thursday, and we decided to return up the lake and try the shooting at the mouth of Scugog River, where it enters Sturgeon Lake. We had a stiff paddle up the lake, stopping at the hotel at Sturgeon Point, where we had dinner, and afterward went on to Pleasant Point, about three miles westward and on the south shore, and about a mile from the mouth of Scagog River. This is a nice, high, dry bank, overlooking nearly the whole lake both up and down, and also facing the reach which leads to Fenelon Falls. It is surrounded by pine trees and has a short, close turf, which makes it one of the most pleasant and favorite camping places on the lake; but this evening we had it all to ourselves. It being now the middle of September, the mere pleasure camping parties had all left and there happened to be no other shooters there.

Friday morning broke with a strong N.W. wind blowing, which brought such a heavy sea into the shore that getting off in a canoe was impossible, so we had to pass the time on shore as best we could. To help to do so we took a stroll with the pup through the neighboring woods to look for partridges. The puppy took to hunting famously and was very biddable, hunting round and round you but never going far from the gun. We found some birds, but the foliage was so dense that it was impossible to see them in time to shoot. The next day, Saturday, my friend had to leave Lindsay (almost ten miles from camp) for Toronto, so, as the wind had fallen, we struck camp and paddled up the river to that town. We reached it at one, and I went right on up the river bound for Lake Scugog, ten miles further, while my friend took the train to Toronto; and I was again all alone. It was half past one when I left the town, and at half past four I calculated that I could not be very far from Scugog Lake, but as it was forty-one years since I had been there before, on which occasion I had been paddled by an Indian right through from Bobcageon to Port Perry, I could not determine my whereabouts exactly. As the evening, however, was coming on apace, and as I was now again single-handed, I felt that it was time to be getting into camp somewhere.

Where I was the river was bordered on each side by wide and dense beds of wild rice, through which I could not force the loaded canoe, so I anxiously looked out for a landing place as I paddled slowly along. At last, on the east side of the river, I came to a small opening through the rice bed, which led to a grassy bank, and I quickly shoved the canoe ashore, and set to work to get up my tent and make preparations for the night. It turned out afterward that I was only about one and a half miles from the lake, and if I had only gone about one-eighth of a mile further to a point of woods on the other side of the river, I would have found the nicest camping ground between Lindsay and the lake. I intended to have gone on to the lake next morning, Sunday, Sept. 19, but when I awoke the pattering of the rain on the tent gave me notice of a probable wet day, and the probability turned out a very wet reality, for a worse or wetter day I think I never passed under a tent. I kept the stove hard at work, and was quite comfortable till about three in the afternoon, when a heavy black cloud came over from the west (accompanied by a high wind), from which the rain descended in solid water. Shortly afterward, while sitting on my cartridge box (which served me as a chair) beside the stove, I happened to look round to the rear of the tent, and to my horror saw two streams of water coming under the ground cloth from each side and uniting in the center where, there being a low spot, a little lake was soon formed. I always carry a small spade with me, so putting on an oilskin coat, I seized the spade and made a drain to the outside, which soon cleared the tent of the water. This deluge was the expiring effort of the storm. The rain ceased shortly after, and by keeping the stove going hard by bed time things were only a little damp. Luckily my bedding had been piled on my waterproof blanket, which happened to be on a high spot in the tent, so it was not wet. And after all I slept that night quite dry and warm. This storm must have been cyclonic in its character; early in the morning when I awoke the wind was N. E., and it gradually veered through the day to the south and west, the rain continuing all the time and the wind blowing a gale, till about half past three in the afternoon, it finished up with the furious wind and rain squall which deluged my tent from N.N.W., and later in the evening the wind got around to due N., having during the day gone nearly all around the compass.

The next day everything was so wet that I remained where I was to allow things to dry; and on Tuesday morning I struck camp and went on to Lake Scugog. Where the Scugog River runs out of the lake there are very large rice beds and a great deal of marsh and bog, which looked like good ground for ducks and snipe, but I did not know where to camp. I was paddling along the west shore of the lake, keeping on it, as it was the weather side and the water was smooth, about a mile from the mouth of the river, but I could see no good camping ground. On the other side of the lake, however, which was here about half a mile wide, I noticed a nice green bank in a nook in the woods, with what looked like a sandy beach at its foot for a landing place; so on the chance I put the canoe's head for it and ran across.

I was correct in my conjecture; it turned out the nicest camping place I had struck, quite sheltered from all but a S.W. wind, fronting right up the lake and only about a mile from the rice beds at the mouth of the river. I remained here till the next Sunday, having fair shooting, particularly at snipe, twenty brace of which I killed on Thursday and Friday. The first evening I went into these rice beds, I saw a good many snipe flying about, most of which seemed to pitch right into the middle of a large rice bed. This puzzled me, but next morning I worked my way to the spot, where I found that in the middle of the bed there was a patch of black muck about 20yds. square and it was on this that the birds were lighting. I returned to the place in the afternoon, and taking up a position in the rice bed, about 25yds. off, I sat in the canoe and killed ten brace of birds as they pitched into the place before leaving; and ten brace more next day. It was the funniest snipe shooting I had ever met with. When pitching into the place the snipe descended with great velocity and I had to take them just as they topped the rice, which was here almost 5ft. tall. I missed some birds at first—shooting over them—but I soon got into the hang of the thing, and afterward by shooting a little under them as they dropped missed but few. I here made undoubtedly the most singular shot at snipe I had ever done. Four birds pitched at the same time into this place, three a little ahead of the fourth. I fired at one of the three just as they dropped behind the rice, killing the bird, and with the second barrel killed the last bird, but when I went to pick them up I found that my first barrel had killed the three first birds; they must have bunched together and got into the line of the first barrel just as I pulled the trigger, so that I killed the whole four snipe with the two shots.

Sunday, Sept. 26, opened rainy and disagreeable, but clearing up about 10 o'clock I struck camp and paddled down to Lindsay to send my game home, returning to the same place on Monday morning. The week's shooting here had made the ducks quite scarce and wild; and as I was anxious to reach Port Perry, at the head of the lake, on Tuesday morning I started for Washburne's Island and camped on it in the afternoon. This island affords very nice camping ground; it is on the west shore of the lake, and behind it is a large shallow bay, a great place for the fall ducks when they come in. There is also all around it some of the best trolling ground for mascalonge in the lake. Here the puppy exercised some very back-handed retrieving. In the evening I brought in three ducks and a snipe and threw them down at the side of the tent in the inside. Next morning while lying in my blankets, before getting up I amused myself by making her bring me from where they were lying, all the birds, one by one. I then jumped up and set about getting breakfast, paying for some time no attention either to the birds or puppy, but afterward in going to fold up my blankets I found one of the ducks and the snipe missing. She had carried them away and hidden them and all my efforts to find them or to get her to go to them were fruitless.

The next morning I purposely left a mallard I had shot lying in front of the tent, and watched, and bye and bye Madam quietly picked it up, went off to a bunch of rushes 50 or 60yds. away, and deliberately hid it. It is a queer propensity and I wonder if it is peculiar to the breed. We have all seen a dog hide a bone or a piece of meat that they did not want to eat just then, but picking up game and hiding it is quite a different thing.

Wednesday I spent quietly in camp, and started for Port Perry on Thursday morning, but on getting to the open lake I found the water far too rough for me. It was blowing hard from the S. W., so I had to come back and put my tent up again. The following morning, the wind having fallen, I made another start, and after a paddle of sixteen miles reached Port Perry at 4 in the afternoon, taking the train for Toronto next morning. I killed a nice mascalonge on my way up. There are plenty of nice camping places between Washburne's Island and Port Perry on both sides of the lake where good shooting could be had, and trolling all the way, but my time having expired I did not stop at any of them. Between these points too one cannot go wrong for fall duck shooting, the lake all the way being lined with rice beds on both sides, which furnish them with ample feeding grounds.

So ended a very pleasant trip. I had not a great deal of fishing or shooting, but enough of each to keep the camp going; and I sent some game home. I might, I suppose, had I gone severely in for them, have had more of both; certainly of fishing, as almost every mile of the route was good trolling ground for mascalonge, and bass could be caught still-fishing. I had plenty of exercise and plenty of fresh air, with any quantity of the finest pure milk and cream, with sweet and wholesome home-made bread and butter, bought from the farmers' wives on the route. I used to get a 2-quart pail filled with sweet milk just as it came from the cow, and a quart of cream for 10 cents, and generally they thought it too much, saying I was welcome to a little cream and milk, they never missed it. Porridge and cream nearly every morning, followed by breakfast bacon, home made bread and the sweetest of butter, with sundry cups of fragrant coffee, make a good breakfast, and if the camper's gun, trolling line and rod cannot furnish him every day with materials for a good dinner on this route, the blame will lie with himself. When next fall comes round I hope to make a similar trip, not perhaps exactly over the same ground, but on a route similar in character. Any one desiring to make a trip over the route I have described, I would recommend to go straight to Coloconk at the head of Balsam Lake, where the railway from Toronto terminates. By following the eastern shore of the lake to Rosedale, at its foot, they will pass through the very best fishing grounds in it for bass and mascalonge, and will avoid the necessity of teaming canoe and traps, which is always a nuisance. For a pleasant trip I do not know that the rest of the route can be much improved on.

When paddling through Lake Scugog with the old Indian, on the occasion I have alluded to, forty-one years ago, we were traveling in the night. The month being July we thus avoided the heat of the day. While crossing a wide bay in the middle of the night, and about half way over, a heavy thunder squall, with high wind and drenching rain burst on us. The old Indian thought that the canoe, a small bark one, would swamp, and he turned tail and made for the shore, which we reached wet to the skin, with the canoe half full of water. Our matches had all got wet, we had no guns and no means of kindling a fire, so we turned the canoe up and crouched, shivering, under it, till daylight, which at that season fortunately came early. As is often the case with these summer thunder squalls, when it cleared up the wind went round to the north and it turned quite cold, and a more wretched and forlorn pair, with nothing to eat, it would have been hard to find, when we got into the canoe again to continue on our way to Port Perry, then a hamlet with a few houses and a plank road leading to Whitby on Lake Ontario. When paddling up the lake from Washburne's Island, just now, I tried to recognize the scene of this occurrence, but quite failed to do so. It is so many years ago, and the appearance of the lake is now so changed from what it was then, with hardly a clearing on it, that it is not surprising I was not able to do so. Now it is lined with beautiful farms, sloping down to its banks, and comfortable homesteads, and Port Perry is a thriving, bustling, busy town of 2,000 people, in the midst of a splendid agricultural country, with three trains a day to Toronto, by two different routes—an instance of the rapid change which comes over a country when opened up by railway communication. W.

P. S.—Apropos of the Clumber puppy, I may say that since writing the above I have spent some days snipe shooting on the Holland Marsh, near Lake Simcoe. After the first day she took to hunting the marsh like an old setter. She never passed a bird, or failed to find a wounded one, and she brought me every bird that I shot. I killed nearly thirty brace. She never ruffled a feather, and if a bird was not killed dead she invariably carried it by one of its wings. The dead bird she took in her mouth. She always hunted to the gun, was perfectly biddable, and a low whistle and wave of the hand would send her in any direction I wished. She seemed to take to it naturally, and, as I have said, after the first day, she seemed to understand exactly what was wanted and what she had to do, and she was seven months and one week old. W.

MINNESOTA NOTES.—Pillsbury, Nov. 24.—The season for small game in this immediate locality has been more than an average good one. Prairie chickens were more numerous than ever before, and some excellent bags were made; in several fields large coveys were undisturbed, and by another year the shooting bids fair to be of the best. During October duck shooting was good enough to satisfy anybody. I could easily bag from twelve to fifteen in two hours absence from my house, and that was good enough for me. Yesterday in a driving snow storm I shot a fine fat mallard, which will make an acceptable side dish for my Thanksgiving dinner. Hundreds upon hundreds of ruffed grouse have been shot in this locality during the past six weeks, and still the wholesale slaughter continues. Deer hunting has been in full blast for the past two weeks or more, though the open season does not commence until Dec. 1. I presume fully 100 saddles of venison are hanging within two hours walk of this village. I have not a word of condemnation for the honest settler, who at any season kills a buck or barren doe for his own use, but this market hunting out of season merits punishment. It never will be, however, until the last deer is killed or game wardens are appointed and paid by the State. Rabbits are altogether "too numerous to mention;" the woods literally swarm with them. Squirrels are also plenty.—J. F. LOCKE.

ARKANSAS AND ILLINOIS.—Charleston, Ill., Nov. 26.—Yesterday a party of sportsmen returned from Pera Gould, Arkansas, after three weeks recreation. Capt. Wm. A. Jeffries, Henry Gramsley, A. N. Bain, Dr. Mort. Chambers, James Skidmore, Jonathan and George Lee, R. S. Curd, Vol. Mount, and the cooks, Ed. Mason and Pleas Jones. A. N. Bain killed a two-pronged buck and Jonathan Lee killed a two year old doe. They killed what small game they could consume, as follows: Quail, squirrel, ducks, rabbits and turkey; and they caught a great many fish, bass, goggle-eyes, newlights, catfish, buffalo and gars. They reported game from fifty to seventy-five per cent. scarcer than it was two years ago. Game is very scarce about this vicinity. Quail, ruffed grouse, turkey, squirrel, rabbit, pinnated grouse and deer none. On last Saturday I was squirrel hunting three miles west of here and I killed seven fox squirrels. The hair was black on the lower half of one of them. It looked quite odd, one half fox and the other half black squirrel. I will stuff it.—J. B. D.

FOX SHOOTING.—North Ferrisburgh, Vermont.—*Editor Forest and Stream:* I see communications from some of the readers of FOREST AND STREAM quite frequently in regard to the size of shot they use. Most of those who write state that they use Nos. 6 and 8 and consider these suitable for anything. I have shot fine guns and they were considered fine shooters, too, but I am still looking for a gun that will throw No. 7 or 8 shot with sufficient force to stop a fox at 8 or 10 rods. Our hunting here is mostly for foxes, and for loads we use from 4 to 5drs. good powder and from 1¼oz. to 2oz. BB drop shot in a 10-gauge gun. One of the leading hunters of this place has stopped a fox at 15½ rods with such a load; the distance was measured, not guessed. Ruffed grouse are fairly plentiful this fall, but foxes and ducks are scarce. A few years since ducks were plenty in fall and spring, but city campers and pot-hunters are fast decreasing their numbers and soon will be a thing of the past unless the law is used to a better advantage than now.—TEN-BORE.

MAINE.—Kentz's Hill, Me., Nov. 24.—Grouse have been fairly plenty this fall but unusually wild. At Belgrade depot, Maine Central Railroad, last Monday, Game Warden I. A. Carr seized a box containing twenty-six grouse directed to a firm in Boston. The shipper, Hosea McGuire, of Rome, was arrested and brought before Judge Weston and fined $135 and costs. He will pay his fine. The birds had been shot by Rome hunters. Our game law forbids the transportation of game to other States. We are in hopes that the Legislature will this winter enlarge appropriations for the better protection of our game and fish.—W. F. M.

WILDFOWL.—Salem, Mass., Nov. 29.—There are a few sheldrake (*M. serrator*) and whistlers (*B. americana*), with some old squaws (*H. glacialis*) in our harbor. The whistlers maintain their usual reputation for shyness. As soon as we get a light snow the chances for rabbits in the towns just outside of here ought to be good. I saw a nice bunch of quail recently. They were hanging in a provision store. They were well grown and plump birds. They came from Topsfield.—X. Y. Z.

CAPT. ANTHONY ELMENDORF, of Brooklyn, died of consumption at Big Springs, Texas, Nov. 19. He was born in Waterloo, in this State, in 1840, and went to Brooklyn at the age of 16. He served throughout the war and became Captain of Company G, of the Forty-eighth Regiment. Upon his return he was for 10 years captain of Company E, of the Twenty-third Regiment, and was proposed for Colonel, but four years ago his failing health compelled him to go west, and, with Col. A. C. Keeney, he bought Valley Ranch, near Big Springs. Capt. Elmendorf was a well-known sportsman and trap shot.

A EUROPEAN PHEASANT was brought home in the game bag of a Brooklyn sportsman who was shooting on Thanksgiving Day in Rockland county, N. Y., in the vicinity of Tuxedo Park. The bird was one of the overflow from the Lorillard preserves. It was two-thirds grown, in poor condition and plagued with hosts of white lice.

HUNTING AND TARGET RIFLES.

Editor Forest and Stream:

I note with pleasure the communication of F. M. Wilcox in your issue of Nov. 18, on the subject of hunting rifles. It is somewhat refreshing to know that there are men who, although they believe the muzzleloader vastly superior to the breechloader as a hunting weapon, yet can discuss the subject in a temperate manner. It has been asserted repeatedly in FOREST AND STREAM that a round ball of a given diameter is much more deadly in its effects on large game than an elongated bullet of the same caliber. This is the pet theory of the muzzleloader advocates, and it has not been denied in any communication appearing in this journal since I have been a subscriber thereto. In spite of this theory, which has been allowed to stand unchallenged as an invincible argument in favor of the muzzleloader, its sponsors gravely tell us that the elongated bullet will tear small game to pieces, and leave it almost unfit for food. There seems to be a contradiction here. Will some one kindly explain why the round ball tears a large hole in a deer and it drops dead in its tracks, while a long bullet of the same diameter cuts a clean hole through the animal, which then proceeds to run away, and the hungry hunter goes minus his supper, while the same practice on squirrels and turkeys has the opposite result?

I have often heard advocated (and more especially among the muzzleloading fraternity) the practice of using greatly reduced charges of powder for squirrel shooting. This I believe to be a positive disadvantage in any rifle, as the reduction of powder will increase the curve and decrease the accuracy of the shooting at unknown distances. Even in target shooting at known distances I would advocate the maximum charge of powder the gun could be made to utilize without causing irregular shooting. It has been my practice during the past four or five years to use 105grs. of powder in all target matches at 100yds. range. The rifle is a breechloader, and I use the same charge at 500 or 1,000yds. If I were to reduce the charge of powder I would expect to get correspondingly inferior shooting at 100yds. This does not refer to shooting at the popular targets, where it is possible to get so-called perfect scores, but to string measurement, where the distance of each shot from the center of the target is accurately measured and credited to the shooter. The same holds good with the hunting rifle. It will do its best work with its maximum powder charge, regardless of distance.

In regard to weight and caliber, I think Mr. W. is on the right track, and although his views in regard to the merits of the .32-cal. may be a little extreme, I fully indorse what he says in regard to the weight of an all-around hunting weapon. Like "Nessmuk" and many others, I prefer to go light in my hunting and fishing trips. My shotgun weighs 6¾lbs. It is a single breechloader, 12-gauge, and handles very nicely. I am satisfied with its execution. My rifle weighs a small fraction over 8lbs. It is too heavy, but, being .40-cal., if lighter it would kick. The fault is in the caliber. This gun shoots 60 grains of powder and a hollow pointed bullet of 223 grains, a little better than a proportion of one to four. It is a single breechloader with barrel 24in. long, and balances well for a gun of its weight. And right here is where the repeaters are lacking. They balance badly because the barrel is too far away from the shooter. The entire gun is too long for its length of barrel. As there may be many readers of FOREST AND STREAM who own long barreled target rifles and would prefer a handy hunting rifle, I will tell them how to make the change. Get an 8in. hack saw and saw off a piece from the muzzle end of the barrel so as to reduce its length to about 24in. File off square and polish with fine emery paper. Countersink slightly to take off the burr inside the bore. Get the lightest bullet you can find in the market to fit the gun. If such cannot be found and you have a mould, drill a hole in same and insert a plug, so as to make a hollow pointed bullet. If this bullet is too heavy to give the desired proportion of powder and lead, get a mould made. Have a set of Lyman sights, front and back, attached to your rifle, and you will probably have a better hunting rifle than you could have had made to manufacturers to make for you. My choice of the rifles now on the market would be a Maynard .35-55-170, or a Remington .32-40-120, or a Winchester .38-90-217.

E. A. LEOPOLD.

NORRISTOWN, Pa., Nov. 24.

Editor Forest and Stream:

I have read the letter of Dr. F. M. Wilcox, in your issue of the 18th with a good deal of interest. Not a word have I to say against his theory so far as it goes. But sportsmen, like women, are, in a great many instances, wedded to fashion, and before we can induce our hunters to abandon their magazine and large-bore weapons the fashion must change. Now before the fashion changes some one must set the fashion, and that some one must be a man or club of good repute. I know every sportsman who has given the question a thought, knows that the game is as surely and certainly doomed as the Indian. All we can do is to ward off as long as possible the day of doom. Time will be when the hunter will not shoot his game. He will see it, steal up upon it and go away to tell round the camp-fire, not what he killed, but what he saw. I do not say that he will not take a shot at it, but the shot will not be with the rifle but with a camera! Smile if you will at the idea, but when a red deer will be worth a hundred dollars and a buffalo worth a thousand, paradoxical as it may seem, it will not pay to kill them. "Time enough yet to think of that," I hear some one say. Well, perhaps so; but these very people now say: "If our grandfathers had only been a little more careful of our forests, they would not be on the verge of extinction (from an economic point of view) to-day. Now, Mr. Editor, the first gun I ever had was a foot or more longer than the owner, and I have used one ever since. I have hunted white bears and walrus in their own ice fields, and deer in our northern woods, and although mine may be an exceptional case, I never had any use for a repeater. For ice bears a heavy bore is necessary, the one I used lately being a Snyder. And to those who go to such out-of-the-way places for sport I say take a whole armory with you if you like. But to the nine hundred and ninety-nine who are satisfied with a few weeks' deer hunting near home, I heartily indorse Mr. Wilcox's statements re a small bore for deer—not on the ground that it is more deadly, but that it is deadly enough. Give the deer a chance, and if you meet a hound in the bush the caliber is quite large enough to prevent its ever leaving there. We cannot expect to be able to induce the present generation to abandon the breechloader, but is it not possible to induce our sportsmen to abandon the magazine gun and use a small-bore singleloader?

Now, Mr. Editor, this is a rambling way of stating the case, but you know what I mean and you can do more by "writing it up" than any one else. You can help to make the single smallbore breechloader "fashionable."

TRADE BALL.

Editor Forest and Stream:

Certainly Mr. W. M. Wilcox "fired off" a big gun in your last issue. I can't see the matter in the light he does. He claims a low trajectory to be a benefit to the hunter. This is all right. I agree with him; but is there not such a thing as getting it too low? I believe that by using too much powder the bullet is upset to such an extent that it "flies wild," consequently what you gain in flat trajectory you lose in accuracy. Take for instance the Remington .32-40-125 rifle, which led in the FOREST AND STREAM test. Soon after the test many persons thought that if this gun beat the others it must be the best, and consequently many gun companies had calls for such a gun using the same cartridge. Among them was the Massachusetts Arms Co., of Chicopee Falls. Now, this company makes a specialty of manufacturing fine sporting rifles, and as the calls increased, in order to please their customers they made a set of tools for chambering their guns for this cartridge, and sold quite a number of these rifles. The result was that in a few weeks complaints began to come in that those .32-40-125 guns would not shoot. Their only reply was that they knew that before they made them, but had only made them to order to please customers. They also claimed to such complainant that they could furnish him a .32-cal. that would shoot. Now they use to make a gun shoot 35grs. powder and 153grs. of lead; and you would be surprised to know how many of these guns are now in the hands of the best marksmen of the day shooting 200, 400 and 600yds. Many are the times that I have seen the workman who tests their guns put one after shot inside a 4in. ring at 200yds., using both patched and naked bullets in the same barrel, and shooting so evenly that no one could tell which made the better target. The majority of all game shot is killed under 200yds.

Now, if Mr. Wilcox will turn to the latest catalogue issued by the Winchester Arms Company, he will find on page 31, the trajectories of several of their new model guns, namely, .40-82-260, .45-70-405, .45-70-500, .45-90-300. In the .45-70-500 the proportion of powder is about 1 to 7, in the .40-82-260 about 1 to 3, in the .45-90-300 about 1 to 3, and the .45-70-405, 1 to 6. The trajectories are for 200yds. from 10 to nearly 13in., showing that the proportion of powder from proportion 1 to 7 to 1 to 3 makes a difference in the trajectory of only 3in. Not so very wonderful. Now turn to page 34 in the same catalogue and you will find a table of the penetration of these different guns. The .40-82-230 penetrates 11 boards and the .45-70-500 penetrates 18 boards. Now, do you suppose that in hunting if the bullet from the .45-70-500 should chance to hit a limb before it reached the game it would be deflected from its course as much as one from the .40-82-260 gun? Then in striking the game do you think the high speed bullet will do as much crushing service as the heavy one? If you wished to break a bar of pig iron would you use a light sledge or a heavy one? Which will drive a nail the quickest and easiest, a light hammer or a heavy one?

Now about breechloaders. One of the greatest faults with them is that they are not properly chambered and the cartridges do not fit. I have lately had a little experience in chambering a gun for a .50-70-405 cartridge. I chambered it so that a sample cartridge would fit nicely; but upon the arrival of several boxes I could not find another cartridge that would go in nearer than ¼ of an inch, and some of these varied so much that while one would fit tight another one would shake. Some of the shells varied 1-16 of an inch in length. Do you wonder the soldiers complain that the Springfield rifle won't shoot? The ammunition should be perfect.

It is generally acknowledged among riflemen that trajectory is only obtained at the expense of accuracy. When a breechloading rifle will shoot fifty consecutive shots inside a 4in. ring at 200yds. it is good enough for me. This the Maynard rifle will do and has done and can do again. I have one of these guns and know just what it will do, and my gun is no exception; their guns will all shoot as good as mine or better. Suppose, as Mr. Wilcox says, I should want to stroll out for squirrels or rabbits. I simply take off my large barrel and put in its place a .22-cal., and the change does not occupy more than one minute. Then I am completely rigged. The cost of ammunition is but 25 cents per 100 shots. Then, again, if I want practice for a coming match I put on the .22 barrel and shoot 100ft. at reduced targets; then when the day for the match comes all I have to do is to change the barrels and I am ready. You see, I get the same sights and the same trigger pull with the small barrel as with the large one, and use the same stock. Now, this practice is nearly as good as longer-range shooting and costs—nothing. The barrel I use for hunting is a .40-70-270. I have in reality three guns, .22, .32 and .40-cal. barrels. These I take in a case with one stock on many pleasure and business trips, as they all can be packed in a small case and do not attract attention. Then, when camping, the .22 is just the thing to shoot about the camp, as it makes no noise. I have used this at 200yds. range with good success, but find it shoots best at 100yds.

I have no "axe to grind" in writing this, and am in no way connected with the Massachusetts Arms Company or the sale of their arms; but I am interested in the facts of the case, and if can learn more I should like to do so.

Will some one tell us do different guns using the same cartridge kick differently?

MAYNARD.

CHICOPEE, Mass.

Editor Forest and Stream:

In your valuable paper of the 25th inst., I find a request from Mr. Romer that I answer two questions. 1st, Why the muzzleloading rifles used in the FOREST AND STREAM trajectory tests were not hunting rifles. Ans.—By the manner of loading. 2d, To make good my claim that the difference in the heights of bullets on the screen at 100yds. on a range of 200yds. shows the accuracy of the rifle. Ans.—I have talked with some of the target shooters here using heavy rifles fitted up with the muzzle paraphernalia for fine work, and they say, "Give me a gun that will hold the elevation as closely as I can hold the windage, is all I ask." If Mr. Romer wants more proof, I am instructed to invite him here to take part in the next match of the N. Y. P. and O. Shooting Club, and they will try to demonstrate the fact on a 200yds. range.

My further statements in regard to the FOREST AND STREAM trajectory trials, I believe, were based entirely on the report of same contained in FOREST AND STREAM at the time, and I accepted the report then, and do now, without a question.

What little rifle shooting I do is done off-hand. I am using a Stevens (instead of a Mayard) rifle .32-40, 34in. barrel, 9¾lbs., with which I have recently made the best shooting I have ever done with any rifle, and yet I am not happy.

Camp-Fire Flickerings.

"That reminds me."

196.

THE hero's name, for purposes of this sketch, was Hopper, and as a successful hunter I have never seen his equal. The intuitive knowledge, buoyant enthusiasm, untiring muscle, keen eye and cool nerve that mark the thorough sportsman were his in a remarkable degree. When hunters of common stripe searched day after day for deer in vain, he knew just the happy nook on the mountain side where a buck was sure to be lying in blissful seclusion, and would bring him to camp with almost miraculous certainty. Deeply versed in all the witching lore of woodcraft, he would follow the trail of a wounded deer with a skill and accuracy that called forth the admiration even of the Indians. He had his foibles and weaknesses, however, or he must have been more than human. Next to his passionate love for all kinds of sport was a jealous devotion to a noble jet black beard that formed his most notable feature. This darling of his heart kept him tolerably well engaged in his leisure moments, and detractors were not wanting who insinuated that a pocket comb and glass were as essential items of Hopper's equipments for a morning hunt as were rifle and ammunition.

Almost on a par with his fondness for the outward and visible sign of manhood was his love for practical joking. Any sort of larking or horse play that might be proposed always met with his warm approval and support; and he prided himself—with good reason, too—on being just a trifle more wide awake than the balance of the boys, and on always having the laugh on the right side. As he said himself, "Bet your life, boys, you don't catch me; I guess I know the difference 'tween a fir knot and a blue grouse." To any one who has devoted half an hour or so to a vain search in the branches of a big fir for a cock blue grouse only to end his quest by a shot at an inviting gnarl on a limb, the force of the expression will be apparent.

One beautiful winter morning, so many years ago that one almost hates to count them, the writer and a friend left home together for a day's deer hunting on one of the most lovely of Vancouver Island's many lovely mountains. Before commencing the ascent and just as we were about to separate, Frank and I arranged to meet at a crescent-shaped wall of rock that stood about half way up the mountain and immediately below what was generally considered the best hunting ground in the vicinity. I had reached the western point of the crescent and was sitting on a big stone waiting for Frank and carefully scanning the ferny hollow below, when happening to look up, I saw Hopper standing midway between the horns of the arc, and like myself, inspecting the sheltered basin at the foot of the cliff. Apparently satisfied that no game was in sight he came over toward me, and long before we met, he began asking about Frank and the course we intended taking. While we were chatting away, a fine buck, that had been lying close under the bluff, jumped out and made tracks for the front.

Hopper hurriedly told me to pass quickly along to the other end of the rocks while he scrambled down the least steep part of them and went off after the deer. Having traveled along till I was clear of the bluff and in fairly open ground, I sat down and waited, the sun shining dazzlingly in my eyes. Presently I saw, as I thought, friend Hopper climbing slowly up through the brush toward me. I could catch a glimpse of him every now and then through the timber as he headed straight for me, but what was my surprise when, just as I was on the point of speaking, I saw that what I had taken for Hopper was really the buck, which he had cleverly driven toward me. The recognition was mutual, and before I had a chance to shoot he was clattering along the hill back to his old lair. I ran as fast as I could to the nearest point whence I could see into the hollow and managed to get a shot at him as he was trotting through the fern. I was blown by the run, however, and missed him.

The deer steered for the other end of the semicircle, and just as he had reached it and was climbing up a steep path to the summit, I saw Hopper on the flat beneath, raising his rifle to shoot. I watched the buck, which had stopped for a moment, and just then the rifle cracked and down toppled his majesty, rolling over and over to the bottom. Then Hopper called out, "Didn't want to spoil the meat. Nipped him in the neck. Sweet, pretty shot, wasn't it?" It certainly was, for, sure enough, the bullet was just below the head, and a long shot at that. We dragged the deer to a convenient spot, gutted him, and prepared him for packing, all the while admiring his size, the beauty of his horns, and so on. All at once a brilliant thought struck Hopper. "Say, let's put him by that log and prop up his head, so that when Frank comes along he'll think the blessed thing's alive and shoot at it." No sooner said than done; the buck was artistically and securely posed, and off we went above the rocks to try and get some more shooting.

Hopper took one side of a tiny stream that rippled through the woods and I the other. In less than five minutes I heard him shoot, and soon a couple of yearlings, buck and doe, came running over to my side of the creek. I blazed away at the leader and dropped him in his tracks, and then cracked away at the second with the other barrel. It ran fifty or sixty yards and then dropped. Satisfied with my luck I got the pair ready, shouldered them both, and started back for the rocks, thinking Frank might have come by that time. There was no sign of him, however, so I sat down for a rest and a comfortable smoke. In a few minutes down came Hopper with a deer on his back. As he reached the edge of the bluff I saw him suddenly start back, drop the deer hurriedly from his back, and crawl stealthily to the front again. Pausing cautiously over the bank he took a long deliberate aim and fired. After a moment's pause for inspection he drew back a little and began to reload. The only object I could see to shoot at was a big eagle on a tree in the hollow beneath, but it seemed quite out of the range of Hopper's fire. Powder, ball, patch and cap being handy it took but a short time to reload. He carefully drew himself to the front again, took another steady aim and cracked away with the same result.

By this time I had begun to smell a tolerably big rat, but I gave no sign or my proximity, determined that the flash of conviction should come to him without any inside aid. It need only be said that four shots in all were fired before the unpalatable truth got firm hold of him that he had fallen into his own trap. When he fully comprehended the sell his active and eloquent gestures indicated that he was relieving his overcharged feelings by a little tall talk. Then he looked keenly all around three or four times till the grateful belief filled his soul with consolation that, if he had outwitted himself, at least no one, save himself was any the wiser. Alas, for the fleeting nature of earthly satisfaction! He had hardly stooped to pick up his burden when a voice brought him all standing as it yelled, "Didn't want to spoil the meat, eh? Nipped him in the neck, eh? Sweet, pretty shots, weren't they?"

Readers of FOREST AND STREAM, you should have seen the inexpressible woe-begone look that came over the countenance of the practical joker. With accents that would have melted a sterner heart than mine, he appealingly exclaimed, "Oh, for Heaven's sake, don't tell the boys!" And I never have told the boys till now.

ALASKAN TROUT AND THE FLY.

Editor Forest and Stream:

Being something of an Alaskan as well as a fly-fisher myself, I was much interested in Dr. T. H. Streets's "Defense of Alaskan Trout," published in your issue of Nov. 18. He has certainly cleared up, once and for all, the old superstition that Alaskan trout would not rise to the fly. Nevertheless, I am afraid that I must contest his claim to the position of "the pioneer fisherman with the fly in Alaska." If I am not very much mistaken my former mess-mate, Dr. George F. Wilson, U. S. Army, at that time surgeon of Lieut. Schwatka's exploring party, and myself, caught a good string of trout in Unalaska with the artificial fly, at least a year before the Patterson, with Dr. Streets on board, came through the Straits of Magellan. And even we, I am afraid, can not be called "pioneers," as I have heard that some of the custom house officials stationed at Unalaska had had some successful fly-fishing years before we came there. Still, Unalaska is so far off that it is no wonder that it takes a long while for the intelligence about such matters to reach civilization, and the remark of the writer that these Unalaska trout "took small dark flies greedily" might easily escape general notice, occurring, as it does, in a Government report (Lieut. Ray's "Report of the Expedition to Point Barrow," p. 132) among the scientific notes on the fishes collected by the expedition. Some details of our fishing may be of interest to your readers.

We were on our way back to civilization after our two years' solitude in the Arctic regions, when we picked up at St. Michael's Lieut. Schwatka and his party, who had just completed their adventurous trip down the Yukon, the story of which is well known to all readers of FOREST AND STREAM. This was in September, 1883. As the last vessel for the year had already sailed before Schwatka's party reached St. Michael's, they were very glad to put up with the crowded accommodations of our little schooner. I found Dr. Wilson an ardent fly-fisher, and we soon agreed that when we reached Unalaska we would see what a fly would do in the little brook behind the village, where our "interpreter" used to catch so many, he said, with the bait. Sept. 19, having completed the observations we had to make, and having no more duties to attend to on board, the Doctor and I started out in spite of the fact that a fine drizzlidg rain was falling and a fresh breeze blowing straight down the valley of the

little tumbling trout brook, which comes down from the mountains for all the world like a New England mountain brook

Of course we had inquired of the resident traders what our prospects were for success, and all had declared that there was "no trout fishing at this season," and that the only time to catch them was "early in the spring, soon after the ice went out." (This was something like the dictum, "Alaskan trout never rise to the fly.") We, however, had faith in Capt. Herendeon, the interpreter above mentioned, who had frequently been at Unalaska with the coast survey parties, and who declared positively that he had caught trout there at that very season of the year. In deference to public opinion, however, we did take with us some newly salted salmon, the only available bait we could obtain, but we determined not to use it except as a last resort.

Well, there is no need for me to describe how we tramped up that little stream in the rain, working against the breeze, and what a good time we had. The fishing was just like any other fishing. The trout were there, and we caught them in spite of the season, and we caught them with the fly, too, in spite of their being Alaskan trout. I shifted my tackle once and tried a piece of red, raw salmon, with a view to capturing a big trout we saw in one pool, after he had declined my flies, but he paid no more attention to the bait than he had to the flies. We took in all fifty trout, averaging about three to the pound, though Dr. Wilson took one beauty of over a pound weight, and I struck and missed one fellow that, to judge from the breadth of tail he turned up, must have been a good two-pounder. Twenty of these trout we took out of one little pool, standing and casting side by side, getting a rise about every other cast, and hooking a fish about every other rise. They were of the species known to ichthyologists as *Salvelinus malma*, the Pacific red-spotted trout, but perhaps better known to sportsmen by their popular name of "Dolly Varden trout." They were bright and silvery, like the trout of the streams of Long Island and Cape Cod, showing that they were in the habit of running down to the sea, and were delicious eating. The flies used were very small black and brown-hackles. One red-bodied brown-hackle did good execution. I tried the usually popular red-ibis, but it met with no favor.

Altogether, we were very well pleased with our day's fishing. The stream is conveniently near the village and easily fished, and the trout of a fair size and fairly plenty. I think I may safely advise any angler who may chance to get an opportunity to wander so far from his usual fishing grounds, to remember to take his fly-rod, with the assurance of fair amusement, if nothing more.

JOHN MURDOCH.

U. S. NATIONAL MUSEUM, Washington, Nov. 23.

THE BLUE CATFISH AS GAME.

ALL my life I have taken great delight in fishing, and have had the pleasure of landing many of the game fishes of our waters. Among those which have furnished the most sport is the blue, or channel cat. I know that most sportsmen do not so consider it; but by what right it is thus excluded I am unable to understand. It certainly cannot be because it is not gamy, for of all the fish that I ever hooked it makes the hardest fight for its life. It differs from them in that they, when struck, leap out of the water, and rush through it with their mouths open, thus making it much easier to conquer and land them; while the catfish takes the hook in its mouth and starts for the bottom of the stream or lake, with a vim that will test the tackle of the best expert. I have had more real sport with it than with any other fish I ever tackled. It is full of fight from the strike to the landing net, and requires longer to bring it to hand than any other of its weight.

Some years ago a party of us were camped on Severn River. We went there to catch bass, and did not want any other fish to take our bait. We caught as many bass, perch, pickerel and maskilonge as we could use in a camp of thirty-five. One day we were trolling up the river, using a large spoon, when there was a strike as if the hook had fastened on a log. The boat was stopped, and after a hard fight an 8lbs. channel catfish was landed. On another occasion three of us were still-fishing from a boat in one of the bays of Sparrow Lake. We had no luck for a long time, and were becoming careless and discouraged, when I felt a tug at my hook as if something intended to upset the boat. In a moment we were all excited by the mighty efforts of the captive to free himself from the hook. He did not rise to the surface, but seemed determined to take us down with him. I had a very strong tackle so had no fear of a break when the strain was put on it to see what kind of a creature was causing so much disturbance; but it would not come to the surface. If it had been in salt water I should have thought it was a shark, but we could not think what it could be that could pull the boat about as it did. After a long and hard fight it was at last brought to the landing net, and proved to be a blue cat. It was not only a very lively fish but was one of the handsomest things I ever took from the water. It weighed just six pounds. Now, if this fish will take the same bait as those which are catalogued as game fish, and gives one as hard a fight, and it requires as much patience and skill to land it, and its flesh is only a little inferior to that of the others, I see no good reason for the general feeling of dislike that is so often manifested toward it.

I would not desire to see any other of the catfish family brought into the same position as this one, as they differ as much from it as it does from any of those which are generally considered as so much finer when on the table. If any of your readers have never tried to satisfy a sportsman's appetite on a breakfast of "catfish and coffee" with the other et ceteras, let him try it once when he is hungry and has a hard day's sport before him, and I think he will be convinced that it is very toothsome and has great staying qualities. And if any one of them has been in the habit of ignoring its claims to a place in his favor, let him give it a chance the first opportunity that presents itself, and if he does not change his opinion of it then I am either no prophet or else no judge of good sport and royal living.

Another thing in its favor is that it can be raised in waters where most of the regular game fish will not thrive. They can be grown in ponds, and will repay one for the time, trouble and expense. They are certainly far superior to the carp as a table fish, and will not require nearly so much care. But they do best when they live in pure running water. This is not the case with them only, but with all other fish. If they have grown in a muddy stream or pond, the flesh will be rank and strong, but in a stream of clear, cold water the texture and flavor is entirely different. Under any circumstances their flesh is very rich and will not agree with a delicate or weak stomach. HOMERUS.

BLAIRSVILLE, Pa.

FISHING IN JAPAN.

Editor Forest and Stream:

My daughter, who has been a resident of Japan for a number of years, sometimes writes us letters containing items which I consider of sufficient interest to publish. In a letter lately received she tells me something about fishing in Japan, which I think will interest the readers of FOREST AND STREAM. She and her husband, Rev. E. C. Hopper, are both fond of angling. Being driven out of Tokio the past summer by the cholera, they visited Kobé, Nikko, Futago, and other places, where, however, they had been several times before. Futago (about ten miles from Tokio) is a famous place for *ai* fishing. I will condense as much as possible. Writing of Futago, Mrs. H. says:

"Now about the fish. The *ai* is called trout in English; but it looks and tastes exactly like smelt. * * * As a rule, fish are taken with the net, though sometimes a bamboo rod, with line and artificial fly, is used. * * * To go fishing in Japan does not mean to fish yourself, but simply to look at the fishermen catch the fish, for which you have to pay them. They put the fish into baskets, and you come home loaded with fish and tell your friends you have been fishing, have had a good time, and then have a feast for supper." A practice somewhat resembling this is not very uncommon here.

It may interest the readers of FOREST AND STREAM to know how these Japanese fishermen catch the fish. My daughter, in addition to her own description, sends me a transcription from a Japanese hand book, which I give herewith, as it is full of detail, as follows:

"Futago is a place much resorted to during the summer months, on account of the *ai* fishing which the river affords. This fashionable amusement of the Japanese (for sport it can scarcely be termed) is quite characteristic of their tastes. The pleasure consists in sitting in a boat watching fishermen (who are engaged for the purpose) catch fish with nets. The scene on the river is very picturesque, and it is quite worth visiting Futago to witness it, and also to taste this delicately formed fish, fresh caught and cooked in Japanese fashion.

"The season for fishing commences about the middle of April and ends in the early part of November. The best months are from July to October. The ordinary method of catching the fish is by using the *Tō ami*, a circular net made of silk and about eight feet in diameter. The circumference of the net is weighted with pieces of lead and to the center there is attached a line at the end of which there is a loop. With a little practice a fair amount of dexterity can be attained in throwing the net, which is cast in the following manner: The noose at the end of the line is passed over the left hand and fastened to the wrist. The line and part of the net, as it hangs from its center, is then made up in turns and held loosely in the left hand. The left edge of the hanging part of the net is then thrown over the left elbow, and the remainder is taken in parts between the fingers of the right hand. In this position the fisherman prepares to cast the net, which should be thrown with a good swing to the right front, turning at the same time in that direction, and letting the folds of the net and line freely escape from the hands. An expert will so cast that the net will fall flat on the water, spread out to its full dimensions, and the weights cause it to sink at once. If thus thrown from a boat or by a person standing in deep water, it is afterward carefully drawn in until the edges of the circumference meet. The net is then hauled into the boat or raised, and the fish that may have been inclosed are now so entangled that they cannot escape. When thrown in a shallow part of the river the plan is to pick the fish out from under the net as it lies on the bottom. The native fishermen are wonderfully sharp in marking fish in the water, and seldom fail in at once inclosing them within the meshes of the net.

"Another contrivance for catching *ai*, which is generally preferred when the river is partly flooded, is the *u-wana*. This consists of two bamboos about 15ft. in length, fastened together at one end, forming an angle sufficiently open to admit the width of the net, which is tied between them at their outer extremities. A cross bar of wood is lashed to the bamboos about 8ft. from the angle where they join, thus not only giving firm support to the frame, but enabling a man to carry it conveniently by resting the bar on his shoulder. The net, which is made of fine silk, is about 12ft. in width at the top, and is fastened to the frame by means of string at intervals of 1½ft., the lower end being caught up and secured to the middle of the cross bar. It thus forms a bag, and the whole may be said to resemble a large scoop. In addition to the net and frame a rope measuring from 15 to 20yds. is used, having bunches of the wing feathers of the cormorant tied to it at intervals of 2½ft., while stones are attached to it at distances of 10ft. to act as weights. This rope is divided in the center and joined together again in the same place by means of an iron swivel.

The method of fishing with the *u-wana* is as follows: One man takes the net, resting the cross bar on his shoulder, and wades into the river up to his waist; then facing up the stream, he places the scoop flat on the water, holding it by the end where the bamboos join. Two men are stationed about 30 yards further up the stream, one on shore, the other in the water, and hold the line taut between them by the loops at its ends. When all is ready they move slowly down the stream, drawing the line through the water a little below the surface. Gradually they begin to move more quickly; the man in the water sweeps round toward the net, and finally, when within a few yards of it, the pace is increased to a run. Care is, of course, taken to keep the line well down in the water, so as to drive the fish before the brush of the feathers into the scoop, the angle end being pressed well down to the bottom of the stream. In this way hauls of from thirty to forty fish at a time are taken."

This artice is too long for comment; but I may suggest briefly, compared with our murderous methods of netting, that of the Japanese is exceedingly picturesque and humane. If the above proves to be interesting, I have more of a like nature. PETRA.

SENSIBILITY OF FISHES TO PAIN.—*Editor Forest and Stream:* In yours of Nov. 11, I see a note by "O. O. S." in reply to me. I find upon inquiry of Dr. Marshall, that it was a companion who did the cutting of the live fish, and that the fish was not thrown back into the water, but fluttered out of the hand into the water while being carried to the bucket. The object of my article was to prove that fishes have very little sensibility to pain, and I stated a fact which was so remarkable, that I brought in the Rev. Doctor as my authority, as without the very best authority I would not believe it myself. In "Humboldt's Travels," he mentions that he was astonished at seeing the same sharks repeatedly taking the bait, while their mouths were terribly torn and bleeding from previous hookings. It goes to prove, that such cold-blooded animals have not that sensibility to pain that is generally supposed. Comparing them with warm-blooded animals we make a great mistake; our premises are wrong, therefore our conclusions are erroneous. This is proven here and elsewhere, as we cannot suppose that the fish alluded to was in sensibility different from fishes of the same species, or from fishes in general. Our mode of fishing is to fasten on the hook a live minnow, or live worms, frogs, grasshoppers, etc. Experience has taught us that fish do not like dead bait. We suppose God taught them. Sometimes they will take artificial bait, but by all odds live bait is the best. If we cannot get suitable live bait, we cut up a live or dead bait, as the case may be, we do not wait till it dies and then fish with it. We suppose that "O. O. S." never fishes with live bait of any kind, or if he does that he ties it on with a soft string, on a soft bed of cotton, with some soft mollifying ointment to cure its wounds.—B. F. M.

MINNOW EXPERIENCE.—When a small boy my passion for gunning and fishing was as large in proportion to my size and knowledge as at present. With the first thick ice I was out with pail and net after minnows for bait. One bait in use here in eastern Massachusetts is the mummy chub, so-called; the other is the common silver minnow. The mummy is by far the toughest and long-lived, but is not so good a lure to the big-mouthed "winter king," the pickerel. The mummy is caught with scoop nets in the creeks and shallow pools near some salt-water bay, and while it will die in a short time if kept in a pail of water, it will live hours and days in a wet piece of flannel if kept from heat and extreme cold. The minnow is caught in the brooks with scoop net or more commonly (here where bricks are made) in the brickyards. In some of the brickyards large shallow basins have been made in excavating the clay. In these basins, which are usually three feet or more deep in the center the minnows are found, and may be caught through the ice on a sunny day by cutting a hole large enough to admit the drop net, which is easiest made of a barrel hoop and mosquito netting and baited with sprinkled cracker or bread crumbs; the minnows will swim into and over the net after the crumbs, and I have caught as many as a pint or more at one haul. As we have to ride six miles to the best ponds a pail would be unhandy and would kill a good many fish, so we put them in a wet blanket or other thick piece of cloth, and after getting to the pond carry them in the pocket, or often in the hat to keep them from freezing. We have quite good fishing here and strings of from twenty to fifty fish (pickerel and perch) are not uncommon from the large ponds. Occasionally a pickerel of from four to six pounds is caught and usually finds its way to the market window for exhibition.—COHANNET.

A MAN-EATING SHARK.—A very rare shark was captured on the south shore of Long Island, near Quoge, last week, and has been lying at Mr. Blackford's for several days. Its length was 7¾ft., and it weighed 280lbs. Prof. S. E. Meek identified it as *Lamna cornubica*, Gmelin, and it is the first specimen of this formidable monster taken about Long Island, although the U. S. Fish Commission has collected a few at Woods Holl. This shark is probably entitled to be classed with the "man-eaters," and from the dentition of the beast the crowd at Fulton Market drew the conclusion that he was an undesirable bathing companion.

A TORPEDO CAUGHT AT SANDY HOOK.—Last Monday a cod fisherman at Sandy Hook hauled up a large torpedo or cramp fish on his trawl, and was partly stunned while landing it. The fish is an unusual one about New York Harbor, and is on exhibition at Mr. Blackford's. Its weight is 150lbs. and it is the second one that has come to Fulton Market in twenty years. In a few days it will be dissected and the electric batteries in its head exposed to view.

THE AMERICAN SALMON FISHERMAN.

THE London *Fishing Gazette* has this to say of Mr. Henry P. Wells's "The American Salmon Fisherman" (Harper & Bros., New York; price, $1.50). The *Gazette's* notes are interesting as showing how the author's views are received in England:

Mr. Wells, in his introduction to the present volume, "desires no more grateful reward than the same kindly reception which has been the good fortune of its predecessor." We think there can be little doubt that he will get his reward. Although written for the guidance of the novice, there are so many subjects connected with salmon fishing touched upon in this work, and Mr. Wells knows so well how to explain his views, and is withal so suggestive and practical, that we venture to say that the most experienced salmon fishermen will read it with interest, and glean some useful ideas.

Of course, on many points, British and Irish salmon-fishermen will not agree with Mr. Wells. It would be too much to expect that they should; indeed, in all probability, their first impression will be, "What can an American tell us about salmon fishing worth knowing that we do not know?" If they are interested in Canadian salmon rivers, the very first chapter will settle this question, for it contains information as to how and where fishing is to be obtained, together with a map and list of the rivers, with brief notes on them.

At one of those interesting "Discussions" of the Fly-Fishers' Club last winter, Dr. Hamilton introduced the subject of the remarkable difference in the average size of salmon frequenting different streams, and gave, as did other anglers present, instances from his own experience. Mr. Wells has the following note with reference to this fact in the life history of salmon:

"A Salmon Problem.—Since salmon obtain their growth in the sea, and lose rather than gain in fresh water, it would seem as if all rivers ought to furnish fish of approximately the same size. Such is not the fact. In some rivers, excluding extremes as it seems to me should always be done in such cases, the fish will run about 10lbs. or 12lbs. in weight, and a fish of 18lbs. will be a rare prize. In other rivers no larger, and in the immediate neighborhood of the others, the fish may average 20lbs. and over, and fish of 40lbs. be as common as fish of 18lbs. in the rivers first alluded to. This difference is not a casual affair of a single season, but a permanent characteristic of each river. A satisfactory reason for this, which will not conflict with what are supposed to be settled facts, I have yet to hear. Is it because the various clans of fish which converge to their native rivers when leaving the sea, diverge

on their departure to distinct and distant parts of the ocean where the conditions favorable to growth vary? This seems difficult to reconcile with the theory that they linger throughout their ocean life near the mouth of their native rivers. Or is it possible that the universally accepted belief that salmon always return to the river of their youth needs further investigation; and that they really so return only until they have attained a certain size, and then go elsewhere? I can suggest the question, but not its solution."

On the important question of rods for salmon fishing, Mr. Wells is diametrically opposed to the views of most salmon anglers on this side the water. He thinks we use rods unnecessarily long and unnecessarily heavy, and it is probable that, to a great extent, he is right, though, in our opinion, he goes much too far in the other direction, and advocates the use of rods which in this country would be considered mere toys. We have noticed that there is a radical difference between the objects, or at any rate one of the objects, for which anglers in America and anglers in this country select a rod. Here it is considered bad form to give a fish more time than is necessary; the angler who allowed the fish to flounder about and so "spoil the pool," when he ought to have killed it in half the time, would be laughed at. An American angler, among fish far more plentiful and far less educated than ours, finds it sport in playing his fish as long as he can get any play out of it; consequently he selects an extreme by light limber rod. American exhibitors of split-cane rods at the 1883 Fisheries Exhibition were never tired of showing visitors how their rods would bend till the tip touched the butt—about as useless an accomplishment for a practical fishing rod as one could well imagine. We have seen and used a great many very fine split-cane rods; but have not yet met with one which, in our opinion, possessed all the qualities of a first-class hard-wood rod.

Mr. Wells says: "If a rod for trout fishing was in view, no American angler of the slightest experience would dream of buying any but an American rod, or of being influenced in its selection by any foreign work on angling. But so little comparatively has been done or said on salmon fishing in this country, and so much in Great Britain, that the American anglers are apt to turn to and be guided by English authorities. He will read of rods 18, 19, and 20ft. long. Well may he groan when he thinks of brandishing such a weaver's beam all the live-long day, and question whether he would not find sawing wood equally beneficial and far less laborious. In the matter of fishing rods I cannot but think that the mechanical common sense of our English brethern is somewhat obscured by respect for tradition."

There is a good deal of truth in these remarks. There is no doubt the majority of salmon rods in use on this side the water, if not too long, are certainly too heavy. We were forcibly reminded of this by some salmon rods exhibited at the Fly-Fishers' Club one evening by Mr. D. Wilson, the honorary secretary. Mr. Wilson fishes principally on the Spey, and his rods are specially made to do the Spey cast. They are made of lancewood, and although of good length, 16 to 18ft., appeared to be about half the weight of an ordinary greenheart rod of the same length. Mr. Wells thinks that the only advantage of an 18ft. rod over one of 15ft. is that the former will cast about 15ft. more line than the latter; apart from the fact that when bank fishing on a big river this extra 15ft.—which, we should say, is probably nearer 30ft. in practice—is often an inestimable advantage; it is perfectly certain that you have far more control over a fish on the long rod than you have on the shorter one and can kill him in half the time. As we have already pointed out, the Americans as a rule, select a short rod, which compels them to give a fish much more time than is necessary. Mr. Wells says:

"Indeed, when the fishing is open and fortune smiles, after the wire edge is taken off by the capture of a reasonable number of salmon with the double-handed rod, so that the loss of a fish is not too harrowing, I question whether strict angling morality does not thereafter require us to resort to a single-handed rod of 10ft. 6in. to 11ft. in length, and from 9 to 10oz. in weight, particularly if the fishing is so remote from communication that the fish cannot be sent out, and the supply exceeds the camp needs. For a fly-fisherman to condemn fish legitimately taken with the fly, to the salting barrel, has always seemed to me a breach of angling propriety but little better than throwing them away to rot. It is a mere matter of sentiment, I admit; but those are my sentiments. To take salmon with a single-handed rod is certainly more sportsmanlike, since it requires greater skill and the fish has more chance. It is also more economical, since the contest will be more protracted, and that alternation of hope and fear which constitutes the great charm of salmon fishing continues for a longer time with each fish. Thus fewer fish furnish more fun, which after all is the main thing. With a canoe as a movable base from which to conduct operations, and a proper reel and line, the angler is sufficiently sure of ultimate victory to warrant the effort; and stimulated by an approving conscience and perhaps just a little dash of self-conceit, the silver sheen and graceful outline of a salmon so taken will far surpass in its captor's eyes—yes, and in the eyes of others—the best that any competing double-handed rod may produce."

If we ever got so sick of catching salmon as Mr. Wells appears occasionally to do, we should give it up. To follow out his argument to its logical conclusion the most sportsmanlike way of salmon fishing would be with a hand line. He ought to give the credit of killing the salmon he catches on a 10ft. trout rod to old Father Time and the dexterity of his boatmen.

We fancy most anglers on this side of the Atlantic will agree with us that it is more sportsmanlike to kill a fish with fine tackle on a powerful rod than with strong tackle on a weak one, and without fine tackle you will generally fish in vain in our hard-fished streams.

Having referred to a few points on which we do not quite fall in with the views of Mr. Wells, we may briefly refer to some suggestions, for which we heartily thank him. It is generally supposed that the best way to put a fly-rod together is to splice it, and that a spliced rod has a more perfect action than any other. We never could satisfy ourselves that a spliced rod has any advantage whatever over one with ferrules, while the disadvantages are manifest. Mr. Wells provos clearly that a spliced rod is "weaker at the splices than at other parts," the rod must be stiffer and must be more elastic at the solid than at the spliced parts.

THE CONNECTICUT COMMISSION.

THE twenty-first report of the Connecticut Fish Commission, for January, 1887, is at hand. By the terms of the appropriation of the General Assembly, the Commissioners have necessarily confined their operations to the hatching of shad and the distribution of young trout. Having no discretion whatever in this matter, they were obliged to decline the offers of salmon eggs from Prof. S. F. Baird because they had no funds to apply to their hatching and distribution. Last year there was an appropriation of $5,000 made to the State Board of Health for investigation and experiment concerning the pollution of streams, and the results of some experiments on fishes in polluted water are quoted from an English paper.

There has been a difficulty in the way of distributing the supply of young trout satisfactorily, either to the Commissioners or to the applicants. They had thought it advisable to put at least 3,000 into each one of the streams to be stocked, and as the $1,000 appropriated would only purchase 334,000 trout, only 112 applicants out of 269 could be supplied. It was decided, however, to supply those who were applying for the first time; and yet one State Senator, in view of the fact that the appropriation is no larger, asks for 50,000 fish, or one-sixth of the whole number possible to be obtained. Comment on this is unnecessary.

An interesting question is about to come up in Connecticut concerning the stocking of private streams by the State. Occasionally a complaint is made that a certain stream which has received trout from the State for several years in succession, has been "posted" by the owners of the land, and all persons forbidden to take trout therefrom. One public-spirited gentleman who had for four years paid the necessary expenses of transportation of the young fry to a well-known brook, when he went to catch a few of them, now well grown, for his own use, was informed that the owner would not allow any more fishing, and on further inquiry, found that the proprietor was in the habit of taking a few pounds of trout every week and sending them to a popular restaurant in Hartford. Section 2, of chapter CV. of the laws of 1886, forbids entering upon the inclosed land of any person for the purpose of hunting, trapping or fishing (whether the land is posted or not), and Section 4 of the same act, authorizes the owner to arrest the offender and take him before a justice of the peace for prosecution, and the infliction of penalties provided for in Section 3.

This is a very comprehensive law, and if strictly enforced, may cause serious embarrassment to many unintentional violators of it. The question has been raised whether a party who has received trout from the State for a number of years and placed them in a brook claiming it to be a public stream, has a right to debar the public from a participation in the fishing after it has been restocked. This is a very different thing from preventing all fishing by any one, owner included, for two or three years, in order to give the young trout a chance to attain a fair size and then open the stream to all alike. The latter plan would be in many cases desirable, and would not be objected to by any sensible person. The question which will soon have to be decided by the courts is, whether a party who has stocked a stream with trout from the State with the understanding that it is a public trout stream, has the right to prevent any and all persons from fishing therein, thereby reserving to himself the entire proceeds of the State's distribution of young trout in that particular stream

The catch of shad shows a falling off from the numbers taken in 1885. Mr. Fenton's report shows that he hatched and planted in the waters of the State 8,360,000 young shad at a total cost of $1,000, or more than 8,000 shad for $1. He used the McDonald jars in a small house which could be locked up at night. The fry was planted in the Connecticut, Housatonic, Thames, Quinnipiac and Farmington rivers.

The old trouble between the Fish Commissioners of Connecticut and those of Massachusetts is referred to. Massachusetts has claimed that Connecticut was getting more than their share of shad in the pound nets at the mouth of the river, and had refused to bear any of the expenses of hatching in former years. It now seems that Massachusetts passed a law in 1881 permitting the use of nets with a two inch mesh, which would take the baby shad.

The Commissioners of Connecticut say that from 1869 to the present time they have annually, except on one or two occasions when short of funds, hatched and placed in the Connecticut River as many young shad as could be obtained for the money at their disposal, and they have never received any financial assistance from Massachusetts, and that all the expenses of the shad hatching operations on the Connecticut River from 1869 to date have been defrayed by the State of Connecticut, with the exception of one or two years, when a portion of them were paid by the U. S. Fish Commissioner, Prof. S. F. Baird. It is a subject for regret that these two States, each owning a portion of this great river, cannot work together in harmony on a subject of such importance as the migratory fishes which use the river as a breeding ground.

On the subject of carp, they report that the Park Commissioners of Hartford have removed the carp from the pond in the park because they stir up the mud and undermine the banks to such an extent that they present a ragged appearance, and that the muddy water more than counterbalanced the pleasure derived by the people in feeding and watching the fishes.

A new fishway has been erected by the Housatonic Water Power Company at Birmingham. The Commissioners went to Washington to inspect the McDonald fishway which was in course of erection over the Great Falls of the Potomac, but which had dragged slowly through some hitch in the War Department, and the Acting Chief of Engineers stated that it was not possible to indicate a time when the fishway would be completed and ready for inspection, and thereupon the Commissioners employed Mr. W. H. Rogers, who built them a fishway, into which the water was turned on Oct. 7, 1886, and which is reported as approved.

NEW YORK FISHWAYS.—Schenectady, N. Y., Nov. 22. —Col. McDonald has completed the fishways on the Mohawk and Schoharie rivers. The latter is completely covered over and the entrance guarded to prevent clogging by drift. The one on the Mohawk at Schenectady is double, with six feet and a half clear water-way. This one was left open for the purpose of passing boats above or below the dam. If found necessary to protect the way from drift or ice, a deflecting crib will be placed above, provision for this having been already made bp the Superintendent of Public Works. The river was very low when the way was completed, giving only six inches in depth in the fishway, but under these conditions it was evident to all that fish would pass up even more readily than through the rapids of a trout or bass stream. The verdict of all who have seen the work since completion is that it is the perfection of a fishway.—G. H.

MR. FILIP FRYBORN, Commissioner of Fisheries of Sweden, has made an extended tour of America this summer, and has visited the principal fisheries and fish hatcheries of the country. Last week he returned to New York from California, and yesterday he sailed for Bremen. Mr. Fryborn will publish the results of his investigations shortly after reaching Stockholm.

THE BOSTON SHORT LOBSTER CASES will be taken up to the Supreme Court.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 1 to 8.—First Dog Show of the Inter-State Poultry and Pet Stock Association, Cairo, Ill. A. A. Cowdery, Secretary, Cobden, Ill.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

January, 1887.—Bench Show of Poultry and Pet Stock Association, at Adams, Mass. W. F. Davis, Secretary.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Ruell, Superintendent, Columbus, O.

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Tairteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Dec. 8.—First Annual Field Trials of the Irish Setter Club, at Salisbury, N. C. W. Dunphy, President, Peekskill, N. Y.

Dec. 13.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

Feb. 15, 1887.—Inaugural Trials of Tennessee Sportsmen's Association. Entries close Jan. 10. R. M. Dudley, Secretary, No. 84 Broad street, Nashville, Tenn.

KENNEL NOTES.

OWING to the very complete reports of the field trials we are compelled to defer the publication of Kennel Notes until next week.

THE EASTERN FIELD TRIALS.

THE DERBY.

THE Derby was to have commenced on Monday of last week, but the weather was such that it was impossible to start. On Tuesday it was cloudy and damp with the wind from the southwest, and the weather was threatening. A start was made, and although it was not a good hunting day good progress was made. The wind came in gusts, scattering the scent and baffling the dogs, causing much of the work to be unsatisfactory. The birds were disposed to run, which also caused considerable trouble. There were quite a number of spectators who took great interest in the work and followed the dogs, watching each heat closely. There were 102 nominations this year, 29 of which filled. This is unprecedented in the history of field trials in this country, and if the interest in this stake continues to increase as it has in past years, it will soon become too unwieldy for practical purposes. Just how the matter can be satisfactorily arranged to keep within proper limit is at present a problem that should receive the careful consideration of the managers. At the inaugural trials of the club on Robins Island in 1879 there were four entries in the Puppy Stake, all of which started. The next year there was a Nursery Stake in addition to the Puppy Stake, with 7 entries and 5 starters in the former, and 8 entries and 6 starters in the latter. In 1881 the Derby was inaugurated, for which there were 27 nominations with 9 starters. The next year the trials were run at High Point, and there were 60 nominations, 15 of them starting. In 1883 there were 69 nominations and 21 that filled. The next year there was an increase of 2 in the nominations, but only 10 that filled. Last year there were 83 nominations and 14 starters. It will be seen that the increase has been constant, and that year by year the stake has grown until it has become perhaps, all things considered, the most important of the meeting, and to bring out a Derby winner is the highest ambition of the breeder. Messrs. D. C. Bergundthal of Indianapolis, Ind., J. W. Orth of Pittsburg, Pa., and J. O. Donner of New York acted as judges, Mr. Donner in place of Mr. Elliot Smith, who was unable to be present. We gave last week a list of the starters and the order in which they were drawn to run. Instead of drawing braces the dogs were numbered in the order drawn, and the first one was drawn with the next available one, and so on down the list. This is much more simple and better than the old way.

NAT GOODWIN AND FRED W.

Leaving the hotel at 8:15, we drove a short distance and the dogs were put down just outside of town near the Snow farm. Nat Goodwin is a heavily marked black, white and tan, of medium size, an easy mover, with good speed and range. He was handled by J. M. Avent, of Hickory Valley, Tenn. Fred W. is a large, good-looking dog, somewhat resembling his sire in looks, way of going and manner of dropping on point. He was handled by C. Tucker, of Stanton, Tenn. After a wait of ten minutes for Avent, who had taken the wrong road, the dogs were cast off in a stubble field. Both started at the word at a fine rate of speed. Nat goes level and easy, Fred with a long, sweeping stride that takes him over the ground faster than he looks to be going. He had a trifle the best of it in speed and in style, although different they were about equal in merit. Working out considerable ground without result, we came back to the starting point and beat out the stubble to some woods near which Fred challenged, but could not make it out and went on. When the spectators came along they flushed a single bird near the place, which flew into the woods and was followed but not found. We then turned down toward a branch, near which Nat made a nice point to a single that his handler flushed to order. In going to him one got up near the horses. These were probably birds from a scattered bevy, as when the spectators came along they saw a number of birds running away just above them. Working the dogs back after them Nat got in a point just a second before the bird rose. Some of the bevy had flown across the road and the dogs were sent after them. Nat again got them first and pointed a single near a ditch. Retrieving is not required in this stake, and Avent was ordered to flush and shoot but not to kill. A little further on Nat flushed a single that he should have pointed, as he evidently got scent, but went too close. Fred then dropped on a nice point to the rest of the bevy, which Tucker to order flushed, and as they rose he shot and Fred was steady. Following them up Fred half pointed but went on a few steps and pointed, and Nat came up below him and also pointed the same birds, which flushed as the judges came up. Fred remained quiet but Nat was a trifle unsteady. Fred then made another point, and Nat backed or pointed, we could not see well enough to determine. The bird was flushed to order and we turned up the hill into some woods, where Fred made a nice point but nothing was found. We then went through to a field of grass and weeds where Nat flushed a bird, and kept on in the same direction, but stopped fairly well to order. A little further on Nat made a point which Fred backed, but nothing was found. The judges then consulted and the heat was decided in favor of Fred W. Down one hour and six minutes. This was a good heat and both dogs showed up well, making an excellent beginning of the stake.

RAPID B. AND HARI KARI.

This brace was taken through the woods to a sedge field and put down a few minutes before 10 o'clock. Rapid is a fair-looking small pointer with no pretensions to speed; he was handled by T. M. Aldrich, of Manton, R. I. Hari is a medium-sized dog, a busy, quiet worker, with a trifle more speed than his competitor. This is not intended as praise, however, as both were very slow. He was handled by C. E. Buckell, of Charlottesville, Va. Both started off very slow, but improved a trifle in a short time. We had gone but a short distance when the spectators flushed a bevy and one of the birds flew over Hari and settled in the grass just beyond him. He was steady and stopped to order. He was then sent round to get the wind and made a nice point. Rapid was brought up to back but probably did not see him and was stopped to order. Buckell put up the bird to order and shot. Hari was steady, but Rapid broke shot and was not under good command. Nothing more was done in this heat except that we took a long tramp during which Rapid half pointed at old scent and Hari backed him. Finally Aldrich and his dog walked up a bevy and the judges ordered up the dogs and awarded the heat to Hari Kari. Down forty-six minutes.

HECTOR AND HUSTLING HANNAH.

This was the next brace. Hector, handled by John White, is a white and black pointer with a fair amount of speed. He is said to do good work, but he was all off in nose and made a poor showing. Hustling Hannah, handled by Short, is a fairly well formed bitch, also with a fair turn of speed. They were put down in a clover field and worked across a hollow to an old field of weeds, where both went well at a fair rate of speed. Hector made a cast and winded a bevy, but drew right into the midst of them and scored a bad flush and dropped to wing. Hannah then got in a nice little chase to a hare, but came back to whistle. We then went for the bevy flushed in the previous heat, which settled in the woods. Hannah was the first to find and she pointed very prettily with her head down wind and Hector backed her, and as the handlers came up the bird flushed just below her. Hector then flushed a bird and stopped to wing and White claimed a point, but there were no more birds there and he luckily scored a false point only, as the judges did not see the flush. Hannah then half pointed, turned back a few steps and located her bird nicely and Hector backed her a second or two and then moved up and stopped to order alongside her. Short to order flushed and shot and both

dogs were steady. This finished the heat with Hustling Hannah the winner. Down twenty-three minutes.

SWATARA AND DAN NOBLE.

Swatara is a large, easy-moving dog with a very gamy, taking way when on game. He is quite stylish on point, and has considerable speed and range. His owners reside at Harrisburg instead of Pittsburgh, as published. He was handled by Tucker. Dan is a large lemon belton. He is also speedy and ranges well. He does not look to be going as fast as his competitor, but his stride is much longer and carries him along at a good rate. He was handled by Seager. They were put down in the stubble where Hector flushed the bevy in the previous heat, and as Swatara came to the place he made a couple of stylish points, but soon went on. We then turned into a sedge field with scattering plum thickets, where Dan dropped on point, but moved on as his handler went in front of him. We then came to the corner where the heat between Gath and Grouse Dale was decided years ago. Swatara flushed a very small bird down wind, and then drawing on a few steps another one got up, and soon after one rose near the dogs. We then worked along the fence, and Swatara pointed and Dan backed an instant, and then moved up alongside. Tucker, to order, put up the bird, and both dogs remained steady. Then over the fence Dan half pointed, and Swatara backed him nicely. Dan then moved on and located the bevy in fine style. Swatara at the same time pointed a single that went with the bevy, which was flushed to order. The birds flew only a short distance, and working toward them, both dogs challenged and roaded a short distance. Finally, at a gully, Swatara got in a stylish point, and as Dan came up he started to back, but catching the scent he turned his head a trifle and also pointed very prettily. Tucker, to order, flushed a single and then the rest went. This was a very pretty finish to the heat, which was awarded to Swatara. Down thirty minutes. Mr. R. C. Cornell informed us that he saw an albino quail in this bevy.

KEYSTONE AND CASSIO.

Keystone, handled by Tucker, is a large dog, fast and stylish, and has the reputation of doing capital work; but something was evidently the matter with both dogs, as most of the work throughout the heat was very unsatisfactory. Cassio, handled by Avent, is a nice level-moving dog of medium size with quite a turn of speed. They were put down in an old stubble field and worked up to the top of a knoll where Keystone challenged to the windward of some birds, and as Cassio came up below them he challenged and then dropped, but soon went on and flushed part of the bevy which got up all around him. He then swung round near the remainder and should have pointed them, but he kept on and put them up and dropped to wing. Taking the dogs round to get the wind they were worked toward them in the woods, but the ground was not half hunted and birds were constantly being flushed behind the dogs. Cassio was the first to find and Key backed very indifferently but was steady to order. Avent flushed the bird which he killed, and as we went on Key retrieved it. Both dogs then worked over the ground but showed no nose, as birds were getting up near them and on ground that they had passed over. We then worked some distance down a branch to a cornfield, where Cassio challenged and soon after made a nice point and Key backed him, but nothing was found. Both dogs then swung into some pines and Cassio drew a short distance nicely, but finally gave it up and made a cast but failed to catch it. Key made his cast in the right direction and nailed the bevy in fine style, and Tucker flushed them to order. Following them back toward the spectators on a side hill, Cassio pointed a hare and Key backed him. When the hare was flushed, Cassio gave chase and Key was unsteady, but both became quiet to order. Although the locality of several birds was known and the dogs worked toward them, only a few were found, and these not by the dogs, except one that Key flushed, when several more got up and he was a trifle unsteady. Soon after another one got up before him down wind. Several more were flushed by the judges and handlers, and as we came to a patch of briers where some of them had settled Key stopped to order, and as the judges came up a bird rose beyond him. Some of the spectators thought it a good piece of work for the dog, but any credit attaching to the point belonged to Tucker. We then worked up to a stubble, where Cassio challenged and Key backed him, and as Cassio turned and saw Key, he also backed, making a very pretty picture. Key then made a cast and pointed a bevy, and Cassio backed him to order. Tucker, to order, flushed and shot, and a few seconds later a second bevy flushed near the judges. Swinging round to get the wind Key pointed but moved on and again pointed a single that Tucker, to order, flushed. Then in the woods Key pointed twice but soon moved on, Cassio backing each time. Cassio then pointed and drew for quite a distance on a hare, which Key saw as it started and gave chase to, but at once stopped to order. We then turned back and Key made a beautiful point, but nothing was found and he scored a false point. We then started toward the Model Farm, where lunch was awaiting us, and as we came to the edge of the woods Key pointed a single that got up wild as the judges came up, and the dogs were ordered up and the heat was awarded to Keystone. Down one hour and seventeen minutes.

BRIDE AND RUE II.

After lunch this brace was put down in a large grass lot west of the barn and worked down to the branch. Bride is a small black bitch with white feet. She comes of a strain that has been kept by her owner many years. She is fast, a wide ranger, and shows hunting sense. She was handled by John White. Rue II. is a pretty little pointer, somewhat resembling her dam, champion Rue. She is also fast and shows well when on game. She was handled by Aldrich. Both started off at speed and went away like streaks, with Bride a trifle in the lead. Turning down the branch Bride caught scent, and turning, jumped upon a flat rock and pointed very prettily a bevy that flushed as her handler came up. Rue then came round and made a nice point where they rose from. We then worked down to the creek and beat out the hillside, but not finding them, turned back, and crossing the branch into corn, Rue made a nice point to a single that Aldrich flushed to order. Bride was working merrily in the corn when one flushed near her that she should have pointed. Rue then flushed one and dropped, and a little further on another one got up near her, and she started to chase but stopped to order. She then came close to her handler and stopped, but he did not think that she was pointing, and while they stood there a bird that she was evidently pointing, flushed in front of her. Soon after one got up near Bride, but we could not see whether she was to blame or not. She then made a gamy point which Rue at once honored. Both went on and Bride roaded some distance what proved to be a fast running bevy, Rue alternately backing and roading with her. After some distance the birds turned through a fence, and Bride, losing the trail, made a cast for it and struck it near the fence just a few seconds after Rue had pointed. The birds were then seen running ahead, and the dogs were ordered over the fence, where both disappeared behind some cedars, where the birds, which had flown a short distance, had settled. As the judges came up both dogs were pointing and the birds were flushed to order. Bride dropped to wing but Rue was a trifle unsteady. They were then ordered up and the heat was awarded to Bride. Down twenty-eight minutes.

MAVIS AND ROI B.

This brace was very evenly matched. Both move easily and both are wide rangers. Mavis was handled by John Lewis and Roi by Short. They were put down in sedge among some scattering pines and worked to an orchard grown up to tall weeds, but nothing was found and we turned back for the last bevy. They had run together and Mavis was the first to find them, making an elegant point that Roi backed in fine style. Lewis went ahead to flush, when Mavis very carefully drew on, and locating the bird again, pointed very nicely. Lewis flushed them, shot and both dogs were steady. Following them up Mavis pointed and Roi backed a few seconds and then moved up to her, when both went on to a fence, where Mavis again pointed, moved on a few steps and again pointed and Roi backed her. She then went over the fence and a single flushed ahead of her. A few steps on she pointed just as one went and soon after repeated the performance. A hare then started toward the crowd and Roi gave chase. A colored brother took a snap shot with a rock at the hare and just missed the dog, whereupon Short started for the marksman who had a sudden call elsewhere and made quick time in going. We then turned back and Mavis scored a flush and Roi made a point that Mavis refused to back and was stopped to order. Short to order put up the bird, both dogs remaining steady. We then crossed down to the branch, where both pointed once or twice, but soon moved on. We then swung round south of the farm house, where Roi pointed but soon went on, Mavis refusing to back him. We then crossed a fence to some woods and Mavis made a point, but soon drew on and located a bevy in fine style. Lewis to order put them up and shot, and Mavis was steady. After them in the woods Mavis flushed one and several more rose. A few steps further on both dogs stopped just as another one went. Mavis then got scent at a brush heap, and went around it and pointed a crippl., which she retrieved. We then turned back and went down a ditch some distance without finding anything except a hare that Mavis went for, but soon came back. Then turning toward the house to a good-looking stubble, both challenged and roaded a bevy that was feeding. Roi got there first and made a nice point, and Mavis soon came up beyond him and also pointed. Short to order put up the birds and killed one that Roi retrieved well. Following them into the weeds we failed to find, and turning back we worked down to the creek and then back nearly to the house without a find. The judges consulted and ordered up the dogs with Roi B. the winner. Down 2 hours and 14 minutes.

DOLON AND ALLIE JAMES.

It was nearly night when this brace was put down. Dolon is a nice looking medium weight pointer with a very level way of going. He has considerable speed and is quite stylish when on point; he was handled by Short. Allie James is of medium size, moves fairly well and has also considerable speed; she was handled by Avent. Both started off well, showing good speed and range. Working through a clover field and some woods to a stubble, Dolon challenged and then drew on a few steps, and made a nice point to a bevy that Short, to order, flushed and killed two at one shot. Dolon broke in but came back to order. A little further on Dolon, while going at speed caught scent and whirled on a beautiful point to another bevy. Short, ordered to flush and shoot but not to kill, put up the birds and by accident killed one and Dolon remained steady. Sent to retrieve he did so nicely. Allie had been working the opposite side of the field and as we came up she turned into the woods and made a nice point that Dolon at once honored, but he showed an inclination to move up and was dropped to order. Avent was ordered to flush and went ahead, but the birds were some distance away and lying closely, and he did not find them readily and ordered Allie on. She was loth to go, but after considerable urging she drew on right into the birds and they got up all around her. She then had a merry chase after a hare, but soon came back to whistle. We then crossed the stubble to the opposite side, and Allie made a point to a bird that went before the judges came up. Soon after she flushed one and then several more went. Then in some sprouts both pointed and roaded but could make nothing of it. Shortly after Dolon made a point, and Allie being close to him and nearer the bird also pointed and a second later the bird went. A little further on one flushed near the dogs and handlers and as it was getting dark they were ordered up to go down in the morning. Down thirty-nine minutes.

WEDNESDAY.

On Wednesday morning it was raining and it looked like a very bad day, but there was a lull about 9 o'clock, and a start was made. The rain came again, however, in a torrent, and there was nothing to do but return. There was another lull toward noon, and partaking of a hasty lunch, "boots and saddles" was sounded and another attempt was made. Your reporter, however, with a wholesome fear of rheumatics, decided to wait until it had done raining, but when the clouds ceased their downpour and an attempt was made to start, there was not a horse to be had for love or money, and for a report of the afternoon's work we are indebted to Mr. H. H. Briggs and the judges, who very kindly placed their notes at our disposal. The brace Dolon and Allie James were put down a few minutes past 12 in sedge to run out their unfinished heat. Working up a hillside, Allie, while at speed, ran into and flushed a bevy. Dolon came round, and casting to the left, pointed an outlying bird that remained, and they were ordered up and the heat awarded to Dolon. Down six minutes; altogether, fifty-five minutes.

GOLDSTONE AND BOB H.

This was the next brace. They were put down in the open and given a spin. Goldstone is above the medium in size, quite fast and very stylish, pointing with head and tail as high as he can get them. He was handled by Tucker. Bob H. is a large, rather coarse dog with full as much speed as his competitor and a very easy level way of going. He appears to have lots of hunting sense and locates his birds in capital style. He was handled by Rose. Following the last bevy, Bob challenged near a fence and drew a short distance and made a stylish point to a single. Goldstone refused to back, ran in and scored a flush. This was too much for Bob and he broke in, but at once stopped to order. A little further on Bob got in another beautiful point, which was at once honored by Goldstone in fine style. Rose to order flushed the bird and shot and both dogs were steady. Bob then drew on through some tall sedge and pointed at the edge, but nothing was found. Turning back in the sedge Goldstone made a beautiful point which was not honored by Bob, although he was in sight. Tucker to order put up the bird and shot and both remained steady. Then turning back up a side hill to some pines Bob made a capital point to a single. Goldstone refused to back, went by him and flushed the bird. They were then ordered up and the heat was awarded to Bob H. Down twenty-four minutes.

GAY GLADSTONE AND CONSOLATION.

This brace was put down in the open near where the last brace was taken up. Gay, handled by Tucker, is a large dog, fast and a very good mover and with fair style. Consolation had a little the best of it in both speed and style and covered much the most ground. His worst fault in moving is that he lifts too high when going, although a portion of the time he ran level. He was handled by Luke White. Working into some woods, Gay flushed a single while at speed and kept on without paying it any attention. Then in some tall sedge he made a very stylish point to a bevy, which was flushed to order, and he was steady to wing and shot. Turning down into some low ground Con flushed a single and dropped to wing. Then in some sprouts he made a good point to a bevy that White flushed to order. Then in some pines, where birds had been marked, Con drew a long distance with his head high, and located a single in grand style, Gay backing very prettily. Working through some sprouts to a patch of small pines, Gay pointed and Con backed him, but nothing was found. Then crossing an open field to some woods, Gay pointed a single that flushed just before Con came up. Gay held his position and Con refused to back and went up and also pointed indifferently. Con then got in a point to a single that White, to order, flushed and crippled, and Gay coming round pointed and then retrieved it. Then circling nearly around the spectators, Con made a false point that was very handsomely backed by Gay. Soon after Gay pointed false, and Con ran in, stopped an instant and went on. Gay had slowed down somewhat and was inclined to potter. Con was going well, and soon pinned a single that was flushed to order by his handler. This ended the heat, with Consolation the winner. Down fifty-two minutes.

SPRINGBOK AND TALLEYRAND.

Springbok is a well formed pointer of medium size, very fast, and a wide ranger, with a nice easy way of going. He carries his head high and puts on lots of style. He is not yet thoroughly trained and was not under good control. He was handled by Captain McMurdo. Talleyrand is almost a fac simile of his brother Roi B. in looks and style of going. He was handled by Short. They were put down in the open and worked to some woods, where Talley scored a false point. Then turning down the creek without a find they went back to a thicket, where Spring roaded out a bevy and pointed them, Talley backing very nicely. The birds were flushed, to order, and both dogs were steady to wing and shot. Then working up the creek Spring made a nice point but nothing was found. Then, crossing a run to some pines, Talley got in a good point to a single that was flushed to order. Spring then made a false point near an old barn. Then down the hill in pines Spring flushed a brace and was soundly rated by his handler. Working down the creek in sedge and crossing to some pines Spring made a nice point, and Talley coming up out of his sight also pointed the same birds, which got up all around as the handlers went on to flush. Spring then got in a nice point that was flushed to order, and the heat was ended in favor of Springbok. Down one hour and two minutes.

RAPIDAN AND PAXTANG.

Rapidan is a nicely made little pointer with lots of speed and an easy, level way of going. He was handled by Haight, who had never seen the dog before, but ran him, as his owner was not in a fit condition to handle him. Paxtang is a large dog of an ugly liver roan color, but he makes up in action what he lacks in looks. He has a level head, is fairly fast and appears to have a wonderful nose, going straight to his birds and locating them in exceptionally fine style. He was handled by Tucker. This was a short heat, as Pax cut out the work, going straight to his birds without giving the other dog a chance. As soon as the word was given Pax went some twenty yards and nailed a bevy in fine style. Rap backed him in elegant form and both were steady to wing and shot. Then across a gully Pax while at speed jumped into a point that Rap backed at sight, but nothing was found. Working up to some woods Pax again made two capital points in quick succession to birds that were flushed to order. Then crossing the road he got in another good point, and Rap not seeing him also pointed the same birds. They were then ordered up with Paxtang the winner. Down 15 minutes

BEN HUR AND CHANCE.

Ben Hur, handled by Short, is a large loose put together dog, quite good looking and with an easy way of going, but he was kept in and had no opportunity to show his speed. Chance, handled by Avent, is of medium size, very fast, quite stylish, wide ranger and looks a stayer. They were put down in sedge and worked down to a gully where Ben chased a hare and caught it, much to the delight of the colored followers, who at once pronounced him the best yet. A little further on Ben scored a false point, and shortly after both challenged and Ben pointed nicely with head and tail well up, and a bevy was flushed to order. Then in some woods each pointed, but the birds ran away, and both commenced roading. Chance had the best of it and located very nicely, and Ben backed him. Avent to order put up the bird and hit it, but it went on. The spectators crowded so close that birds got up all around. Soon after in some pines Ben secured a flush, and the heat was decided in favor of Chance. Down twenty-nine minutes.

JEAN VAL JEAN AND FLY.

Jean Val Jean, handled by Avent, is a well-formed dog, very fast and stylish, reminding one of Foreman, both in his way of going and the style in which he goes to his birds. Fly is a very nice moving little bitch of good style, with head carried high. She gets too close to the ground when on game. She was handled by Kolb. They were put down in the open and both went off at great speed with Jean in the lead. Fly was the first to point, but nothing was found. Jean then followed suit, and also scored false. They were then taken up, and 18 minutes later put down where a bevy had been marked down. Jean got there first, and scored a good point. They were then ordered up and the heat was awarded to Jean Val Jean. Down thirty-nine minutes. Kidd having a bye this finished the first series with the following result:

Summary First Series.

Fred W. beat Nat Goodwin.
Hari Kari beat Rapid B.
Hustling Hannah beat Hector.
Swatara beat Dan Noble.
Keystone beat Cassio.
Bride beat Rue II.
Roi B. beat Mavis.
Dolon beat Allie James.
Bob H. beat Goldstone.
Consolation beat Gay Gladstone.
Springbok beat Talleyrand.
Paxtang beat Rapidan.
Chance beat Ben Hur.
Jean Val Jean beat Fly.
Kidd, a bye.

THURSDAY.

Second Series.

KIDD AND FRED W.

On Thursday morning the rain was coming down with a persistency that boded ill for the trials. Nevertheless a start was made shortly after 9 o'clock, during a lull in the storm, and the dogs were put down in stubble a short distance from town a few minutes later. Kidd is a light built black and tan, well up in legs, fairly well formed, and looks like going, but he was suffering from dysentery and scarcely galloped during the heat. He was handled by Kolb. As soon as the word was given, Fred was off at speed and soon beat out the fields, while Kidd was trotting around just in front of us. Turning down toward the woods a bevy flushed under the horses' feet and settled in the pines. Fred had passed within twenty yards of them with the wind in his favor, but the high wind and rain had destroyed the scent. The wind was blowing strong from the southeast and came in fitful gusts, making it next to impossible for a dog to locate his birds, even when he got the scent. Added to this, the birds were not moving, and a worse day for bringing out the hunting qualities of a good dog could scarcely be imagined. A short nosed, slow, pottering dog might, if lucky, get in some work that would count, and thus beat the ideal field trial dog, who would be heavily handicapped by the very qualities that we are seeking for, and would thus cut his own throat with his own best weapon. Speed, dash and good

nose me of but little avail in such a day as this. Following up the birds in the pines one flushed near Kidd, and he dropped to wing. Fred also put up one while at speed, and kept on but stopped to order. Fred then pointed but went on, and soon after Kidd made an uncertain point under some cedars, drew on and again pointed fairly well, and as his handler went to flush a bird rose some little distance beyond him. We thought Kidd entitled to the point, as the birds evidently were running, but it was not easy to determine, as he was pottering over the scent for some time. It then commenced raining, and we turned toward a deserted house. Kidd made a false point on the way, and soon after he pointed a hare and Fred backed him. It was now raining fast, and we sought shelter in an old barn and under the shed. The judges announced that Kidd did not possess merit enough to win, and awarded the heat to Fred W. Down fifty-three minutes. After a short stay at the barn some one opened the house and we soon had a fire going in the large fireplace, when an attempt was made to get dry and a messenger was dispatched to order our lunch brought to us; but the rain was coming in torrents, and the prospect for any more work was very gloomy. Finally it was decided to return to town, and we were soon on the road and no further work was done on this day.

FRIDAY.

HARI KARI AND HUSTLING HANNAH.

Friday morning broke clear and beautiful with a gentle breeze from the northwest. There was a heavy frost and on this account we started rather late, not leaving the hotel until 8:20. The dogs were put down in an old field about one mile from town at 8:38. Working through the field to some sedge, Hari swung round a few yards in front of the horses and made a pretty crouching point directly toward us, and Hannah backed him nicely. Buckell to order flushed a bevy between the dog and horses, and they settled in a thicket where London made his celebrated pose four years ago. Following them up, Hannah made a point to a single that Hari at once honored, and the bird was flushed to order. She soon had another one fast and Hari backed her, and the bird went as the handlers came up. Then crossing the branch she again pointed, probably a running bird, as one flushed wild some little distance above her, and as she went on another one rose near her. Hari then got in a nice point to a single that Buckell to order flushed and killed and Hari retrieved it. We then beat up to a grassy stubble, where Hari made a very pretty point to a bevy and Hannah dropped to back the instant she saw him. The birds were flushed, but not shot at. This was very well done. A single bird was marked down at the top of the opposite bank and the dogs were sent toward it. Hannah found it, but scored a flush, and the heat was awarded to Hari Kari. Down twenty-four minutes.

SWATARA AND BRIDE.

Just before the brace was put down a few birds flushed near us, and they were taken a short distance and cast off in an old field. Both started at speed, Bride having the best of it in this respect as well as in range. After taking quite a circle Bride struck scent of a bevy and with her head well up never broke her gallop, but quartering the ground and holding the scent went a long distance to her birds and pinned them in capital style and held them until we came up, when they were flushed to order and one was killed by White. This was a very commendable piece of work and it was warmly praised by all. Following them into the edge of some woods Bride made an excusable flush, and soon after Swatara pointed one that flushed as Tucker came up, and a short distance further on she made another point and this bird also went as Tucker came up. She then flushed one and soon after made a point to which nothing was found. One then got up near Bride and soon after Swatara pinned one that Tucker flushed to order and both dogs were steady to wing and shot. Swatara then scored a flush and Bride got in a good point to one that flushed itself a few seconds later. They were then ordered up and the heat was awarded to Bride. Down thirty-four minutes.

KEYSTONE AND ROI B.

This brace was at once put down in the large stubble field, and Keystone, after going a short distance pointed, but went in of his own accord, and a little further on he again pointed, but he held it too long this time, as nothing was found and he scored a false point. A little further on Roi made a good point to a bevy that Short flushed to order, killing one that Keystone retrieved as we went on. We then left our horses and crossed a fence to a knoll of sedge and brush, where Keystond made a point and Roi backed him, and as the judges came up Tucker flushed a bird just behind his dog. A little further on both dogs pointed at very nearly the same time, and birds were flushed before each. A little further on one got up near Roi and Key made a point, but soon went on a few yards and again pointed and Roi backed him, but nothing was found. We then went to some woods where some of the birds had been marked, and Key made a point to a single that went as the judges came up, and a little further on he half pointed a second before another flushed; then two or three more went behind the dogs as the judges came along. This ground was not half hunted, as the dogs were sent straight on instead of giving them time to work over the ground. We then turned down a branch, where Key pointed, drew on and again pointed, but soon left it, and Roi took up the trail and roaded it out and pointed and was drawing on when Short came up, and the birds flushed wild just beyond the dog. This ended the heat with Roi B. the winner. Down twenty-nine minutes. Keystone appeared to be all off, as none of his points were rigid.

DOLON AND BOB H.

were put down in a field of sedge. Bob was handled by his owner, who had recovered from his indisposition. After going a short distance, Bob made an undecided point, and as Dolon came up both went on and Bob again pointed and Dolon backed him, they both went on, however, and did some roading, probably on trail of birds of the last bevy when they ran together, as it appeared to lead toward the place where they were flushed. We then crossed the branch to the thicket where the birds had been marked down, and after several had been flushed by the spectators Bob made a nice point in the sedge, Dolon backing to order. The Doctor put up the birds to order and shot; both dogs were steady. Taking a few steps, Bob pinned another one that the Doctor flushed and killed, and Bob retrieved nicely. A little further on one flushed near Dolon, and a few yards further both dogs pointed at nearly the same time, Bob catching the scent a second before Dolon. As the handlers came up birds flushed behind the dogs. As they went on Bob flushed one going down wind, and a little further on he made a nice point to some birds that got up as the Doctor went to him. Bob soon made another point, but was sent on by his handler, who had failed to find a bird that the spectators put up as they came along. Bob soon had another one that flushed itself a few seconds later, and he was a trifle unsteady to wing. They were then ordered up, with Bob H. the winner; down 18 minutes. Dolon was suffering from dysentery and did not show at his best.

CONSOLATION AND SPRINGBOK.

This brace was put down in sedge on top of the hill and worked down to a run and then up to some woods that both dogs ran into, and considerable noise was made before they were got together again. We beat out quite a large tract of good-looking ground without a find, both dogs going well and ranging wide. Finally on a stubble field Con found a bevy and pointed it in beautiful style, Spring backing him nicely. White, to order, flushed them and killed one that Con retrieved in good style. This was a very pretty piece of work. Leaving our horses and following them up, Spring, while at speed, whirled on a beautiful point to a single that went a second or two later, and a little further on the performance was repeated. Returning to our horses we turned down toward the branch, and as we came to a small thicket Spring made a nice point that Con at once honored. Capt. McMurdo, to order, put up the bird and killed it, and Spring retrieved it nicely, pointing dead very prettily. A little further on in a stubble field White walked into a bevy that settled in a patch of scrub oak, where Con found and pointed them nicely. Spring coming up flushed one and stopped and the remainder went. They were then ordered up and the heat was awarded to Consolation. Down fifty-eight minutes.

PAXTANG AND CHANCE.

Owing to the breaking down of a bridge after the handlers and judges had passed over it, your reporter was obliged to make a long detour, and did not join the party in time to see the work of this brace and is indebted to the kindness of Mr. Briggs for notes of the running. The brace was put down near the creek and worked up to some pines, when Pax challenged but could not make it out. Then crossing a run he made a point, and Chance backed him. Tucker beat round for some time, and the bevy finally flushed out of a cornfield behind the dogs. Following them up, Chance pinned a single that was flushed to order. Pax then pointed one and Chance was called to heel, while Tucker, to order, put up the bird and shot and Chance broke in and was dropped to order. Then in some sedge, as the dogs were coming together from opposite directions, a bevy flushed near them and both stopped to wing. Working through a thicket, Chance was inclined to range too far and was not under good control. Then near a run Chance pointed a single that Avent flushed to order, and shot at and Chance was unsteady. When ordered on, Pax went a few feet and pointed but went on and both challenged once or twice but could not make it out. Following up the bevy, Chance, while going down wind at speed flushed a single, and a short distance further on in some pines Pax pinned a single that was flushed to order. The judges then consulted and ordered the dogs to go on, and Chance at once pointed a single that flushed wild a moment later. Pax then cast to the right and pointed a bevy which flushed before the judges saw him and he failed to score a good point that he deserved. Working on to a cornfield, each scored a point to which birds were flushed, both dogs remaining steady. They then swung back in the pines and Chance made a point to a single that was flushed to order. Pax then got in one or two more points in rapid succession, and the heat was decided, Paxtang winning. Down forty-eight minutes. This ended the second series, and as it was nearly 1 o'clock a break was made for lunch. Following is the result of the second series:

Summary Second Series.

Hari Kari beat Hustling Hannah.
Bride beat Swatara.
Roi B. beat Keystone.
Bob H. beat Dolon.
Consolation beat Springbok.
Paxtang beat Chance.
Jean Val Jean a bye.

Third Series.

JEAN VAL JEAN AND FRED W.

After lunch this brace was put down near the creek in a cornfield, and a turn was taken to the lower end without a find. Then turning back we crossed the creek and went up through woods to an open field of sedge, where Jean got in a nice point to a bevy that Avent flushed to order and shot at. Following them into the woods, both dogs pointed, and we heard a bird go, but could not see if either was to blame. Jean then flushed one and soon after made a point; Fred backed him; the bird flushed as the handlers came up; a few steps on the performance was repeated, except that Fred was not near to back. Fred then got in two points in the same manner. He then made a point, but left it, and as the spectators came up a bird was flushed from there. Jean then sat down very gracefully on point to a single that Avent flushed to order. After a brief consultation the judges awarded the heat to Jean Val Jean. Down thirty-seven minutes.

HARI KARI AND BRIDE

were at once taken to an adjoining stubble field and put down on the hillside, where Bride pointed and drew, probably on an old scent, as nothing was found. She then swung lower down and pointed a single from the last bevy, and the bird went a few seconds later. She then swung into some pines and pointed a bevy just as they rose. Following them up Hari ran up one and took a few jumps after it, but stopped to order. Bride then made a nice point to a single that White put up to order, and Bride was steady to wing and shot. Hari then made a good point to a single that Buckell, to order, flushed and killed; meantime Bride pointed but moved on as several birds flushed, when Hari's bird went. A little further on Bride pinned one that White, to order, put up, and the heat was ended in favor of Bride. Down twenty minutes.

ROI B. AND BOB H.

This brace was put down at the edge of the pines and given a turn in the open and then worked round into the pines after the scattered birds of the last bevy. Bob got there first and nailed one that the Doctor, to order, put up and killed. Roi then pointed one that went before the judges came up. He soon had another one fast that flushed as Short went to him. We then swung back down to a run, where Bob pointed, drew on and again pointed and then roaded a short distance, probably a running bird. Both dogs then disappeared in the pines, and when found they were both in a gully pointing, with Roi a little ahead. It was impossible to tell which found first, as evidently one had jumped in the hole and at once pointed, and the other, without seeing him, had also done exactly the same. Short, to order, flushed, and both dogs were steady. A little further on Roi caught scent, but the bird went before he could locate it, and as he went on one or two more flushed near him. One then got up near Bob just as he stopped on point to another that his handler flushed to order. He soon had another one fast that got up as the Doctor went to him, and the heat was ended with Bob H. the winner. Down twenty-five minutes.

PAXTANG AND CONSOLATION.

This brace was put down in a field of sedge, where Pax after going a short distance made a point to a single that flushed before Tucker came up. Working up to a fence Con flushed one and stopped, and a second later several more got up. Following them into some pines Con made a good point to a single that flushed wild a second or two later, and a little further on the performance was repeated, and soon after he again pointed, but nothing was found. Pax then came up and went on a short distance and pointed the bird, and Tucker to order flushed it and shot. Pax then swung to the left and again made a nice point, and Con backed him very prettily, Tucker to order putting up the bird. We then turned into some sedge where Pax dropped on point as if shot, and Con, a little behind him, also went down in the same manner to back, but catching scent also pointed. Tucker went ahead to flush when Pax drew on a step or two and a single got up, and then the remainder of the bevy went. This was a very pretty piece of work. They were ordered up and the heat was awarded to Paxtang; down 21 minutes. This ended the third series with the following result:

Summary Third Series.

Jean Val Jean beat Fred W.
Bride beat Hari Kari.
Bob H. beat Roi B.
Paxtang beat Consolation.

Fourth Series.

JEAN VAL JEAN AND BRIDE

were put down in some sedge on top of a hill, and after a short spin swung round after the last bevy in some pines. Jean soon made a point and Bride backed him but nothing was found. A little further on Jean again pointed and Bride backed him. Avent, to order, put up the bird. Bride then got in a good point to a single that White flushed to order and killed and she retrieved it well. Jean then pointed but soon went on and Bride flushed one and stopped. White called point but there were no more birds near her and she scored a false point. Jean then made a nice point to a single that Avent flushed to order. We then turned down to some stubble, both dogs going slower, Bride evidently tired but occasionally striking a good gait, Jean going fairly well. Crossing a stubble to an old field, Jean ran into a single and flushed it, and kept on and put up the bevy and was a trifle unsteady. Following up the birds we failed to find them, and turned for a bevy that the spectators had seen running into some weeds. Both pointed and then roaded on the trail for some time. Finally Bride caught the scent, drew on and pointed them nicely, and White flushed them to order. Following them up Jean made a nice point and Avent, to order, put up the bird, and two or three more went; Jean showing sign of being unsteady, was dropped to order. We then swung into some pines, where Jean pinned one in fine style, that Avent put up to order. Meantime Bride made a point to which nothing was found, and the heat was declared in favor of Jean Val Jean. Down one hour and fourteen minutes. This was a trying heat for the dogs, as it was mostly through tall sedge. Little Bride had gone through her previous heats gamely, but the heavy work was too much for her; next year, if nothing befalls her, she will make it hot for the best of them.

BOB H. AND PAXTANG.

It was after 5 o'clock when this brace was put down in sedge. Bob at once made a very stylish point where a bevy had been flushed and Pax backed him in equal style, making a beautiful picture. Then working through to a stubble Pax pointed a hare and made a jump or two but came back to whistle, and soon after he pointed once or twice at larks and then making a cast to a stubble he caught scent and half pointed, but before his handler could get to him a large bevy flushed wild on the hill above him and he remained steady. The birds settled across a branch in a thicket along a fence. Pax was there first and scored a nice point and was handsomely backed by Bob. Tucker put up the birds to order, and as the dogs went on Bob caught scent, pointed a moment and went on and left his birds and Pax came up and pointed them, Tucker flushing them to order. This ended the heat with Paxtang the winner. Down seventeen minutes. It was now night and we started for town well pleased with the day's work, having run off twelve heats. This ended the fourth series with the following result:

Summary Fourth Series.

Jean Val Jean beat Bride.
Paxtang beat Bob H.

SATURDAY.

Tie for First Place.

JEAN VAL JEAN AND PAXTANG

were the only ones left to contest for first place and the heat was intently watched by the crowd of spectators. The day was simply perfect. There had been a heavy frost during the night and the air in the morning was a bit keen, but it soon grew warm, although it was not uncomfortably so at any time during the day. There was a gentle breeze from the northwest and not a cloud to be seen. Starting from the hotel a few minutes past 8, we drove a short distance from town and the dogs were put down in an old field at 8:39. Jean showed himself the fastest, and was the equal of Pax in range, but much of his ground was gone over twice, while Pax, with his steady lope, was doing his work in a masterly manner, looking out the likely places and going to them in a way that showed the workman. After beating out the field we turned into some pines where Pax pointed a moment but soon went on. When we came to the place two birds flew out of a tree some ten feet above the place. Turning in the direction of these birds Pax got a point on one and Jean backed him and the bird was put up to order. Tucker shot and both dogs were steady. We then turned back and worked out a side hill grown up to weeds and a stubble, where the spectators flushed a bevy that was followed back into the pines, but none were found except two or three that were flushed by the handlers and judges. We then crossed to the large open field of the Snow farm where both dogs ranged wide. Finally Pax made a point but soon moved on and cast for the scent, but Avent walked into the bevy a short distance away and flushed them. Jean then came round and made a beautiful point where they rose, and Pax backed him in grand style. Following the birds into some woods, Pax made a point but went on, and as the spectators came up a bird flushed near them. Jean then made a point just in time to score, as the bird went a second later. Pax then got in two points in rapid succession, and, to order, a bird was flushed to each. Jean then pointed a bevy that was flushed to order. Pax, coming round, made a nice point where they rose from. A little further on Jean pointed a hare and gave chase when it started, but came back to whistle. Pax then pointed a hare and Jean refused to back and was dropped to order. A little further on Jean appeared to catch a little scent and challenged, while Pax, not seeing him, came round and pinned the bird, which went a second later. They were then ordered up, and Paxtang was awarded the heat and declared winner of first prize, $400, also winning for his owner, who bred him, the Breeders' Cup, valued at $100, and for Mr. Tucker the FOREST AND STREAM prize of $50 to the handler of the winner.

Ties for Second Place.

BOB H. AND CONSOLATION.

The judges announced that Bob H., Consolation and Chance should decide by running which of the three should have the honor of contesting with Jean Val Jean for second place, the dogs to be run in the order in which they were first drawn. This gave Chance the bye, and Bob and Con were put down in the large stubble field on the Snow farm and worked across it toward the woods on the opposite side. As we passed the place where Avent flushed the bevy in the previous heat Bob made a splendid point at the old scent, but soon went on and making a wide cast down wind turned and pointed toward us, then drawing a few steps he again pointed and Con backed him nicely. The Doctor came up and ordered Bob on and he took one jump and sat down on point, Con backing him instantly. Bob then went on and challenging for scent he got too close to the bird, that had evidently been running, and scored a flush, and as his handler came up two more got up. A little further on they backed each other very prettily, and soon after Con pointed and Bob backed him nicely, but nothing was found. We then worked down along the woods and Con made a wide cast down wind and turning, pointed toward us just as a bevy flushed in front of us. White claimed the point but Con did not, as he drew on in the opposite direction and located another bevy, which his handler, to order, flushed a short distance ahead of him. This was a very pretty piece of work, as Con roaded down wind, and, making a short cast, whirled into point in capital style. Crossing the fence at the corner of the woods Con pinned a single in good style, and it was put up to order. A short turn was made in the woods, but nothing was found, and when the judges came back they were consulted and the dogs were ordered up, with Consolation winner. Bob H. had run his

previous heats in fine form. Although his owner, who handled him, never witnessed a field trial, he brought out a grand dog and showed him up a winner over some good dogs.

CONSOLATION AND CHANCE.

After a short rest this brace was put down, near where the last brace was taken up, and worked in stubble and sedge down to the creek, where Con found a bevy and pointed them nicely, Chance backing him in good style. The birds were flushed to order and five or six flew over the judges and settled in the sedge a short distance beyond them. The dogs were brought round, and almost as soon as let go Chance winded and was turning round, when Con, quick as a flash, straightened out on point, and a second later Chance also pointed partly behind the other dog. The bird was flushed to order, and the dogs sent into some tall sedge where Con pinned one that White to order put up and killed and Con retrieved it. Con soon got too near one and it went. Chance then made a point and Con backed him, but as Chance drew on Con went ahead and stole the point. The bird was flushed to order, and we left our horses and crossed the creek after the remainder of the bevy. Taking the dogs round to get the wind they were sent on. Con got there first and pointed an instant, drew on and made an uncertain point, while Chance, a little to the right, caught scent and stiffened just as Con appeared to locate them. Birds were flushed before each dog and they were ordered on. Con was the first to find, pointing a single that White flushed to order. They were then ordered up with Consolation the winner. This was a good heat and some very pretty work was done by both dogs.

Final Tie for Second Place.

JEAN VAL JEAN AND CONSOLATION.

This was the last heat in the stake, as the judges selected the third prize winner without running. They were put down in grass just above the bridge over the creek on the Model Farm. Both swung into some tall weeds and pointed at nearly the same time, Con perhaps half a second first, then on to the edge of the woods Con again pointed, but went on into the woods where both pointed at nearly the same time, and birds got up all around them. They were then swung round to a thicket, where Jean pointed, but nothing was found; meantime Con made a point to a single that White flushed to order. The dogs were then sent on, and Con soon made a point, drew on and again pointed nicely a bird that White flushed to order. Jean then got too close to one that went, and soon after he pointed one that soon got up and he was inclined to chase, but stopped to order. They were then ordered up. The heat was awarded to Consolation, and he was declared winner of second prize, $200, and as under the rules third prize may be decided without running, the judges selected Jean Val Jean, and he was declared winner of third prize, $100, and the Derby of 1886 was ended. Consolation came out strong in his last three heats, going better in each successive one, and proving himself to be a rattling good one. Jean, the winner of third, is also a remarkable dog. He has had but two weeks on quail, yet he showed up a grand performer and bids fair to make as good a one as any. Following is the summary:

First Series.

Fred W. beat Nat Goodwin.
Hari Kari beat Rapid B.
Hustling Hannah beat Hector.
Swatara beat Dan Noble.
Keystone beat Cassio.
Bride beat Rue II.
Roi B. beat Mavis.
Dolon beat Allie James.
Bob H. beat Goldstone.
Consolation beat Gay Gladstone.
Springbok beat Talleyrand.
Paxtang beat Rapidan.
Chance beat Ben Hur.
Jean Val Jean beat Fly.
Kidd a bye.

Second Series.

Fred W. beat Kidd.
Hari Kari beat Hustling Hannah.
Bride beat Swatara.
Roi B. beat Keystone.
Bob H. beat Dolon.
Consolation beat Springbok.
Paxtang beat Chance.
Jean Val Jean a bye.

Third Series.

Jean Val Jean beat Fred W.
Bride beat Hari Kari.
Bob H. beat Roi B.
Paxtang beat Consolation.

Fourth Series.

Jean Val Jean beat Bride.
Paxtang beat Bob H.

TIE FOR FIRST PLACE.

Paxtang beat Jean Val Jean and won first place.

TIES FOR SECOND PLACE.

First Series.

Consolation beat Bob H.
Chance a bye.

Second Series.

Consolation beat Chance.

Final Tie for Second Place.

Consolation beat Jean Val Jean and won second prize, Jean Val Jean winning third prize.

THE POINTER STAKE.

There were 35 nominations for the All-Aged Pointer Stake, 23 of which filled. Previous to the start, however, one was withdrawn, changing the order in which they were drawn. Following is the list in the order in which they were finally arranged to run:

Sweep against Malite.
Jetsam against Tammany.
Robert le Diable against Richmond.
Flash R. against Nick of Naso.
Dixie against Don's Dot.
Krupp against Prince.
Dress against Duke of Bergen.
Old Pebo against Rod.
Consolation against Rue II.
Half-and-Half against Lalla Rookh.
Flotsam against Bang Bang.

The stake was commenced on Saturday, after the finish of the Derby, and five heats were run with the result as follows:

Malite beat Sweep.
Tammany beat Jetsam.
Robert le Diable beat Richmond.
Nick of Naso beat Flash R.
Don's Dot beat Dixie.

The judges are Messrs. B. F. Wilson, D. C. Bergundthal and J. W. Orth. The work of the dogs as a whole was far from first-class. Malite and Tammany won their heats easily and were not down long enough to get fairly going. Robert le Diable and Richmond were in heavy brier thickets most of the time and hardly had a chance to show what they were capable of. Nick of Naso distinguished himself by beating Flash R., doing some excellent work. The heat between Dixie and Don's Dot was a very poor one. The weather through the day was delightful and birds were found plenty.

[Special to Forest and Stream.]

HIGH POINT, N. C., Nov. 29.—The weather to-day has been good except rather windy at noon. Seven heats were run. The work from some cause has been very unsatisfactory, although there has been an occasional brilliant point. The trials were run on ground six miles east of here. Birds were plenty but scent appeared to be poor and none of the heats were very good. Prince beat Krupp, Duke of Bergen beat Dress, Rod beat Old Pebo, Rue II. beat Consolation, Lalla Rookh beat Half and Half, Bang Bang beat Flotsam. In the second series Malite beat Tammany and Robert le Diable ran an unfinished heat with Nick of Naso.

[Special to Forest and Stream.]

HIGH POINT, N. C., Nov. 30—8:50 P. M.—The weather to-day has not been good for field work. There has been some rain with a high wind. In the unfinished heat between Robert le Diable and Nick of Naso, Robert won, doing some good work. Prince beat Don's Dot. Duke of Bergen beat Rod. Lalla Rookh beat Rue II. in a good and close heat. This ended the second series. In the third series Bang Bang beat Malite in a close heat. Robert le Diable beat Duke of Bergen in a long, tedious heat, without finding many birds. Prince and Lalla Rookh did not finish their heat and will go down in the morning. The stake will probably finish by noon to-morrow.

The drawing for the Setter Stake took place to-night. Twenty-six of the entries filled. They were drawn as follows: Noble C. against Clifford, Fred W. against Lillian, Brandon against Gloster, Lady C. against St. Elmo IV., Pendragon against Belle, Roy Monarch against Chickasaw II., Mandan against Windemere, Daisy against Gene, Chance against Mack, Dashing Noble against Dan Gladstone, Fannie W. against Prince Imperial, Bob Gates against Belle of Piedmont, Pet Gladstone against Slocum. Messrs. Bergundthal, Orth and F. R. Hitchcock will judge the Setter Stake.

ROBINS ISLAND TRIALS.

QUITE a delegation of the members, with invited guests, left for Robins Island Monday, Nov. 22, on the morning and afternoon trains. Among the first arrivals at the club house were Messrs. L. H. Waterbury, Chauncey Marshall, S. B. Duryea, W. Hester, A. S. Swan and George Abbott. Upon reaching Robins Island a surprise awaited many of the members in the altered and much improved appearance of the club house. So extensive an addition has been attached to the old club house that the latter is dwarfed in comparison. Imagine a structure over 80ft. in length by 35 in width, two stories, with high and lofty ceilings on each floor, the whole fronted and sided by a wide piazza, and your readers can form some idea as to the extent of the alterations and the consequent changed appearance of the club building. Inside the look of things is immensely for the better. A wide hall divides the building in halves and ends in a large and commodious sitting-room. On either side of the hall are bed rooms, so that the sleeping quarters are now all that can be desired. There are 16 rooms, and in case of necessity two smaller rooms can be added, the last having been built at the extreme east end to break the force of the easterly gales, which are in the locality sometimes fierce in the extreme. Besides these rooms the club has in the old house eight most comfortable sleeping apartments. The interior of the new house has been finished solidly in wood. No plastered walls or ceilings, but completely finished in yellow pine and cypress, the grain being brought into strong view by the use of shellac varnish. The resinous odor of the woods strongly impregnates the air and brings to one's mind visions of pines with their feathery tops, moaning and sighing as the wind soughs, now fierce, now soft, through their fringed altitudes. At the club house a strong delegation was found, among them Messrs. L. H. Bullard, Lawrence, Pomeroy, Dobson, Van Amden and others whose names I cannot at this writing recall. Those who came in the evening were Dr. S. Fleet Speir, the president of the club; Messrs. Clarence Speir, Lewis, Stanley and Wellington, the two last named newly elected members of the club, with the judges, Captain Bruce, of New York, and Judge C. Pratt, of Brooklyn. The clanging bell announced that dinner was served, when jest followed jest, wit and jollity reigned supreme, so that good digestion followed appetite without doubt. After coffee an adjournment was had to the newly built sitting-room, where an informal meeting was had to arrange for the details of the trials.

In the All-Aged Stakes the prizes were: First, a handsome flagon of solid silver, presented by H. Polhemus, the vice-president of the club; second and third, a silver-headed dog whip and silver whistle, the winner of second having the privilege of selecting which of the two prizes he preferred. Entries:

JEFF (W. Hester), orange and white setter dog.
GOUT (W. M. Van Amden), orange and white setter dog (Massy's Duke—Hudson's Dora).
BERKLEY (A. S. Swan), red setter dog (Chief—Gussie).
JOCK (W. Stanley), black and tan setter dog (Jock, Jr.—Bessie).
PRIDE OF ROBINS ISLAND (Chauncey Marshall), orange and white setter dog.
BLADE O' GRASS (L. H. Bullard), lemon and white setter dog (St. Elmo—Countess Louise).
NED (S. B. Duryea), blue belton setter dog (Blunder—Fan).
ROYAL SULTAN (S. B. Duryea), blue belton setter dog.
GENERAL ARTHUR (S. Fleet Speir), black and white setter dog (Emperor Fred—Wanda).
ST. ELMO VI. (S. Fleet Speir), black and white setter dog (St. Elmo IV.—Lucy).
FORCE (L. Waterbury), liver and white pointer dog (Vandevort's Don—Bessie).
RUBY (H. Polhemus), liver and white ticked pointer dog.
DARE (H. Polhemus), liver setter dog.

The dogs at these trials are judged entirely by a scale of points, the running in heats being only to expedite matters so that a conclusion can be more quickly reached. They were drawn as follows:

Force against Royal Sultan.
Pride of Robins Island against Blade o' Grass.
Jock against St. Elmo VI.
Ned against General Arthur.
Berkley against Gout.
Jeff against Dave.
Ruby, a bye.

The Derby Stake closed with six entries. There was but one prize, an extremely handsome and valuable dog collar of solid silver. Entries:

OISEAU (A. S. Swan), black setter bitch (Doctor—Nellie).
STILETTO (L. H. Bullard), liver and white ticked pointer dog (Donald II.—Nellie).
NED (S. B. Duryea), blue belton setter dog (Blunder—Fan).
DICK DONALD (S. Fleet Speir), liver and white ticked pointer dog (Donald II.—Nellie).
DON DONALD (S. Fleet Speir), liver and white ticked pointer dog (Donald II.—Nellie).
DIPLOMAT (L. Waterbury), liver and white ticked pointer dog (Donald II.—Nellie).

They were drawn to run:

Ned against Don Donald.
Diplomat against Oiseau.
Dick Donald against Stiletto.

The Brace Stake closed with five entries:

W. M. Van Amden's Jeff and Gout.
Chauncey Marshall's Pride of Robins Island and Berkley.
S. B. Duryea's Royal Sultan and Ned.
S. Fleet Speir's St. Elmo VI. and General Arthur.
W. Stanley's Jock and Gifford.

It was sharp nine o'clock Wednesday morning when the first dogs were cast off in the open rolling fields to the west of the club house. The day was overcast and cloudy, the wind blowing strongly from the southwest, now and again rising to half a gale. A chilly, blustery day, the worst possible to insure good work, and making with the chilliness of the air, a raw, uncomfortable morning for the spectators.

ALL-AGED STAKES.

FORCE AND ROYAL SULTAN

were hunted due west (Force handled by L. Waterbury, Sultan by S. B. Duryea) over the hills and hollows to the bluff where commences North Point. Both showed a good deal of speed, ranging and quartering well. A turn was made south to that five-acre patch of cat brier and thicket so well named as the Devil's Kitchen. It closets the birds and cooks the chances of the dogs if they get in it. Nothing found. A turn about to north and dogs hunted along the foot of the bluff where the sedge grass was thick and heavy. Force held his speed well, while Sultan, too fat for good work, was dropping back. Scarce in the sedge when Force ran up a bird, the quail going off wild. Sultan stopped to wing. A rod or so on and both dogs got a good point, birds flushed, shot at and none killed, dogs steady to wing and report. Starting had been but begun when Sultan, half stopping, ran on and flushed a good-sized bevy. Another move and both dogs ran up a bevy of birds. Having no chance to win, brace was ordered up at 9:35. The judges, after a moment's argument sent the dogs on. They had hardly got into motion when Force ran over a couple of birds which rose behind him. Sultan paying no attention to either birds, dog or handler, the brace was taken up at 10 A. M., having been down an hour.

BLADE O' GRASS AND GOUT

were promply cast off where others had been taken up. Gout soon located a wounded bird, which was shot at and killed by Master Clarence Speir. Gout ordered to retrieve did so in indifferent fashion, the bird being brought in by his handler, W. Van Amden. Blade o' Grass going like the wind, ran up a hard, close-lying bird, dropping to wing as if shot when the bird rose. Hunting westerly to bluff Blade o' Grass again flushed a bird, dropping to wing as in first case. The flushes were partly excusable, as Blade is as speedy if not faster than any dog at the island. Gout had the day previous cut his fore foot badly on a dry scallop shell and evidently in pain, was doing well considering the circumstances. A stop by both dogs in a bunch of bayberries proved a false point for each. Through bushes to open and Gout stopped staunchly, Blade came up, did not back but also established point. Birds flushed, shot at, none killed. The bevy followed, Gout getting a point which Blade refused to back. No birds found when a flush was ordered. At this point Blade got away, and after a quarter hour's search by Dr. Speir, who was handling him, the brace was ordered up; time 11:10. No delay was had and

ST. ELMO VI. AND JOCK

were immediately let loose in high sedge grass on the south beach, past Black Duck Pond and into bayberry bushes of Southeast Point. Only a single bird was found, that rising well to left of dogs. Nearing the point Jock pointed stiff, St. Elmo VI. backing him nicely, although somewhat unsteady. Birds put up, shot at and three killed. Ordered to retrieve Saint did so, but in indifferent fashion. Jock found his birds, pointing dead, he not retrieving. Shortly after this Saint stopped staunchly, no bird found. On for some rods, when he again pointed in elegant fashion. Jock called up to back did so in excellent style. It proved, however, no bird. Another move ahead through bayberry bushes, when Saint stopped, roaded along and stopped again. Jock again backing. This proved a wing-tipped bird, upon seeing which Saint ran in and caught the bird, bringing it in indifferent style. When near his handler he dropped it, the bird fluttering off, at which both dogs broke in and grabbed for it, the Saint getting it. Ordered up at 11:35.

NED AND GENERAL ARTHUR

were cast loose in the sedge grass and sand at South Point. Along toward end of point both dogs hunting in grand style. Soon a turn was made back, where Ned flushed a quail in lively fashion. A moment after he ran up another, chasing it for some yards. Arthur moving rapidly along, trying to locate, flushed a bird some distance ahead of him, dropping to wing in beautiful style. Ordered on he soon established another point. Ned called up to back utterly refused, running completely around Arthur and taking scent himself. Dr. Speir flushed the birds—a big bevy—shot and missed, Arthur dropping to shot. A move forward, where Arthur commenced roading steadily and fast. Before he got on the bevy Ned rushed up and past him, flushing the birds in a lively manner. A bird was here thrown for dogs to retrieve, Arthur doing so more than well, Ned also retrieved, but in so-so fashion. Dogs ordered up at 12 o'clock and the next brace,

JEFF AND DAVE,

turned down at Southeast Point. Both moved off slowly. In a bunch of heather Jeff picked up a wounded bird which he deliberately walked off with, chewing as he went, despite the calls of his handler. Hunting along through the scrub oak, which lines the edge of the east bluff, Jeff flushed a bird in most approved style. A sharp turn back in southerly direction when he again flushed handsomely. Dave was merely running around for play and showed none of the really exquisite nose he displayed in the trials of last year. Then he ran like a quarter horse, this season he was heavy and dull. Neither handler was at all acquainted with his dog, which added to the indifferent work displayed. Ordered up at half-past twelve, neither having the slightest chance of winning.

PRIDE OF ROBINS ISLAND AND BERKLEY

were cast off at once and hunted south through bayberry bushes to edge of south bluff. Scarce on the bluff's edge when Pride flushed a bird, dropping to wing. The single bird started a bevy of at least twenty birds. From here through scrub oak westerly, each dog doing some good work on evidently running birds. Each dog took quite a turn, and on coming together each stopped and backed the other. Going through a thick and high patch of bayberry bushes Berkley picked up a wounded bird, which he retrieved in most clever fashion. On into some scrub oak, where each did some first-rate roading, the birds at last flushed away to left of dogs. Going in same direction Pride ran over a large bevy, the birds scattering in every direction. Moving on each dog false pointed badly. Berkley followed this with a flush. Pride soon after pointed but in uncertain manner. Marshall, who was handling him, put up the quail, shot and missed. Again Berkley "got on" but the bird flushed wild. A rod or so further on toward southwest end of island and Pride located a bird. Berkley came up and backed in good style. Marshall flushed the bird, shot and missed. Dogs ordered up at fifteen minutes past one.

I cannot but disagree with the judges in awarding first prize. No one was or could be more astonished than I when first went to St. Elmo VI. Arthur is much the handsomer in appearance, is infinitely better in style and way of going, and his work in this stake was, as all can see by reading, absolutely without fault, for his flush was of such character as, in my opinion, to earn no demerit. Saint was off decidedly, as was shown by his withdrawal from the Brace Stakes Thursday morning, which accounts for his numerous false points.

ALL-AGED STAKES SUMMARY.

Name of Dog.	Points of Merit.								Demerits.					
	Pointing.	Pace.	Backing.	Style.	Staunchness.	Ranging.	Quartering.	Obedience and disposition.	Retrieving.	Flushing.	False pointing.	Breaking in.	Breaking shot.	Breaking shot and chasing.	Total.
	35	20	7	6	6	6	6	4	10	1-6	1-7	3	5	10	
St. Elmo VI.	32	17	6	6	5	5	5	4	4	....	2	....	....	....	85
Jock	32	16	7	6	5	4	5	4	5	....	....	....	....	....	84
General Arthur	28	18	5	5	5	4	5	5	4	3	....	....	....	....	81
Pride of Rob. I'd	30	18	5	5	5	4	5	5	2	4	3	....	....	....	70
Gout	25	18	4	5	4	5	5	5	4	3	*	....	....	....	73

Force	20	18	6	5	5	0	4	5	5	5	*	....	....	....	57
Ned	18	17	5	5	5	3	5	5	8	6	....	....	....	....	56

*No opportunity.

Jeff and Dave had no record taken, Ruby was withdrawn.

Lunch was taken in *al fresco* fashion, having been brought to the south side of the island by Superintendent Lecompte. A few words in praise of that gentleman and his methods. There are some fifty canines to care for, 35 of them to be broken and hunted, so that his position is anything but a sinecure. At the kennels everything is found in capital order, and the running of the different animals in the trials speaks volumes as to his success as a trainer. When it is considered the rules of the club require each member to handle his dog, some of these members seeing their dogs for the first time this season at the trials, it is a subject of wonder that the dogs cut out such work as they did.

THE DERBY.

DON DONALD AND NED.

Ned was an entirely different animal from what he had been in the morning. His wild spin of the forenoon had sobered him down, and he showed work of the first order, such work as has never been beaten in any Derby. Had his owner only known the dog, and the dog him, his record would have been wonderful. As it is, he is one of the best the writer ever saw. Cut loose at half-past 2 and hunting north, each ranged and quartered well, but Ned outstyling and outfooting the pointer. The setter soon established a point near the south end and stood well and firmly. Don called up to back, refused. Ordered to flush, handlers found nothing. On again for a dozen rods in westerly direction, when Ned again located birds. Don again refused to back, roading up and taking scent himself. Bird flushed, both dogs steady to wing. Dogs ordered up at 3:10.

OISEAU AND DIPLOMAT.

This was a long and weary run. The puppies appeared to lack fire and ran about aimlessly, paying but little attention to their new handlers. A move in northerly direction across the whole island at its east side. When nearing the upper side both dogs ran past a big bevy which flushed wildly as the judges came along, right behind the dogs. A turn was then made and the island again crossed, this time in westerly direction. Scarce out of the woods on that side, Oiseau pointed nicely, but broke her point, moved on and flushed her birds, half dropping to wing as they rose. Diplomat refusing to back. Still westerly when a single bird rose wild and both puppies followed in full chase. Ordered up at 4:10, having been down just an hour.

DICK DONALD AND STILETTO

showed so little good work, and having not a "ghost of a chance" to win, were taken up after being down ten minutes. Ned was the winner without argument.

BRACE STAKES,

JOCK AND GIFFORD AND JEFF AND GOUT

were let loose in the open rolling country to west of club house and hunted to West Bluff. They had not been down five minutes before Jeff found the birds and pointed. Jock and Gifford backed him beautifully. Jeff, however, left his point and flushed his bird. A move on of only a rod found all four dogs pointing at once, and nearly simultaneously. An immense bevy rose wild and moved for safer quarters. Young Clarence Speir got in a couple of shots and so many birds got up and were so bunched that five quail dropped to the two barrels. For a moment or two there was a confused mass of birds, dogs and men. After the excitement, Gout, the first to recover, went on and found another bird. Jeff, Jock and Gifford ranged up and all stopped. Nothing prettier was ever seen. Another big bevy was flushed in front of them. All steady to wing. After the flight Gout still held his point till a couple of birds, alarmed by the noise, rose from almost under his nose. Though crazed by excitement he was steady as a clock. Soon after Gifford got a solid point, the bird flushing wild while he was standing. Jeff behaved quite badly in this heat when ordered to retrieve. As it was now quite dusk and darkness fast coming on the dogs were taken up and a move made for the club house; time, 4:50.

Thursday morning opened raw and chilly, wind strong from the eastward and threatening rain at any moment. Nine o'clock saw all running toward west side of island, where so large a number of birds had been left the night previous.

PRIDE OF ROBINS ISLAND AND BERKLEY

were uncoupled and dashed off fast and furiously. Each showed marked improvement over their work on the preceding day. Pride insisted upon hunting southwardly despite the demands of Chauncey Marshall, his owner. The dog knew best, however, and a good quarter of a mile from the judges found his birds, and stopping well was at once backed in handsome fashion by the red dog. Marshall, who was some way off—the dogs had moved so rapidly—gave Berkley opportunity to give up his back and move along so as to get scent himself. When the handler got up both dogs commenced roading on slowly and carefully. The birds could be seen running directly ahead of the dogs, and a second later flushed wild as hawks. Moving on, Pride got another point, and Berkley again backed in good form. Birds flushed, fired at and missed. Both dogs thoroughly steady to wing and to shot. A complete turn about and dogs hunted north. After passing clay pit Pride located birds in patch of bayberry bushes on a hillside, and was backed handsomely by Berkley. Roading on, the moving birds broke cover with a rush and a roar. A slight move to the left and both dogs got on birds at the same moment, standing staunchly. Marshall, ordered to flush, did so, fired and killed. Berk a little unsteady to shot, but stopped at command, Pride dropping to shot. Berkley retrieved nicely when ordered. The bird was thrown for Pride to bring in, which he did in the very best manner. At quarter to two dogs taken up and the last of the braces put down.

NED AND ROYAL SULTAN

went south to Devil's Kitchen, crossed through and then around, where Sultan flushed a bird brilliantly. A turn to south, where Ned struck scent, and for a few seconds no one ever saw such a whirl of dog, first head, then tail, until he crouched down with a wounded bird between his forefeet and held there by his down pressed nose. His owner and handler, S. B. Duryea, picked up the bird which was unhurt by the dog. Another turn north, along east edge of the catbrier thicket. When almost past Sultan made an elegant point, exciting all hands by his graceful and easy position. Ned called to back, refused utterly, ranging up at full speed, passed completely around Sultan and dashing in routed up the close-lying bevy, to the great disgust of his owner. Dogs at once taken up and the trials of 1886 closed a success in every way and in consequence a pleasure to all concerned.

DERBY SUMMARY.

FOX-TERRIER CLUB STAKES.

NEW YORK, Nov. 24.—*Editor Forest and Stream:* The following stakes have been opened by the American Fox-Terrier Club and we will be very much indebted to you if you publish them.—AUGUST BELMONT, JR., President, A. F. T. C.

THE TOMBOY STAKES OF 1887.—For a silver cup, presented by the president of the American Fox-Terrier Club, added to a sweepstakes of $5 each p.p. for fox-terrier bitches whelped after Jan. 1, 1886, and to be competed for at the spring show of the New Jersey Kennel Club in 1887. Entries to close with the undersigned on Jan. 1, 1887.

THE APOLLO STAKES OF 1887.—For a silver cup, presented by the Secretary of the American Fox-Terrier Club, added to a sweepstakes of $5 p.p. for fox-terrier dogs whelped Jan. 1, 1886, and to be competed for at the spring show of the Hartford Kennel Club in 1887. Entries to close with the undersigned on Jan 1, 1887.

HOMEBRED PUPPY STAKES.—For a silver cup, presented by John E. Thayer, Esq., added to a sweepstakes of $5 p.p. for fox-terrier puppies whelped after April 1, 1886, to be competed for at the spring show of the New England Kennel Club in Boston, 1887. Entries to close with the undersigned Jan. 1, 1887.

Entries for all of above should be sent to FRED HOEY, Secretary A. F. T. C. (Long Branch, N. J.).

TENNESSEE TRIALS.—Nashville, Tenn., Nov. 20.—*Editor Forest and Stream:* At a meeting of the Executive Committee of the Tennessee Sportsman's Association, recently held in this city, it was decided to postpone their inaugural trials until Feb. 15, 1887, on account of the original dates conflicting with the last dates selected by the National Field Trials Club. The date for closing the entries in both the All-Aged and the Derby will be Jan. 10, 1887.—R. M. DUDLEY, Secretary and Treasurer.

MASTIFF IMPORTATION.—Mr. E. H. Moore, Melrose, Mass., has imported the mastiffs Minting and Orion. Minting was considered by many judges the best mastiff dog in England, and has just won equal first with Beaufort at Crystal Palace. Orion was equal second with Victor Hugo at Crystal Palace when very young, and has since then beaten Cambrian Princess and many others.

PROVIDENCE BENCH SHOW.—Providence, R. I., Nov. 26, 1886.—*Editor Forest and Stream:* The Rhode Island Kennel Club claim the dates March 29, 30, 31, and April 1, 1887, for their inaugural bench show.—NATHANIEL SEABURY, Secretary, P. O. Box 1333, Providence, R. I.

AMERICAN KENNEL REGISTER.—The editor of the *A. K. R.* desires us to say that in order to accommodate all who have not already sent in their entries for the December number, which closes Vol. IV., that he can accept all received at this office up to Saturday, Dec. 4.

"MONT CLARE'S" letter on Irish setters, recently reprinted in these columns, should have been credited to the *Kennel Review* instead of the *Kennel Gazette.*

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

THANKFUL.—A cocker spaniel dog, 12 years, nose on end is sore and has been so for some time; sore came first on one side of nostril and then extended all over end of nose and inside of nostril. It appears to be from cold, is white and very moist where scab comes off; wants to scratch his nose on any solid substance and does so until he cries out with pain. Often after runs snuffles greatly. Dog lives outside with kennel all year around. Ans. The trouble is probably due to the changes incident to old age, malnutrition, etc. A dog 12 years old is not often healthy. Give Fowler's solution of arsenic five drops morning and evening, and rub balsam of Peru ointment into the sore after cleansing. If the dog becomes a nuisance we would advise you to kill him.

NEMO, Springfield.—Setter dog has had distemper pretty badly and it has left him a little weak in hind legs, so that he staggers just a little when running, but is able to do a fair day's work in the field. Is it safe to breed him to a bitch? Will the trouble affect the pups? Ans. We would advise you not to use your dog for stud purposes until he has entirely recovered. Give a two-grain pill of the citrate of iron and strychnine twice daily. You can conceal the pill in a small bit of meat. It would probably not affect the offspring if you used him now in the stud.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4311.**

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Nov. 27.—The new series of matches which were opened at the range at Walnut Hill to-day were largely attended. The wind was light from 9 o'clock and the light was very bright. During the day Mr. Chase made 100 in the rest match, and Mr. Cushing 87 in the decimal match. Appended are the records:

Decimal Off-hand

H Cushing, C	9	10	8	9	7	10	7	8	9	10—87

GARDNER, Mass., Nov. 26.—At the last regular meet of the Gardner Rifle Club at Hackmatack range, the shooting was off-hand, the Standard American target was used, distance 200yds. The totals were as follows:

G F Ellsworth	79	78—157	E Taylor	59	75—134
G C Goodale	75	81—156	C Crabtree	60	63—123
A Mathews	74	76—150	D E Warfield	57	58—115
G R Warfield	73	77—150			

On Thanksgiving Day, Nov. 25, the members of the club were again at the range. The results of each were as follows:

G C Goodale	78	84—162	H C Knowlton	71	67—138
I N Dodge	76	84—160	C N Edgell	67	65—132
W C Loveland	78	80—158	E Taylor	69	60—129
A Mathews	85	—85	F Parker	54	74—128
G R Warfield	74	80—154	D E Warfield	49	69—118
C Crabtree	73	68—141			

WORCESTER, Mass., Nov. 26.—On Thanksgiving Day the rifle team of the George H. Ward Post No. 10, G. A. R., Department of Massachusetts, went out to the Millbury avenue range for practice. The results of the team shooting, military rifles, were as follows:

	200yds.	500yds.
E R Shumway	5344444441—40	5554444545—45
J B Willard	4544454544—43	4545355455—41
S A Taylor	4444454445—40	5444545544—41
C S Macomber	5445444515—40	2344344455—38
M Morgan	4444444554—42	5444545455—41

MANCHESTER, N. H., Nov. 25.—The riflemen enjoyed the day by a competitive prize event at the West Manchester range, and in addition to this a telegraphic team match was shot with the Lawrence Rifle Club. The conditions for shooting have rarely been excelled, the clouded skies, steady light and no wind being just what the men ask for when desirous of doing their best and they don't mind a little rain. The match with the Lawrence Club has been on the tapis for months and the Manchester boys distinguished themselves by winning a signal victory, although without the services of one of their number, A. B. Dodge, who ranks among the best shots in New England. There were no particularly brilliant scores made by the riflemen, but their work was uniformly excellent. The conditions were 10 men to a team, rounds 10, distance 200yds., off-hand. The individual work of the Manchester team is shown by the following:

C D Palmer	9	7	8	7	8	7	9	8	7—77	
W Morris	9	6	6	8	8	9	10	6	8	6—76
G A Leighton	9	9	8	9	3	10	7	6	7	7—75
E J Knowlton	8	9	9	6	7	5	6	9	7	7—73
E C Paul	8	9	8	3	8	8	6	8	5	9—72
J A Barker	6	10	8	5	5	7	5	8	5	9—69
C W Lyman	9	7	5	10	9	8	7	5	5	8—68
N Johnson	9	7	7	8	8	5	5	5	6	7—67
F J Drake	6	4	10	8	5	7	6	8	3	7—64
C W Temple	6	6	9	7	6	8	5	8	6	5—63—704

The score of the Lawrence Club is shown by the following telegram: "LAWRENCE, Mass., Nov. 25, 1886.—Secretary Manchester Rifle Club—Score 688, 10 men.—J. E. SHEPPARD." This gives the victory to the Manchester Club by 16 points.

The conditions for the special prize match were: 200yds., off hand, 5 cards of 5 shots each, highest possible score, 250:

E C Paul	50	43	42	48	38—200	J A Barker	37	33	39	39	32—180
W Morris	50	42	37	39	42—199	N Johnson	32	36	39	38	36—181
C W Temple	41	20	41	40	39—199	J H Toof	38	37	32	31	32—170
C D Palmer	39	40	42	38	39—198	F B Potter	35	36	28	33	22—154
C W Lyman	37	35	40	41	39—192	E J Partridge	32	32	26	27	31—148
E J Knowlton	37	39	36	39	37—188	W Schonland	25	26	31	26	28—138
F J Drake	36	39	26	39	37—187	R Fulton	28	25	26	27	29—129
G A Leighton	34	41	36	38	37—186						

The total valuation of the prize list was $53. There was but one tie, this being between Messrs. Morris and Temple. The settlement of this was left to the next best cards, and it was found that each had a 36, but on going beyond this Mr. Morris had a 35, while Mr. Temple's next best card was 34, which gave the ranking in favor of Mr. Morris.

Creedmoor, Nov. 25.—Amid a heavy mist, high wind and teaming rain the Second Gatling Battery of the National Guards, State of New York, held their 15th annual prize-shooting at Creedmoor ranges yesterday. The wind was very puffy and blew a hard 2 o'clock gale. Notwithstanding this the marksmen made exceed-

ingly good scores. In the champion match for the Morton medal which is shot for yearly, Corporal Henry Jordan was the winner, making 54 points out of a possible 75, at distances of 100, 200 and 300yds., with a Remington carbine. The second prize was won by Private McHugh, who made 48 points. The first prize in the battery match at distances of 200 and 300yds., was won by Driver G. R. Kelly, who made 41 points. Private McHugh also took second prize in this match, scoring 40 points. Ex-Lieutenant Henderson won first prize in the honorary members' match, and ex-Private Baldwin the second. Out of the 43 members who shot 33 won prizes, consisting of silverware. Private Chas. Buhler was presented with the leather medal for making the lowest score. Twenty-four members of Company D, 14th Regiment, of Brooklyn, under command of Captain A. D. Limberger, also held an annual shoot on the range. The winners are Sergeant E. W. Castwell, First Sergeant Marsh, Corporal E. J. Tugmann and I. W. Frederick.

THOMASTON, Conn.—Scores for Nov. 6:

E Thomas	8	6	9	9	5	8	8	10	8	1—79
G Canfield	8	9	8	9	4	8	8	9	8	5—76
G A Lemmon	10	9	5	6	7	5	10	4	8	5—69
C F Williams	9	4	5	5	7	7	4	8	7	8—64
G P North	5	6	6	10	5	5	6	5	4	7—60

Scores for Nov. 20:

E Thomas	8	10	5	8	10	9	10	5	8	9—82
G A Lemmon	8	6	4	7	6	8	4	7	6	7—63

The weather conditions of Nov. 25 were very bad, it being cold with a heavy rain falling part of the time. Last shoot of the season:

G A Lemmon	10	9	6	7	7	9	9	8	7	7—76
G C Canfield	7	7	6	7	8	9	9	8	7	5—73
W H Dunbar	6	6	6	6	10	9	6	10	6	7—72
E Thomas	7	9	8	7	5	6	7	6	8	7—70
H Canfield	7	4	6	5	6	7	7	4	8	6—60
F A Perkins	5	4	6	8	6	4	8	6	5	6—68

WILMINGTON, Nov. 22.—Two matches were shot by the Wilmington Rifle Club at 200yds. with the Massachusetts target.

First Match.—Off-hand.

C Heinel	10	10	11	8	9	9	11	9	11	12—100
H B Seeds	11	10	10	12	10	10	7	11	9	8—98
J B Bell	9	7	3	10	8	8	11	7	8	6—80
E M Clark	7	11	9	9	9	2	6	9	12	4—75
W A Bacon	8	7	6	7	6	9	7	7	7	4—68

Second Match.—With Rest.

H B Seeds	10	11	10	12	11	11	12	11	11	11—110
J B Bell	11	12	10	10	10	12	11	11	11	12—110
C Heinel	11	11	9	10	11	12	9	11	12	12—108
J E Newman	12	11	10	11	10	10	10	10	10	12—106
E M Clark	7	9	12	12	10	11	11	9	11	9—101
W A Bacon	10	10	10	8	12	10	10	11	10	9—101

Nov. 25.—Owing to the inclemency of the weather to-day only one of the Wilmington Rifle Club's matches was attempted and it was not finished. There were several entries for the Remington rifle, resulting in four ties on 14, which will be decided when the matches for the other prizes will be shot. The following are the scores out of a possible 15 points at 200yds. on Creedmoor target:

John Scott	15—15	Jerome B Bell	13—12
Charles Heinel, Jr.	15—14	James E Newman	15—12
Samuel J Newman	15—14	William O'Connor	14—12
Ellis M Clark	15—14	Howard Simpson	15—12
William A Bacon	14—13	Frank Brinton	14—11
William F Seeds	14—12	Charles Heinel, Jr.	13—11
Henry B Seeds	14—12		

Company F, Delaware N. G., in target practice at Schuetzen Park this afternoon, made the following scores at 200yds., Creedmoor target:

Capt W Condon	23323—15	Corp McBride	32333—14
Lieut Harkins	22332—12	Corp Dunn	02230— 7
Lieut Glynn	23343—15	Pvt Munda	43533—18

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

OSKOLOOSA, Ia., Nov. 26.—Oskoloosa Gun Club's Thanksgiving shoot, 5 live pigeons:

Smith	01111—4	Regan	10111—4
Dougherty	11111—5	Golightly	10110—3
Mendenholl	11011—4	Swearingen	01110—3
Harrington	11111—5	Carroll	11111—5
Baxter	10111—4	Wilson	11111—5

Harrington first, Mendenholl second, Swearingen third.

Match at 5 live pigeons:

Harrington	11101—4	Swearingen	01111—4
Wilson	10011—2	Mendenholl	11001—3
Brixy	11110—4	Golightly	11103—3
Baxter	11100—3	Templeton	11111—5
Jackson	10111—4	Regan	11101—4
Janney	11111—5	Obrien	11100—3

Templeton and Janney first, Jackson second Mendenholl third.

BROOKLYN, Nov. 26.—The Long Island Gun Club held its regular shoot to-day. Only 9 members were present, but those present performed very well. Out of 78 birds shot at 51 were killed. H. Knebel won first prize, Brower second and Donnelly third. The full score is as follows:

H Knebel, 27yds	1101111—6	Brower, 23yds	1110110—5
Arklurst, 21yds	1011001—4	Topping, 23yds	1001011—4
R Moore, 21yds	1000010—2	Cameron, 25yds	1000011—3
Donnelly, 21yes	0010111—4	Lennon, 21yds	1010011—4
Vrooman, 23yds	1101001—4		

Ties for third prize: Arkhurst 4, Donnelly 0, Vrooman 5. Referee, J. Jones.

RIVERSIDE CLUB.—Topsham, Me.—Thanksgiving shoot, weather very disagreeable, only four shooters present. Scores at 25 clays, hats and blue rocks, for three badges:

W Crocker	1000010011101003101111110—13
A L Goud	0101101011011010110011111—15
A E Hall	0110001111111010110011010—15
C Goud	1011111111111011111011110—21

Ties on 15: A. L. Goud..11000111; A. E. Hall..0011010. C. Goud first, A. L. Hall second, W. Crocker third.

WASHINGTON HEIGHTS GUN CLUB.—Thanksgiving Day, club grounds, One hundred and sixty-eighth street and Twelfth avenue, live birds, 3 traps, 25yds., weather threatening, which doubtless had something to do with the slim attendance:

Veitch	1111100000—5	E H Fox	1111101110—8
Geo Snooks	1111111111—10	C Terwilliger	1111110100—7
Dux	1111011111—9	Harrison	1111111111—10

Ties did not shoot off, as other pressing engagements called the members elsewhere.—E. H. F.

CINCINNATI, O., Nov. 27.—A turkey shoot was held under the auspices of the Cincinnati Independent Shooting Club on their grounds Thanksgiving Day. The shooting commenced at 10 A. M. and continued until dark. The following gentlemen, among others, participated: H. Strunk, C. A. Wasteney, Geo. Wells, Dr. J. W. Dennis (Bemis), John Leathers (Greener), W. H. Burl, W. W. Condell, Frank Baecker, Fred Strunk, Sam Condell, C. W. Eckert, A. D. Whitlock, C. W. McFee and Reno. The new Ligowsky clay-pigeon N. 3 with clay tongue was used; it was pronounced by all to be the best artificial target yet produced. It flew in magnificent style and out of 350 thrown 6 only broke in the trap. This clay tongue is burnt solidly with the target itself, and is thrown from any of the old Ligowsky traps by inserting small rubber disks in the tongue or clamp. This improvement will be welcomed by all trap shots, as it removes the only objection ever urged against the original Ligowsky target, viz., the softening of the glued tongue, as it substitutes in place thereof a fixed unremovable clay tongue. Over 75 shooters participated in the trial, all of whom expressed themselves as surprised and delighted with the improvement.—H. F. ROBINSON, Pres. Cin. Inpt. Gun Club.

DEAN TROPHY MATCH.—The match for the Dean trophy, representing the clay-pigeon championship of Kings county, N. Y., was contested Thanksgiving Day on the grounds of the Bay Ridge Gun Club, Sixty-seventh street and First avenue, Bay Ridge. Out of 26 entries 15 faced the traps at 21yds. rise. A high northeast wind blew across the grounds, blowing the birds in all directions, making it difficult for high scores. Mr. James Kirby, referee; Mr. R. H. Thomas and William Van Horn, judges. The trophy was won by Mr. F. M. Eames, of Bay Ridge, with the score 44 out of 50; Mr. S. H. Durvea, Bay Ridge, second, 37 out of 50. Mr. O. Heingke, same place, third. The shoot passed off very pleasantly. A large number witnessed the match, all joining in giving a rousing vote of thanks to Mr. James Dean for presenting so beautiful a medal and furnishing so grand a day's sport.—E. D. WAKEMAN (Sec. B. R. G. C.).

MIDDLESEX VS. ESSEX.—Dunellen, N. J. Nov. 23.—*Editor Forest and Stream:* Will you kindly allow me space to answer an article from the pen of Jacob Pentz? I neglected to state in my article last week "Middlesex vs. Essex," that Mr. Pentz was referee for that day. Mr. Pentz states that he is an ex-member of the "Essex Gun Club," which probably accounts for his plain "bias" in favor of that club. Had this fact been known before the match Mr. Pentz would not have been chosen to fill that "unsatisfactory position," as there were many well-known gentlemen from neutral clubs who would have acted had they been requested. Every one that knows W. F. Quimby (and every one does that faces the traps around New York) will be surprised to hear that he made a noisy coach, certain it is that no one believes it. Of the twenty-nine "challenges made by the Middlesex members, mostly by one Dickens," and but one challenge by the Essex members, Mr. Pentz does not state whether or not he scored the twenty-nine birds dead and the one bird lost. Mr. Dickens's challenges were all made against Mr. Carrington's gun, which, every one but the referee could see, was above his elbow nearly every time he went to the score. I stated last week that the referee's decisions were all unquestioned, but I may state further, that many of them called forth smiles from the spectators.—DYNAMITE.

THE ALGONQUIN GUN CLUB, of New York city, will hold their annual meeting to-day (Dec. 2), after which a banquet will be served.

THOSE WHO preach, lecture, declaim or sing, will and *do* find Hale's Honey of Horehound and Tar the speediest restorative of the voice in cases of hoarseness. It cures coughs and sore throats rapidly and completely. Sold by all druggists. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

EIGHT MILLION DOLLARS PAID IN BENEFITS, under general accident policies, in the Travelers Insurance Company, of Hartford. Every business man should have a policy.—*Adv.*

Yachting.

OURSELVES AS OTHERS SEE US.

THE skipper of the Clara, who has lately returned home, gives his views on American yachts as follows to the Glasgow *Herald*. His remarks are hardly complimentary, but there is enough truth about them to make them interesting:

"Captain John Barr, of Gourock, has just returned from America, where he has been racing with great success the Clyde-built 20-ton cutter Clara, and has been fortunate in obtaining a great deal of insight into the sport of yacht racing as enjoyed on the other side of the Atlantic. Mr. Barr's reputation as a well-known and clever racing yacht captain gives to the information he has picked up a critical accuracy, which for the first time will enable our own yachting men to understand the present aspects of American yacht racing, and still further increase the interest so rapidly spreading in the American growth of the sport. Mr. Barr explains that within the last two years yachting has made great strides on the American seaboard, and his testimony toward the enthusiasm is verified by the fact that at one regatta in which he raced the Clara the number of yachts of all sizes entered to race was about 400, of which crowd 250 started. And this fleet was not made up of any sort of craft, but included only yachts fitted for a likely contest. But neither American yachts nor the handling of them has given Mr. Barr cause for surprise. He owns a large class of centerboard boats, big and little, and canvassed occasionally ingeniously and often outrageously, fly down the wind like an open umbrella, but on the wind are no good whatever to any British racing yacht unless over a mill-pond course. And besides being useless in a seaway, the same class of boats are most dangerous. In all the smaller class of centerboards Barr was amused to see the crews occupied in holding sheets in hand to ease away in case of an upset, and in the larger class of centerboards axes are kept at hand to cut across the main sheet in case of any dangerous squall. For it is a peculiarity of the centerboard that, laid over beyond a certain angle, it will not luff up in the wind and becomes wholly unmanageable. In proof of the danger of the build, Barr saw a centerboard of large tonnage in which sheet, hallirads, rigging, had all been cut away to save her in a squall. He had a sight of the Mohawk schooner, which looked as large and comfortable as the Selene, and was struck to learn she had capsized while lying at her anchor with her sails up, and had drowned a cabinful of people. More or less in connection with the dangers attendant on the centerboard form of boat, Captain Barr heard of thirty cases of drowning during the past yacht racing season on the American coast. While the opinion formed as to the needless hazard to life occasioned by the centerboard fashion seems founded on good evidence, Barr had exceptional opportunity of finding out that the Mayflower, the latest outcome of the American model, is 'a poor tool' in a breeze and rough sea enough to turn to windward against a Clyde 20-tonner. In a long turn to windward down the coast from Boston to New London, Clara came up with the successful champion Mayflower going the same course, and had a famous opportunity of finding out the value of the centerboard build turning to windward. Clara had topmast housed and double-reef down, while Mayflower was under staysail and had two reefs in mainsail. Clara had no difficulty in coming up with Mayflower, both being close-hauled, and with a board or two Clara weathered Mayflower. The two had the wind dead ahead with a steep, short sea while working the passage inside the Nantucket Shoals, and Clara was still dropping Mayflower astern, when Barr's boat carried away her bowsprit shrouds. Clara had to be hove in the wind for repairs, while Mayflower coming along again took the lead. Clara, all right again, followed and the twenty had again no difficulty in passing and weathering the Mayflower. This centerboard seemed to find the breeze rather hard for her, for she shortly afterward fetched the shelter of an outlying anchorage, where she remained. Meantime Clara snugged down another reef, and under three-reefed mainsail and jib was held on her course for New London. Clearing the Shoals, the Clara had the open fetch and was getting knocked about badly in the head sea. She kept her going, and found on getting into harbor Clara had carried away most of her topsail yard, along with it about 12ft. of her rail forward. Of course Mayflower, six or seven times the tonnage of Clara, if she had been worth anything in such weather, ought to have left Clara every mile she sailed, instead of which she was getting dropped by the little craft. And Mayflower was making very bad weather of it, plunging head and shoulders into the head sea, and filling her deck with every second she gave. With little Clara coming up on her, Barr thought Mayflower a very 'lame duck,' and would have many times preferred to cross the Atlantic in his own small cutter. Clara on other occasions made a signal example of the best American centerboards, and through the American racing season beat everything that was entered against her. The American centerboard Cinderella, built last winter to beat Clara, was the only really dangerous rival to the Clyde boat, and, besides being about Clara's length, was, according to British rule, of considerable more tonnage. Cinderella had her lead ballast outside, and, although a centerboard, was deep in the body, and somewhat of a compromise between the American and British build. Perhaps Athlon was the next most dangerous rival to Clara, and being so, a private match was arranged between the three for a sweepstake at Larchmont by the Larchmont Club. This club appears exceptional in some of its features, for while its members have no objection to matches on Sunday, the club has a rule against square-headed topsails. No doubt a breach of the Fourth Commandment is not so likely to lessen the roll of the club as the capsize of a centerboard; but the crew of Clara did not at first comprehend this view. A Sunday match was sailed between the three boats, and Clara gave both an easy drubbing, arriving 8 minutes ahead. Clara altogether sailed eleven matches, and won eleven first prizes—a very sufficient proof that the British model had it pretty much her own way against all the varieties of American models entered against her, centerboards included. The Americans confess to be thoroughly beaten by Clara, but allege the British model is only superior up to 20 tons, a comfortable and whimsical assurance the coming International contest is pretty certain to dissipate. The ability with which Captain Barr sailed Clara no doubt abetted the result, but the honor is shared by young William Fife, of Fairlie, who built and designed Clara for Mr. George Clark, of Paisley. Before Captain Barr left America he was congratulated on having been selected for the yacht that is to be built on the Clyde for the coming International contest, and no doubt the example Clara has made of the American yachts quite vindicates the selection made.

"Not the least interesting incident of Captain Barr's American visit was getting a sight of the famous old schooner yacht America, which arrived at Cowes in the summer of 1851, and captured the Queen's Cup, over the possession of which trophy these international contests have arisen. Barr thought the old craft a fine-looking schooner with a beautifully-modeled bow, but rather full aft and boxy in the quarters. He saw her sailing about in a light breeze, and on even keel she was going very fast. Indeed, the America had been sailing so fast alongside Mayflower before the latter got into trim that it was a question whether or not the old schooner might not be as good as any American yacht to protect the cup she had originally won. Not many Clyde yachtsmen will remember what a stir the America's success in beating the best English yachts made. Almost every British yacht of any note was lengthened by the bow, and bluff bows so much approved of were everywhere condemned. Long bows were given to yachts building, and the sudden revolution gave rise to exaggerations and absurd failures."

MEASUREMENT RULES ABROAD.

THE following from the *Field* will show that the measurement committee of the Y. R. A. have reported in favor of the alternative sail area rule in use for two seasons past, and that the report has been accepted by the council. It will come before the Association at the general meeting Dec. 14:

A meeting of the council was held at the Royal London Y. C., Savile-row, Nov. 17. There were present the Marquis of Exeter (in the chair), Col. Leach, Mr. C. W. Prescott-Westcar, Mr. Francis Taylor, M. P., Mr. G. B. Thompson, Mr. W. G. Jameson, Mr. W. Baden-Powell, Mr. E. R. Tatchell, Mr. H. Crawford, Mr. A. Manning, Mr. Frank Willan, Mr. John Scott, Mr. James Reid and Sir William Forwood.

The measurement committee brought up their report as follows:

"To the Council of the Yacht Racing Association. Gentlemen—In accordance with your resolution passed on Oct. 12, to consider (1) the rules of measurement now in force, and to suggest any alterations in the same which may appear likely to have an advantageous effect on yacht building and yacht racing; (2) to report upon the present classification of yachts by tonnage and sail-area; (3) to suggest such alterations or new rules of measurement or classification as may seem desirable.

We have to report that, to enable us to thoroughly investigate these subjects, we have obtained the evidence of Messrs. A. Richardson, G. L. Watson, C. P. Clayton, D. Kemp, and W. Fife, Jr., naval architects; we have also obtained by letter the views of other naval architects and builders, including Mr. Beavor Webb, Mr. R. E. Froude, Mr. Wm. Fife, Sr., Mr. Arthur Payne, Mr. E. Wilkins.

The present Y. R. A. tonnage rule was introduced in 1881 in substitution for the Thames rule, the object sought in making the change being to induce yacht designers and builders to use more beam in proportion to length. This object has not been attained, and although in the larger classes extreme proportions have not, so far, been reached, yet the tendency is to proceed in that direction. The type of yacht engendered by the rule is extremely costly to produce and maintain, and the latitude which the rule permits of increasing speed by continued additions to the lead ballast and sail area, gives a very short racing life even to a successful yacht. Your committee is of opinion (shared in by all the witnesses) that it is not likely any alteration of the present rule would be of a satisfactory character.

The B and C classes were introduced to promote racing between ex-racers and cruisers, and heavy time allowances were arranged to prevent A class yachts entering in the classes. The B class has not been found advantageous and the committee recommend that it be expunged. The C class has afforded a considerable amount of sport, but the heavy inter-class allowances have enabled C class yachts to compete against the A class with marked success. As this is highly detrimental to A class racing, your committee recommend that the inter-class time allowance be abolished.

In considering a new rule for the rating of yachts, your committee have been anxious to preserve the present type of yacht as being peculiarly adapted to British waters and to guard against the building of racing machines. At the outset they examined proposals to measure the hull only, and to measure the sails only. * * * After a thorough examination of these proposals your committee concluded that to prevent exaggerated proportions in the hull or sail spread, both should be included in the rating. A proposal was made by Mr. G. L. Watson to include length and beam in a rule with sail (that is to say, that the rule should be length plus breadth multiplied by sail and divided by constant), but after careful consideration the committee concluded that, beam being so necessary for stiffness and deck accommodation, and so detrimental to high speed when carried to excess, it would be unwise or unnecessary to penalize it. Length, however, stands in a different position, and by using it in a rule as of equal value with sail, a moderate but salutary check will be placed upon undue proportions in length and sail area.

The committee therefore recommend that the rule hitherto placed only in the Y. R. A. appendix be made the sole rule for rating. The rule is, length on waterline multiplied by sail area, and the product divided by 6,000. The committee is of opinion that, should this rule be adopted, it should remain in force for seven years, unless by a vote to the contrary of three-fourths of the council present at a meeting and confirmed by a majority of the members of the Association.

Your Committee recommend that the following classification be adopted:

Five tons to take in existing yachts of three tons.
Ten tons to take in existing yachts of five tons.
Twenty tons to take in existing yachts of ten tons.
Forty tons to take in existing yachts of twenty tons.
Sixty tons to take in existing yachts of forty tons, and above sixty tons.

To suit this new rule and new classification, the time scale will require re-adjusting.

With this proposed rating there will be no necessity for continuing the length class rating, and the committee recommend that it be expunged from the book.

A regulation will be devised to keep the mainsails of yawls in the proportion they now are."

Sir W. Ferwood proposed, and Mr. A. Manning seconded, that the report be adopted.

Mr. J. Reid proposed, and Mr. W. G. Jameson seconded, that the consideration of the report be deferred for six weeks, in order to allow yacht architects time to consider the matter, and if they can show that the rule will produce an undesirable type of yacht, the committee would then have an opportunity of considering the advisability of adopting a simple sail area rule.

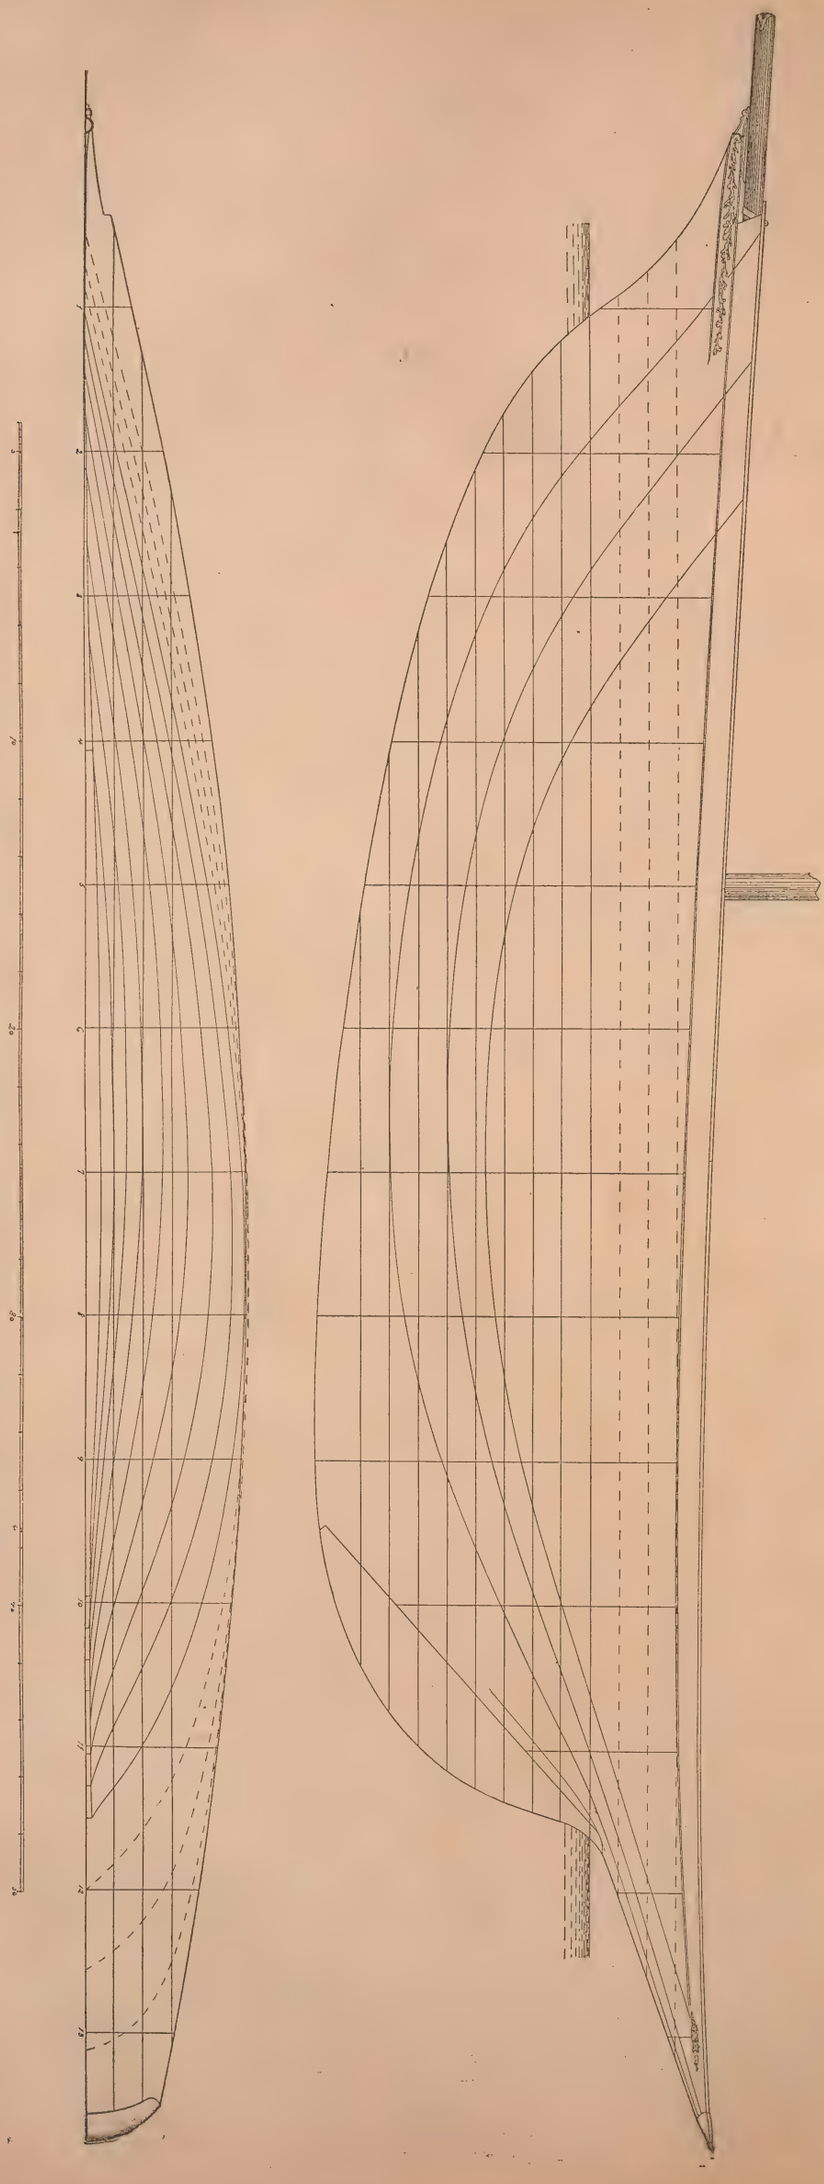
The amendment was opposed on the ground that all the evidence possible to obtain from naval architects had been obtained by the committee, and most carefully considered; and further, that the delay would only prolong the existing dead lock, so far as yacht building is concerned, and finally lead to the same conclusion arrived at by the committee.

The amendment was then put, and there voted for it Messrs. Reid, Jameson, Scott, Taylor and Thompson. It was declared not carried.

The original motion was then put, and there voted for it Col. Leach, Messrs. Prescott-Westcar, G. B. Thompson, Baden-Powell, E. R. Tatchell, H. Crawford, A. Manning, F. Willan, Sir Wm. Forwood and the Marquis of Exeter. This being a majority of two-thirds of those present, as required by the rules, the report was declared adopted.

It transpired that the expert witnesses expressed opinions as to a new rule as follows:

Mr. A. Richardson—Simple sail area.
Mr. Beavor Webb—Simple sail area, or sail area and length.
Mr. C. P. Clayton—Sail area and length.
Mr. G. L. Watson—Length, breadth and sail area.
Mr. Kemp—Length, breadth and sail area, or length and sail area.
Mr. Fife, Sr.—Length and sail area, or, if by hull alone, then take in depth or girth.
Mr. Fife, Jr.—Length and sail area.
Mr. R. E. Froude—Simple sail area, or sail area and length.
Mr. A. Payne—Sail area and length.
Mr. E. Wilkins—Sail area and length.



The general meeting was fixed for Dec. 14.

CUPS FOR NEXT SEASON.—The citizens of Bar Harbor propose to offer prizes for a regatta to be sailed in the latter part of August next, over a 30-mile triangular course from Bar Harbor. The prizes will probably be a $300 cup for schooners; one of $350 for cutters and sloops over 80ft. sailing length; one of $200 for those 60 to 80ft., and one of $150 for cutters and sloops under 60ft. the race to be under the rules of the New York Y. C. The Bar Harbor Y. C. has the matter in hand at present.

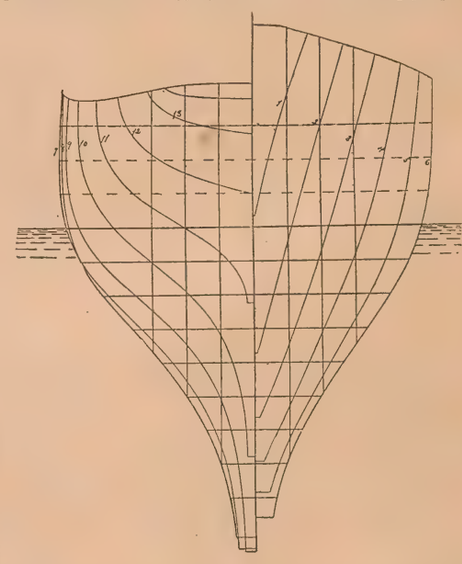
AMERICAN Y. C.—At a meeting of the A. Y. C. on Nov. 30, the prizes won this year were presented. The Commodore's Cup goes to Atalanta, the Emery Cups, to Yosemite Lagonda and Nereid; the cup under the Haswell allowance to Inanda, the latter also taking the Bateman Challenge Cup. The Alley Cup for launches goes to Orienta. Mr. Frank R. Lawrence made the presentation speeches.

THE CLYDE CHALLENGE.—The *Field* states on authority that the new Clyde boat is now building and will be named Thistle. Her name and measurements will accompany a formal challenge in due time.

JULIA.—Mr. C. W. Chapin's new schooner, was launched on Nov. 30.

DESIGN FOR A "LENGTH AND SAIL AREA" CUTTER.—WM. FIFE, JR., FAIRLIE, SCOTLAND.

A LENGTH AND SAIL AREA CUTTER.



THE long war of the various types in American waters has left the yachting interests in a most unsettled state for two or three years past, while the impartial observer finds it hard to predict the outcome of it in the future. The racing of 1885 left matters almost where they were, and all parties looked forward to the present year to settle the question definitely, and to indicate what would be the coming type. But now in December, with the racing over, the situation is practically the same as it was when sails were first stretched in May. The season has brought more than the usual allowance of races and an increased number of boats, but like the preceding year it has convinced nobody.

The Eastern man, rejoicing over Mayflower, Puritan, Sachem and Thetis, is firm in the belief that the problem has been solved in the new beamy keel-centerboard type, and that further search is useless, the happy mean has been found. The undaunted cutter man on the contrary comes up smiling, with no visible traces of a hard season, and points to a long string of aggregate wins, headed by the redoubtable Clara, and argues as strongly as ever for the six-beam boat.

The only ones, perhaps, who have reached a final conclusion are the owners of the late American sloops, who find that their occupation is gone, that there are no prizes left for them, and that a new and radical departure is imperative.

The question of the coming type is important to all, but especially to those whose boats have been out-classed and who must build if they would win mugs. Building and testing a yacht of any size means an expenditure of a large sum of money and with a considerable risk involved, and yachtsmen to-day are little likely to order blindly of some builder who chances to be in fashion through the success, real or fictitious, of some one yacht. Before signing contracts the yachtsman is apt to study pretty closely the boats he is trying to beat and also the boats which may soon be built to beat him, and the possibilities and probabilities of each type are thoroughly weighed. Just now the subject of the coming yacht is of special interest; the old type has been proved useless, the new Boston boats have not yet received that thorough test necessary to their general adoption by American yachtsmen, while the extreme cutter is not accepted by the majority as the coming boat for American waters. Of this latter boat it must be said to its credit that built under a peculiar rule and for certain waters it has thus far succeeded well under a totally different rule and in foreign waters, holding its own under conditions it was not intended for and with boats specially built to meet those conditions.

There exists in England a very good reason why a 6 beam boat should beat one of 4 beams, and to this reason is due the introduction of the type as well as its maintenance there; but in this country, under vastly different conditions the narrow boat can depend on no such fictitious advantages, but must stand or fall on its merits as a practical vessel. Thus far it has done so and won a place beside the native types, but its continuance is simply a question of the survival of the fittest. Should the cutter of 6 beams fail here, however, it by no means proves the unfitness of the general type, but simply that built for one rule it cannot compete under a very different one. Between Genesta, Galatea, Madge, Clara and Ulidia on the one hand and Mayflower, Puritan and Cinderella on the other, there is a wide gap, and it may be that the happy mean is to be found between them; that the cutter built to race under American rules may far outstrip the same boat built under British rules.

BODY PLAN.

This opens up a field that is as yet practically unexplored: the visiting cutters from Madge to Galatea have all been extremely narrow boats and the few real cutters built here in which beam has not been limited, argue well for the possibilities of the type. Of this small class the leaders, Bedouin and Oriva, have attained a degree of success which should induce further researches in the same direction.

Through the kindness of Mr. Wm. Fife, Jr., of Fairlie, Scotland, so well known here as Clara's designer, we are enabled to give the design of a similar yacht to compete in the third class under the New York Y. C. rule. The design, in its beauty and fairness, speaks for itself, but for a more thorough understanding of its features a comparison of its elements with those of the leading representatives of the opposing types, Clara and Cinderella, is appended as follows:

	Clara.	Design.	Cinderella.
	Ft. In.	Ft. In.	Ft. In.

*Including board, 14ft.

The most striking features of the new boat are her increased beam and the clipper stem, as in these two points she is a wide departure from the imported cutters. While we have strenuously opposed the great beam of American boats and have shown the fallacy of the claim that beam in itself gives increased room, we are not prepared to say just where the mean is reached, but are open to conviction. The question of interior accommodation will be considered in connection with the interior plans, but we may safely assume that in the matter of comfort and convenience on deck the extra beam would show a gain over Clara, both in a

SAIL PLAN—"LENGTH AND SAIL AREA" CUTTER.

lessened angle of heel and increased space for spars, boats and working ship. As to the effect on speed it may be urged that boats of the same proportion, 4½ to 4¾ beams to length, have been tested in the racers of half a dozen years since, which have raced against the newer and narrower boats and failed, but these races have been under the Y. R. A. rule and the new boats have profited greatly by lighter hulls and heavier keels, so that this is no evidence against the proposed boat of modern build and under a length and sail area rule. The new boat carries a displacement two tons greater than Clara, but the unrestricted beam has allowed her designer to dispose of it differently, and if equally well rigged and handled she could probably well afford the allowance of 51 seconds due to Clara over a 40-mile course, while fully as well able as the latter to take care of Cinderella with a margin of 33 seconds from her. Under the rule a length of 55ft. might have been taken, but the designer has evidently confused the limit of the class, 55ft. waterline, with the corrected length for allowance, which is, of course, unlimited by the rule.

Her reduced sail area and lessened beam would of themselves allow a far lighter hull than in Cinderella, even if built in similar style, but the proposed boat would be like Clara, steel frames and wooden skin, and consequently the gain in weight would be still greater. The sail area would be more than Clara's, with little or no increase of immersed surface; while as to the angle of entrance, certainly no exception can be taken to the beautifully molded wedge of the bow. The draft is less than Clara's by 6in. and greater than Cinderella's by 3ft., but when the flush deck and absence of a trunk are weighed against this excess few will grumble at it.

The clipper stem is the most prominent feature to the eye, and the one which will occasion the most comment, and many will agree with us in preferring the plumb stem as far as appearance goes, but there is much more than this involved. Strength is secured by a continuation of the keel upward until it forms the stem, the latter being in one piece from the scroll far down to the forefoot, instead of the form common here, a nearly plumb stem cked out with a knee spiked on. Another advantage, structurally, is the support given to the bowsprit, the spar outside of gammon being 1ft. 3in. shorter than Clara's, though really 3ft. 9in. longer from end of L.W.L. The foresail also is of great size, though the mast is a foot further foward than Clara's. The deck line is fairer and fuller, giving increased room where most needed for working forward, while the rapid increase of the area of the upper waterlines permits a fine body below. The bow is very long, but the various parts are so beautifully proportioned that no disadvantage is likely to result. Altogether the design is a remarkably taking one, and opens a wide field for thought and study to the many who are anxiously wondering what is coming next. We shall pursue the comparison further next week in connection with the interior plans.

SEAWANHAKA C. Y. C.—The fifth and last regular meeting of the Seawanhaka C. Y. C. for 1886 was held at Delmonico's on Nov. 29 with Commodore Canfield in the chair. On the table was the large vase lately completed by the Whiting Manufacturing Company, the prize offered by the club for the winner in the first class, and won by Puritan. The vase is 2ft. 10in. high and 14in. wide across the handles, of the same design as published in the FOREST AND STREAM of June 24, but with the details more fully elaborated. The outline of the vase (a vertical section) resembles the blade of a paddle; on one side in relief is the full length figure of a squaw, the feet resting on a steering wheel. On the other side is the name and motto of the club with the name Puritan and date, June 19, 1886. The design is artistic and beautiful in every way, whether its striking outline is viewed from a distance or the many small details are closely scrutinized. Besides the Indian patroness the club entertained another distinguished guest, Lieut. Henn, who, in response to a unanimous vote of welcome, made a short speech, promising to put Galatea in all the races open to her next season, with the certainty of good sport whether winning or not. The resignations of several members were read and accepted. A vote of thanks was passed to the New York Y. C. for the offer of the privileges of their club house during the races last fall. A letter was presented by the Secretary from a yachtsman in Kiel, Prussia, stating that the S. C. Y. C. rule had been tried in races there with good results. A letter from the secretary of the Bar Harbor Y. C., offering prizes for a race at Bar Harbor was also read. The death of an old member of the club, Mr. Henry P. Egleston, was announced, and a motion to record the notice of his death on the minutes was passed. The question of a location for the club was discussed at some length, and finally a committee of three were appointed to examine sites and devise some permanent plan, to report at the next meeting in January. The committee includes Com. Canfield, Mr. Chas. H. Leland and Mr. Van Rensselaer Cruger. Mr. Simonds reported that the club yacht Venture had been a complete success this season, being in use constantly by the club members. On motion of Mr. Tams a committee of three was appointed to revise the sailing regulations, to report in January. The committee are Com. Canfield, Mr. J. F. Tams and Mr. Chas. Sweet. A motion was introduced to raise the fee for life membership. The names of five proposed members are announced.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

THE CRUISE OF THE BETSY BOBBETT.—We have received the following postal card from Dr. Neidé: "Near Savannah, Tuesday.—Arrived safely and am lying a couple miles above the city fitting out and laying in stores. Will start for Fernandina Thursday in company with sloop Outing, Capt. Cloudman.—C. A. NEIDE."

THE LOCATION OF THE NEXT MEET.

Editor Forest and Stream:

Why does the executive committee persist in having all the meets in northern New York? It seems to me that after all that has been said about having next year's meet on salt water they did a very questionable thing in going back to the old neighborhood. Let us have their reasons for doing this.

On the Passaic River, N. J., there are fully 100 or 125 canoeists and only about 12 are A. C. A. men. I have heard of but one of this number going to a meet. I have never been able to attend but expected to next year, as the general opinion seemed to be in favor of a meet on salt water, and I supposed this opinion would be respected by the executive committee.

It has always been uphill work trying to get fellows to join the A. C. A., they saying it would not pay, the meets always being too far away, and never coming in this neighborhood, that we could not attend, and the other benefits derived are not worth $2 a year. On the expectation of a meet near New York several have promised to join, and by spring others would have come in and we would have a grand rally, but that this is all knocked in the head is the regret of IDLEMERE.

BELLEVILLE, N. J., Nov. 23.

[This letter probably voices the complaint of many who would like to attend a meet but are prevented by time and distance, and is therefore entitled to as full an answer as possible. The question of location was fully discussed by the executive committee and the claims of the Eastern Division for a salt-water meet were ably advanced by the three Eastern members present, and it is greatly to their credit that they finally submitted to what seemed to be best for the Association at large. The desirability of a meet near New York and Boston is generally admitted, and many favored it, but at the same time opposed it for the following reasons: This year and last are most important ones in the growth of the A. C. A., marking a distinct change in the organization, an enlargement of the general plan. The first step following the revision of the Constitution in 1885 was the organization of the Eastern Division at Calla Shasta in May, 1886, and the application for recognition as a separate Division which was made at the last meet. The recognition of this Division made it imperative that the remaining portion of the Association should also take the form of a Division, and it was organized as the Central Division. This organization can only be considered as temporary, as it differs very much from the Eastern Division, being, in fact, more like the old Association in its composition. The Eastern Division is compact and entire, covering a comparatively small territory in which a Division meet accessible to all can easily be held. The Central Division on the contrary covers a large area, New York, Pennsylvania, Canada, and the West and South. That this Division must resolve itself into several smaller ones is a matter of course, the only question being one of means and methods. As matters are now there is a large Canadian contingent of earnest A. C. A. men who have been with the Association from the beginning. They are more widely scattered and have not enjoyed such opportunities for the discussion of A. C. A. business as the New York, Mohican, Hartford, Knickerbocker and other large clubs

nave, and they are less familiar with the machinery of organization. Already they are preparing for the formation of a Canadian Division, and will in all probability hold a local meet next spring and elect officers, applying for recognition at the next meet. Once fairly organized they will be in a position to hold a large Division meet of their own in such years as the A. C. A. meet shall be held at distant points. Just now, however, they are in an unsettled state and without any definite organization. If the meet was held on salt water about New York or Boston, they would be unable to attend, and the formation of their Division would receive a severe check, while they would feel that the Association had in a great measure deserted them by going where they could not follow. Next year, with a strong local organization, they will be very differently situated, and in a position to hold a Division meet alone. These facts have been felt strongly by the leading A. C. A. men, and have led to the selection of a site midway between Canada and the Atlantic coast. The distance from New York is really less formidable than it seems if we consider that a night on the Hudson River and a few hours by rail will bring a New York man into camp in time for dinner. It is now pretty well settled that a local meet will be held on salt water by canoeists of New York and New England prior to the A. C. A. meet. This will meet the demands of "Idlemere" and others, and it only rests with the canoeists themselves to make it almost as important as the A. C. A. meet. Let the canoeists of New York, New Jersey and New England take the matter in hand in good time, discuss it and settle details this winter, hold as many small meets as possible early in the spring, enlist all their canoeing associates, and then hurrah! for a big salt-water meet in the early summer. Much has been done and much more still remains to do before the A. C. A. is brought near to every canoeist, but the work is in good hands and progressing as rapidly as could be expected. The more who help, however, the sooner it will be completed, and now is the time for the non-members to lend their aid. With the help of all the salt-water meet may easily exceed in numbers the A. C. A. meets of three or four years since. All that is needed is the hearty co-operation of all hands. Those now in the A. C. A. have worked hard and long to make it what it is. Is it fair now to expect them to do all the work of enlarging and extending it while those outside decline to help until they can see their $2 expended in a meet on their town common? Every canoeist can and should help the Association in return for the indirect benefits which he in common with others receives from it, but further than this it now seems certain that he will soon find it near enough to him to afford more direct and visible advantages.]

WIDE VS. NARROW CANOES.

Editor Forest and Stream:

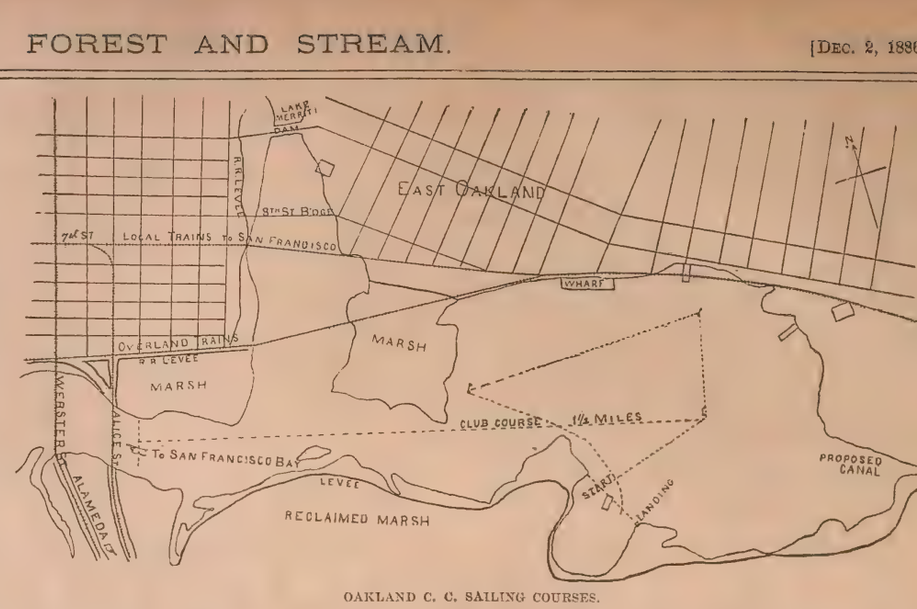
Mr. Clapham claims to have been silenced on an issue raised by him previously. This is a condition his friends among your readers will hardly believe possible, and I should be sorry to think it impossible to convince so enthusiastic a lover of sport on the water. To the issue he now raises, a point he overlooks suggests itself as an immediate answer.

How far and how easily can he paddle his wide canoe? Grant for a moment the points he claims (they are disputed as inaccurate by many present at the meet), would he paddle one or five miles against any recognized good all-round man—Vaux, Brokaw or Gibson? Would he enter any combined race? Even "we racers," as the Ideal Cruising Association's admiral loves to stigmatize us, recognize that the canoe is primarily an all-round craft, and that the permanence and continued growth of our sport depends on the preservation, at all hazards, of this all-round or cruising side. Within the limits now wisely fixed by the A. C. A., we are striving, therefore, each of us, to develop that side of the sport which appeals to our individual tastes, and we should be spared, in my opinion, such one-sided attacks as are from time to time made on our chosen type.

In conclusion, I would say that some of Mr. Clapham's statements afford me genuine surprise. His Red Jacket was, indeed, constantly on the water; but, to my knowledge, was outsailed in many impromptu trials. Mr. Butler's Blanche got away from him easily. My own Wraith, on the only occasion when I could get a try with him, walked easily out to windward and outfooted him, rather to my surprise, I confess, as he carried a large sail comparatively. Others were reported to have done the same.

It is a curious statement to make of a boat under trial, like his, that she could carry much more sail—but didn't. Our great soreness just now over the London *Field's* garbled account of the races in New York and at Grindstone arises from just the same cause—viz., that the plea should be seriously advanced that boats entered for an important test should be excused on the ground of want of proper preparation—in fact, pleading the baby act—and I am truly sorry to see any American gentleman take similar ground.

GUENN.



Editor Forest and Stream:

Red Jacket, ahoy! Lay to, drop sail, or do something that I can get a chance to get up to you. Your singlehander (for such is the name by which your "wide canoe" should be called) of such beam and sail can outsail my narrow canoe easily. If I am not mistaken there is a boat somewhat like your "wide canoe" on the Delaware River, whose dimensions range from 14 to 15ft. long and 40 to 48in. beam. A 48in. boat is considered as "beamy." These boats are called "duckers" on account of being built especially for ducking. In going for ducks this boat is poled or paddled by a single blade, a short platform is in one end and a seat in another. This boat has no deck or centerboard. But the ducker that comes near the description of Clapham's wide canoe is of the same class as quoted but differing slightly from it—a deck the same as a canoe, but no hatches, bulkheads, foot steering etc., such as are on a canoe. They carry a dagger centerboard well forward, the mast being stepped in the eyes of the boat. A cockpit of 8 or 10ft. long, the washboard being but 6in. wide. They invariably carry a single sail, fore and aft, or sprit sail, the sail area being from 10 to 18 sq. yds. To handle this boat effectively the crew must consist of two men. One man very seldom goes out in a ducker single-handed; often you will meet three men, while a crew of five is very common. I remember outsailing four duckers the past summer in a 14.4ft.×32in. canvas canoe and using Mohican rig of 85 sq. ft. may here add that this canoe was sold this fall partly on account of the paddling difficulty, and have now ordered a 30in. boat, while I was seriously thinking of getting a 15×28. The first ducker I left astern was in this manner: While sailing down stream with wind forward of bow I caught up to the boat which had one man as crew. No sooner had I got near him when he sang out: "Those things go like thunder, don't they?" I gave him my opinion and asked how many yards in his sail; he replied, "Over 9yds." The same day in mid stream opposite Gloucester I saw three in a bunch. I soon ran up to them and sailed a short distance with them, answering a job lot of questions on stability, speed, etc. The breeze increasing the topic changed to "How are they in a strong breeze?" For an answer I showed them my stern post, getting a lead of about 20yds. At another time it was nip and tuck to get ahead of a saucy little ducker. One Sunday I was stopping at a float at Gloucester, when a gentleman (with whom I am now acquainted) asked the usual amount of questions, informing me that he was interested in canoeing. After chatting with him for an hour I departed. A friend of his accompanied me a short distance to see how a canoe could sail. Somehow he could not get where he wanted, viz.: a few lengths ahead of the canoe. The wind was astern and his boat had 16yds. of canvas. The next opportunity I had of meeting my acquaintance he informed me that the crew of the ducker were surprised at the speed the canoe showed, and also that the helmsman was a semi-professional racer. The above named gentleman is about to discard his boat for a canoe, while for another owner of a ducker I am building a 15×30in. canoe. S.

THE OAKLAND C. C.

WHILE canoeing has been followed on the Pacific coast for a long time, its existence for a some years was rather precarious, but with the organization of the Oakland C. C. it has been placed on a firm and permanent footing. Though far from the canoeing center in the East, and out of reach of the annual meets, the canoeists of the Pacific are full as energetic and enterprising as their older brethern, and are working as successfully for the spread of the sport. The difficulties at first were considerable, as the freight on canoes from New York or the East was heavy, and there were no local builders; but the club now boasts a fine fleet, mostly of larger size than the A. C. A. rules allow, but they are used largely for sailing in strong winds and rough waters. We give herewith a map of the club courses on Oakland Creek, the straight course of 1½ miles being the one usually sailed, while the triangular one was used for the first race for the Edwards Cup on Nov. 2. This cup was presented by Mr. R. W. Edwards, of Oakland, Cal., to be raced for under the following conditions:

The races shall be sailed over the courses of the Oakland C. C. on Oakland creek, and shall be open to all Second and Third Class canoes of the O. C. C., sailed by their owners. They shall take place on the first Sunday of every month, or on the nearest legal holiday thereto, due notice being given. Time allowance and other details to be governed by the rules of the club. The winner of each race to hold the cup until the sailing of the next race. Should he cease to be a member of the club before the series of races is decided, the trophy shall revert to the club and his record be nullified. The above rules have been decided upon and drawn up by the board of directors.

OAKLAND C. C. SAILING COURSES.

The first race was set for Nov. 2, Election Day. A number of ladies and friends were invited for a good time and all left the boat house about 11 A. M., the fleet comprising eight canoes, viz.: Shadow, Zephyr, Zoe Mou, Coney Island, Mystic, Colombia, Falcon and Waif, and the yawls Nettie, Bonita, Nautilus, Clark and Aloha. With a scarcely perceptible zephyr they glided gently up the creek to the basin. Near the Alameda shore there have been at anchor for a long time a lot of big floats all tied together, and it made a splendid landing place for the small craft. On one of the floats there was laid up a Whitehall boat, and this was covered over nicely from end to end with planking for protection from the weather—which made a fine table for lunch. The party consisted of about thirty ladies and gentlemen, and the lunch was all that could be desired, elegant in every way—and a fine appetite divided up among the assembly enabled them to do full justice to it. The weather was simply delicious, a red-letter day, even for the glorious climate of California. By 2 o'clock all was in readiness for the first race. A nice little breeze—too light for speed—was blowing from the north, and the Waif, Falcon, Shadow and Colombia got a good send off at 2:07 P. M. The little Waif, a Rushton, with two large lateens, walked away from the rest with scarce an effort, and came home an easy winner in 42m., as shown in the report below. The winner took the silver cup for one month, when the next race of the series will occur.

Next there was a handicap for all the canoes, which amounted to little better than a drift most of the way, with here and there an occasional puff. This was won by the Mystic, as below.

About 4:30 P. M. the party packed up camp stools, empty baskets, hampers, etc., and started for home, the leading boat to have for a prize a very artistic old shoe of paper maché. The Waif arrived first, but as she started considerably ahead and carried no passengers she was ruled out and the prize awarded to the Zoe Mou. Altogether this was the most delightful canoeing trip the club has had and the ladies are more enthusiastic over canoeing than ever.

Mr. Engelbrecht, nothing daunted by the loss of his much prized canoe Spray, is at work on a new one, which is already nearing completion. She will be a little longer than the old one and a different model somewhat, but promises to prove as fast.

The Oakland C. C. has systematized its reports of races in a way that all clubs would do well to follow, each race being entered on a printed blank which provides a space for all details. The preservation of records is a matter to which clubs are apt to give little attention until some day the occasion arises when they are needed and cannot be had. The expense of proper blank forms is merely nominal and they should be kept on hand by the secretary and filled out in duplicate, one being preserved and the other forwarded to the FOREST AND STREAM to insure a correct report of the race in print. The following reports of the two races mentioned above show the form adopted by the Oakland C. C. Spaces for 12 entries are provided on each blank. Columns for "Position," "Difference" and "Remarks" are also provided on the blanks, but necessarily omitted here for lack of space.

WASHINGTON C. C.—Washington, D. C., Nov. 25.—*Editor Forest and Stream:* Owing to the heavy and continued rain, the final race of the championship series was not sailed to-day, and the prizes will, in consequence, probably go over until next season unless an opportunity is presented in the immediate future to finish the series this year. The Mermaid and the Petrel each stand as the winner of one race, but as one boat must win in two races neither can claim the championship. The arrangements for winter quarters are nearly finished, and the prospects seem bright for a series of pleasant camp-fires during the cold weather and an early and enthusiastic campaign next spring. Paddling cruises for a day or two at a time are still in vogue, and will probably be kept up while the river remains open. The Washington C. C. hope to be counted in in any branch of the A. C. A. which may be formed within reasonable distance.—J. R. LAKE, Sec'y and Treas.

ANOTHER LONG CANOE CRUISE.—Wellsville, O., Nov. 15.—*Editor Forest and Stream:* During the leisure hours of the summer season Bert Jones, aged about 16 years, son of Rev. P. H. Jones, built himself a rude but substantial little canoe, in which he later embarked as captain, crew and passengers, for a voyage toward the sunny South. He took along with him fishing tackle and hunting accoutrements and a small "A" tent which he proposed rigging to the boat for shelter at night. When last heard from he had reached Memphis, Tenn.; was securing plenty of game, and perfectly delighted with the trip. He thought strongly of continuing the voyage to Texas, where he would join his brother. Considering his extreme youth and the slight experience possessed, he displays a grit characteristic only of enthusiastic sportsmen.—JO.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. B. F.—Of the three you name Scott and Greener.

C. C., Philadelphia, Pa.—The rockered keel and rounded stern would improve the model.

M. M., Grand Rapids, Mich.—Canoes must pay the duty on manufactured wood, 35 per cent.

H. C., Vermont.—You will doubtless find the gun named satisfactory. For safety there is no choice between it and a dozen others.

INQUIRER, Austin, Miss.—The Atlantic was built by the so-called "Rule of Thumb." The other yachts were the work of professional designers.

KANUCK, Toronto.—A Class B canoe may be 16in. from under side of center of deck at fore end of well to inner side of garboard next to keelson. Vesper and Pecowsic are under this limit; probably 14 and 13in. respectively. There were no formal races with Red Jacket, but Vesper beat her in one scrub race and other canoes did so as well. There was no "no-ballast" race this year.

W. L. F., South Bend, Ind.—I should like to get hold of some book that would give me an idea of the wolfing business on the northern boundary of Montana or in the Saskatchewan country. Do you know if I could get any reports of the extent of this business carried on by sending to Washington. I have had some experience in the business in California. Ans. The wolfing business is carried on by poisoning bait with strychnine. Montana is the best country to work in that we know of at present. An account of the business was published in FOREST AND STREAM of July 22, 1886. Fort Shaw, Montana, is a good outfitting point.

BOOKS RECEIVED.

Messrs. Lee & Shepard, of Boston, have issued in very fully-illustrated form four of our most familiar and sweetest hymns, "Rock of Ages," "My Faith Looks up to Thee," "Abide With Me" and "Nearer My God to Thee." These are uniform in size, each small quarto volume containing its single hymn and the engravings which accompany it. The paper is heavy, the illustrations are numerous and varied, and the binding is in imitation of alligator skin.

Similar in general character are "Home, Sweet Home" and the "Curfew Must Not Ring To-night," from the same press. These are handsomely bound in cloth and are profusely illustrated.

An extremely useful little volume is "Mistakes in Writing English," by Marshall T. Bigelow, also published by Messrs. Lee & Shepard. This little book deals with the blunders most commonly made in writing, and should be in the hands of every one. The author has set right a very great number of vulgar errors.

Under the title of "Young Folks' Pictures and Stories of Animals for Home and School" Lee & Shepard publish six little volumes of a natural history series by Mrs. Sanborn Tenny. These six volumes treat of Quadrupeds, Birds, Fishes and Reptiles, Bees, Butterflies and other insects, Sea Shells and River Shells, Sea Urchins, Star Fishes and Corals. They are useful little volumes and may profitably be put into the hands of young children. The stories of the creatures whose habits are detailed are pleasantly told and in general are drawn from good sources. The illustrations are numerous and familiar.

A very striking holiday book, complete in all its make up and marvelous in the beauty and number of its engravings is "Nature's Hallelujah," arranged and illustrated by Irene E. Jerome. The story, so far as it has one, is that of the fancied rejoicing of Nature at the coming of spring, and the time is April, May and June. The fragments of verse which accompany the illustrations are many of them very beautiful, and we find scattered everywhere through the pages conceits quaint and charming, which make the book delightful to pore over. Too much can hardly be said in praise of the illustrations. They are the work of a true lover of Nature.

"The Young Wrecker," by Thomas Meade Bache (Lee & Shepard), has reached its sixth edition. It is the story of a boy, crazy to go to sea, but restrained from doing so by his father's commands, who was at length carried off by accident in a vessel bound for Havana. Here he was transferred to a wrecking schooner, and passed some pleasant months on the Florida coast before receiving a letter from his father, to whom he had written at the first opportunity. The story of Fred's adventures is well told, and the whole motive and lesson of the book is a good one, while at the same time there is in it plenty of adventure and excitement.

"His One Fault," by J. T. Trowbridge (Lee & Shepard), is another boys' book. The hero is a boy whose heedlessness is constantly leading him into scrapes of all kinds. After a series of severe lessons from which he emerges with no loss of credit, he is supposed to be cured and the story ends. The history of Kit Downimede may be read with profit by a great many boys.

"The Complete Poultry Manual," by F. D. Craig, is a handy little pamphlet on poultry keeping and poultry breeding. The common diseases to which fowls are subject are quite fully treated, and instructions given as to the accommodations for poultry. A list, with some description, of the different breeds is given and a vocabulary of technical terms used in this connection. The last third of the book is devoted to a little romance, so-called, in which the success of two young poultry breeders is detailed.

"Under Blue Skies," published by Worthington Company, 747 Broadway, New York, is a beautifully illustrated child's book. The verses and colored pictures are by Mrs. S. J. Brigham, and both are entitled to high praise.

SMALL YACHTS.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice.

By C. P. KUNHARDT.

THE FOREST AND STREAM PUBLISHING COMPANY takes pleasure in announcing the publication of a magnificent quarto volume, bearing the above title. This book covers the field of Small Yachts, with special regard to their design, construction, equipment and keep. The opening chapters are devoted to a consideration of the model and the draft, their relations to one another, and the purposes which they subserve. Full directions are given for producing the plans of a yacht with reference to the chief points in design, and the method of taking off the lines of a boat already built is likewise described in detail.

All elements entering into design, such as Resistance, Stability, Balance of Rig, Handiness, Displacement, etc., are dealt with in separate chapters. The rules necessary for the mathematical computations, and a review of theory and practice close the first division of the book.

The second portion comprises the description of the Plates, covering the whole range of type in small yachts, from the shoal catboat and American centerboard sloop to examples of the narrowest and deepest British cutter yet built. These yachts have their lines, build and fittings depicted in the Plates, which are drawn to scale. With their aid and the specifications presented, the reader is placed in possession of accurate information concerning the mould, accommodations, rig and characteristics of all styles of yachts which have received favorable recognition. Sporting boats, combination row and sailboats, and various examples of special form are introduced.

The third division offers a comprehensive review of single-hand sailing, to which small yachts are especially adapted. Directions are given as a guide in selection of type and sail plan, and subsequent equipment and proper management.

The iron work of yachts, their gear, yawls, stearing apparatus, boat building and much other closely related matter is entered upon. The new International Rules of the Road, Signal Service, and a Bibliography appear in the Appendix.

The work is profusely and handsomely illustrated with 150 illustrations inserted in the text, besides the sixty-three plates.

A folio (size of page 14½x12½ inches), printed on paper specially manufactured for it, and with great beauty of execution and finish in every detail, making a volume vastly superior to any other work of the kind ever published. Pages 370, with 136 plate pages additional, or a total of more than 500. Price, postpaid, $7.00.

LIST OF PLATES.

I. The Sloop Yacht Schemer.

CHRISTMAS PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of Christmas gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for Christmas. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL. D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR. C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

The Forest Waters the Farm,

OR, THE VALUE OF WOODLANDS AS RESERVOIRS. By ANTONIN ROUSSET, translated by REV. S. W. POWELL. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual of boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Fyshhe and Fysshynge.

By DAME JULIANA BERNERS. An elegant fac-simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft' he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 9, 1886.

VOL. XXVII.—No. 20. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

A WORD IN CONFIDENCE.

READERS old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves with the best possible demonstration, namely success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportman's journal for sportsmen could be conducted without resorting to such questionable make-shift expedients has proved quite correct.

The FOREST AND STREAM will be, in the future, as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe, or yacht. Its tone and high character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

THE POLLUTION OF NEW YORK HARBOR.—In another place we record the conviction of two men for illegally dumping refuse on the oyster grounds. This is a good beginning and we rejoice to learn that Fish Commissioner Blackford has obtained indictments against the Standard Oil Company and other oil works located on the Kill von Kull, for polluting the waters of New York harbor. For years these great concerns have fouled the waters and driven the fish, lobsters and oysters away from their former feeding grounds, and it is a cause for rejoicing that some one has brought them before the courts for it.

NO SYMPATHY.

THE Maine report, of which advance notice is given in another column, is a thoroughly business document. We will give fuller extracts from it when the complete text is received. It is full of sound sense. Here is something worth thinking about in connection with the recent murder of a game warden and the character of the "oppressed" hunters. The Commissioners say: "Our game laws are fair and impartial to all. They only seek to protect the game when it is breeding, or when nursing its young, or when recuperating after the season is past. It is merely sought to insure to the working man, whether at manual labor, or at the desk, or counter, or factory, or sawmill, an equal right to his share of what belongs equally to all. By what right do these men abandon that work by which the members of the social world earn their bread, and claim authority to kill and sell that which belongs to the State and which the State gives equally to all, upon conditions to be fulfilled before legal title to the same can be acquired? By what right do certain men conspire together to seduce visitors at our summer resorts to break our laws and kill our game? With bated breath the inhabitants inform us of the outrages of these men, but always pleading that we will not give their names, as they fear the threats of personal violence of life, of burned barns, or tracts of forest fired. The whole community, the whole State stands in awe of these vicious, dangerous outlaws."

It is the veriest nonsense to prate of the hardships wrought by the law. The game of the State is for the people. Law-abiding citizens should not be robbed of it by those members of society who like domestic animals in certain countries have reverted to a feral state and taken to the woods.

SNOW IN THE SOUTH.—The first extensive snowstorm of the winter not only buried the Northern and Middle States, but whitened the ground through the South as far as Georgia and Alabama. The snow fell from a foot to eighteen inches deep in regions where snow is seldom seen at all, and the mercury ran far below the freezing point. Such unusual weather could hardly be without its effect on the game. From some localities we hear reports that quail were frozen to death in large numbers. Happily, however, the storm was succeeded by milder weather, and we are inclined to believe that the injury to the quail has been overestimated. While the snow and cold weather were hard upon the quail, they made the duck shooting very good. On Currituck Sound, though there has as yet been but little weather to bring the fowl in, there has been excellent shooting at "common ducks," a term which includes all varieties except canvasbacks and redheads. We heard of three guns, on the grounds of the Narrows Island Club, killing 112 birds in a day. This should satisfy any one. The best shooting at canvas and redheads will come later, when a severe freeze occurs. At last advices from High Point it was snowing heavily, but it is to be hoped that the storm, unprecedented in the South at this season of the year, may not interfere with the field trials to be run at Grand Junction, Tenn.

SUMMER WOODCOCK SHOOTING.—The communication on this subject, printed elsewhere, is worthy of respectful consideration, because, for one thing, it comes from a sportsmen whose experience of twenty years should give him some authority. The belief he holds is shared by many others. Indeed the tendency of the times is toward stricter and more adequate protection. There is only one sure basis of reasoning on this woodcock question. To discuss summer woodcock shooting from the standpoint of sentiment is fruitless. It is quite as idle to attempt to argue against the practice on the ground that July shooting is tremendously hard work. The one reason for closing the season in summer is that the stock of birds will not stand the great drain now made upon the supply. It is the simplest arithmetic. It is proverbial philosophy. You cannot eat your cake and have it too. Woodcock do not miraculously increase. If they are killed off they will not spring up again. If New Jersey and Pennsylvania sportsmen expect to enjoy woodcock shooting in the future, common sense requires abandonment of this foolish summer destruction.

OUGHT TO BE STOPPED.—The exportation of American wild turkeys, quail, ruffed and pinnated grouse, ducks, snipe and other game to Great Britain,

NO CREDIT.—The FOREST AND STREAM is widely quoted. Usually the best things taken from it are not credited, or else the credit is given to some other paper which has appropriated from our columns. This is a common thing with all journals having much original matter worth copying. There is now going the rounds a little story of a man who shot a centipede off from his toe, the bullet wounding a mule and poisoning it to death with the poison of the centipede. This yarn is widely circulating and is credited to the Tombstone, Ariz., *Epitaph*. Months ago it was printed and reprinted as coming from the Laramie, Wyo., *Boomerang*, Bill Nye's paper. Probably, if traced back, it will be found to have appeared in the old *Spirit of the Times* back in Mexican war times. We do not mind it much when the FOREST AND STREAM is denied due credit for what esteemed contemporaries find useful in its columns, but it is aggravating to see "Nessmuk's" poems (recently published in the FOREST AND STREAM) going the rounds with no credit to either paper or author. To filch in this way is of no special credit to the newspapers copying the poems.

BIRCH BARK PICTURES.—We have been shown by Mr. J. Henry Phair, Commissioner of Fisheries, Fredericton, New Brunswick, some very artistic birch bark pictures. The bark, of different shades, is cut to the form of the required figures, and pasted upon the paper, on which the background is drawn. The natural bark, in short, is used to form one of the colors of the picture. In one of the specimens, for example, the figure of a canoe and three anglers is cut from bark, pasted upon a card, and then the details of river, shore and sky are drawn in pencil. The effect is very beautiful. Mr. Phair's work, we notice, has received attention at the Indian and Colonial Exhibition in London.

AN INTERESTING MARKET ITEM.—Among the current New York market quotations is this: "Connecticut partridges and woodcock are $1.25 a brace, and those from the West $1." The exportation of woodcock and grouse from Connecticut is forbidden by the game statutes of that State, but the birds are for sale in New York. There is no special difficulty in bringing them to market. The mere existence of the law does not stop market-hunters, since there is no adequate machinery for enforcing the regulations. In the same way Michigan venison is to be had in St. Louis and New York and Boston and Philadelphia, though the Michigan non-export game law is very explicit.

AN IMPOTENT GRIP.—When the Passaic County Fish and Game Protective Association caught Domenico Billa, Giovanni Pelozi and Pauli Gacomond, sons of Italy and song bird shooters, red-handed and pockets stuffed with booty, and hauled them before a Paterson justice, the interpreter gave to constable and magistrate the grip of the Knights of Labor, and assured the court that the bird shooters were all members in good standing. The dodge failed to work, and the Italians paid their fines. The Paterson *Press* reports that the work of the Association will be prosecuted with vigor.

THE BELLEVILLE SPORTSMEN are doing good work for Ontario game by bringing to justice parties who have been unlawfully killing deer. It is worthy of remark that one of these convicted deer poachers was himself a magistrate. He has now, it is to be hoped, acquired a practical and useful knowledge of the game law of Ontario. It was dear bought knowledge, even though the cash outlay was comparatively insignificant.

THE REPORT OF THE EASTERN FIELD TRIALS is concluded this week. The meeting has been a notable one by reason of the large number of entries; and some of the heats have brought out very fine work. The trials have passed off pleasantly, and it gives us pleasure to record the absence of any unpleasant episode to mar the satisfaction of those participating.

NESSMUK'S POEMS are already an assured success. The first five hundred advance subscriptions having filled, we are now under way for a full thousand. The artotype portrait is a great success. The price of the book has been advanced to $1.50.

THE THIRTEEN-THOUSANDTH FIRST MAN to eat thirty quail, one each consecutive day, is hard at work in Chicago.

The Sportsman Tourist.

NOTES FROM THE PARK.

YELLOWSTONE PARK, Nov. 27.—*Editor Forest and Stream*: Since my last letter we have been having slight snows until there is now at the Falls, Lower Basin and Norris about 2ft. on an average. At the Mammoth Hot Springs there is about 1ft. On the Cooke City road and Swan Lake country there is about 15in.

Teams are still employed in the Park, getting material on the ground for the new hotel at the Grand Cañon and for improvements at the Lower Geyser Basin.

The trains on the Park Branch, which have been running two and three times a week, from this time on will run but once a week.

The mail service has been increased to six trips a week in place of three from Livingstone and three to Cooke City in place of two trips. It is carried on stages.

Considerable quantities of freight have been coming in for the soldiers' station here. Hay is shipped in from Fort Ellis, M. T. The soldiers will soon have everything at the camp required to make them comfortable and keep them and their horses until spring. They moved into their new quarters some two weeks ago. In addition to the buildings mentioned in my last, a small hospital has been commenced, work on which was stopped for the want of funds.

Last week the scout found a hunter's camp on Hellroaring Creek. The soldiers arrested the hunter. William Whitworth, for hunting in the Park. This is the second time Whitworth has been arrested, once under Major Conger, when he was fined under the Wyoming law. For the last offense nothing was done, as there was no evidence against him. There is but one party of soldiers out from the main camp; they are stationed at Soda Butte, the others having all been called in.

On Sunday night, Nov. 7, about 11 P. M., there was a local disturbance of the earth's crust in the Park at Norris Geyser Basin, the shock of which broke dishes, cracked plastering and shook up the inmates of the hotel at that place. It was plainly felt at the Grand Cañon and Firehall. Some claim to have felt the shock at the Mammoth Hot Springs; others who were awake at the time did not. Parties at Norris describe the shock as blows being struck—similar to the shocks felt when the Giantess Geyser begins to erupt, only much more violent. Two men sleeping in their loaded freight wagons at Cañon Creek, eight miles from the Basin, say their wagons were shook from side to side the full play of the wheels, as though on a rough road.

It will be quite an additional attraction to the Park if we can have a small earthquake now and then to add to the wonders here. It is to be regretted that some of the U. S. Geological Survey were not here to have observed the disturbance and reported it intelligently, as almost every one exaggerates all accounts of such things. There is no doubt that from some cause there was a disturbance, but not as violent as has been reported.

A party of tourist hunters came in last week from Buffalo Fork of Snake River via Lewis's and Shoshone Lakes to Yellowstone Lake, thence down the Yellowstone to Yanses. They report the snow as fully three feet deep on the divide. You will hear from them, as one of them is a writer for the FOREST AND STREAM. He says he has had a very good season in the mountains around the Park. A party saw several bands of elk close in to the Main Hot Springs—one of thirty-two—within two miles air line of hotel. Elk have been seen within a mile of the Hot Springs.

The scout, Barronett, found the dressed carcass of a blacktail deer, which he reported to Capt. Harris. Soldiers were sent out after the parties who killed it. They found no hunters, but brought the deer in. If Congress will only pass proper laws for the government of the Park, all hunting could be stopped.

Cooke City, as a mining camp, is rather dull now. I hear of contracts being let for charcoal and freighting in of coke. This means there will be more activity in the mines. The friends of the Cooke City and Cinnabar Railroad are very quiet. They are waiting for Congress to assemble before commencing to push their schemes. They will try to make a "still-hunt" through Congress with their bill. As this affects the Park, they must be watched very closely. X.

BEARHEAD AND THE BEAR.

OUTSIDE the snow drifted and piled against the door; the wind howled and shrieked around the eaves, and old Boreas covered the window panes with a furry coat of frost. But little cared I for that. I only piled up the logs the higher, and smoked and read and enjoyed myself as well as any one can, cooped in a house. However, if you will go at it right, cabin life during the cold months can be made very pleasant. In the first place I had a boat to build, for "Yo" and I had vowed to make another trip to the Walled-in Lakes, and the old scow we had left there was wholly unfit in rough water. It was with great difficulty that I collected the materials to build my craft. The siding came from Minnesota, the copper nails from St. Louis, and the ribs I made of old wagon bows—bows which for years had sheltered with their sheet the bales of robes and furs and merchandise in transit over hundreds of miles of prairie; but alas! those days are gone forever, and now the old wagons stand uselessly around, and the rust is deep upon their thimbles. It was no task, rather a labor of love, to build the boat; and as I fashioned a strip of siding, or clinched a nail, I thought of the pleasant days to come when "Yo" and I should explore the unknown shores of the upper lake. Thus I passed the days, working a little, but for the most part sitting by the broad fire-place, smoking, reading, dozing, and getting fat and lazy. One day the clear familiar honk! honk! of the wild geese awakened me from my winter's lethargy and I was glad. Spring was at hand, the boat finished, and one that any man might be proud to own. She is 14ft. long, a double-ender, built like those of Adirondack fame, and in honor of my friend it bears on bow and stern in large white letters the inscription, Yo.

Who that loves the lakes and woods and the great mountains but longs to be among them as summer comes? So it is with me, at least; and having no business cares, lord of my own sweet will, I determined to take the boat to the lakes and stay until the flies should drive me out. One bright morning I carefully lashed the Yo on top the wagon, stowed the tent, stove and camp duffle under it, and accompanied by Bearhead, an Indian, and our retriever, set out on the journey. Now, as we passed a prairie lake by the side of the road, what should we see but a "bob-cat" peering out at us from a bunch of rye grass. Bearhead immediately jumped out, picked up some rocks, and accompanied by the retriever, cautiously approached the animal. When within ten or fifteen feet of the bunch of grass the animal sprang out and ran as fast as he could. But like all others of the cat family, these "bob-cats" have but little endurance, and after a quarter of a mile run, perhaps less, the dog brought him to bay and Bearhead ended his life by crushing his skull with a rock. Coming up alongside I quickly removed the entrails, threw the carcass in the wagon, and we resumed our journey. Perhaps you want to know what we did with the carcass. Well, we ate the hams fried for supper, and the next evening had the ribs, plain boiled. I have never tasted the domestic cat, but I have eaten fat panther, lynx and bob-cat, and very good meat it is. One winter, way back in "York State," I killed a very fat panther, and cutting out the largest steaks, sent some to my mother and some to a friend, marked very plainly, "Venison." Sometime after, when I had returned home, I asked them how they liked the deer meat. "Splendid," they said, "delicious, best we ever had." "Ah," said I, "it wasn't venison; it was panther steak." Tableau.

Near sundown we arrived at Indian John's place on Cutbank, where we stopped for the night. I saw that John hadn't been idle during the winter, for since our last visit he had built over two miles of fence, which now inclosed a fine field of grain and vegetables. Of a business nature, and aided by Mr. Kipp, the post trader, John now has a fine ranch and a number of horses and cattle. But there is not another Indian in the tribe so fortunate as he. After supper John took us out to see his pet beavers. He had two, about six weeks old. We took them down to the creek and gave them a swim, but they did not seem to care for the water and came back to us immediately, whimpering and shivering, and seemed glad to get back to their nests. The beaver will soon have followed the buffalo. In this part of the country, probably the wildest portion of Montana, they are being thinned out rapidly. Every fall the Kootnai and Stony Indians, who belong in the Province of Alberta, come over here and trap along the streams belonging to the Piegans. If they merely trapped, it would not be so bad; but they cut the dams, pull down the houses and knock every beaver on the head. Not one escapes. How little we know of the habits of this wonderful animal. We see the great trees he has felled, his dams and houses; but we do not know how the work was done. It seems as if some of our great naturalists should be interested enough to make a thorough study of the beaver, his method of building, etc., and he who will do so should be at work at once, for in a short time the creature will have passed away forever.

The next morning we were on the road till sunrise, and arrived at Milk River about 10 o'clock. Here we turned out the horses to rest and graze and refreshed ourselves with a bath and a "bite to eat." About 2 o'clock we hitched up again and drove along up the North Fork of the South Fork. A much better route than the one "Yo" and I took last fall and a shorter one by at least fifteen miles. We had not traveled over an hour before a thunder shower came, and we had lively time to get the tent up when the rain came down hard and fast. We boiled the bobcat ribs, ate our supper, and the rain still coming down we soon rolled up in our blankets and went to sleep.

We rose at daylight and were soon traveling, and by 9 o'clock reached the top of the hill. The day was very warm, not a breath of wind was stirring and the flies were very bad; so we hurried down to the foot of the lake, built a number of smudges for the horses, and spent the rest of the day making a stable for them. We built it of quaking asp poles, and filled in the chinks with grass and moss, which excluded the light. The sun was down by the time we had finished the little building and we were so tired that we took a cold bite and turned in.

The next morning we placed the Yo in the water and started out for a fish. The boat did not leak a drop and proved to be very fast and easily rowed. As we pulled away from the shore with long, quick strokes, the bow fairly hissed through the water, and Bearhead was surprised. "Oh-ho-hi!" said he, "You don't pull hard, yet we are going as fast as a horse runs." Reaching deep water I threw the troll overboard and let out about fifty yards of line. I soon had a strike, and unceremoniously hauled the fish up alongside and gaffed him into the boat. It was a lake trout (*Salmo namaycush*), and weighed about 8lbs. Once again Bearhead was astonished; he had never seen such a large fish. I then handed him the trolling line and he caught several much larger. The sun was now well up and the flies attacked us furiously. Black flies there were and plenty of them; then there were several other kinds which I do not know by name, but their bite was stinging and poisonous. We were about to return to camp when the wind rose, relieving us of our tormentors, so we continued fishing. Having no rod, it was but little pleasure for me to fish, and I let Bearhead handle the line. Every time a fish struck he would grin from ear to ear, and if he lost one he would look so sad I couldn't help laughing. Cutting open several of the fish, I found that their stomachs were full of flies. I think that one could have good sport with the fly-rod here at this season of the year, although I never heard of these lake trout taking the fly. However, if one should fail to get these fish with the fly, there are other species of trout which afford great sport. We caught during the day at least 200lbs. of fish. They were not wasted, for we salted and dried them.

The flies were so bad that we could not stay away from the smudge long. I concluded to take the boat to the foot of the upper lake and cache it, where it would be handy when "Yo" and I should make our trip in the fall. With this end in view we started out early the next morning. During the night the weather had changed, the wind was now in the north and quite cold, and the sky overcast with dark clouds, which threatened snow. We had reached the head of the lower lake, when Bearhead suddenly exclaimed: "See the bear!" I saw on the edge of a little prairie right near the pines a big sunburned grizzly industriously digging. His hair was exactly the color of a buffalo bull's at this season.

We hastily rowed ashore, and taking the gun I started off, followed by Bearhead, who had no gun, leading the retriever. Favored by a coulee and a small clump of quaking asps, I was just getting in fair range of the animal when he walked leisurely into the thick pines, which grew in clumps 4 or 5ft. high and very dense. I waited some time, hoping the bear would come out again, but as he did not I concluded that he had gone off up the mountain; so I walked leisurely up to where we had last seen him and waited a while. I did not dare go into the thick pines and was about to give up the hunt when he came out on the edge of another clump of pines some 30yds. to the right. I fired and he fell, roared and got up and stood on his hindfeet, looking around. I again shot him and he went through the same performance and then started for the pines, but I managed to hit him again before he had got out of sight. Bearhead now let go the retriever, which ran into the edge of the pines and stood there barking, so we knew that he could see the bear, or at least smell him very plainly. Near by was a large dead pine tree. After some talk we decided to climb this, thinking that from the top of it we might get a good shot at the animal. Now the tree was only about 40ft. from where the dog was barking, and we approached it very cautiously. We reached the base, and handing the rifle to Bearhead, I turned to climb, when the bear rushed out, open-mouthed. Instead of making for the dog, as any sensible bear would have done, he came directly for us. Bearhead raised the rifle to his hip, he had not time to do more, and fired, and the shaggy old beast fell almost at our feet, the ball having passed through his brain. I have hunted a good many years, and in my experience that was the luckiest and most timely shot I have ever seen. I must confess that when it was all over, and I saw how nearly one or the other of us had come to being mauled and perhaps killed, my nerves were a little shaky. It was some satisfaction to get the knife into the old fellow and rip off his hide. He was very poor. In his stomach we found ant eggs, roots, strawberries and a gopher. Having now enough exercise and glory for one day, we packed the hide down to the boat and returned home. Bearhead was happy, he had on his broadest grin, his eyes sparkled and he sung his little war song all the way to camp, and even after we had turned in for the night.

The next day the weather was still cold, and we again started for the upper lake. We did not see any more bears, but saw the track of one, fresh, just as we entered the inlet. The water here was so swift that I made Bearhead walk, and it took me at least an hour to pull the mile between the lakes. As we pulled out into the deep water, I was more than ever impressed with the beauty of this lake; and was not a little gratified as I thought that the Yo was the first boat that had ever rested on its bosom. As I gazed at the great glacier-clad mountains toward its head, I longed for the time to come when "Yo" and I should camp among them and explore the great cañons and timbered valleys where no man had as yet set foot. Not far from the outlet we found a suitable place to leave the boat, and having cached it so securely that one could not see it unless he stumbled on it, we took the trail for camp and reached there just at dusk. The next day was very warm, but by noon we had got so far away from the mountains that the flies were not troublesome, and at dusk we arrived at Indian John's place on Cutbank.

APPEKUNNY.

Natural History.

Address all communications to the Forest and Stream Pub. Co.

SHORE BIRD NOMENCLATURE.

Editor Forest and Stream:

I am glad to see that my note in your issue of Nov. 4 has called out other communications on this subject, namely those of "X. Y. Z." in the issue of Nov. 18, and Mr. Cahoon in the paper of Nov. 25.

Mr. Cahoon evidently knows what he is talking about, and I am very glad to get hold of his list of local names, which will, however, be much more valuable if he will have the kindness to specify exactly in what locality he has actually known these names to be used. It is quite important for the sort of study of these names that I am inclined to undertake that we should know if possible just how far the use of each name extends. The matter is not so trivial as it may appear at first sight to many readers, for many of these names contain much that is interesting in the way of folk-lore and popular philology. And now for a few words in regard to Mr. Cahoon's criticisms. If he will permit me to say so, I may not be as much mistaken as he believes, while he may be perfectly right himself in the use of the names. Most of my shore bird nomenclature for Cape Cod was learned in the town of Orleans in the seasons of 1869–'72, and chiefly from the older generation of gunners. The names even at that very locality may easily have changed since then, and I should be very glad to learn positively whether they have or not. In those days the golden plover was quite as often called "toadhead" as "green plover," and though the old gunners talked of "winter yellowlegs," they said "little yellowlegs" or "yellowlegs" for the other species. I was perhaps too sweeping in including Chatham in what I had to say about "thoroughbred gunners," though I had the impression at the time of writing that the same names were used there as at Orleans. I am glad, however, to be corrected. The name "winter oxeye" for a bird described as coming in immense flocks late in autumn, and evidently the young red-backed sandpiper, was heard from a very old man at South Orleans in 1869.

I should like to ask Mr. Cahoon how generally he has found the name "bumble-bee peep" used for the least sandpiper (*Tringa minutilla*) by native gunners on Cape Cod. The name sounds as if it were meant to be jocular, and is almost the only instance I have ever heard of gunners making any distinction between this species and the semi-palmated sandpiper (*Ereunetes pusillus*). I hope we shall hear more from Mr. Cahoon, "X. Y. Z." and others of your readers. JOHN MURDOCH.

U. S. NATIONAL MUSEUM, Washington, Nov. 29.

Editor Forest and Stream:

Your columns of late showing much interest in the above, lead me to say that if your correspondents, if they are old subscribers, will look up the FOREST AND STREAM for Nov. 9 and 23, 1876, they will find a nearly complete list of local names at Plymouth, Mass., which I made a specialty of obtaining during a gunning season spent at that place. F. C. BROWNE.

FRAMINGHAM, Mass.

A RASH JUDGMENT.

Editor Forest and Stream:

In a recent issue a correspondent notes the failure of an attempt to rear ruffed grouse chicks hatched in an incubator. He follows this with a declaration that it is only another illustration of "the folly of attempting to domesticate the ruffed grouse." If it were not for seeming impolite, I should say his declaration illustrates the folly of founding so sweeping a proposition on a single experiment, especially when that experiment begins at the wrong end. Old hunters are common who, having been familiar with the ruffed grouse all their lives, declare that the adult birds will not even live in captivity.

There are some of us who believe the domestication of the ruffed grouse not only possible, but practicable; yet it will not be accomplished through the hatching of wild eggs by an incubator. It will begin with the adult birds which will first be so far tamed as to mate; nest and incubate in confinment, and chicks so hatched will have ten chances for reaching maturity to one for those submitted to the tender mercies of incubators and brooders. But the undertaking will not be an easy one; first, because the general opinion is that it is impossible, and, second, because whoever makes any attempt of this character finds himself utterly in the dark and obliged to depend entirely upon that very expensive instructor, experience. And if your correspondent is not already a long ways past three score and ten, I hazard the opinion that he will yet live to find himself in error. JAY BEBE.

TOLEDO, O., Nov. 27.

FORESTRY IN CALIFORNIA.—The State Board of Forestry of California has prepared for presentation to the next State Legislature a concurrent resolution which reads as follows: "Whereas, the interests of California, like those of all countries, necessitate the reservation of a certain portion of land in forest for the best interests of agriculture; and Whereas, the proportion of land in the greater part of California in forest is already much less than is deemed essential by scientific men; and Whereas, the land laws of the United States and of this State, applying to forest lands, are unsuited to the honestly conducted lumber trade, and fail totally to guard against waste or destruction by fire, and provide no protection for a future lumber and fuel supply, or for the preservation of the water sheds of our State; and Whereas, when these laws are good, the absence of adequate machinery for their execution forms a bar to their utility, and thus fraud, dishonesty and waste are rife, and robbery of the timber of the general government and from the State school lands, is common; and Whereas, these practices and wrongs should cease; therefore, be it Resolved, by the Senate and Assembly of California, that the Senators and Representatives of this State, in the Federal Congress, are hereby requested to use their utmost endeavors to improve the present land laws applying to timber lands, and especially to provide for an immediate withdrawal of all government timber lands in California from sale, until a definite survey shall have ascertained what portion of such lands should be reserved to secure a permanent and continuous supply of timber and fuel for our citizens, and to protect the agriculture of the State from injury and destruction by flood and drought."

"BIRD NOTES FROM LONG ISLAND."—Under this title Mr. William Dutcher has published in the October *Auk* a paper of exceptional interest on the rarer birds of Long Island. Mr. Dutcher has made Long Island his special field of study, and this field, although so often worked over by others, has yielded him very important results. He adds to the Long Island list of birds *Megalestris skua*, its most southern resort; *Sterna fuliginosa*, *Vanellus vanellus*, first record for the American continent south of the parallel of 60°, and *Turdus alicice bicknelli*. Besides these interesting occurrences there are noted the occurrence of such rare birds as the harlequin duck, the corncrake, the three species of phalarope, the oyster catcher, black vulture, summer tanager and Carolina wren. There are also a number of notes on the breeding of species not before known to summer on Long Island. Mr. Dutcher is to be congratulated on the interesting material which he has presented to ornithologists.

"WEAPONS IN GAME."—*Editor Forest and Stream:* I am glad to be able to give some information to your correspondent "Sancho," who writes under the above heading to FOREST AND STREAM for Nov. 25. The ivory arrowhead, which he describes as being found in the breast of the wild goose, is undoubtedly one of those made by the Eskimos of northwestern Alaska, such as we have some hundred or so of in the Museum. The natives in the neighborhood of Point Barrow make a slender polygonal ivory arrowhead, about five inches long, for the special purpose of shooting large fowl such as geese and swans.—JOHN MURDOCH (U. S. National Museum, Washington, Nov. 29).

A. O. U. AND THE AUDUBON.—American Ornithologists' Union, Washington, D. C., Dec. 1.—*Editor Forest and Stream:* I have the honor to inform you that at the fourth Congress of the American Ornithologists' Union, held in Washington, D. C., Nov. 16 to 18, 1886, it was Resolved, That the thanks of the American Ornithologists' Union be extended to the Forest and Stream Publishing Company for valuable assistance rendered the Committee on Protection of North American Birds, and for advancing the interests of the AUDUBON SOCIETY.—C. HART MERRIAM, Sec. A. O. U.

CONNECTICUT.—Thomaston, Nov. 31.—I add another to the list of albino squirrels, having on the 11th inst. killed one of the gray species, white, with a faint yellow tinge. Ruffed grouse are quite plentiful this fall in this vicinity, and more quail are reported than usual. Have seen but three woodcock this year; shot two of them. Numerous coons have been bagged about here by the aid of Pat McKane's celebrated coon dog, Bangs, a cabinet size photograph was recently taken of the dog with a coon on each side of him, which he captured the evening previous. —POINTER.

OTTERS IN NEW ENGLAND.—Center Harbor, N. H., Dec. 1.—Moses and James Thompson and myself captured two fine otters last Monday. Both were males, weight 19lbs. each, lenght of skin 5ft. 6in. They were hard subjects to handle without gloves, as Jim can testify.—GEO. H. PIPER.

WEATHER WISDOM.—Morristown, N. J., Dec. 3.—On Thanksgiving Day a very large white or "snow" owl was shot in the suburbs of this city. It was a female, 5ft. from tip to tip, and having but few spots on the snowy whiteness of its plumage. On the same day another was killed at Denville, six miles above here, apparently a male. In view of the mildness of the weather lately, their appearance so far south created much surprise among our local sportsmen and naturalists, and some of the wise fellows held it to presage the near and sudden approach of winter in all the name implies. They were right. Winter reached the latitude of Morristown Dec. 3.—F. B. D. B.

ATHENS, Pa., Nov. 29.—A party of hunters while after rabbits on Thanksgiving Day, shot a fine specimen of the snowy owl, which measured 5ft. 6in. from tip to tip and was 25in. long. I mounted it for a gentleman of this place and it attracts considerable attention, as it is the first one ever known to have been killed around here.—W. K. P.

A SILVER FOX.—Ferrisburgh, Vt., Nov. 27.—*Editor Forest and Stream:* In his day, fifty years ago, Uncle Bill Williams of Charlotte was a great fox hunter, and in one season shot sixty foxes. His sons inherited his love of hunting, and in great measure his skill and luck, so that it was always said of the Williams "boys" that they were lucky hunters. The old man's mantle seems to have descended to his grandson, Will Williams of this town, for on Oct. 30 he killed a veritable silver gray fox near the "Cove" in Charlotte. This is a "streak o' luck" such as never struck any other hunter in this town. The other fox hunters here have had a poor season so far, hardly one scoring more than two foxes, and they only reds. Most of us would be glad of a chance at even one of these, which are unusually scarce, and the few appear to have the "biled down cunnin'" of all the generations of their race.—AWAHSOOSE.

A KANSAS EAGLE.—Paola, Kan., Nov. 26.—Mr. Albert Lyder, of Six Mile, brought into town this morning an immense eagle, measuring 7ft. 6in. across the wings. He brought the huge bird to the ground from a distance of 80yds. Seeing him soaring about the poultry yard, evidently with an eye on some fine Thanksgiving turkeys, Mr. Lyder loaded up his faithful old fowling piece with about five charges of powder and a few buckshot. The bird, on falling to the ground wounded, made an attack upon his enemy, who had to defend himself with another well directed shot.—R. H. C.

Camp-Fire Flickerings.

"That reminds me."

197.

TWO civil engineers employed on the levee in Coahoma county, Mississippi, are quartered at the residence of Mr. Simpson, who is by the way a very hospitable gentleman. A few days ago as they came in from their work they noticed fresh deer tracks in the vicinity of the house. This stirred up their ardor as sportsmen, and having heard much about the abundance of deer in that locality, their inflamed imaginations were not much shocked at the sight of a real live deer in a cotton patch a few yards from the house. They hastened into the house and procured a gun. Selman with the gun approached the deer and fired at short range with No. 6 shot. The deer dropped instantly and appeared to be gasping his last gasp. Kent rushed up and jumped on the deer, threw his hat up into the sky and shouted. They called William, the colored man, to fetch a butcher knife. William came, and after looking sadly at the deer for a few moments remarked in sepulchral tones, "Dar now, you done kill Mr. Eldridge pet deer. Dat deer been in dis yard most ebery day. He come in de house if you had er let him."

Let us draw a veil for a few minutes while the two engineers recover. The silence was broken by two simultaneous exclamations, "We've played it!" The funny part was that Kent thought he had killed the deer and was disposed to take all the onus on himself. Selman had some trouble to assure him that he (Selman) had done the shooting. After some consultation they told William to cut the deer's throat and take the carcass over to Mr. Eldridge. But when William essayed to inaugurate the second act, the deer got up and quietly proceeded to browse around, and seemed as well as ever. The two engineers retired to their room and indulged in a thinking spell, during which they overheard the following observations by William in the adjoining room: "Miss Simpson, ain't I better put up dem turkeys? Dem white gentlemans shoot mighty wild 'round dis yard. Dey shoot dem turkeys sho if dey ain't in de hen 'ouse."

COAHOMA.

198.

A few days ago McLaws, the levee contractor, had an Irishman plowing up the ground preparatory to building a levee. Barney plowed up a torpid snake which he carefully stepped over without any remark. McLaws, who was just behind, exclaimed: "Barney, didn't you see that snake?" Barney stopped his plow and looked back; "An' is it a snake, Mister McLaws? I wasn't goin' to say a worred; sure thin I'm jist afther having a two weeks' drunk, and I didn't know if it was a snake or not."

COAHOMA.

MEMPHIS, Tenn.

199.

In your paper of Nov. 25, I enjoyed reading "First Lessons." The rabbit stew at the evening meal "reminded me" of the well-worn story of the preacher and his rabbit stews. A preacher who, for the sixth time, had dined on rabbits with the same family, said grace in the following words:

Rabbits hot and rabbits cold,
Rabbits young and rabbits old;
Rabbits tender and rabbits tough,
We thank thee, O Lord, we have rabbits enough.

SUMMER WOODCOCK SHOOTING.

NEW YORK, Nov. 2.—*Editor Forest and Stream:* Have you within the last five years noticed the yearly decrease of woodcock? Not only have they become fewer and fewer every year, but they have actually become scarce, and at this rate within the next decade they will certainly be practically exterminated. The cause of this is very simple and easily traced.

Of all the game birds, the woodcock is the most hunted. During the summer and fall months it is hunted and shot in our Northern, Eastern and Western States; during the winter months it is killed in our Southern States; in fact it is a wonder there are any left at all. It has really only three breathing months, during the months of April, May and June, and even then it is killed by the pot-hunter. It is a delicacy for which the marketmen and hotelkeepers pay a good price, therefore it is sought for by the market shooters. Let the sportsmen think of this seriously, and they will not wonder any more why woodcock have been so scarce. There cannot be a total stop put to this extermination, it is really only a matter of time. Woodcock will have to disappear before the progress of swamp culture and civilization. But the evil day can be put off quite a length of time through a combination and union of sportsmen. Let all summer woodcock shooting be stopped north of Maryland and east of Ohio. Let there be no woodcock shooting before the middle of September or the first of October.

I know it will be very hard for some of our best sportsmen to acquiesce in this, but we will have to come to it; and the sooner the better.

For the last twenty years I have not missed one single opening day of woodcock shooting, either in New Jersey or New York, and sometimes I have carried the war into Pennsylvania. I have braved the heat and the mosquitoes, and I have enjoyed it immensely; but after a good deal of reasoning with myself, I have been obliged to come to the conclusion that, although the law has been on my side, I have been doing wrong. There are hundreds of good sportsmen who have been doing as I have, and to these, most particularly, I now appeal.

Let all true sportsmen rouse themselves and use their influence, no matter how small, against summer woodcock shooting. Let all game clubs memorialize their legislatures against summer woodcock shooting; but by all means let us pull together and unite. Let us be wary, and let us not be beguiled by a few politicians or demagogues, calling themselves sportsmen. They are either pot-hunters themselves, or the representatives of marketmen or hotelkeepers. Do not let us compromise on a half-way law, but let our motto be, NO MORE SUMMER WOODCOCK SHOOTING. Then within a very few years our fall shooting will be something like what it used to be.

A MEMBER OF THE BROOKLYN GUN CLUB.

NEW ENGLAND GAME.

THE gunners in this section are not very well satisfied with the late fall shooting. The drought was followed by successive rains that have precluded outdoor sports to any but the most hardy. The shore bird shooting has been almost a failure, and now the gunners are waking slowly up to the necessity of abolishing spring shooting if they would have any birds in the fall to shoot. The birds that have come into the bays and inlets of the Massachusetts coast have never been so shy as this fall; so the gunners say. There has been an abundance of snow in many parts of New England for nearly half of the month of November, but it could not be improved for tracking in many places, because it has been followed by crusts. Still there has been some partridge shooting in Northern Maine, as witness the few boxes that have been smuggled through from Maine and New Hampshire. But the game dealers of this city have got but very, very few grouse this year. Indeed the sight of that bird in this market has almost been rare this fall. The dealers say that it is because they have been very scarce, but the reports of Maine gunners, who formerly shot for this market, prove to the contrary. They have killed their fifties and hundreds of birds, but the non-exportation law has prevented the sending of their trophies to Boston.

I have a few reports of deer killed since the snows, but the universal verdict is that it has been very poor tracking owing to the crust, though the deer are very plenty in some parts of Maine. In Dixfield, in that State, several have been killed, some of them not far from the town; so I am told, at least. Some of the real sportsmen of Maine have also been into the woods on their annual deer hunt. It gives everybody pleasure to hear that they have been successful. They are ardent workers for the protection of game in the close season, but in the legal time they hunt for the genuine pleasure it gives, and there is no game killed to go to waste. A deer a piece is enough. I learn that one of them has missed his deer this year—a magnificent buck, that he had spent days in tracking, but at last brought within easy range, and that too of buckshot. It was a dead miss, and the deer trotted away as though nothing had happened. This was in the vicinity of Lake Molechunkamunk, but the hunter won't let me give his name, though it was in the midst of the open season, and he had not killed his three. The damage to his reputation as a dead shot at a deer would hurt him.

I saw two carcasses of venison in the market to-day, the first I have seen this year that looked like Maine deer. The cutting of the flesh looked like that freshly done, and those deer never came from the West. I asked the marketmen in charge where those deer were from, and one or two of them referred me to the other one, but the other one did not know. He would look at the invoice, but the man with the invoice winked to the other man; and "Behanged if the invoice shows where they come from." Singular, was it not? They would have answered me almost any other question correctly. They had just unboxed a lot of mutton from Aroostook county, Maine, and the venison lay just beside the mutton and the boxes. The Boston marketmen won't give away the methods by which game illegally reaches them, but they are watched; let them rest assured of that. SPECIAL.

DEER IN THE ADIRONDACKS.

Editor Forest and Stream:

At the close of the open season for hunting deer in the Adirondacks it is fitting to take a retrospective view of the workings of the game law as amended by the Legislature of 1886. Being in a position to learn the views of sportsmen and tourists who visit the Adirondacks I must say there never were such universal expressions of dissatisfaction from all classes as there have been to the present law. The hounder has been shut off too soon to glut his insatiate thirst for cruelty and slaughter. If the season for hounding had extended later, when deer take to water more readily before the hound, he might have killed a dozen where now he has only obtained half that number.

The worst of it is the law has been disregarded and hounding has been continued in all of the secluded places in the Adirondacks throughout October and even in November. It brings forcibly to mind the assertion of FOREST AND STREAM, "that hounding one month meant hounding twelve months in the year." Great slaughter has been committed. More than double the deer have been killed this year than in 1885. This must necessarily be so, so long as hounding is permitted, as this method of hunting makes it possible for every one to kill deer, and every one is ready to improve the opportunity who is not particular how he kills them, whether he shoots, clubs or drowns them.

The tourist whose vacation comes from the middle of July to middle of August does not quite like the idea of being obliged to go without venison just to save them, only to be murdered and rendered unfit to eat by hounding in September and October. The three-deer clause and one for transportation are the only redeeming features of the law, although this does not amount to anything when hunting with hounds—they go in such large parties that even three deer each make a large number. I know of one party that numbered over fifty hunters, and several that contained ten to fifteen. Besides, there are no detectives on the ground and it is such an easy thing to kill deer in this way they are likely to overrun their quota and bring out their heads as trophies, as the law allows them to do. The three deer applies to still-hunters. There is perhaps one man in a thousand that can kill from fifteen to thirty deer by still-hunting them if allowed the whole of November to hunt. But it requires so much hard work no one will kill them if not allowed to take them out of the woods. But the close season, Nov. 1, shuts off all possibility of getting their three deer, as no one can hunt successfully while the leaves are on the trees.

I think it is all wrong to close the season Nov. 1. During November deer are in the best condition of any month in the year; besides, since the general aversion to running deer with dogs many sportsmen like to come up and have a quiet hunt, and if possible kill a deer when they are in their prime, and when the weather is cold enough to admit of taking one home.

I have heard much complaint this fall in this respect. They are satisfied with the number allowed, but they do want the privilege of getting those three when they are the best and when they can save and enjoy them after their arrival home. The Beaver River country and perhaps the northern part of St. Lawrence county were the only sections free from the scourge of hounding. The Beaver River Club, who are aware of the evil effects of hounding and have not only pledged themselves to refrain therefrom but also to use all proper means and influence to prevent this mode of hunting, have succeeded beyond all expectation.

And the good results are apparent. I would like to have taken you through the Beaver River country in the fall of 1884 and then repeat it now, you would be surprised at the increase. Where you would find one track in 1884 you would find a dozen now. There have not been so many deer in the vicinity of Number Four in twenty years as there are now.

I do not attribute it all to actual increase, but the deer have sought refuge from other sections where they have been harassed by hounds. There was a light fall of snow the latter part of October which aroused all my old hunting propensities, and the day found me in the woods trying to compete with the wary deer. I found an abundance of tracks and started several, but they were too sharp for me, I only caught a glimpse of their tail as they waived defiance on their rapid retreat. At length I came to a place where, I should judge by their tracks, that there had been not less than twenty deer the previous night feeding upon an area of fifty acres. Their tracks were so plenty going in every direction that it was impossible to follow any one deer. I moved slowly on, keeping a sharp lookout in every direction and feeling every footstep lest there should be something under it to snap and give warning of my approach. I had not proceeded far when, at a long distance ahead, I saw through the brush the dim outline of a deer. His head was erect and ears thrown forward and was evidently looking directly toward me. His quick ear had detected my approach and at the first glimpse of motion he would have been no more. Pressing my Winchester firmly to my shoulder and drawing a good bead on his breast, I drew the trigger. He gave one plunge forward and fell to the ground. Going down to where he stood I found a splendid buck stretched at full length on the ground. Glory enough for one day. The following morning the snow had disappeared, and thus ended my hunt for this year.

It does seem that the people of the State of New York would be wise in time and protect the most noble game in her forest preserve by passing a good protective law, one that would be respected by all good citizens. Having always lived in the Adirondacks, and knowing well what would best tend to the preservation of deer and at the same time conform to the wishes and needs of the greatest number of people that visit the woods, allow me to suggest a law which, I think, would be respected and would tend greatly to the preservation of deer for all time to come.

First—Hounding should be strictly prohibited under heavy penalty. Hunting deer with hounds in a country like the Adirondacks, abounding in lakes, is sure extermination, and if allowed all other protective measures will be of no avail.

Second—As there are as many or more sportsmen who go to the woods from the middle of July to the middle of August who think, and perhaps rightly, that they are as much entitled to venison to supply their camp as those that come later—and it seems almost an absolute necessity to suggest to their guide that they must have meat to eat—this has a demoralizing effect on the guides, so they do not feel like complaining of offenders in the early summer when they may be expected to do the same later on when deer are good, but is equally illegal. Therefore, I firmly believe that there would be less deer killed in early summer if the open season for bucks commenced the 15th of July. Make it $100 penalty for killing a doe before the 15th of August, and no jacking before that time.

Third—Make the open season to Dec. 1. Deer are in their best during November, and as long as one is limited to three deer let them get them, if they prefer, when the weather is cold enough to keep them a while. Keep in the three-deer clause and transportation to one as now.

With such a law as the above every one would be interested and would act as game constable. Give us such a law, or even exclude hounding, and the Beaver River Club will put a good man on the ground at its own expense, and keep him there during the close season, to prevent all violations of the law. But if hounding be allowed there is no inducement to prevent summer killing, as they are only saving them for water butchery in September and October.

I know there are a few that will object to any law that does not include a season for hounding. But they are not more than 10 per cent. of the people of the State of New York. And why is it? Because it makes hunting easy and killing a sure thing. But it must be prohibited on the score of protection.

There is a deer as well as a "trout hog," and there are scores living all around the borders of the wilderness who have no sporting proclivities and no regard for law or deer protection, whose only desire is to kill all they can and in any way they can, and thus a law that admits of hunting deer with hounds is just what they want, as with such a law they can gratify their propensity to the utmost. Instinct will surely lead a deer into the water when pursued by the hounds, and when once in the water the hunter has a sure thing. No previous knowledge, no practice or experience is necessary, only the implements of destruction. MUSSET.

NUMBER FOUR, Nov. 13, 1886.

THE MAINE TRAGEDY.

MACHIAS, Me., Nov. 25.—*Editor Forest and Stream:* While I sit surrounded by my family all well and happy, my thoughts wander to the shores of Gardner's Lake, where live the widow and five children, homeless and penniless, made so by the murderous gun of the assassin, Calvin P. Graves and his accomplice. Lyman O. Hill, the murdered warden, was an honest, upright man, was ready to do his duty and brave, never flinching in the presence of danger. He saw that the poachers were determined to defy the officers of the law, to hound and destroy the deer, and he like a true man planned to enforce the laws of the State. He first went alone and found that poachers were at Niccatous Lake in force and were following the deer with dogs through to Eagle Lakes, Gassipius, Machias and Horseshoe Lakes, and that one camp at Coombes's Brook was filled with poachers from that nest of defiant poachers upon the shores of Niccatous Lake. I say defiant, because they have notices posted: "No Wardens Allowed Here." A man told us in the Post, "Calvin P. Graves would be as safe at Niccatous Lake as he would be in the interior of Zululand." I judge this correct if the communication in the *Industrial Journal* issue of Nov. 19, signed I. Darling, is to be understood as it reads. He also found that a crowd of poachers had escaped Warden French and were hounding deer at Third Machias Lake, and more, he was notified that another party was expected soon with hounds. He then hired Charles Niles, a guide and good hunter, to aid him. They started to do their duty as officers of the law, and the result is known to your readers. With such a dark page of lawlessness we should not expect the sympathizing friends of the murderers to undertake in less than two weeks to traduce the unblemished moral character of a faithful officer and true man, killed by the hand of an assassin while in the discharge of his duty, as we believe. But we were pained to see the cruel and cowardly attack upon the dead man's good name. This so aroused the citizens of this community, notably the comrades of the G. A. R., that the following resolutions were passed, the object of which you will readily see. May God care for the widow and fatherless, and we from our plenty contribute to a worthy and needy family.

COMRADE.

RESOLUTIONS ADOPTED BY BRADBURY POST.

Whereas, Bradbury Post has but lately been called upon to mourn the loss of a beloved and respected comrade, Lyman O. Hill, who gave up his life in the faithful performance of his duty as an officer of the State, thus marking him as a hero in peace as well as in war; therefore,

Resolved, That we hereby express our admiration of his manly and courageous character, our love and respect for him as a soldier and comrade, and our profound sorrow for his loss;

Resolved, In token of our sympathy for those thus deprived of a loving husband, father and friend, that these resolutions be entered at length upon the records of the Post, and that a copy of the same, attested by the Commander and Adjutant, be forwarded to his bereaved family.

We, the comrades of Bradbury Post, G. A. R., Department of Maine, feel it our duty to express our most unqualified indignation for the cruel, cowardly and wicked attack upon the moral character of our murdered comrade, Lyman O. Hill, who was killed, as we believe, while in the discharge of his duty as an officer of the State of Maine, at Fletcher Brook House, Nov. 8, 1886, by the assassin, Calvin P. Graves and his accomplice. We, therefore, resolve,

That the attempt to traduce the moral character of our murdered comrade, Lyman O. Hill, by correspondents for several newspapers in this State is most cruel, cowardly and wicked, equaled only in audacious cruelty by the assassin and accomplice who did the horrible deed.

That we have known our comrade, Lyman O. Hill, from boyhood until his untimely death at Fletcher Brook House, we can truly say Lyman O. Hill was honest, brave and sympathetic, and possessed of all the qualities requisite for a true man and upright citizen. He was a brave soldier, an honest and faithful officer both for his State and country, and an affectionate father and husband.

That we do not feel it a disgrace that in the struggle of life he did not accumulate wealth, for he lost an arm in the service of his country. And as by his untimely death he has left his family homeless and penniless, we feel it a duty and privilege to contribute to the wants of his needy family.

That we ask all the sympathetic friends in this and other States to contribute to a fund to be held in trust for the maintenance of his family.

That we ask Rev. Henry F. Harding, of East Machias, to act as agent to solicit subscriptions for this most worthy and helpless family, and in case that he accepts this position that he may visit the cities and larger towns of the State and present the true condition of this distressed family, with the full indorsement of this Post. A. E. PREBLE, Com.

G. A. R. HALL, MACHIAS, Me., Nov. 24. E. H. BRYANT, Adjt.

FIRST LESSONS.—II.

TRUE to his word the jolly old farmer had come in for us, and bundled up in the blankets and hay I most thoroughly enjoyed the ride in the "bob." Fortune seemed to have again favored us, for a new and heavy fall of snow was on the ground. The smooth running sled flew along swiftly behind the large and well-fed farm horses, but it took us a long time to arrive at the barn yard gate, and when we did Cookie exclaimed, "Well, Canvas, I bet there's good hunting out here, as it's so far that none of the city chaps come out;" and the farmer replied "That's where you're right, there is good hunting out here and you fellows 'll be the first ones over my lands, and I reckon the only ones, as you seem to be pretty straight and did right by me I'll not forget it." We could never convince him that he was the one that had shown the kindness.

Following Cookie's example I helped unhitch and lead the horses to water and then to the great barn. As we stepped into the house we met the farmer's wife, who made us feel perfectly at home. Soon after supper was ready and all, including three hired hands, sat down to the evening meal, and what a meal it was. Hot biscuit, three different kinds of jelly, a great veal roast, tea and coffee, pie and cake.

Supper over we insisted on helping, so I fed the horses which I greatly enjoyed, letting hay down from the great loft and running the oats to the different stalls by means of a slide and trough at each manger. After that I helped feed the calves, sheep and pigs; at the same time I found that everything on the place from, the two dogs to the blooded horses, had all it could wish.

The evening work done we gathered around the fireplace on which the hickory back log crackled and blazed brightly. By its light and lying on the floor in front of it Cookie and I had a close and interesting game of checkers, while the old farmer sat in his chair near by and watched every move made, and as I at last cornered my opponent's only man and king, the old man chuckled away and said it was a close tussle, and the old lady looked up from her knitting and asked. "Who beat?" As the clock on the mantle struck nine with a clear and swift ring the farmer said we would be up at five, so then we followed him as he showed us to our room and a wondrous comfortable bed.

After breakfast we shouldered our batteries, and were surprised to meet the farmer at the kitchen door with a fine double-barreled breechloading gun, which in reply he said he had got a long time ago, but he "thought he'd try his hand at shooting this mornin' with you young fellers, though of course he'd get left," which we then believed but afterward found to be just the other way. As he called the two dogs he said they were "worth a little to take along," as he had "trained 'em last fall," at which remark we both stopped and I said, "Why, you are a true sportsman, I'll warrant," at which he said he "was at one time" and "guessed he still had it in his bones." This then explained the reason why we were so thoroughly and royally treated.

The snow was not very deep, while the air was just a little below freezing point, just about right. Going to a cornfield on which the corn had been standing, the dogs stopped their frisking and playing and settled down to business. Going a little in advance of the others as we neared the center of the field, I saw something gray and about the size of a common chicken standing up so still that I was almost sure it was a clod of dirt; nevertheless, I thought I would shoot at it, which I did, and was highly pleased to see the feathers fly and the pheasant—for that is what it was—give its last, dying movements. As the other two hunters came up with me, they sent the dogs in and they soon came to a stand. Moving forward, a large flock got up one at a time, making every nerve tingle with the sound of their short wings. The farmer was the first to shoot; standing in perfect position he fired both barrels, and was rewarded by two birds. Cookie was the next to shoot, in fact, he was but a fraction of a second behind the farmer, and like him he brought down two. In the meantime I had been standing, mouth open, at first startled at the noise with which they got up and afterward charmed at the picture. The flock, scattered and flying, the dogs far cooler than myself, and my two companions, the smoke pouring and wreathing round one, while a great flame leaped with lightning-like rapidity from the gun of the other. As the last pheasant got up I was aware that I had a gun; pulling up and shooting before it had gone a yard, I, of course, missed; as for the second barrel, I was utterly unconscious of having such until the bird was far beyond reach. Never before had I known what a "hunting dog" was, and no one could have fathomed my astonishment at having seen them "point" the game and wait until the firing ceased to then run on and seize the spoils to carry back, without fail, to the shooter who had won.

I wondered if Cookie had seen my failure in shooting and my neglected second barrel, but, of course, he had, though he made no fun of me. Instead, he told me how I could do better and did take a genuine interest in my advancement, for which I then and now inwardly thank him. Each one of us had fastened on to where some particular bird had dropped, and we all started out to get the same. By accident I had seen where the one I had shot at had lit. It was in a thick clump of weeds gathered around a hill of corn. Walking slowly to the place with my eyes never taken off of it, I stopped when in good range to steady myself, for my knees and arms were a little given to be shaky. Cocking both barrels I at last crept nearer and nearer. Again I stopped to cool down and "wonder if it had got away." But bound to be sure I stepped up and kicked the weeds, when out from right by my feet it flew. Oh! how I, poor tenderfoot, jumped; and this time neglected to shoot at all. Happily for me nobody saw my blunder, and closely watching where it dropped, I followed the same bird. As I neared the spot where it had settled I saw it walking away. I had him now. Throwing the gun up and taking quick sight I fired. As the smoke cleared away I looked for my game. Horrors! where was it; why I couldn't have missed it? But as I saw the weeds waving not far away I realized all; that I had shut my eyes and fired. Calling one of the dogs I showed him where I had last seen the bird, and sure enough it had walked off, for the dog tracked it and came to a stand. Again did I see the proud fellow strut so bravely and stately, but this time I kept my eyes open and wits about me, and of course was rewarded to see the beauty, torn and rent

lying at my feet. Keeping the dog, I started out for another one, which was soon found, as both hunters and game were scattered over the field. As I was becoming somewhat cooler and more level-headed, I tried to follow Cookie's advice in following a flying bird until ahead of him. Although I missed my next shot I knew I had acted properly and therefore felt as much pride as if I had succeeded. The next one I did the same with and brought him down. By closely noticing I soon found out that it paid me to keep on the high ground, and I also learned, in the same way, to look out for more birds when one got up. Happening to look at a hay stack in a neighboring field, I saw some bird sitting in the top of it; the more I looked, the more I wanted him. So at last having planned a plan, I walked up a hollow in the ground, where he couldn't see me, and as I got on the high ground in view of him, I dropped flat, and, watching my chances, I crawled toward the stack. As I came in good distance I blazed away, and was pleased to see a great hatful of feathers fly out of him, but, nevertheless, away he flew only to come down before the second barrel, which I for the first time used properly, as I knew. As the dog brought the featherless bird to me I recognized it as a prairie chicken, and afterward, as I heard the farmer remark, "that they were hard to get this time of the year," I felt fully repaid for my sneak.

After being hunted quite a while the pheasants became very shy, and as our host spoke of a good place in a field near by for quail, we went there. I was given the place of honor, that along an old rail fence where the plow had not run, and as a result the place afforded a well-known shelter for the "partridges," as some call them. Hearing a faint noise, which I thought might be some of them, I walked slowly forward and soon a large flock got up inside of twenty fet from me. They were so closely packed together that they seemed one swiftly-moving, dark red body. Shooting one barrel only, again I stood astonished almost out of my wits to see the feathers fly out of that flock. Being so close together and near to me, I could hardly fail to hit them. It was not only feathers that dropped, for hunting around (the others now had the dogs) I found three of the best of all birds. How happy I was. I, a young fellow on his second trip, securing three quail at one shot on the wing! But no more such luck did I have that day, although I was offered many and many a chance, which I tried, yet I would always fail to secure anything. Following the advice to shoot away ahead of them. I would still fail, while I could see the farmer and Cookie fire shot after shot and seem to get something every time. When I joined the others I saw our new friend covered from shoulder to waist with pheasants and quail, tied to him by odd pieces of string. On asking how many he had, he replied, "Twenty-three altogether, and that young fellow you call Cookie twenty-one. I tell you we had it close; he's a dandy."

After dinner we once more took our places in the boat and set out for home. On the road he told us of the weekly trip to town Fridays and remarked, "I'd like to have you fellows come out often with me as I enjoy it as much as you do." Cookie looked at me, winked and said, "You ought to," whereat the old farmer laughed and said, "I'll tell you though I did my best to get those two ahead of you and you must be sure to come out, as I want to have more hunts with you."

This time I walked proudly into the sitting room with my three quail, two pheasants and one chicken. About an hour after being home I was surprised to see Cookie come walking in and hand me six of his score with the remark, "I didn't like to offer 'em to you while the farmer was around as you had refused the ones he offered you. But you know it's always share alike with every one but 'the hog,' I brought these over, with what you got we'll each have about the same number," and off he started and I had to keep them. CANVAS BACK.

OSCEOLA, Iowa.

IN TURKEY COVER.

HIGH POINT, N. C.—One day before the trials, in company with Dr. Williams and Mr. Sechrest, an old turkey hunter, I drove out to the turkey range where I bagged my gobbler last year. Placing the doctor on guard at a favorite crossing, with strict injuntions to do his duty without flinching, I skirmished around for sign. Mr. Sechrest had gone to the lower end of the range to make a drive toward us, while the team was sent on to the end of the range above us. Looking over some of the likely places and finding plenty of sign, I came back and had arrived within about a hundred yards of the doctor, when I heard two shots above us, and knowing that the gun was "talking turkey," I strained my eyes in the direction expecting every moment to see the noble game coming in my direction, but alas, my spirits fell as I caught a glimpse of an old patriarch silently winging his way over the treetops nearly a half mile away. Soon, however, every nerve was tingling as the report of the doctor's gun awoke the echoes, and as I turned my head in his direction I saw a black form stealing away through the tall grass about fifty yards to my right, and springing to my feet I "put in my best licks" to head her off, and as she turned from me I drew a bead on her head and laid her low. Upon examining her I found that the doctor had put one shot through the body that had broken her wing on the other side. That there was joy in camp goes without saying. This was the doctor's first shot at turkey and his unmerciful chaffing of my prediliction for the sport was forever hushed. While we stood talking over the incidents of the capture we heard another shot, and soon our companion joined us with a mate to our bird across his shoulder. He and I had fully expected that one turkey would fall to our lot, but this was more than we had dared to hope, and we were consequently considerably elated.

After we had shaken hands all round and congratulated ourselves upon the very successful result of the hunt, Mr. Sechrest gave us the particulars of his experience. His dog had struck the trail a half mile below and followed it to where the first shots were fired. It appeared that the turkeys had shown themselves to our driver near where the team was standing, and as he ran toward them they took wing with the old gobbler in the lead. He was a long distance away, but Mr. Sechrest let him have it right and left just as six or seven more flew over his head within ten yards of him, and with a wistful look he added, "I stood there and never thought to load my gun, and if you will take me out and kick me I'll give you a dollar." Had he been a little fellow I would have undertaken the job, but as he stands six feet two I politely but firmly declined. After he had shot at the big gobbler he stood and communed with himself a while and then started for one of the birds that had settled in the hedge a short distance away, and as he approached the place the turkey sprang in air, and he cut loose at her and brought her down. This somewhat consoled him, but the loss of the gobbler as well as the chance for a beautiful double still rankled in his bosom, and he would not be comforted.

After arranging for a beat through the woods we separated, and when we again met I saw that things were not working just right with him, but all that I could gather from his somewhat incoherent ejaculations was that his dog had pointed at a brier patch and thinking that a bevy of quail was before him, he took out his shells that were loaded with heavy shot and was feeling in his pocket for some that were charged with fine, when a turkey burst out of the patch within 20yds. of him and he scored another lost opportunity. Knowing by sad experience that mere words would not fit his case I left him and took another turn in the woods. Soon after I heard his gun, and when I returned all traces of trouble had disappeared from his countenance and another turkey was across his shoulder. I had no trouble in making out his story this time. Bert had again pointed, and this time there was no changing shells, but walking in ahead there was a confused fluttering in the bushes, a roar from the old gun and our third victim was gasping out its life among the brown sedge. This was glory enough for one day, and with feelings of contentment and at peace with all the world we spread our lunch and with appetites sharpened by vigorous exercise enjoyed our picnic as only a hunter can. SHADOW.

MAINE GAME REPORT.

THE forthcoming report of the Maine Fish and Game Commissioners is in the hands of the printer. From advance sheets I am able to state that it is a noble document in spirit, while it contains a fund of information that can come only of the severest and most earnest experience. Everybody will remember that the practice of fish and game protection and propagation is yet in its infancy. The Commissioners of Maine may have been rich in theory in the beginning, but the experience they have had to work out themselves. Their coming report will show that with limited means and little of experience they have been wonderfully successful. The report will set forth the accepted theory that the value of summer visitors and of summer travel is very great in that State and will say:

"Five millions of dollars is not too high an estimate of the money expended in our State by our summer visitors in 1885. This year the tide of travel to our sporting centers has been far in excess of any past precedent, and the press has in one voice pronounced it double, as also its consequent expenditures among our people and on our lines of travel. The primary attraction for this living tidal wave has been and is our fish and game, and which would never have found its way here had it not been induced by that powerful allurement. The Commissioners have enforced the laws to the full extent of their appropriation, and have been obliged then and there to stay their hands. The extent of our jurisdiction is over 35,000 square miles of territory. Our duties, to exercise fostering care over all the fish and game, and to promote its protection and increase, by rigidly executing such laws as are enacted by the Legislature; to visit all parts of the State and note the workings of the laws; to introduce new and valuable species of fishes to our waters; to order fishways wherever we deem them necessary, and to see that the wardens do their duty in enforcing the laws. Our appropriation by the last Legislature was $7,500 per annum for the biennial term. This sum gives a small fraction over 21 cents per square mile of our territory to pay for all our work. The boundaries of one-half of the State over which we are expected to extend our protection and care are upon the Dominion of Canada and the province of New Brunswick. To hunt or shoot in New Brunswick requires a license of $20. Her Indians and her citizens, and those of Canada kill our game in close time, crust hunt our moose, break all our laws with impunity and escape beyond the reach of our authority. This is why we require a good and efficient guard on our boundaries. Within our own limits our present appropriation of $7,500, which is the largest ever made for our department, is only sufficient to do a little in each county of the State. There has been open resistance to the authority of the State, in Washington county, by an organized band of outlaws, who culminated their career of crime by a cold-blooded murder, commenced two years ago in attempting the lives of wardens, in destroying stock, in burning houses and barns, girdling trees, destroying gardens and seeking to intimidate by sending letters threatening life if the enforcement of the laws was not discontinued. The dignity of the State demanded a rigid performance of our duty. Two of the criminals have been tried and convicted, and unless gross corruption prevail, will be consigned to the State prison at Thomaston. It involved one-half of our whole year's resources, and we have been obliged to withhold our annual subscription of $1,500 for our usual supply of salmon eggs, besides other economies and sacrifices necessary to keep within our appropriation, even at the expense of our usefulness. Is there any one interest in our State that pays back directly to the people so large a yearly return as the department of fisheries and game? Would an appropriation of $20,000 be too large a sum to pay out for a yearly return of $5,000,000?"

On the subject of landlocked salmon in the Sebago waters the Commissioners will say:

"Our only resource to save the few salmon left in Sebago waters has been to build a weir, stopping every fish as near the mouth of the river as possible, take the spawn of ascending salmon and hatch the product, all to be turned back in Sebago waters.

"We have referred to our being compelled to contrive some method of checking the poaching on Crooked River, which resulted in our device of the fence weir built directly across the river at the nearest accessible point to its mouth, with a plank walk on top, to enable a man with a rake to clear away any refuse collecting between the rails of the fence, endangering the safety of the structure from any suddenly occurring autumn freshet. From time immemorial the spearing of these fish has been the only method of taking them by the local inhabitants, and is continued down to the present day, until the fish have become almost extinct. Our weir has been amply sufficient to take and hold all the ascending fish. If the lake could now number one salmon to an acre of water, we should have required weirs capable of holding as many hundreds as we have now units, on account of the large size of our fish taken there, yielding many hundreds of eggs per fish more than those at Grand Lake stream. We anticipated taking but few fish from which to obtain eggs, inasmuch as there are left but few fish in the lake, but our surprise was great when these fish, by their large average size of 10lbs. to all taken, yielded us the unlooked-for result of 1,000,000 eggs. It may be worthy of note that one female fish in our preserve or pen weighed 25lbs. One huge male fish of wonderful beauty weighed 27lbs. From the present flattering point of view, appearances would indicate that we may here look for our future supply of landlocked salmon eggs of increased numbers and less expenditure."

In the way of changes in the laws for the protection of moose, caribou and deer, the Commissioners will recommend that imprisonment be added to fines for their infringement. On the subject they will say:

"We think a term of imprisonment should be added to all our penalties, as the bearing of the money penalty is necessarily unequal in its application to all criminals. The poor man is more severely punished by a $1 fine than the wealthy by $100. In these cases imprisonment cures the evil. Many of our visitors have the hardihood to bring hounds with them into our State, boldly acknowledging that they intend to break our laws. Will not our Legislature give us the means to punish this insulting defiance to our State laws? Give us a law that will compel them to give a bond of $100 for each and ever dog, with two resident sureties, or deposit that amount in the hands of the city marshal, or the game warden or one of the Commissioners. The money to be forfeited if the dogs are used for illegal purposes or sold within the State. We require a square non-exportation law. There are enough deer for all, and the law has made a fair apportionment of three for each. One moose, two caribou and three deer is the apportionment made by our Legislature for each man. The running of deer by dogs is intended to insure their slaughter without any work or skill on the part of the hunter. Every deer in a county can thus be killed by a few men banded together. The law should be amended by making it punishable with fine and imprisonment to kill a deer in the water, as well as hunting and killing with dogs."

On the subject of protection to the moose, the Commissioners take strong ground, and ground which is new, and best of all it looks to be reasonable:

"The slaughter of moose of all ages and sexes the last two years by crust-hunting poachers has been most pitiful. Thirteen moose hides taken last spring by one Indian guide were lately found in his possession. The high market value of the moose skin is as great a temptation to the idle vagabond poacher as is a well-filled safe to his brother scoundrel the professional cracksman. Many of the guides, all who are Indian, after earning good wages from their employers, and after the season is over, seek out the wintering yards of the moose, and in the snow crust of spring slaughter all, even down to the worthless calf. If the yard is handy to a winter camp of lumbermen, the meat is sold. If far away, they are killed for the skins alone. The whites and Indians, both of our own or neighboring scoundrels, are engaged in this destruction of our moose. The few bulls killed by our visiting sportsmen would never exterminate the race, for rarely is a cow moose killed, as they do not come to the call of the hunter. It is the destruction of the cows by the crust-hunter that is to lead to their utter extermination, if not summarily stopped by the enforcement of severe laws. A penalty of $500 and six months' imprisonment should be the mildest punishment for killing a cow moose at any time."

In addition to the above recommendations, I have it from the best of authority that the Commissioners will also recommend that the month of September be made an open month for the legal hunting of moose, caribou and deer. They only await certain decisions, and the recommendation may yet become a part of the report. The Commissioners are of the opinion that such a change in the laws may be made with safety to the game in question, and they are willing to grant any reasonable license, provided those who desire the change will agree to render implicit obedience to the existing close time. Such a change will be most graciously received by many of the sporting fraternity, as well as those interested in summer travel and summer hotels, and it will show that the Commissioners have the real good of the sportsmen at heart. SPECIAL.

A SCUFFLE FOR DEER MEAT.—The *Sun's* Port Jervis correspondent reports that Jonas Shaffer, one of the three well-known Shaffer brothers, two of whom distinguished themselves some time ago by smoking out five bears from their winter quarters back of the High Knob and killing them all, two of them in hand-to-hand fights, during which the hunters were stripped of every stitch of their clothing and a good deal of their flesh, also took advantage of the tracking snow on Saturday and went out in the Wescoline Pond region, three miles north of Lackawaxen, after deer. Selah Decker, a man named Broffett and two others were hunting together in the same woods. In the course of the day a big deer came bounding along by Jonas Shaffer. He put a rifle ball from each barrel of his gun into the deer before it got out of reach and killed it. While he was preparing to get the carcass in shape to carry home, Decker, Broffett and the others of their party appeared on the scene. Decker put in a claim to the deer, on the ground that he had wounded it before it came within range of Shaffer's gun. Decker said he had hit the deer with buckshot. The only wounds in the deer were two rifle ball holes. Decker claimed that one of the rifle ball wounds was a buckshot wound, and demanded half the deer. Shaffer refused to allow the claim, and the two hunters pitched in to fight on the ownership of the carcass. The others of Decker's party came to his aid, according to Shaffer's story, and three of them held Shaffer down while the fourth cut the deer in half. They then carried off one-half and left him the other. Shaffer threatens to prosecute the party for aggravated assault and highway robbery.

MONTANA.—Bozeman, Nov. 15.—Bears scarce. Black-tail deer and elk abundant on the borders of the National Park and in the West Gallatin Basin. Hunters are coming in every week with wagonloads of elk and deer. Ducks, chickens and geese are very plentiful. Numerous hunting parties are out now killing elk and deer.—G.

RUFFED GROUSE IN MICHIGAN.

MONROE, Mich., Nov. 29.—Having just returned from a trip after ruffed grouse in the Saginaw Valley, I am sorry to say that these noble and wary birds are far from being so numerous as they were in the same localities a few years ago. One principal reason is in the increased number of the shooters, both city sportsmen and market-shooters, who can be met at almost every station along the line of railroads leading out of the city. And probably no city of equal size in the Union possesses more excellent ruffed grouse shots or more good ruffed grouse dogs than Saginaw. While there I saw some excellent setters, English, Irish and Gordon. The largest bag of ruffed grouse I learned of was 227 birds in eight successive days' shooting by two brothers, over an Irish setter, son of Elcho, and a pointer bitch of an excellent old native strain. Our best day, for two of us, gave twenty-seven birds; and a most enjoyable day it was, over English setters. A party of four in the same neighborhood, over Gordons, did nearly as well. They had a brace and a half of excellent dogs; one, particularly, a real beauty, and said to be a most careful killing bitch. The others were also quite handsome, active, hardy-looking fellows.

Unlike sportsmen from other States whom I read of but have never met, who merely go out to see dogs run and don't care for the shooting, a sportsman in Michigan, when he goes out with a gun and dog, goes out to shoot, and the dog that gives him the greatest number of shots in the time out with the least travel or fatigue is invariably the best dog.

For our State a rushing, blundering dog is a nuisance in the field. Quail are now so scarce as not to be worth looking after. Our shooting depends on ruffed grouse, woodcock and snipe; and we find that an active, courageous, plucky dog, carrying a high head, ranging and quartering the ground systematically in front of the shooter, under easy control, with a fine nose, staunch and sagacious, is what is wanted for our shooting; in fact, a dog that can be hunted all day without being spoken to, and that will wheel to the slightest whistle. Ruffed grouse, when out feeding, are exceedingly wary, and great caution and silence must be used to successfully approach them; and in a heavily timbered country upon being once flushed, they almost invariably make off into the timber, where it is very difficult to find them, and in many instances useless to follow them at all. Unless you have a dog that will find and point them where they may be feeding, your chances are very small for a respectable bag. To hunt the skirts of the timber or barrens (their usual feeding grounds when mast cannot be found after the season for berries is over) with such a dog as I describe, where grouse are fairly plenty, is equalled by no shooting I know of, and certainly none requires more skill in the shooter or more merit in the dog. JOHN DAVIDSON.

BROUGHT TO BOOK.

Editor Forest and Stream:

The Sportsman's Club have, after wearying delays interposed by the guilty parties, including bogus convictions in country magistrates' courts, secured before the papers from the court here were served, by interested friends, who thus tried to defeat the ends of justice, succeeded in having two of the lawbreakers convicted and punished, a third escaping by turning "Queen's evidence," while a fourth swore himself clear and was not proceeded against. The particulars of the cases, which were tried on Monday last, are thus given by the *Intelligencer* in its issue of Tuesday: "A case that has long been pending in the Police Court was up for a hearing yesterday afternoon. It was intended as a gentle warning to those gentlemen of leisure who delight in the pastime of killing deer out of season. The plaintiffs were the Sportsman's Club, of Belleville, and the defendants, Peter Grass, David Sager, Peter Vandervoort, of Trenton, Sanger Golding and his son, Wm. Golding, and Dr. Faulkner, Reeve, of Stirling. Anson Cummings, who went to Horse Shoe Lake on Oct. 15, was an unwilling witness. He said when he reached the camp the parties named were there with the exception of Dr. Faulkner, who arrived a few days after. He understood from conversation he had that the doctor had been there before and shot a couple of deer. He also saw some eight or ten deer skins in camp, some of which were pretty dry, as though the deer had been killed for some time. The hunters also had hounds with them. Peter Grass, one of the party of hunters, who killed the most deer, on being promised the protection of the court, gave a graphic description of camp life; how they got their supplies, both liquids and solids, and who the successful hunters were. He said he went into camp on Sept. 20 with S. Golding, they took hounds and partridge dogs. Dr. Faulkner followed in a day or two, and the others finally came, a few pieces of venison were sent to Stirling. 'To sell?' 'No, they were traded.' 'What was got for it?' The witness hesitated and looked at the floor. 'What was it?' 'Well, it was whisky.' 'How much did you get?' 'God bless me, I don't know.' From his evidence it was shown that Dr. Faulkner killed two deer before Oct. 15, S. Golding three, and he, the witness, admitted shooting four. Mr. Golding showed a discharge from A. Chard, Esq., of Stirling. From the discharge it appeared that Thomas Downes, of Stirling, had charged Mr. Golding before Mr. Chard with killing deer out of season, and he was fined $10 and costs. As Mr. Downes was the party who gave fluids for the meat the discharge was not taken as a full atonement for Mr. Golding's offenses." The magistrate reserved judgment until this morning, when he fined Dr. Faulkner and Sanger Golding $10 each and costs, which amounted to $11.60 in Faulkner's case and $8.95 in the case of Golding. Faulkner's is a particularly bad case, as he is a county counsellor and a magistrate. Other cases are in prospect, as the club are determined to put a stop to illegal hunting of all kinds, particularly fire and crust hunting of deer, by which means immense numbers of the noble game have been slaughtered in our back country. The minimum penalty has so far been imposed at the club's request, but future violators of the law will be punished with the utmost rigor of the law.

R. S. BELL, President Bay of Quinte Sportsman's Club.
BELLEVILLE, Ont., Dec. 3.

THE MESSRS. ALFORD & BERKELE CO., of New York, are sole agents for a new spring gun and pistol, which shoots large shot, marbles, peas, beans, putty balls, etc.; also arrows and darts for target practice. See advertisement in another column.

CALIFORNIA GAME.—During the past month (Nov.) ducks and geese have been coming down from the far north in great numbers—the canvasback, the mallard, the widgeon and teal, the common brown duck, the diver and the grebe, the latter so well-known for a breast of down or soft feathers, much sought for trimming hats and outside garments. The ducks come to the winter-feeding grounds, the shallow estuaries, the tidal creeks and the bays. They like the soft mollusk and know exactly where it is to be found. Acres of ducks may be found all along the Contra Costa and Alameda shores, and the small tidal pools of marshes. The game markets and stores are now well-stocked with them. When a pair of mallards can be bought for fifty cents, and they are sometimes sold as low as thirty cents, a game dinner need not be a costly affair. Wild geese pay particular attention to the grain fields. A great deal of wheat is just now sprouting, and the young blades are just above the ground. California is the winter home of millions of wild geese. They are the largest of all the game birds. A couple of expert hunters will frequently knock down a wagon-load in a day. The brant, the gray goose and the large white goose, are found on the same grounds, and are piled up by the hunters in a promiscuous way. Last winter many farmers were compelled to protect their wheat fields by employing hunters on horseback to ride around and over the fields, slaughtering great numbers and preventing clouds of these birds from alighting. The same methods will probably be necessary this year. The wild goose is a valuable game bird, but when the farmer finds acres of his young wheat destroyed he is apt to have a modified opinion about the value of this game bird. Quail, snipe and rail have been abundant this season. It is doubtful if the quail need now the protection of game laws. In some parts of the State two broods are brought off by one pair in a single season. The food supply for this bird has greatly increased of late, and there has been a corresponding increase of numbers. The grain fields and vineyards are good feeding grounds, and the dry grass of pastures where the small seeds have matured. The wildcat, the lynx, the fox and the coyote destroy thousands of these birds every year. Hunters take thousands more, yet the number has increased so rapidly that they have become pests in some parts of the State. The wildcat begins on the young quail before they leave the nest, and he follows up this game nearly all the season. When an old bird rises from the brush a wildcat will sometimes spring from six to ten feet into the air and down his bird nearly every time. If one wishes to know what are the game resources of this State, let him go through the market on the three or four days preceding Thanksgiving, or on any other days prior to Christmas.—*San Francisco Bulletin.*

INCIDENTS OF A DAY.—Taunton, Mass., Dec. 4.—Your correspondent, J. C. C., and I went out for a day's tramp Thursday. Although there had been snow the night before, it was warm in the morning. It grew colder as the day passed, and we took the woods and swamps as much as possible. The partridges must be educated, for we did not start the same bird twice in an all day's hunt. The quail, like the partridges, on being flushed would disappear in the dim distance. Only once could we find them, although we had three dogs, two first-class setters and a very promising pointer puppy. While hunting a corner of birches for a partridge the dogs pointed a woodcock in the brush. We flushed but missed him. As it was Dec. 2 and two inches of snow on the ground, was it not rather late for him to be here? Perhaps some of your readers may have had a like experience. If so, will they tell us of it? Afterward we started a flock of quail in a field, and as they rose wild we got but one. We followed them, and after a half hour or more Zip pointed on a brush heap that we had been tramping over for some time. Nothing came out, so J. C. C. put his hand under, and after feeling around for some time brought out a live quail in as perfect health as ever. He was not wounded and J. C. C. will probably keep him and try to mate him in the spring. We managed to get home at night half frozen, with one rabbit, three partridges and seven quail. The bag was not large, but the experience and enjoyment of the same were.—COHANNET.

DEER AND GEESE IN DAKOTA.—Bismarck, Dak., Nov. 18. We have the most charming weather imaginable, bright and beautiful, without a speck of snow; and yet I see any number of deer hanging at the market places. Usually we wait for snow to track, but the deer are plentiful this year. A friend of mine killed two this morning, just two miles from town. Riding out six miles, a few evenings ago, my wife and I saw two by the side of the road within 50yds. They allowed us to pass without seeming frightened. Two miles further we saw three more coming toward us, playing and skipping like lambs. They stopped just seventy steps away; I had occasion to step it a few days after. I have done but little hunting this fall. Went out a few mornings, getting back at 9 o'clock. I killed seventy geese, twenty-five in one morning. That same morning I had twenty-one shells misfire; they were loaded last year and had lain in a damp place. More than this, another shooter was in a pit 40yds. west of me, the geese came from the west, and he often shot at and turned them away from me. Had my shells been good, with no one to interfere, I think I could have killed seventy-five or a hundred. I had hoped that some of the gentlemen who come out here would write you of it; but so far I have not heard from them. I know one party who killed nearly 300 geese, another 600. They should report. I write these letters to let sportsmen know what is here.—W. H. WILLIAMSON.

ATHENS, Pa.—Most of the gun club were out on Thanksgiving Day after grouse and rabbits, but the heavy snow which fell all day made game bags very light. A great many grouse have been brought to market, which shows they have been plenty in the woods. Few quail have been killed. Squirrels, unusually plenty on the 1st of Sept., seem to have disappeared by the last of that month as quickly as they came. Rabbits are getting scarcer than ferrets, and one or the other will "have to go." The deer hunters in Sullivan county, Pa., are having good success. Sam Lee returned on the 20th Nov. from a week's hunt, having killed three deer. J. Struble and Jesse Barber left for the same place on the 18th. Ely Murray and R. Watkins started for Potter county on the 15th Nov. They will stop at Fred Martin's camp on the East Fork Sinnemohoning, and there will be venison in market when they return.—P.

NOTES FROM UTICA.—Central New York hunters are having a good deal of sport this fall in rabbit shooting. Technically speaking, it would have been well to have said "hare shooting," for the species *L. americanus* is the most plentiful in this portion of the State, although it is said that a few of the genuine rabbits, a much smaller species, are found in some parts of Schenectady county. A party of Uticans left the city at 5:30 A. M. via the Utica & Black River Railroad, one day this week, visited the swamps above Remsen in this county and returned at 10 o'clock that night with fifteen as plump hares as one often sees. A few days before that a party from this city killed fourteen hares and two grouse during half a day's shooting in the same locality. Good hunting is also to be had above the village of Grant, Herkimer county, in the swamps near the West Canada Creek. A few hares yet remain in the Oriskany swamp, some six or eight miles west of Utica, but probably not more than one could be found there now, where ten years ago there were fifty. Almost anywhere on the outskirts of the Adirondack wilderness hares are now to be found in great numbers. PORTSA (Utica, N. Y., Dec. 4).

NORTH CAROLINA GAME.—New York, Nov. 30.—I have just returned from a shooting trip in eastern North Carolina. I found quail rather scarce and had bad weather, but still had fair sport. The early heavy rains flooded the low lands and the early broods suffered, very few escaping. We had to leave many bevies on account of their small size. The season in North Carolina is entirely too long, from Nov. 1 to April 1, and the darkies trap the quail terribly. The most birds were found where the owners of the plantations were in the habit of shooting and were sportsmen. What I mean by that is, where they looked after the welfare of the birds, not allowing their dogs to run loose and break up the nests, and not allowing trapping. I find, as a rule, that the sportsmen there obey the game laws better than with us. There is no Sunday shooting, no pot shots on the ground, no shooting for numbers, no lark or blackbird shooting; but when they want a few quail for themselves or a friend, they kill them in good style and then quit.—W. HOLBERTON.

BEAR KILLING WITH SMALL SHOT.—Parry Sound, Ont.—Killing a bear with small shot is undoubtedly a rare occurrence, nevertheless it's a fact. Two or three years ago a bear was killed about a mile from this village by a young man with a gun charged with small shot. It was some time in the month of November. Two young men were coming home one Saturday evening from a lumber camp. They were scampering through the woods trying to get out to the main road, and while scrambling over a fallen hemlock tree a large black bear made out from under the hemlock turn up, where he was making up his den for the winter. Without a whisper of surprise or inquiry, Kirkland planted the charges of both barrels into bruin's hump ribs, and in ten minutes that bear was as dead as lead could make him.—CABERFEIGH.

INDEBTED TO FOREST AND STREAM.—Kent's Hill, Me.—I had a magnificent time while in northern Maine; was gone a month and had the good fortune to shoot one moose and two caribou and a large number of grouse. I owe all of this fall's grand hunting trip to your excellent paper, which I have read constantly for over a year. For over twenty years past I had not used a gun or fishing rod. A year ago I bought both and all the necessary outfit, together with a fine rowboat, and have used them more or less every Saturday during the year, and nearly all my vacations. I have been doubly paid for the outlay in health, not to say anything about the pleasure. Again I am thankful to the FOREST AND STREAM for it all, and wish every teacher in the country would enjoy the same. —M.

VIRGINIA.—Game notes from the Petersburg *Index-Appeal* of Nov. 19: Partridges are said to be more abundant than they have been for years, and huntsmen are having a fine time shooting them. Congressman Hamner, of Philadelphia, with a select party of friends, passed through Petersburg yesterday *en route* for Weldon, where they will spend some days hunting for partridges in that section. The party will be the guests of Major T. L. Emory and Mr. H. J. Pope. Master James Bruce, aged fourteen years, son of Mr. S. D. Bruce, of Chesterfield county, a few days ago killed three wild turkeys at a single shot, and wounded the fourth, which was captured by another party a short distance off. Who can beat this?

A SHOT FROM THE DOORSTEP.—Atlanticville, L. I.—I think that there are more quail this season than I have known in years. Several large bags have been made; 32 on the first day's shooting and several other like bags have been made. The other morning, when kindling a fire, I chanced to look out of the window, and saw near the barn, 80 yards distant, a bevy of quail. Being in my night shirt I did not know what to do, but on second thought jumped for my old Parker and a couple of cartridges, carefully opened the door and stepped out on the step. The quail started to fly, but I brought down two. This was the first shot at quail I ever made in my night shirt.—E. A. JACKSON.

SNOW GEESE ON LONG ISLAND.—Atlanticville, L. I., Dec. 3.—A flock of white geese flew within a few rods of me to-day. I think they numbered thirty. Please inform me what geese they are and if often seen so far south.—OLD GUNNER. [No doubt snow geese (*Chen hyperboreus*), the "white brant" of the Western States; not uncommon on this coast, but for several years past large flocks are reported to have wintered at the mouth of the Delaware River. Rarely observed on Long Island coast, though we have seen occasional specimens from there. Two snow geese were seen in company with a single Canada goose at Cold Spring Harbor, on the north shore, on Tuesday last, and we have heard of several others having been seen near that place.]

A PENNSYLVANIA PUZZLE.—Leechburg, Pa., Nov. 22.—*Editor Forest and Stream:* In a late issue of FOREST AND STREAM you give a list of game laws of Pennsylvania, in which the killing of deer is made lawful for fifteen days after the season has closed for having them in possession. I am aware of the fact that our pamphlet laws read that way, but what are we to understand by it? If we can kill deer to the 15th of Dec., can we not have possession of them as well?—CLARION.

MISSOURI.—Golden City, Mo., Nov. 29.—All kinds of game are scarce in this part of southwestern Missouri. Prairie chickens have bunched and are very wild. A few snipe were killed this fall, but the spring is the best time for them here. A party of four, myself included, took a day's hunt on Thanksgiving. We only bagged eighteen quail and three rabbits, but this poor showing was partly due to bad shooting. Six good coveys were found, all of which were in thick brush along the small runs or branches, where it was almost impossible to hit them. No ducks so far, where last fall at this time every pond and stream was filled with them. Much game was killed out of season or the shooting would be better now.—R. A.

VIRGINIA.—New Castle, Craig Co., December.—Quail and grouse (generally known here as partridges and pheasants) are more plentiful in this section of Virginia this season than they have been for several years. We also have some deer and wild turkeys. This place is about 21 miles from Eagle Rocks, on the Richmond and Alleghany R. R., and about the same distance from Salem, on the Norfolk and Western. Conveyances may be procured at either place.—C. N. H.

SNIPE ON BONNETS.—A Long Island gunner shot in the months of July, August, September and October, more than 8,000 snipe for milliners; about 500 of them were large snipe.—OLD GUNNER.

AT REELFOOT LAKE, Tennessee, duck shooting is reported to be "great guns." Two Louisville sportsmen bagged 160 ducks there one day last week.

BAY RIDGE, L. I., Nov. 5, 1886.

U. S. Cartridge Co., Lowell, Mass.:

GENTLEMEN—I feel duty bound to you to express my *entire satisfaction* with your Climax shells. I have given them a most severe test, and find them *superior to any other* in many respects. They can be loaded over at least six times, and still the gas cannot escape, the pores of the case remaining firm and solid, while the most severe wetting does not swell the paper in the least. Any man that knows what a good shell is will look no further for a better shell after using your shell one day. I shall use them hereafter in *preference to any other*. If this is of any use to you in any way, you are at liberty to use it in any way you like. Hoping that it may further the interest of your Climax among shooters, I remain, Yours truly,

[*Adv.*] (Signed) F. M. EAMES.

SPLICED RODS AND FERRULES.

Editor Forest and Stream:

When "Woodcraft" was published I purchased a copy. When "Canoe and Boat Building" came out I again bought. I now have lying on my desk as I write a copy of "The American Salmon Fisherman." The perusal of it is just finished, and I cannot resist the temptation to send you a few lines. I hardly feel able to pen the high praise of which I feel the work to be worthy. I do, however, desire to enroll myself among those who heartily indorse the principles and views Mr. Wells so aptly and concisely presents to his readers.

The missionary of the spliced rod sect pleased me much. I once, from my early reading, preached from that text; but a few trials and the ancient spliced-rot propaganda fell from grace, never with me to be resurrected. Pages 38-9 I read with close attention, and really thought there might be an opportunity to suggest something that had been overlooked; but on page 44 I found the very point I had in mind, the "capped ferrule."

Our little cotorie of —, well, fishermen since they fish, have for a number of years used the short, close-fitted, straight, German silver capped ferrule. We have, however, been accustomed to ream out the upper end so that the inside up to the straight part of the ferrule would present a surface slightly tapering, having a thickness at the edge agreeable to the size of the winding silk. We were thus enabled to leave the ferrule with the second piece nearly the same diameter as the butt piece at its entrance to the female ferrule. Thus we thought, retaining the full strength of the wood, having no weak spot or shoulder at the joint. The male ferrule is then fitted at the lower end with a thin circular bit of metal just right to solder on its inside. The wood fitted snugly to the inside shape, coated with a mixture of cut shellac and whitelead and the ferrule carefully forced on. The female ferrule is put on in a like manner until it reaches its proper limit, which is marked on the rod. Another disc of metal or even of heavy paper is then forced down the inside to cover the exposed end of butt length. We think by this course we get our ferrules on pretty nearly waterproof. I have never known a well fitted one on properly seasoned wood to start.

The guides we use are essentially the same as those pictured by Mr. Wells, except that we discard the piece of metal between the two rings, retaining the two pieces at the end, which are soldered on a little below the inside surface of the ring and flush with its bottom. On heavy rods, where large wire is used, the under side is sometimes burred out to fit the round of the rod.

That a proper rod should have a casting capacity of five or five and one-half times its length was entirely new to me. I remembered, however, that some of my friends had made casts of about 60ft. with a rod 10½ or 11ft. long. That was about their limit, I think.

For some years I have been using a rod of 9ft., 27in. joints, ⅜in. at the first joint, and tapering $\frac{1}{32}$in. for each 9in. of length. It seems to combine about all the comforts that can be got into one rod. Easy of transportation, handles a bait well, and with a line slightly heavier than would perhaps be selected for fine fly-fishing, and throws a fly well toward the rule given. I have been able to cast with a fair degree of accuracy and ease from 40 to 45ft. So my own experience, as I now remember and apply, seems to corroborate the rule given.

I have really run out more line than I thought the reel held, but there seemed no proper landing in the pool where I rose the subject, so I perforce ran on. Before closing I wish to assure you of the appreciation of myself and many others, of the good work being done by the publication of such instructive wholesome literature as the works I have mentioned are a type of. Worthy of the highest praise are those talented gentlemen who have opened the volumes of their experience for the benefit and education of their more ignorant fellow sportsmen.

From Mr. Stephens I learned to build a canoe of light weight, forty-five pounds, which floated the skipper, his companion and duffle safely and comfortably. When in the woods "Woodcraft" is constantly in mind, while on the bow of the canoe appears the name "Nessmuk." From him I learned to build a comfortable camp. From him I learned to make a proper night fire and to cook a plain dinner in the woods. I learned that to go light was to double the pleasure. Our canoe, tent, provisions and other duffle, will weigh less than ninety pounds. This for a ten days trip. I hope ere long to feel the canoe once more respond to the stroke of my paddle; to smell the sweet wood of our camp-fire; to even rest myself on the odorous bed of browse, and gaze at its evanescent flickerings through the open front of a Nessmuk shanty tent.

RHODY.

PROVIDENCE, R. I.

SENSIBILITY OF FISHES TO PAIN.—*Editor Forest and Stream:* Your correspondents seem to think that fish are insensible to pain because, after having a hook broken in their mouths, or a slice cut from them, they take the bait again. I do not think it by any means proven. Would a sufferer from tooth-ache, if hungry, refuse to satisfy his hunger because it pained him? Should he be deemed insensible to pain for so doing? Is the moth also insensible to pain because, having flown into the flame, it straightway returns to destruction? Instinct is very powerful, and there is no reasoning from cause to effect. The instinct of fish moves them principally in three directions, viz., to seek food, safety, and the propagation of their species, and they will go to any length in the accomplishment of these objects. The instinct of fish overrides suffering, and impels them to seize the food regardless of broken hook or mutilation. I do not believe fish or animal can be deprived of its natural habitat without more or less suffering. It may be that some fish are more sensitive to pain than others. Not all persons are alike sensitive to pain. It will not do to generalize too broadly. It would seem impossible for fish to show suffering more plainly than they do when taken from their home. Give the *coup de grace* to a fish with a knife or club, and what could show suffering more evidently than the death tattoo with its tail. I am not inveighing against the sport of fishing. I am as fond of it as any one, and perhaps have done as much of it as the average correspondent, but I do not believe in giving needless pain, and I believe in taking the benefit of a doubt—and giving it to the fish. Can any one be certain that fish do not suffer pain? Assuredly not. Then how much better to assume that they do, and inflict as little as possible. Is it not more noble and gentlemanly?—O. O. S.

FOR POLLUTING THE WATERS.—On Friday last Capt. James Keyes, of the tug F. Dassori, and Capt. James Ellis, of the tug Three Brothers, were fined $50 each in Weschester Co., N. Y., for violating the law forbidding dumping refuse on oyster beds. The offenses were committed in Long Island Sound, near Execution Light. Both men were employed by the Street Cleaning Department of the City of New York, and to save time and expense dumped their load where most convenient to themselves, thinking they might escape as heretofore. They pleaded guilty by advice of counsel or the fines might have been heavier. Fish Commissioner Blackford is naturally much pleased at the result of these cases, believing that the heavy fines imposed will have a beneficial effect in preventing the recurrence of such offenses as those committed. The city's garbage carriers haven't been any too particular in the past as to how and where they dump their filthy loads, and the result has been the destruction of several good oyster beds which were in a high state of cultivation, as well as valuable natural beds. Commissioner Blackford has been after this class of offenders for some time, and is in earnest in his intention to stop the violation of the law of which oystermen have been complaining for some time. State Oyster Protector Mersereau was instrumental in obtaining the arrest of the two offending captains, and in obtaining such evidence as would have made their conviction a certainty in case it went to trial.

THE FISH LAWS OF ARKANSAS.—Pine Bluff, Ark., Dec. 4.—*Editor Forest and Stream:* Our State has been far behind in protecting fish and game, and although we have some laws on the subject, they are not enforced. Now that the Governor has reorganized the Fish Commission, we hope for improvement. The president of the new board, Mr. H. H. Rottaken, is well known as an advocate of protection, and as a member of the old board he has done what he could to this end. The Legislature makes no appropriation for the Fish Commission, as it should, and the Commissioners, while serving the State for nothing, have to bear all the expenses of travel, stationery, etc., incurred in their work. At the last session of the Legislature a protective law was passed at the urgent request of Mr. Rottaken, but we need means to enforce it. There is room yet for more stringent laws to protect the State's property in fish and game, and also for something to be done in the way of increasing our fish supply. There is no reason why Arkansas should not adopt what has been found so beneficial in other States, unless the change would interfere with the notions of men who have always speared fish on the spawning beds and killed birds in the nesting season.—STRAW HAT.

A GAME CATFISH.—*Editor Forest and Stream:* In your last issue "Homerus" writes of the channel catfish as a valuable fish for introduction as food and game. My attention was first called to this fish, in print, by "Cyrtonyx," in your issue of March 25, 1886, and on searching the angling books find no mention of it. Some years ago I took this fish in western waters, and wish to bear testimony in its favor. What your correspondents say of its merits is true, and it is deserving attention from the Fish Commissioners.—G. N.

THOSE WHO preach, lecture, declaim or sing, will and *do* find Hale's Honey of Horehound and Tar the speediest restorative of the voice in cases of hoarseness. It cures coughs and sore throats rapidly and completely. Sold by all druggists. PISO'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Fishculture.

Address all communications to the Forest and Stream Pub. Co

CARP AND CATFISH IN CALIFORNIA.—The San Francisco *Bulletin* says: There are two or three kinds of fish which have been introduced in this State of no special value. The carp is one of these. Every few months some one furnishes a long dissertation on the value of the carp as an edible fish. These essays may be inspired by those who have carp ponds to sell or young fish for stocking ponds. Years ago this journal suggested that the propagation of carp would result in disappointment. There is not the least difficulty in breeding the fish. The difficulty is in eating it. Of all edible fish this is of the poorest quality. In California, where the best fish in the world are found in both fresh and salt water, there is no need of stocking any water with carp. It is essentially a mud fish, hybernating for a part of the year, and never comparatively good by any known process of cooking. The late Senator Miller, of this State, who tried thoroughly the experiment of breeding carp at his homestead in Napa, found as the result of his experiments that while there was no trouble in propagating the fish, it was wholly undesirable for edible purposes. He had ordered it cooked in all known ways, had followed the German methods, had smothered the fish in all sorts of condiments, but could make nothing palatable of it. Then he drew the water from his ponds in order to exterminate the carp, but they went into the mud and refused to quit. Days after the water was all out of the ponds they could be turned out of the mud as lively as ever. If no other fish could be obtained it might be just possible to tolerate the carp. But when salmon, rockfish, smelts and fifty other sorts of delicious salt-water fish can be had, with brook trout from nearly every running stream, the dropping down from these fish to carp is like dropping down from canvasback ducks to mud hens. There was also the catfish, which was introduced with a considerable flourish. This fish abounds in nearly all Western waters, and is rated among the lowest of all edible fish. A large proportion of people living contiguous to Western rivers never touch this fish. It is almost impossible to make the trout and the catfish live in the same waters. Even in the clear waters of the Upper Mississippi, whither catfish have gone from the muddy waters below, there are no trout, or not enough for mention. It was said that an especially good variety of the catfish was introduced into our own waters, a variety quite above the ordinary quality so common in Western waters. But it turned out to be the muddy-water fish, sluggish, coarse and suggestive always of countries afflicted with chills and fever. Neither the catfish nor the carp are entitled to rank among desirable fish for the waters of this coast. Where trout are propagated in small brooks with as much ease as chickens are raised in coops, it would seem the more undesirable to take any more special pains to produce fish of such doubtful quality that few people want them at any price.

FISHCULTURE IN SCOTLAND.—We have a circular from the Howietown Fishery, Stirling, which records the successful exportation of 200,000 salmon eggs to New Zealand and 100,000 Lochleven trout egggs to Newfoundland last season. The landlocked salmon from Maine have thriven and will spawn next spring. The rainbow trout have not grown as rapidly as the Lochleven. The prices of eggs per thousand are: Lochleven, $5; brown trout, $5; American brook trout (*fontinalis*), $7.50. The prices for fry are just double these figures. For foreign shipment the price varies, being greater for boxes of 15,000 and less when sent in lots of 100,000. A history of the fishery, with 197 cuts, has been published.

FISHERIES OF HOLLAND.—We have the report of the Fish Commission of Holland for 1885. Heer J. Drabbe has resigned from the commission and Heer Jhr. J. L. C. Pompe van Meerdervoort has been appointed to succeed him. The commisson has built a new vessel for their service, called the Albatross, which has been very satisfactory. The catch of the boat fishermen has been very good during the past year. Mr. C. J. Bottemanne, well known to our fishculturists, is still the superintendent of the fisheries, and to his kindness we are indebted for many favors. Much attention is given to the capture and marketing of fishes in Holland, and but little to fishculture.

SMELTS AND LOBSTERS.—Cold Spring Harbor, L. I., Dec. 4.—Smelts have been caught here lately by Mr. Charles Dole, and are the first ever taken in the harbor. It is just three years since the first planting was made here from the hatchery of the Fish Commission. Young lobsters planted here last spring by Superintendent Mather have been taken by oystermen on the oyster beds. When planted the lobsters were ¼in. long and now they are over 3in. in length. The popularity of fishculture in salt water is growing. Lobsters disappeared from this portion of Long Island Sound some years ago.—*New York Times.*

THE ARKANSAS COMMISSION.—The Governor has recently appointed as Fish Commissioners the following gentlemen, all of Little Rock: H. H. Rottaken, Pres.; J. W. Calloway and W. B. Worthen. The president is a member of the old board and is re-appointed.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

January, 1887.—Bench Show of Poultry and Pet Stock Association, at Adams, Mass. W. F. Davis, Secretary.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

FIELD TRIALS.

Dec. 13.—Eighth Annual Field Trials of the National Field Trials Club, at Grand Junction, Tenn.

Dec. 14.—Inaugural Field Trials of the Texas Field Trials Club. For members only. John F. Sharp, Secretary, Marshall, Tex.

Feb. 15, 1887.—Inaugural Trials of Tennessee Sportsmen's Association. Entries close Jan. 10. R. M. Dudley, Secretary, No. 84 Broad street, Nashville, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 4311.

THE EASTERN FIELD TRIALS.

ON Saturday, Nov. 27, after the finish of the Derby, the Pointer Stake was commenced. There were thirty-five nominations, twenty-three of which filled, all but one of them starting. A list of them was published last week. At the inaugural trials of the club on Robins Island, in 1879, there were twenty nominations for the All-Aged Stake, fifteen of which started, three of them being pointers. The next year six pointers started, and in 1881 there were four. In 1882 there were six and the next year there were eighteen. In 1884 the Pointer Stake was inaugurated with twenty nominations, sixteen of them starting. Last year there were twenty-two nominations, with eighteen starters. Taken as a whole, the work of the pointers this year would compare favorably with that of last year, although none of the heats were so brilliant as some that were run then. The winner turned up in Robert le Diable, who has proved himself to be an excellent field dog, running through his heats in capital form and maintaining his pace throughout in a manner that elicited hearty praise from all who saw him. Prince, the runner up, also showed up a capital fielder. He divided third with Bang Bang who ran well, but not nearly up to his form of last year. Many of the others did good work as the minutes of running will show.

SWEEP AND MALITE.

After the finish of the Derby lunch was served in the large barn of the Model Farm, and at 12:19 the first brace in the Pointer Stake was put down in the large grass field south of the barn. Sweep is a large black dog with only a fair amount of speed. He moves rather heavily and carries his head low; he was handled by W. Seager of Sewickly, Pa. Malite is a neat looking little bitch, not very fast, but with an easy way of going. She showed some style when on game, but the heat was short and there was not much opportunity to form an opinion as to her merit. She was handled by E. H. Haight. After a spin in the open they were taken through the woods to a stubble field, where Malite made a very pretty point, facing in to a bevy that lay just in front of the horses. Sweep came round, and refusing to back got too close and scored a flush on part of the bevy, and as we went on he put up the remainder at the corner of the fence. We then went into the woods after them and Sweep made a point to a single, but spoiled it all by moving up and scoring another flush. They were then ordered up and the heat was awarded to Malite; down fifteen minutes.

JETSAM AND TAMMANY.

Jetsam is rather a nice looking black bitch, with an easy way of going with considerable speed, and is quite stylish when on game. She was handled by Seager. Tammany, handled by John White, was looking better than we have ever seen him, and, during the short time he was down, he appeared to have lost none of his speed. They were given a turn in the open, when both went as well as the nature of the ground would permit. Working out some sedge where a bird or two had been marked, Jetsam found one and made a stylish point, and Seager to order put up the bird, but did not shoot, as it went over the judges. We then turned back into the woods after the remainder of the bevy. Tam was the first to find, making a good point, and drawing on and locating his bird very nicely as his handler came up. The bird was flushed to order and missed by White. Tam soon had another one fast, and Jet came up, refused to back, and as she went by Tam he moved on and the bird flushed near them. A little further on Tam pointed another one in fine style, and Jet again refused to back, went in front of him, and scored a flush. This ended the heat, with Tammany the winner. Down eighteen minutes.

ROBERT LE DIABLE AND RICHMOND.

Robert is well-known as a bench show winner. He was in capital condition and looked much better than when in show form. He went well, moving better and faster than we thought him capable of doing. He was handled by Haight. Richmond is a nice looking little dog with quite a turn of speed. He was handled by Short. They were put down in the stubble field where the last brace started and worked down to a run, and then following down we crossed to a stubble near the house and then turned down to a branch and worked up a short distance, when the spectators flushed a bevy on the hill above us, and they settled a short distance beyond us, where Robert made a point and soon after one flushed behind him. He then went on and swinging round pointed just as the bird flushed. Richmond then pointed and Robert backed him. Both soon went on and roaded and pointed once or twice, evidently on running birds but they failed to locate them. They were then taken across the branch where part of the bevy had been marked down, and Richmond pointed a single that Short, to order, flushed, when two more got up. Robert then came round and pointed where they rose from. We then crossed back and went through the pin s, down to the creek, where Robert made a point at the bridge and drew on, but Richmond, some fifty yards to the left of him, pinned the bevy that he was evidently trailing. Short, to order, put them up, and winged one that was not found. Following them up Robert made a grand point to a single, that Haight, to order, flushed and missed. Richmond then made a point and Robert backed him, but he drew on as Short went ahead and could make nothing of it. A short distance further on he found the winged bird and pointed it nicely. Richmond then made a point and Robert backed him, but nothing was found. We then turned up the creek across the road, where Robert made a point to a bevy, and Richmond backed him. Robert then drew on and located them nicely. Haight, to order, put up the birds and missed with both barrels. Following them up Richmond pointed an instant and then drew on and flushed the bird. Meantime Robert made a point, and Haight, to order, flushed and killed one with his second barrel, and Robert retrieved it. We then turned back where birds had been marked down. Both pointed larks, and soon after Richmond caught scent of a bird but did not locate it and it got up behind him. Then in a thicket Richmond half pointed and moved on, when Robert went ahead and made an undecided point just as the bird flushed wild. We then crossed the creek and beat out some tall weeds, where Richmond flushed one, and soon after he pointed a bevy that Short flushed to order. A little further on he made a false point and Robert backed him. Then in a thicket, Robert pointed and almost at the same time Richmond also pointed. Short put up the bird to order and missed it. The judges then compared notes and awarded the heat to Robert le Diable. Down one hour and twenty-six minutes. Richmond appeared to be off in nose. We saw him run at Canton two years ago, where he did much better work.

FLASH R. AND NICK OF NASO.

Flash was not up to he form of last year. Family cares have sobered her down and reduced her speed. She went fairly well, however, and did some good work. She was handled by Haight. Nick was imported last spring. For a first season dog he showed up remarkably well. He has quite a turn of speed, is stylish and gamy when on point and appears to have a capital nose. He does not move quite so easy and level as Flash, but was ahead of her in speed and range. He was handled by John Lewis. They were put down on a grass field and given a spin and then worked back to the thicket where the last brace were taken up. Nick got the first point, which Flash at once honored. Lewis flushed the bird, which flew over the judges and was not shot at. Flash then made a point and Nick backed her, and Haight to order put up the bird. We then turned into the woods, where Nick made an elegant point, and as Lewis went ahead to flush he drew on and the bird got up. Soon after Nick, just in front of the horses, whirled on a gamy point to a bird that flushed a second later. This was very well done. A few minutes later he pinned another one and Flash backed him. Lewis to order flushed the bird, and by mistake killed it. Nick was ordered to retrieve, but Lewis remarked that "he was not that kind of a dog," and gathered the bird himself. We then beat through the woods to the Snow farm, where Flash made a point, and Nick coming up above her flushed one and stopped. Flash held her point and Haight to order put up a bevy and killed one that Flash retrieved fairly well. Nick then made a point, and as Flash came up she was stopped by order. Lewis went in to put up the bird, when Nick drew on toward Flash and again pointed. Lewis claimed that he was backing Flash, and started on, and the bird got up under his feet. We then turned into the woods, where Flash got in two nice points in quick succession, and birds were flushed to order each time. Nick then pointed, and drew on in beautiful style and located his bird nicely; Lewis put up the bird, and the heat was ended with Nick the winner. Down thirty-six minutes.

DIXIE AND DON'S DOT.

Dixie is a large, rather heavy moving dog with no pretentions to speed and with but little style. He was handled by John Vail. Don's Dot is of medium size and moves fairly well. He shows considerable style on point, but is also slow. He was handled by Short. After quite a walk, during which not much ground was covered by the dogs, Dot finally made a point and Dixie backed him. The point proved to be barren of result, however, except to somewhat relieve the monotony of the proceedings. Soon after Dot got in another point that looked a little more like business, and Dixie backed an instant and then moved up, when Dot drew on a few steps and again pointed, and as Short went up to him he drew on a few yards and located a bevy very nicely. Short put them up and killed one that Dot retrieved well. Following the birds, which settled along a branch, Dixie scored a flush, and a little further on he made a very undecided point, and a few seconds later a bird got up in front of him. We then turned into some woods, where Dot made a nice point to a single that Short flushed to order. This ended the heat with Don's Dot the winner. Down twenty-six minutes. This finished the work for the week. There was time enough to run off two or three more heats, but none of the other dogs were at hand, only five brace having been ordered out, as it was thought that this would be sufficient for the day.

MONDAY.

KRUPP AND PRINCE.

On Monday morning an early start was made and we drove to the adjoining town of Progress to the large open fields where a portion of the trials were run two years ago. Mr. T. M. Aldrich, who had leased the grounds, reported birds plenty, and we found them so, raising some twenty bevies during the day; but from some cause we failed to get much satisfactory work on them, and only seven heats and part of another were run. The day promised well, and, with the exception of a high wind a portion of the time, there was no apparent reason to account for the inferior work that was done. The dogs were put down at half-past 8 in a large field of stubble. Krupp is of medium size, very moderate in speed, and with not much style. He was handled by W. B. Stafford, of Trenton, Tenn. Prince is a large, fairly well-formed dog, rather an easy mover and with a fair amount of speed. He shows some style, but carries his head too low. He was handled by J. M. Whaite, of Newton, N. C. After going a short distance Krupp challenged and then roaded down wind into a bevy and flushed them. Leaving our horses we followed them into some woods, where Prince pointed and Krupp backed him. Prince then drew a few steps and again pointed. Krupp went up to him, drew ahead and stole the point. Judge Orth, with blood in his eye, took the gun, and, flushing the bird, blazed away and brought it down. The dogs failed to find it, but the judge got his meat, for Col. Leach went straight to it and retrieved it in fine style. Prince then made a good point to a single that flushed itself a few seconds later, and as the judges came toward the dog two or three more got up. We then beat out considerable ground in the woods, Prince going nicely and ranging well, while Krupp was trotting round without apparent aim. Finally Prince started a hare and went for it at his best speed, giving tongue. Krupp saw the race and showed up fairly fast as he disappeared in the distance. They soon returned, and again mounting our horses we turned toward some sedge, where Prince pointed and roaded a short distance and wanted to go over the fence, but was ordered back. He knew what he was about, however, for when, after taking quite a turn, we came back there on the other side of the fence, one flushed near Prince, and as he went on another one got up wild and was dropped by order. The judges then came up and the remainder of the bevy went. Judge Orth's bird was then thrown for Prince to retrieve, but he brought it only part way and dropped it. They were then ordered up and the heat was awarded to rince. Down forty-two minutes.

DRESS AND DUKE OF BERGEN.

Dress is a nicely put together little bitch, rather cobby built, with more speed than her appearance warrants. She moves easily and is a wide ranger. She was handled by Haight. Duke of Bergen is well known. He came out in better form than we have ever seen him. He was handled by Luke White. They were put down in the same stubble near where the last brace started. In speed and range they were about equal. Beating out the stubble we swung over the hill and worked out considerable ground without a find. Coming to the head of a run both pointed at nearly the same instant, with the advantage just a trifle in favor of Dress. Duke soon moved on into a thicket and a large bevy flushed near him. It was very thick and we could not see whether he was to blame or not. Following the birds among some scattered pines Duke made a point and Dress backed him, but they soon moved on and Dress went to the edge of a wheat field, a few yards beyond, and made a nice point and Duke backed her, the bird going as Haight came up. Both then got a point at very nearly the same time to a bird that went as the handlers came up, and Haight missed it. We then went around the wheat field and worked down another run to a branch where Duke made a point and almost at the instant Dress also pointed the same bird. White flushing them to order scored a miss. Crossing the branch into some pines, both dogs alternately pointed, backed and roaded the birds, which were running. Then each got a point to singles that flushed almost as soon as pointed. Then several more rose wild and a little further on Duke pointed and roaded a bird that flushed close to him and his handler. Both then alternately pointed and roaded, but the birds had all gone. Leaving our horses we beat out the woods without finding them, and turned back on the opposite hillside, where one or two were flushed by the judges, and Duke at a fallen trectop made a good point, and Dress backed him. White to order put up the bird and winged it, both dogs a trifle unsteady. Duke sent to retrieve did so, but not in first-class style. The judges consulted and ordered the dogs on. Crossing a gully Duke pointed and then drew on and Dress coming up made a cast with Duke close behind her, but she failed to strike it. Duke then cast to the left and made a nice point to the bevy, and Dress coming up dropped to back the instant she saw him. The birds flushed wild and the dogs were ordered up with Duke of Bergen the winner. Down one hour and twenty-two minutes.

OLD PEBO AND ROD.

Old Pebo is of medium size, with a fair turn of speed, an easy mover and fairly good in range. He was handled by John Vail. Rod came fresh from his victory at Abilene, where he won second, and much was expected of him. He is well formed, moves fairly well, but is not quite so fast as his competitor nor does he range so wide. He was handled by Stafford. Working out considerable ground, we crossed the road and turned down a run grown up to briers. Rod pointed at the edge and followed his handler into the briers, where he again pointed. Pebo also made a point in these, and then both worked through to the opposite side in the sedge, where Rod made a nice point and Pebo backed him, but moved up as Rod drew on and both pointed, and then drawing on both caught scent at nearly the same time and pointed just as the birds went. Stafford killed one and Rod was a trifle unsteady. He stopped to order, and when sent on retrieved the bird well. Following up the birds, Rod scored a good point and Pebo two flushes, and the heat was ended, with Rod the winner. Down thirty-six minutes.

CONSOLATION AND RUE II.

These dogs both ran in the Derby, Consolation winning second place. They were put down at half past eleven in sedge and worked round to get the wind and were taken toward some birds of the last bevy that had been marked down near where they were first found; but after considerable pointing and roading by the dogs, both doing some very pretty work on old scent, they were then ordered on without a find, although birds were flushed when the horses came on. We then beat out a large extent of good looking ground but failed to find birds until finally, in a pine thicket, a bevy was flushed by the handlers or dogs, we could not see which, as the dense thicket prevented. Following the birds to the top of the hill among some scattering pines in the sedge, both dogs scored a flush on singles, and soon after Rue put up another one and stopped an instant and then took a step or two and pointed one that went a second later and one or two more then got up near her. Just then Con challenged, but got too close and the bird flushed and White shot and winged it. Rue was unsteady to shot, and as she did not see her handler she started for White, but came back to whistle. Con then got in another flush that his handler claimed was down wind. Rue then made a point and Con backed her, but nothing was found. A little further on another one got up near Con. We then turned down to the branch where Con scored another flush in a patch of weeds, and a little further on he half pointed but went on and roaded up the bird, and the heat was ended with Rue II. the winner. Down one hour and seventeen minutes. This was wretched work. Both dogs were evidently off in nose, and Con being the fastest got the worst of it.

HALF AND HALF AND LALLA ROOKH.

Half and Half ran here last year in the All-Aged Stake, but was unplaced. He was handled by Captain McMurdo. Lalla Rookh, handled by Luke White, is too well known to need description. They were put down in sedge on a side hill. Rookh showed up a trifle the fastest, although Half had cut his feet badly a few days before and this may have affected his speed somewhat. After fooling with larks and backing each other very prettily once or twice, Rookh challenged near a fence and then roading a few yards she dropped as if shot to a brace of birds that White to order flushed, killing one that she retrieved. After considerable challenging and roading by both dogs in the vicinity without result, they were worked back to the house of Mr. Aldridge, who had provided a bountiful lunch or rather dinner for us, which was thoroughly enjoyed and heartily praised by all. After lunch they were taken some distance to a good looking stubble, where Rookh made a point near some woods and Half backed her. As the judges came, Rookh drew toward them and, locating the bevy, made a gamy point. White to order put up the birds and killed one, Rookh retrieving it in good form. A little further on Half flushed a bevy and the heat was decided in favor of Lalla Rookh. Down altogether thirty-seven minutes.

BANG BANG AND FLOTSAM.

Bang Bang, handled by Luke White, is well known. He did not show up in this heat nearly as well as he did last year. Flotsam is a black bitch of medium size, an easy mover, not very fast, but gamy and stylish when on game. She was handled by Seager. They were cast off in the stubble at half past two. Bang was the fastest but lacked the dash and go that he has formerly shown. Working down to a run Bang made a nice point. A single outlying bird flushed near Seager as the handlers went up, and several more rose as White went ahead, one of which he killed, but it was not found by Bang when sent to retrieve. As we stood there a large bevy flushed just beyond us, and some of them settled on a hillside. Following them up Bang made a point and Flo backed him, but nothing was found. Flo then pointed and Bang backed her, but the birds had probably run and both points were at foot scent. Flo then made a nice point, and Bang, not seeing her, went by and also pointed the same bird, which was flushed to order. Bang then made a point, but White failed to find a bird. Soon after he pointed one and Flo backed him very nicely. White to order put up the bird and killed, and Bang, with the assistance of his handler, retrieved it, flushing a bird as he came back. He then pointed, drew on and lost it. Flo then made a very stylish point and Bang backed her nicely. As Seager went on to put up the bird, Flo drew on a short distance and located her birds in fine style, and several were flushed by Seager but not shot at. Swinging round after them Flo made a point, and, as Seager went ahead, she drew on and located it nicely and it was flushed to order. Bang then flushed one down wind. We then turned up a ravine where some birds had been marked, and Bang got in a good point to a single that White to order flushed. Flo then pointed near some briers and drew on, but the thicket was so dense she was called off. One then got up near Bang. We then turned into some woods where Flo made a good point to a bird that flushed wild. We then worked up along the branch to a stubble, where Bang made a wide cast, turned toward us and came to an elegant point. White, ordered to flush, beat out the ground in front of him, but failing to raise the bird he went up to Bang and shoved him on with his foot and the bird flushed under his nose. This was a brilliant piece of work and it decided the heat, with Bang Bang the winner. Down one hour and eight minutes.

This ended the first series.

Summary First Series.

Malite beat Sweep.
Tammany beat Jetsam.
Robert le Diable beat Richmond.
Nick of Naso beat Flash R.
Don's Dot beat Dixie.
Prince beat Krupp.
Duke of Bergen beat Dress.
Rod beat old Pebo.
Rue II. beat Consolation.
Lalla Rookh beat Half and Half.
Bang Bang beat Flotsam.

Second Series.

MALITE AND TAMMANY.

This was the first brace of the second series. They were put down in a stubble field on a side hill. Malite made a cast up the hill and made a nice point. Tam had not had a fair chance to get acquainted with her, but as she stopped he went up to her and introduced himself in proper form, but she scornfully spurned his advances and indignantly sprang away from him right into the bevy, which flushed and took to the woods. This rebuff disheartened Tam, and before he recovered from it his chances for winning the heat were gone. Following them into the woods Malite flushed one and stopped to wing or on point, we could not see well

enough to determine which, and another went soon after; Tam came round and pointed where they got up. Then in a cornfield Tam scored a false point and was nicely backed by Malite, and soon after Malite also pointed false and Tam backed her. We then beat out a knoll where some birds were flushed by the handlers but none were found by the dogs. Then in stubble both did some very pretty work roading and pointing larks. We then turned back below where Malite had first challenged to the scent of the larks as supposed, and she and Haight walked into and flushed a bevy down wind. It was probably the trail of this bevy that the dogs had been roading the wrong way and thus became mixed up with the larks. The bevy went to some pine across a creek, where one flushed near the dogs, and soon after Malite pointed, drew on, and the bird rose, and Haight scored a miss. Both then pointed a short distance apart at about the same time. Malite soon went on and Tam held his point and White put up the bird and missed, Tam a bit unsteady. Malite then pointed a single that flushed as Haight came up. Tam refused to back and went up to her and another one went out of a tree. The owner of the land now appeared and emphatically ordered us off, and we turned back to an old cornfield where the spectators flushed a bevy, and as the dogs came round, a short distance beyond, Malite made a nice point to another bevy a long distance from her. Tam came round and backed her, and then catching the scent, turned his head toward the birds and also pointed. This ended the heat with Malite the winner. Down fifty-one minutes.

ROBERT LE DIABLE AND NICK OF NASO.

This brace was put down in stubble on a side hill. Robert had a little the best of it in speed and range. Beating out the stubble and turning down into the bottom, Nick crossed a fence and whirled into a beautiful point to a bevy that Lewis to order flushed and missed. The birds flew back, and, as it was nearly night, they were not followed. Working toward the teams, Nick made a nice point to a single and Robert backed him, Lewis flushing the bird, which was not shot at. Nick then flushed one down wind and soon after Robert followed suit. We then crossed a creek and beat up a draw, where the judges rode into a bevy that were feeding, and they flushed and settled in some pines and sedge. Both dogs scored a flush each, when Robert cast down in the hollow, and, catching scent, turned and drew a short distance and pointed, and as his handler came up he drew on and located a bevy very nicely. Haight to order put them up and killed one, and Robert retrieved it well. Then in the pines Nick pointed and then drew on running birds, and Robert flushed one and stopped and pointed and drew on, with Nick backing him, but the birds ran away and he did not succeed in locating them. We then went into some woods where the birds had run and where the last bevy had settled. Both handlers urged on their dogs and the spectators crowded up, making considerable noise on the dry leaves, and although Nick scored a point or two and both did some good roading, flushes by dogs, handlers, judges and spectators were the order of the day, and the work done was very unsatisfactory. Finally the dogs were ordered up for the night to go down again in the morning, and a start was made for home. Down forty-one minutes.

TUESDAY.

The weather on Tuesday was not very favorable to sport. It rained in the morning and there were two or three showers during the day. The wind was high most of the time, making it hard on the dogs and unpleasant for the spectators. We exchanged work with Mr. H. H. Briggs, of the *Breeder and Sportsman*, using his notes for the day, and on the following day returning the favor. Leaving the hotel at 9 o'clock the dogs were put down one mile east of town in a grassfield and worked through to a cornfield, where Robert challenged and then drew quite a distance to the edge of some pines and pointed a bevy very nicely. Haight to order flushed the birds and killed one that Robert retrieved. Nick was brought up to back and did so rather unsteadily. Following the birds into the woods Nick pointed a single that flushed wild. They were then ordered up with Robert the winner. Down twenty-two minutes. Altogether one hour and three minutes.

DON'S DOT AND PRINCE.

This brace was put down in sedge and worked some distance. Finally the judges flushed a bevy and they were followed to some woods, where Dot pointed near the edge and Prince backed him a few seconds and then drew on past him and stole the point. Short, to order, put up the bird and killed it and Dot retrieved it in good form, both dogs steady. Prince then winded a bird, half pointed, and then went on and scored a flush. Dot backed him and both were steady to wing. A little further on three birds got up near Prince and he was unsteady. Then in a thicket each scored a good point and birds were flushed to each and Prince was again a trifle unsteady. Then, in sedge, Prince pointed a single that flushed a second later. Working through some weeds to a grass field Prince challenged, drew on and established a nice point. Judge Orth flushed the bird and scored a miss. This ended the heat with Prince the winner. Down thirty-one minutes.

DUKE OF BERGEN AND ROD.

This brace was at once put down in a field of grass and worked back to some pines. Duke showed up the fastest and displayed more hunting sense. Rod had a little the best of it in style. Crossing a run to a field of sedge Rod made a point and Duke backed him, Stafford flushing to order. Then in the woods Duke nailed a bevy and was handsomely backed by Rod. White put up the birds and missed. Duke remained quiet but Rod was unsteady. Rod then got in a good point to a brace in a brush heap and was again unsteady when the birds were flushed. A little further on a bevy flushed wild. Duke got there first and made a point to a single, that White, to order, flushed and missed. Meantime Rod also pointed but nothing was found, and soon after he drew on and pointed and Duke backed him, but, as before, no bird was found. Soon after he repeated this, probably on running birds. Duke then drew on and made rather an uncertain point and Rod went ahead and stole the point. This ended the heat with Duke of Bergen the winner. Down thirty-one minutes.

RUE II. AND LALLA ROOKH.

These two were nearly matched in looks and speed, and it was sometimes difficult to tell which was which. The heat was close, and some very pretty work was done. They were put down in grass and worked over considerable ground. Finally, just as Rue challenged, a bevy flushed wild and settled in some woods. Rue pointed at the edge very nicely and Rookh backed her in fine style, but nothing was found. A little further on Rookh drew quite a distance, but did not locate her bird, which was flushed by her handler. Then in sedge Rue got in a good point to a single that Aldrich to order put up and missed. Rookh then flushed one while at speed and did not stop, and soon after she jumped into a nice point and Rue instantly backed her very prettily. White to order flushed the bird and killed it, Rookh retrieving it in good form. A little further on in tall sedge Rue at speed flushed a brace and stopped. At the same time Rookh dropped to a single that flushed wild, and soon after in some pines this was repeated. Rue then made a good point to a single that Aldrich put up and killed. Rue sent to retrieve flushed one and then went to the dead bird, but refused to retrieve it. We then turned back to some marked birds, but they were flushed by the spectators. Crossing a road to some tall weeds Rue winded a bird and deliberately flushed it, and soon after both pointed a short distance apart, but neither had birds. Working up to some pines Rookh caught scent and drew a long way and pinned a bevy in fine style that White to order flushed. This ended the heat with Lalla Rookh the winner. Down one hour and twenty-four minutes. This ended the second series, Bang Bang having a bye.

Summary Second Series.

Malite beat Tammany.
Robert le Diable beat Nick of Naso.
Prince beat Don's Dot.
Duke of Bergen beat Rod.
Lalla Rookh beat Rue II.
Bang Bang a bye.

Third Series.

BANG BANG AND MALITE.

This was the first brace of the third series. They were put down on a knoll in grass. Malite led off with a point to a hare and Bang backed her. We then worked over considerable ground without result, except one or two false points by each. Finally Malite, in some pines, got in a good point to a bevy and Bang backed her in elegant style. Haight to order put up the birds, but did not shoot. A little further on the spectators flushed a bevy and the dogs were worked to where they were marked down. Bang made a point and Malite backed him, but the birds were running. Both cast and Malite struck the scent and pointed and then drew on a long distance, locating the birds and establishing her point in capital style, and Bang backed her very nicely. Haight put up the birds and killed one that Malite retrieved fairly well. Bang had challenged at this trail, but before he fairly stopped she swung ahead and followed it up. Bang was a little over-cautious and soon after he scored a false point and Malite backed him. Soon after Malite, at speed, flushed one she should have pointed as she had the wind. We then beat out an old field, where both ranged wide and at good speed. The judges flushed a bevy that settled in a large grass field, where Bang, while at speed, jumped into a magnificent point to a single that flushed wild and Malite backed him. Bang then challenged and began to draw, but Malite swung ahead of him and stole the point to a bevy that flushed wild. We then went to lunch. Down thirty-eight minutes. After lunch they were again put down in sedge, where Bang made a very stylish point to a bevy and Malite backed him. White to order put up the birds and scored a miss. Following up the bevy, Bang made a couple of false points and Malite backed him each time. Malite then made a point to a bird that flushed wild and then several others went. A little further on she got in another point to a single that was flushed to order. Bang then made a point, and as his handler came up he blinked his bird, which White flushed as he went on. Soon after Bang put up a woodcock and then Malite pointed a single, but blinked it, and Haight flushed it and gave her a taste of the whip. She then made a false point, and soon after the spectators flushed four birds. The dogs were then worked into some pines, where Malite again scored a false point. A little further on Bang pointed, drew on and worked out a bevy and pointed them nicely, Malite backing him in fine style. White flushed the birds and missed. This was a good piece of work. Malite then flushed a bird and soon after, across a gully, Bang made an elegant point to a single, and the heat was decided in his favor. Down forty-nine minutes. Altogether one hour and twenty-seven minutes. This was a close heat and at times very interesting.

ROBERT LE DIABLE AND DUKE OF BERGEN.

This brace was put down in an open grass field, and worked through to some sedge, where Duke jumped into a stylish point to a bevy that White to order flushed, killing two with one barrel that Duke retrieved nicely. A long turn was then taken without a find. Duke finally found and pointed a single that flushed wild and Robert backed him. The bird was marked down and the dogs were worked in that direction. Robert got there first and made a stylish point and Duke backed him. Haight flushed the bird and scored a very clever miss. Turning back into some woods Robert flushed one that he should have pointed, as he had the wind. Soon after each scored a false point, and a little further on Robert passed a bird that he should have pointed, as Haight flushed it as he came along. Then in some woods Robert challenged and drew up wind, but the birds were behind him and they flushed as the judges came up. A little further on he made a point to a single, and Duke backed him nicely, but was a trifle unsteady to wing. We then went a long distance and nothing was done. Finally in some tall weeds Duke made a nice point to a bevy and Robert backed him in fine style. White put up two birds under Duke's nose, and when the dogs were ordered on Robert went ahead and pointed the bevy and Duke backed him. Haight to order put up the birds and scored a very nice double, and Robert retrieved but not in good form. A little further on Robert made a point; Duke backed unsteadily, and as Robert drew on he went up and both moved up and flushed the bird and chased it some distance. When they came back a single flushed near Robert and he dropped to wing. The judges then consulted and ordered the dogs up, and awarded the heat to Robert. Down two hours and nine minutes. This was a long heat and both kept up their speed remarkably well.

PRINCE AND LALLA ROOKH.

This brace was put down in a patch of scrub oak and sedge. Prince cast to the right and pointed a single and Rookh backed him. White, to order, flushed the bird and killed it. Prince, sent to retrieve, found it, and he and his handler brought it in. Rookh then in tall sedge pointed a single, and as White went to flush it she left her point and went around. White put up the bird and missed it. Prince was then lost and found soon after dropped on point, but the bird had probably run as nothing was found. They were then taken up for the day and we started for home. Down twelve minutes.

WEDNESDAY.

On Wednesday it was cloudy and it looked like rain. Leaving the hotel at 8:22 the dogs were put down in an old field east of the town eleven minutes later. We beat out considerable ground without a find until we came to a brier and weed patch on a side hill where Rookh found and pointed a bevy that White flushed to order and killed one, and Rookh retrieved it nicely. Following up the birds in some pines, Prince made a point to a single and Rookh backed him. He then drew on and located the bird and Whaite flushed and killed it and Prince retrieved it part way and dropped it. A little further on Rookh challenged and Prince cast ahead and pointed the bevy just as Rookh pointed. Whaite, to order, put up the birds but did not shoot. Prince then made a point but drew on and the bird flushed in front of him. Both dogs then challenged and roaded running birds and soon after Prince pinned one that his handler flushed to order. Rookh then pointed, but went on and shortly after Prince pointed nicely and Rookh backed in fine style. Whaite put up the bird and several more went. Both then half pointed and commenced roading, Prince to the left and Rookh to the right. Prince drew a few yards and nailed a brace that were flushed to order and the judges ordered them up and awarded the heat to Prince. Down twenty-eight minutes, altogether forty minutes. After the heat was decided Rookh continued her roading for a long distance and finally Whaite flushed the bird in front of her. This was a very nice piece of work. This ended the third series with the following result:

Summary Third Series:

Bang Bang beat Malite.
Robert le Diable beat Duke of Bergen.
Prince beat Lalla Rookh.

Fourth Series.

BANG BANG AND ROBERT LE DIABLE.

The race between these two dogs was watched with absorbing interest. They were put down a few minutes past nine in the large open field on the Snow farm where all could see the work and compare their relative merits as to speed and range. Bang started off at rather a moderate rate, while Robert cut loose at the start. After a few minutes Bang went better and there was not much advantage for either in speed and range during the heat. Beating out the stubble across to the woods we turned back lower down, and when nearly through the field Bang made a wide cast, and as we turned he caught the scent and made a nice point with his head high in the air. The judges rode up within fifty yards of him and stopped, and a few seconds later several birds flushed close to them, and as they rose the bevy in front of Bang also went and settled in the cedars beyond. We then beat out the remainder of the stubble without finding any more birds, and then turned into the woods and worked toward the scattered bevy. Robert was the first to find, making a nice point at the edge of the cedars. Bang came round but did not see him and also pointed a few yards away, and birds were flushed to each point. A little further on Bang stopped to a single that was in the air almost at the instant. This was very close to a flush, Bang having about a quarter second the best of it. Robert then got in a very nice point to a single that Haight flushed to order, but did not shoot at. As Robert went on one got up suspiciously near him, but we could not see in the thicket just how it happened. Meantime Bang, to the right of him roaded a short distance and made an uncertain point to a single that White flushed and killed, and Bang broke shot, but stopped to order. He then was sent to retrieve and brought the bird very nicely. Both dogs then crossed the fence and pointed and each handler claimed the point, but the dogs soon went on, and the judges ordered them back into the cedars. As soon as they came over the fence Robert made a nice point and Bang backed him in fine style. The bird was flushed to order, and as the dogs were sent on Bang went to the right, while Robert turned to the left, challenged and then drew to a beautiful point, doing his work in a masterly manner, Haight to order putting up the bird. Bang then made a false point near a gully. The judges consulted and ordered the dogs on and we turned back on the opposite side of the gully. After going a short distance Robert made a stylish point, and as his handler came up he drew on and located his bird in fine style. They were then ordered up with Robert the winner. Down thirty-four minutes. Prince having a bye this ended the fourth series.

Tie for First Place.

PRINCE AND ROBERT LE DIABLE.

These were the only ones left in for first money, and the heat proved to be the last one of the stake. They were taken back to the large field where the last brace started, and after a few minutes were cast off at 9:56. Both started out well and beat the stubble in fine style. Working across the field the dogs went to windward of a bevy in the center of the field, and the birds flushed under the horses' feet and pitched down the slope into the woods. We left our horses at the fence and the dogs were sent on. Prince was over the fence first and at once pointed, Robert refused to back went up and made an uncertain point alongside. Both then drew on and pointed nicely, Prince just a trifle first. Whaite to order flushed the birds and killed one, and Prince, sent to retrieve it, turned back near the same place and pointed a brace that had lain, and his handler put them up. This did not count as the other dog was ordered down while he was retrieving. Prince then, with the help of his handler, found the bird and brought it a short distance and dropped it. We then beat out the corner but no more birds were found, and we returned to our horses and then worked south up the slope, and then down toward the creek in the sedge where Prince dropped to a bevy, and Robert, a short distance below him, also pointed the same birds, which were flushed to order. We then followed the birds across the creek and Robert got in a nice point, drew on a few steps, and locating his bird pointed it in fine style. Haight, to order, put up the bird and killed it. Robert sent to retrieve flushed one, and then the others got up wild, he then retrieved the bird in good form. We then recrossed the creek and Robert got in two nice points, and birds were flushed to each. Then crossing a gully Prince made a cast toward a thicket and made a beautiful point, then drawing on in a very gamy way he again pointed in good style, but nothing was found, and he scored a false point. We then crossed a branch and worked up the slope to a stubble where Prince made a point, and drawing on caught the scent and dropped as if shot with his head high in the air, Robert instantly backing him. This was a very pretty picture. Whaite went ahead to flush, and Prince drew on and the birds got up a short distance ahead of him. Following the birds into some sprouts where there was but little cover, two or three flushed near the judges, and the dogs were ordered round there. Robert going down wind flushed one, and a few strides further on he whirled round on a very gamy point to another one that his handler to order flushed. Prince soon after flushed one that he should have pointed, and a little further on he repeated the performance and the heat was ended with Robert the winner, and he was declared winner of first prize. Down fifty-three minutes. The judges selected Bang Bang as the best of the dogs beaten by the winner to run with Prince for second money, but the handlers agreed to divide the honor and money equally, and the Pointer Stake was finished at eleven o'clock and we returned to the Snow farm to begin the Setter Stake.

Following is the summary:

First Series.

Malite beat Sweep.
Tammany beat Jetsam.
Robert le Diable beat Richmond.
Nick of Naso beat Flash R.
Don's Dot beat Dixie.
Prince beat Krupp.
Duke of Bergen beat Dress.
Rod beat Old Pebo.
Rue II. beat Consolation.
Lalla Rookh beat Half-and-Half.
Bang Bang beat Flotsam.

Second Series.

Malite beat Tammany.
Robert le Diable beat Nick of Naso.
Prince beat Don's Dot.
Duke of Bergen beat Rod.
Lalla Rookh beat Rue II.
Bang Bang, a bye.

Third Series.

Bang Bang beat Malite.
Robert le Diable beat Duke of Bergen.
Prince beat Lalla Rookh.

Fourth Series.

Robert le Diable beat Bang Bang.
Prince a bye.

Tie for First Place.

Robert le Diable beat Prince and won first prize.
Prince and Bang Bang divided second prize.

THE ALL-AGED SETTER STAKE.

There were 44 nominations for the All-Aged Setter Stake, 26 of which started. At the first meeting of the club, on Robins Island, in 1879, the setters and pointers were run together. There were 20 nominations for the All-Aged Stake

with 15 starters, 12 of them being setters. The next year there were 54 nominations, 36 of them starting, 30 of them setters. In 1881 there were 44 nominations, 21 of them filling, with 17 setters. In 1882 the trials were held at High Point and there were 35 nominations and 32 starters, 25 of which were setters. The next year with 53 nominations and 41 starters there were 23 setters. In 1884 the Pointer Stake was inaugurated. In the Setter Stake there were 47 nominations with 23 starters. Last year there were 23 nominations and 17 starters. In previous years the club has been favored with good weather, and the different events have been run out without delay. This year the weather was unfavorable and rain and high winds protracted the running and prevented the dogs from displaying the good quality of work that they appeared to be capable of doing. High strung dogs that, through loss of scenting powers or from other causes, fail to scent their game, become rattled after a few flushes and consequently are very apt to go to pieces and do indifferent work. In many of the heats the wind was shifty, either blowing the scent away from the dogs and causing them to flush the birds, or it would bring the scent from a distance, causing them to point, and as they could not locate their birds they appeared to be false pointing and doing bad work, for which they were not to blame. All this was very confusing, especially to young dogs, and will no doubt account for some of the apparently bad work. The running of the stake began at ten minutes past eleven o'clock on Saturday, after the finish of the Pointer Stake. The judges were Messrs. D. C. Bergundthal, of Indianapolis, Ind.; J. W. Orth, of Pittsburgh, Pa., and F. R. Hitchcock, of New York. A list of the starters was published in FOREST AND STREAM last week.

NOBLE C. AND CLIFFORD.

Noble C., handled by his owner, Mr. B. M. Stephenson, of La Grange, Tenn., and Clifford, also handled by his owner, Mr. J. O. Donner, of New York, had the honor of opening the ball. Noble is a nice moving dog, of medium size and has the reputation of being a capital performer. He had the best of it in speed and style, but was off in nose. Clifford ran in the Members' Stake. They were put down at ten minutes past eleven o'clock in the middle of the large open field on the Snow farm and worked east down the slope in sedge grass and plum thickets. The spectators flushed a bird that flew over our heads and Noble was swung back up the slope and was soon on a stylish point to a single that his handler to order flushed and missed. Meantime Clifford pointed, but moved on and challenged at first scent and Noble also moved on cautiously, but they could not make it out. Clifford then flushed one down wind and stopped. We then worked down the slope, both dogs challenging and backing each other once or twice, but no more birds were found. We then beat out considerable ground, where birds were known to be, but we failed to find them until on the Model Farm, just below the old mill, both dogs challenged and went out of sight in a thicket along the branch and flushed the bevy, but we could not see if either was to blame. A portion of the birds settled on top of the hill near some trees and as we went toward them Noble made a point in a thicket and Clifford backed him but nothing was found, and a little further on the performance was repeated. Clifford then made a nice point in some weeds, and Mr. Donner went ahead of him to flush, but he went the wrong way, and as Mr. Stephenson and Noble came up the birds flushed near them. A little further on Clifford again pointed, but as one flushed near Noble, Clifford went on and again pointed just as one went, Noble backing him; several more then flushed near by. Noble then made a point, and at almost the instant the bird flushed. Then on the bank of the ditch near the mill Clifford pinned one nicely. Mr. Donner to order put up the bird and killed it, and Clifford retrieved it very well. He soon had another one fast that flushed as his handler came up, and a few steps further on one got up in front of him that he should have pointed, but the wind was so high that the flush was perhaps excusable. The judges compared notes and ordered up the dogs with Clifford the winner. Down one hour. We then went to lunch at the barn of the Model Farm.

FRED W. AND LILLIAN.

Fred W., handled by Tucker, ran in the Derby. Lillian is well known both on the bench and in the field. She was handled by Stephenson. They were put down in a cornfield near the house after lunch. Lillian in the first burst showed up the fastest, but after a few minutes Fred had the best of it in both speed and range. Lillian moved the easiest and was much his superior in style. Beating out a large extent of ground we turned back into some woods, where Lillian caught sight of a stump that she probably thought was a dog on point, as she backed it in magnificent style. Meantime Fred, making a wide cast down in a hollow near a stack-yard, roaded out a single and pointed it, and Tucker to order flushed it. The dogs were then brought together and sent in the direction where the bird had been found by Fred. As we came to the stack-yard Lillian challenged, took a step or two, and pointed close to the fence; meantime Fred W. swung round below her, and as he saw her he straightened out, but before he was fairly rigid he caught scent of the birds, and turning his head slightly he pointed them, and a second or two later a large bevy flushed from the yard and Tucker killed one that Fred retrieved. Stephenson found fault with Tucker for shooting over the point of Lillian, but we thought him excusable, as he undoubtedly believed the point to belong to Fred. Following up the birds, Lillian made a point, but left it, and as her handler came up a bird flushed there. We do not believe that she blinked the bird, although it looked much like it; but the wind was high and she must have lost the scent. Fred then pointed; but soon went on, and catching a little scent he challenged and then drew on, but got too close and the bird went. Lillian then put up one and soon after she went over the fence, but was called back, when she flushed another one, and soon after in some stubble she put up another one. We then took a long turn before finding. Fred finally made a gamy point and Lillian backed him in elegant style, Tucker flushing to order. This ended the heat, with Fred W. the winner. Down one hour and eighteen minutes. This was rather an unsatisfactory heat, as but few birds were found, and an estimate of the relative merits of the two dogs when on game could scarcely be determined. The work done, however, as will be seen from the minutes, was in favor of Fred.

BRANDON AND GLOSTER.

Brandon, handled by Whaite, and Gloster, handled by Capt. McMurdo, both ran in previous stakes. Gloster had much the best of it in speed, range and style. They were put down in stubble and worked through to an orchard, where Brandon pointed but went on and Gloster came round just beyond the place and made a stylish point. A large flock of doves had just flown from the place, and the judges, thinking the point to them, so informed the Captain, who called to his dog to come away, but he held his point and as the Captain went to him a large bevy flushed in front of him. We then beat out the woods where they disappeared, and turning into some pines Brandon made a nice point and Gloster came round without seeing him and also pointed, and birds were flushed to each. A little further on Gloster pinned a single in fine style and Brandon backed him nicely. The bird was flushed to order and the heat was decided in favor of Gloster. Down seventeen minutes.

LADY C. AND ST. ELMO IV.

Both of these dogs are well known. Lady was handled by her owner, Mr. Stephenson, and Saint by Haight. After a wait of more than half an hour for the dogs that had been sent to meet us further on, they were brought back, Mr. Gregory on horseback bringing Lady in his arms. They were put down in the hollow on the west side of the Model Farm and worked down toward the creek. Lady out-footed her competitor and showed the most style. Turning into the pines Lady disappeared, and as her handler came to her pointing a bevy, he called point and a few seconds later the birds flushed. Following them in the pines Saint pointed, but went on a short distance and one got up near him. Lady is very quick in getting around and she soon had one fast that her handler to order put up and crippled, and she retrieved it alive in first-class style; and a little further on she whirled round and dropped to another one in the grass that Stephenson to order flushed and killed, Lady again retrieving quickly and well. She was then lost, but soon found dropped on point to another one that was flushed to order and the heat ended with Lady C. the winner. Down eleven minutes. This was quick work and Saint had no chance to show what he was capable of doing. We once saw him beat Carrie J. by doing just such work as Lady did in this heat, but somehow he failed to get a-going this time.

PENDRAGON AND BELLE.

Pendragon, handled by John Lewis, ran in the Members' Stake. Belle, handled by Haight, won the Derby last year. Belle had the legs of Pen, but was much inferior to him in style. They were put down in the hollow where the last brace was taken up and worked up to the head, and we then turned back on the opposite side, where Belle flushed one and stopped, and soon after another one got up near her and she stopped on point and Pen backed her. She soon went on and pointed two or three times on old scent, Pen backing her each time. Then in an old cornfield she pointed and roaded, and Pen swung ahead of her and pointed, but as Lewis went ahead he moved on. Belle then pointed nicely and Pen went ahead down wind and flushed the bevy. Following them in the pines Pen made a point, and as Lewis went ahead to flush he drew on and located the bird, which was flushed to order. Belle then cast down to a thicket near the creek and pinned a single, and Pen backed her nicely. Haight to order put up the bird and missed it. We then crossed the creek and the dogs disappeared in a cornfield, and soon after a bevy came out and settled on the hillside. Belle had a very good idea as to the location of the birds, and making a cast in their direction she soon had them. Pen came round and also pointed just below her. Haight to order put up the birds and missed with both barrels. Lewis also took a shot but the birds kept on. This ended the heat with Belle the winner. Down fifty-five minutes.

ROY MONARCH AND CHICKASAW II.

Roy, handled by Aldrich, and Chickasaw, handled by Short, made their first appearance in public. Both are large, good-looking dogs. Chickasaw showed up the fastest at the start, but Roy soon picked up and beat him in speed and range; in style they were nearly equal. Chickasaw moves easy while Roy runs a trifle heavy. They were put down in sedge where the last brace was taken up, and worked down wind to the lower end, where Chick, after passing a bevy, whirled and pointed very stylish with his head toward us. Roy refused to back and took point alongside. The birds were flushed to order but not shot at. As they went on posted land they were not followed, and we turned back along the creek and then worked over to a branch where the bevy found by Belle had been marked. Two were flushed by the handlers, and soon after Chick put up one and stopped on point, and Roy backed him. Short flushed another bird and missed it. Chick may have been pointing this bird, but we thought it doubtful. We then went to the large field on the Snow farm, where Roy made a nice point to three birds that flushed wild as his handler came up. A little further on Roy stopped on scent and then roaded out a bevy along a drain in capital style quite a distance, then making a cast for the wind he located them and pointed in good style. Aldrich flushed the birds to order and killed one that Roy with some help from his handler retrieved indifferently well. Following the birds into the woods Roy soon pinned one and was handsomely backed by Chick. Aldrich to order put up the birds and missed. Chich soon after scored two flushes and the heat was decided in favor of Roy Monarch. Down forty-seven minutes.

MANDAN AND WINDEMERE.

Both of these dogs are well-known. Mandan was handled by his owner, R. B. Morgan, and Windemere by Haight. They were nearly equal in speed and range, Windemere showing the most style. They were put down in the open field and worked toward home. Crossing the road Mandan pointed a bevy, and Windemere at the same time pointed behind him but moved up and refused to back and was stopped by order. Morgan went ahead and the bird flushed wild some distance beyond him. He hit one that towered and fell a short distance away, and as he went to it the bird again towered but soon came down again. Mandan, sent to retrieve, failed to find it. A portion of the bevy settled near the edge of the woods and Mandan soon made an uncertain point to one, drew on, and again pointed with his tail going. Morgan, to order, put up the bird and winged it. Mandan, sent to retrieve, flushed one, and after searching for the cripple for some time gave it up. Meantime Windemere flushed one near the woods and dropped to order. He then came down where Mandan pointed and another one got up near him. They were then ordered up and the heat was awarded to Mandan. Down seventeen minutes.

THURSDAY.

DAISY F. AND GENE.

Both of these dogs ran for the first time. Daisy is a large, good-looking bitch, with lots of dash and go, very stylish and staunch on her points. She was handled by Rose. Gene, handled by Aldrich, is a nice-looking dog, above medium size, an easy mover, but not fast enough to compete with a flyer like Daisy. They were put down about one mile north of town at 8:17 Thursday morning. Working through some sedge to a stubble, Daisy caught scent of a bevy and drew very nicely a long distance and pinned her birds in fine style. Gene backed an instant indifferently and then moved ahead. Rose to order put up the birds and killed one. Daisy broke shot, but came in when called. She then retrieved in good form. We then went into some sprouts, where Daisy jumped a fence, and as she struck the ground she caught the scent, and, making a cast for the wind, dropped on point to the bevy. Rose to order flushed them, but did not shoot. The dogs were then worked toward a marked bird, but Daisy got on the windward side and flushed it. Swinging round to get the wind we went into the sprouts, where Daisy pinned a single that Rose to order flushed and missed. This ended the heat, with Daisy the winner. Down twenty-six minutes.

CHANCE AND MACK.

Chance, handled by Avent, ran in the Derby. Mack, handled by Tallman, is a black dog with white stockings; he is of medium size, high up on his legs, and has considerable speed; he carries his head too low and is not much on style, although he makes a very gamy point. Chance had a little the best of it in speed, and showed much the most style. They were put down in the open and we took a long turn and then came back to the starting point, and then turned into the sprouts after the last bevy; Mack found them and pointed in gamy style, the birds flushing as Tallman came up, and Mack was a trifle unsteady to wing. Following them up Chance ranged too wide for the thick cover, while Mack scooted round among the sprouts covering the ground in a workmanlike manner. As we came to a road Chance shot down it and pinned a bird that Avent to order flushed. Chance soon had another one that was put up to order by Avent and missed. Soon after Chance flushed one, and Mack got in a good point to a single that Tallman put up to order. Mack, when ordered on, took a few strides and again pointed a single that went a second later. Chance then made a point and Avent went ahead to flush the bird, but not finding it he ordered the dog on, and he rooted out the bird that was lying just in front of him. A little further on Chance pinned another one that went as his handler came up. Soon after Chance made another point, but Avent failed to find the bird which had probably run as Chance drew on and again pointed, but nothing was found. We then turned into the road and Mack swung to the left and made a point, and Tallman to order went up to flush and put up a bird down wind from the dog and killed it. Mack still held his point, and as Tallman went to him a brace flushed under his nose, and Tallman scored a miss. Mack then retrieved the dead bird in good form. This was a very creditable piece of work. The judges then consulted and ordered up the dogs and awarded the heat to Chance. Down thirty-six minutes. This was a very close heat and the quality of the work done by both dogs was of a high order, as the birds were in scrub oaks among the dry leaves.

DAN GLADSTONE AND DASHING NOBLE.

Dan Gladstone, handled by Short, is a fine, slashing going dog with lots of style. Dashing Noble ran in the Members' Stake; he was handled by Seager. He had not had much work in the interval between the stakes and showed up rank and appeared to be off in nose. In speed they were about equal. They were put down in a large open field, both showing good speed and ranging wide. Working down to a run Dan went into a bevy and flushed them. A little further on Dash pointed a woodcock. We then swung round for the wind and worked toward the birds in some woods. Dan pinned them in fine style and Dash backed him nicely a few seconds and then broke in and scored a bad flush and dropped to wing. Some of the birds settled in a thicket along a branch, and as Dan came up he pointed and Dash backed him. As Short went to flush Dan drew on and went ahead just as the birds flushed wild and went to some pines a short distance up the slope. Dan soon found and pointed one that Short to order put up and missed. This ended the heat with Dan Gladstone the winner. Down twenty-one minutes.

FANNIE W. AND PRINCE IMPERIAL.

Fannie W. is a very nice, easy-moving little bitch, with no great pretentions to speed, but she is a merry worker and keeps going, and drops on her points quick any gamy. She was handled by Tucker. Prince divided third in the Derby last year. He moves very well with a long stride that covers a lot of ground; he is also stylish when on game. He was handled by Luke White. They were put down in sedge on a slope. Beating out the knoll we crossed to some woods; we beat out an orchard grown up to tall weeds, where Fannie pointed but Tucker failed to flush and she was sent on. Prince challenged near there, but went on a short distance and pointed, but gave it up. Fannie then made a point and Prince backed her. Tucker went ahead to flush and she drew on, and soon after ran up three or four birds that she should have pointed. We then went to a large field where both ranged well but nothing was done except that both dogs challenged once or twice at old scent. We then turned through some woods to a likely-looking stubble, but nothing was found. Beating out the sedge along the woods near the railroad Prince pointed a bevy and Fannie backed him. White to order flushed them and missed. Following them into the woods Fannie made a very pretty point, drew on and again pointed a single that Tucker flushed to order and killed, and both dogs broke shot. Fannie, sent to retrieve, made a nice point to a bird that Tucker flushed, and she then retrieved her bird well. We then beat through the woods and turned back down in a hollow, where Fannie dropped very nicely on point and Tucker to order flushed and missed, both dogs remaining steady. This ended the heat with Fannie the winner. Down one hour and thirty minutes.

BOB GATES AND BELLE OF PIEDMONT.

Both of these dogs are well known. Bob Gates, handled by Stephenson, won second in the Derby and divided third in the All-Aged stakes at the National trials last year, and Belle divided second in the All-Aged Stake here last year. She was handled by Captain McMurdo. In speed and range they were about equal, Bob showing most style. They were put down in sedge and scattered pines, where Belle pointed a hare. We then swung round to get the wind and turned into the woods after the last bevy. Bob pointed once or twice but went on, and we turned back higher up. Bob found one and pointed it nicely, and his handler, to order, put it up and killed it, and he retrieved it in good style. Meantime Belle was lost. When Stephenson shot we saw a bird go from near the place where we saw her last, and soon after she came round behind us, and passing in front of us stood looking for her handler, and a bird flushed near her. We then went through to a small stubble field where Belle challenged, made a short cast for the wind, and pointed very nicely a short time and made another cast and again pointed. She then drew on and made a cast up to the fence and pointed and commenced drawing back toward the center of the field. As her handler went toward her a large bevy flushed right where she had been pointing. She was still drawing and soon pointed and three birds were flushed in front of her, one of which the Captain killed and Belle retrieved it well. This was either good work or bad. Some of the spectators pronounced it the latter. We were inclined to believe that Belle had roaded out the old bird, as she gave out more scent than the others, which were not nearly grown, and that her cast up to the fence had turned the old bird back. This is only supposition, but we have seen good dogs do just such work, and under the circumstances we think her entitled to praise. Following the birds into the woods Belle got a point, and a few seconds later Bob also pinned one some distance from her, and birds were flushed to each point. Soon after Bob made a very nice point to a single that was flushed to order, and he was a trifle unsteady to wing. A little further on Bob again pointed, but nothing was found, and soon after he repeated the performance. Turning back, Belle dropped very prettily to a single that her handler flushed to order. Bob then made a point, but Tucker failed to flush a bird. We then turned back to the railroad, where Belle made a point at the edge of the woods and Bob at the same time also pointed inside the woods. Belle was on the trail and Bob had the birds, which Stephenson to order flushed. They were then ordered up, with Bob the winner. Down one hour and nine minutes. This was a good heat, and there was not much to choose between the dogs. It was now nearly 1 o'clock, and we made a break for the lunch wagon, which was a half mile away, near the school house on Col. Holton's farm.

PET GLADSTONE AND SLOCUM.

Pet Gladstone, handled by Tucker, is a nice moving dog, but appeared to be lacking in experience. Slocum, handled by Aldrich, ran here last year. They were put down after lunch in sedge and worked up to some sprouts and through to stubble, where Slocum caught a little scent and drew some distance straight to a bevy and pointed them in good style. Aldrich, to order, put up the birds and killed one that Slocum retrieved in good form. The birds went into the sprouts and the dogs were sent toward them. Slocum pointed at the edge but went on, and soon after a bird flushed near him down wind. A little further on he pointed a bird that flushed as we came up. Pet then made a point to a single that Tucker flushed to order and missed, and a little further on he stopped to another that went half a second later. We then swung back across a stubble and Pet made a point and Slocum backed him. Tucker, to order, put up the bird and killed it, and Pet retrieved it, biting it badly

Then on a sidehill toward a marked bird Slocum caught the scent, but before he could locate it Pet went in and flushed it. They were then ordered up and the heat was awarded to Slocum. Down forty minutes. This ended the first series with the following result:

Summary First Series.

Clifford beat Noble C.
Fred W. beat Lillian.
Gloster beat Brandon.
Lady C. beat St. Elmo IV.
Belle beat Pendragon.
Roy Monarch beat Chickasaw II.
Mandan beat Windemere.
Daisy F. beat Gene.
Chance beat Mack.
Dan Gladstone beat Dashing Noble.
Fannie W. beat Prince Imperial.
Bob Gates beat Belle of Piedmont.
Slocum beat Pet Gladstone.

Second Series.

CLIFFORD AND FRED W.

This brace was the first of the second series. They are owned by the president and vice-president of the club, and in accordance with parliamentary usage the dogs were placed in the relative positions sustained by their owners. They were put down at half past two in a hollow, and worked up a slope in sedge. Fred made a point to a single that Tucker flushed to order and missed. Clifford then came up and pointed near there, it was thought at the scent of the same bird, but several birds soon flushed a short distance ahead, and he may have been on their trail. We then worked down a run in sedge when both dogs challenged, roaded and pointed several times. Finally Clifford pinned the bevy and Fred backed him, or pointed, we were not near enough to determine which. Mr. Donner to order put up the birds and crippled one, that Clifford with considerable help retrieved. The birds settled among some pines and were followed. Fred made a point and as Tucker went ahead Fred blinked his bird but soon came back and the bird flushed near him. Clifford then pointed but soon went on, and soon after Fred pointed and again blinked as Tucker to order went ahead and flushed the bird. This ended the heat with Fred the winner. Down twenty-eight minutes. Fred had much the best of it in speed and range.

GLOSTER AND LADY C.

were put down in an old field and worked over to a branch, and then we turned down the branch in sedge. Gloster made the first point and Lady backed him nicely. Captain McMurdo to order flushed four birds and scored a miss. We then turned up over a knoll, when Gloster pointed and then drew on and got too close, the birds flushing just as he pointed. Lady then pointed at the old scent and Gloster backed her. A little further on a brace flushed near the judges and one near Lady. We then crossed to Colonel Holton's and beat out a patch of weeds, where Gloster was lost, but soon found on point to a bevy that his handler to order flushed and killed one. When Gloster was ordered to retrieve, Lady went for it and brought it nicely. The judges consulted and ordered up the dogs, with Gloster the winner. Down twenty-seven minutes. This was a short heat, and Lady had no opportunity to get in any work, as Gloster had the legs of her and got to the best places first.

BELLE AND ROY MONARCH

were put down near where the last brace was taken up and worked down to the branch and then up through a stubble, where Bell made a nice point and Roy came up and went ahead and also pointed the same bevy. Haight, to order, flushed and brought down three with one barrel, Belle retrieving two of them very nicely. Following them up Belle got them first, and pinned one and Roy backed her. Haight, to order, put up the bird but did not shoot. Roy then got in a point to a single that Aldrich, to order, flushed. They were then ordered up with Belle the winner. Down eighteen minutes. Belle was the fastest and widest ranger, Roy having the best of it in style.

DAISY F. AND MANDAN

were put down in an old cornfield and worked down to the branch and then over a knoll in sedge, where Daisy made a nice point, and as her handler came up she drew on a step or two and dropped very prettily. Rose to order flushed a small bevy, and Daisy was unsteady to wing. Following them into some pines Mandan ran into a fresh bevy and flushed them. A little further on Daisy made a point but nothing was found. Mandan then made an indifferent point and Daisy backed him. Morgan to order put up the bird and killed it, Mandan retrieving nicely. Daisy then made a point and Mandan backed her, but nothing was found. We then turned back and after going a short distance Daisy made a stylish point to a single that Rose flushed to order almost under the feet of the judges. A little further on Mandan flushed one and stopped, and soon after he pointed and as Morgan went ahead to flush, Mandan left his bird and drew on after him, and he was ordered on and the bird flushed near him. The judges then compared notes and ordered the dogs to go on. We then crossed the road to some grass and weeds, where Daisy challenged and then roaded out a bevy and pointed them nicely. Mandan went round her and also pointed, and the birds flushed as the handlers came up. This ended the heat with Daisy the winner. Down forty-nine minutes. Daisy had the best of it in speed, range and style.

CHANCE AND DAN GLADSTONE.

This brace was put down at 4:47 in the field where the last brace was taken up and worked across the road to a cornfield where Chance pointed and Dan backed him and three birds flushed as the judges came up. Short claimed that his dog was pointing when Chance flushed a portion of the bevy and then pointed the three birds that remained, but the judges could only pass upon what they saw. Following the three birds into some pines Dan pinned one that Short to order flushed and missed. Chance then pointed one that flushed as Avent came up. The remaining bird was flushed by the judges and the dogs were brought back, when Chance pointed a bevy near the road that Avent to order put up and missed. This ended the heat with Chance the winner. Down thirteen minutes. Chance had the best of it in pace and range and was fully the equal of Dan in style. This was a short heat and hardly time enough was taken to fairly test the merits of each of the dogs.

FANNIE W. AND BOB GATES.

It was a quarter past five o'clock when this brace was put down. They were taken among the scattered birds of the last two bevies, and although considerable roading and pointing was done the birds were running to roost and the work was very unsatisfactory as the ground was apparently covered with scent. After eighteen minutes they were taken up for the night and we started for town.

FRIDAY.

Leaving the hotel at 8:20 the dogs were put down at 8:38 in a large open field to finish their heat. After beating out considerable ground we turned into the pines, where both challenged, pointed and roaded for some time. Finally both cast, Bob up wind and Fannie down, and soon after she pointed. Bob then swung back below her and also pointed. Fannie then drew on, and catching sight of Bob backed him. Stephens, to order, put up the bevy and killed one that Bob retrieved nicely. We then crossed the creek and Bob made a point but went on and Fannie soon pointed a single that went as Tucker came up. Bob then got in a stylish point to one that flushed wild before we came up. Bob then challenged and half-pointed, but his handler called him away, and a bird flushed as he came up. He soon had another one, however, and made a stylish point that Fannie backed nicely, and the bird went as we came up. This ended the heat, with Bob the winner. Down altogether forty-one minutes. This ended the second series, Slocum having a bye. Following is the

Summary Second Series.

Fred W. beat Clifford.
Gloster beat Lady C.
Belle beat Roy Monarch.
Daisy F. beat Mandan.
Chance beat Dan Gladstone.
Bob Gates beat Fannie W.
Slocum, a bye.

Third Series.

SLOCUM AND FRED W.

This brace was put down in the large open field on the Snow farm. Slocum went faster and ranged wider than we have ever seen him. Fred was also going at his best pace and cutting out the work in fine style. Working along the woods to the lower end of the field we turned back and when near the center of the field Slocum challenged, and with his head well up drew nicely to a bevy that flushed wild ahead of him and settled apparently in the corner of the woods, where we had failed to find them several times. This time also proved to be a win for the birds, as they again escaped. Judge Orth at this point was taken sick and returned to the hotel and Messrs. Bergundthal and Hitchcock judged the remaining heats. We turned north along the slope and crossed the fence near the old deserted house that sheltered us during the rain when running the Derby. Fred was going as he pleased and would not mind the whistle, but hunted according to his own taste. Both dogs challenged near a ditch and the handlers were ordered to work the dogs up the run. Slocum at once obeyed the order, but Fred took a turn down the run and crossed the ditch and pointed a bevy in grand style. Tucker to order flushed them and killed one that Fred retrieved. The birds settled beyond the thicket where London made his celebrated pose four years ago, and as we went toward them another bevy was flushed by the spectators that went to the upper edge of the thicket. Crossing the branch Slocum made a point, and as Aldrich came up a bird flushed near the dog, but he held his point and Aldrich went ahead of him and put up another one, and missed it right and left. A little further on Slocum caught scent but drew too close and scored a flush. We then crossed over the hill and down to the branch, where Fred made a cast to the upper end of the field and challenged. Tucker after some time got him back and gave him a taste of the whip. This soured him, and when Slocum a few minutes later was drawing nicely on a bevy, Fred came up at speed and, winding the birds, made a willful flush and dropped to wing. This ended the heat in favor of Slocum. Down fifty-five minutes.

GLOSTER AND BELLE.

This brace was put down near where the last brace was taken up and given a spin in the open. So far as speed was concerned, Belle could outrun Gloster, but her spurts were short and half the time she was loafing, while Gloster, with his steady strides, was hunting from start to finish and covering much more ground than she did. His range was also more systematic, and he was greatly her superior in style, both in his way of going and when on game. Turning back into the woods after the last bevy, Belle made a point and then went on and flushed birds that she should have held. Nothing more was done here, except that both dogs challenged and pointed at old scent, Belle once backing Gloster very prettily. We crossed the hollow to some pines where the first bevy found by Fred W. had settled. As we crossed the fence Belle pointed, but soon went on, and a little further on again pointed just as a bird flushed. Gloster then made a very nice point, and his handler to order put up a bird in front of him and then the others went. We swung round to the top of the hill, where Gloster made an elegant point and Belle backed him nicely; as his handler came up Gloster drew on a few steps down wind and again pointed, and the bird was flushed to order and killed and he retrieved it well. This was a capital piece of work. They were ordered up and the heat was awarded to Gloster. Down thirty-three minutes.

DAISY F. AND CHANCE.

This brace was nearly evenly matched in speed and range. Both were very stylish, Daisy having a little the best of it. Working them some distance, we turned into some pines, where both were lost. Chance was first found on point to a bevy that Avent to order flushed, winging one that Chance brought alive in good form. A search was made for Daisy, and she was found some distance away on a staunch point to another bevy. As Rose went up to flush we saw the bevy nestled together close to the roots of a pine, and pointed them out to the spectators, who gathered round greatly admiring the beautiful picture. Rose then put them up, and, greatly to the delight of all, missed them clean. This was very good work, as Daisy had held her birds for a long time. Daisy got the next point to a single that Rose flushed to order and missed. As Daisy had not retrieved in this heat, by consent a dead bird was thrown, and she retrieved it nicely. A little further on Daisy made a point, and Chance backed her. She soon went on, and in a short time pinned a single that was flushed to order. Meantime Chance pointed, probably at old scent, as nothing was found. This ended the heat, with Daisy the winner. Down twenty-eight minutes. Bob Gates having a bye, this ended the third series.

Summary Third Series.

Slocum beat Fred W.
Gloster beat Belle.
Daisy F. beat Chance.
Bob Gates a bye.

Fourth Series.

BOB GATES AND SLOCUM.

In this heat Slocum, as Aldrich put it, "went back on him," and did no work worth mentioning, winding up with a flush that should have been a point, for which his handler gave him a taste of the whip after the heat was over. Bob went well and pointed two hares, and at the finish he made a good point to a bird that Avent, to order, flushed and crippled, but it was not found. Slocum had scored one flush and he now put up another, and the heat was ended with Bob the winner. Down thirty-eight minutes.

GLOSTER AND DAISY F.

This brace was put down at 12:15 at the lower end of large open field on the Snow farm. Just before they were cast off several birds flushed near the horses and we worked in their direction, but none of them were found, except one that flushed under the horses. We turned into the stubble, where both at nearly equal speed ranged wide and well. In style Daisy is a trifle more showy than Gloster when moving, but when on birds Gloster has a way of going to his points that is very taking and to our mind the showy and stylish manner in which Daisy gets on her birds is not so pleasing and satisfactory as the very gamy action of Gloster from the time he catches the scent until he pins his birds. Nothing was done in the stubble except that Gloster made a beautiful point to which nothing was found. We turned through the woods to the Model Farm and beat out the large field of weeds, and crossing the creek turned up the branch toward the old mill. At the ditch above the mill Gloster made a point at the edge of a row of briers and Daisy backed him a few seconds and then catching the scent she also pointed. As the Captain came up Gloster drew on a step or two and again pointed with his nose almost in the briers; two birds were flushed in front of him on the opposite side of the briers, but he still held his point, and as his handler went through the thicket he drew on and turned up in the ditch and roaded out the running bevy, never leaving the trail and locating them, pointed in grand style. The birds were flushed to order and missed. They went in every direction, and one of them taking a wide circle came back over our heads and settled in the place from which they had flown. Working back to where a bird had been marked Daisy made a nice point and Gloster backed her, Rose to order putting up the bird and missing it. We beat out a thicket and the weeds along a fence and turned into some pines, where Daisy was lost and after some time found on point by her handler, but the bird flushed before he came up to her, and as the judges did not see her she got no credit for the point. We then went to lunch at the barn of the Model Farm. Down one hour. After lunch the dogs were again put out in the cornfield south of the house and worked through to the field beyond. Crossing a hollow, Daisy found a bevy and pointed in fine style; her handler to order put up and missed. As the birds flew up the hollow another bevy under them rose and followed into the woods. The dogs were sent in this direction, and a short distance from the fence Gloster caught scent, probably of three or four birds several yards in front of him, and was going up to them when he ran up a single that was lying between, and the others went. This, we believe, the judges did not see, as they were some little distance away. Gloster went on a few steps and pointed one that his handler to order flushed and killed, and he was a trifle unsteady, and when sent to retrieve he did so, but bit the bird badly. A little further on Gloster made a good point and Daisy backed him. There was nothing to his point, although a bird was flushed a few yards away down wind, but it could not have been his. A little further on Gloster again pointed nicely and his handler to order put up the bird. After comparing notes the dogs were sent on, and Daisy soon made a point and Gloster backed her, but nothing was found. Shortly after this Gloster disappeared behind some bushes and a bevy was seen to go from there; but he was going down wind and out of sight of the judges, and either condition would save him from scoring a demerit. Following the birds into some sprouts Daisy scored a flush, and after a short consultation the judges decided the heat in favor of Gloster. Down twenty-six minutes; altogether one hour and twenty-six minutes. This was a good heat, Daisy running him a close race. Gloster was scouring and toward the last he let up in speed, but gamely kept up his gallop to the finish, his superior nose pulling him through. This ended the fourth series with the following result:

Summary Fourth Series.

Bob Gates beat Slocum.
Gloster beat Daisy F.

Tie for First Place.

BOB GATES AND GLOSTER.

These were the last two left in for first money. Bob Gates was in capital condition, having had just work enough to put him in good form. His heat in the morning was short and he got the benefit of a bye in the third series, and had an easy time with Slocum and was as fresh as though he had not run. Gloster had run against Belle and Daisy F., having just finished a long and hard heat, added to which he was suffering from dysentery. Had he been in as good trim as Bob there is no telling which would have won, as both are rattling good ones. Even as it was Gloster ran a much better race than was expected of him, and Bob was not so far ahead at any time that he could afford to make many mistakes. After a wait of half an hour the dogs were put down in the open field where the two bevies had been found and worked down to the stubble near the house. Turning down to the woods Gloster challenged and was drawing on a bevy, when Bob made a point in the woods just below him, and Gloster was ordered to be brought round. As the captain went to him he stiffened on point, but he was taken off, and as the spectators came up they flushed a bevy there. Bob meantime drew on quite a distance, but finally gave it up. Gloster then made a cast in the woods in the direction that the bevy had gone, and catching the scent he made a beautiful point to a brace that were flushed to order. Just then Bob pointed but nothing was found. A little further on Bob challenged just as one flushed, and when his handler fired he broke shot, but at once came back to order, and soon after he flushed one and stopped, and several more got up. Both then pointed at the same time, and birds were flushed to order to each. Stephenson missed his bird, but the captain crippled one, and when Gloster was sent to retrieve he made an elegant point to another one; but as he was retrieving, this did not count. He then retrieved the cripple nicely. We took a turn up the branch, and as we came back Bob cast over to a stubble and pinned a bevy within a few yards of Short, who was standing there with his horse. Stephenson to order put them up and killed one that Bob retrieved nicely. Following up the birds into some pines, Bob got them first and nailed one, Gloster backing him nicely. The bird was flushed to order and the heat was ended, with Bob the winner, and he was declared the winner of first prize. Down forty-two minutes. The judges selected Belle of Piedmont as the best dog beaten by the winner, and she was ordered to run with Gloster for second place, but Captain McMurdo, who handled both, decided to divide the honor and money equally between them, and the stake was finished at 3:29.

Following is a complete summary:

First Series.

Clifford beat Noble C.
Fred W. beat Lillian.
Gloster beat Brandon.
Lady C. beat St. Elmo IV.
Belle beat Pendragon.
Roy Monarch beat Chickasaw II.
Mandan beat Windemere.
Daisy F. beat Gene.
Chance beat Mack.
Dan Gladstone beat Dashing Noble.
Fannie W. beat Prince Imperial.
Bob Gates beat Belle of Piedmont.
Slocum beat Pet Gladstone.

Second Series.

Fred W. beat Clifford.
Gloster beat Lady C.
Belle beat Roy Monarch.
Daisy F. beat Mandan.
Chance beat Don Gladstone.
Bob Gates beat Fannie W.
Slocum a bye.

Third Series.

Slocum beat Fred W.
Gloster beat Belle.
Daisy F. beat Chance.
Bob Gates a bye.

Fourth Series.

Bob Gates beat Slocum.
Gloster beat Daisy F.

Tie for First Place.

Bob Gates beat Gloster and won first prize.
Gloster and Belle of Piedmont divided second prize.

THE CHAMPION STAKE.

There were six nominations for the Champion Stake, and Robert le Diable, the winner of the Pointer Stake, also en-

tered. The entries closed on Friday night after the finish of the Pointer Stake, all except Drake and Roderigo filling, making five ready to start. They were drawn to run: Robert le Diable against Mainspring, Gath's Mark against Foreman, Paul Gladstone getting the bye. The stake was to have been run on Saturday, with Messrs. Wilson, Donner and Orth as judges, but in the morning it was snowing, and the prospect for a start during the day was very unpromising. At half-past 9 the handlers requested the committee to decide what should be done, and they very wisely decided that the entrance money should be returned and the stake be declared off, the club dividing the added money, $100, equally among the five dogs. This decision was accepted by the handlers as entirely satisfactory, and the meeting of the Eastern Field Trials Club for 1886 was brought to a close.

MASTIFF PRIZES.

Editor Forest and Stream:

At a recent meeting of the American Mastiff Club it was decided to offer the following prizes:

First—A challenge prize, to be competed for yearly, of the value of $150, open to all exhibitors, for the best American bred mastiff whose dam has been owned in this country at least six consecutive months before the birth of the competitor.

Second—A silver challenge cup of the value of $100 for the best mastiff dog the property of a member of the American Mastiff Club.

Third—A silver challenge cup of the value of $100 for the best mastiff bitch the property of a member of the American Mastiff Club.

Fourth—Mastiff puppy sweepstakes, to be decided at a show in the spring of 1887, to be selected by the executive committee of the American Mastiff Club, open only to members of the club. R. H. DERBY, Secretary.

AMERICAN MASTIFF CLUB, 9 West Thirty-fifth street, New York.

AMERICAN KENNEL CLUB.

A MEETING of the American Kennel Club was held at the Hoffman House in this city on Monday, Dec. 6. The president being delayed by the storm, the chair was taken by Mr. W. H. Child, of Philadelphia. The clubs were represented as follows: Philadelphia, W. H. Child; New Jersey, C. J. Peshall; Rhode Island, N. Seabury; Hornellsville, J. Watson; Fox-Terrier Club, T. H. Terry, regular delegates. Proxies were held as follows: Westminster Kennel Club, T. H. Terry; Pittsburgh, A. P. Vredenburgh; New England, C. A. Baker; Cleveland, L. G. Hanna; New Haven, C. J. Peshall; Hartford, T. C. Naedele. Cincinnati and the National Field Trials Club were not represented.

The secretary's report was the first regular order of business after reading the minutes. This document was taken up by sections and referred to business done by correspondence since the September meeting. The Hornell point of order as to the right of the club to delegate the power to appoint committees which was by the constitution specially made part of the committee's duties, was first considered and the president's ruling sustained.

Mr. Peshall, the mover of the resolution to appoint a committee to revise the constitution, then drew the attention of the members to the point of order, really being well taken and obtained permission to so amend his resolution as to propose a committee on revision of constitution, to consist of Messrs. Smith, Child and Watson. Carried.

The Stafford Springs Club, which had been rejected, asked permission to support an application for a rehearing of their case. This was granted and the committee without discussion decided to allow the application to lie on the table pending the receipt of the new constitution.

No reply having been received from the Wisconsin Kennel Club to the request for a copy of their constitution, the secretary was instructed to notify that club that he was still awaiting their answer to his communication of last September.

Mr. Peshall was appointed a committee to procure the evidence in the cases of Sensation and Wattie, entered in classes at Boston show to which they were not eligible.

The new credentials committee was elected, consisting of Messrs. Child, Terry and Munhall, and a committee on discipline was also elected, viz.: Messrs. Faxon, Downes and Peshall.

No report was received from Mr. Smith, appointed to procure testimony in the Sans Souci Kennel disqualification case.

The next case was the appeal of Mr. Munhall, of Cleveland, owner of the pointer bitch Patti M., from the decision of Mr. Peshall, the New Jersey delegate, that Beaufort was entitled to compete for the special, "open to all comers." Mr. Hanna warmly supported the cause of Mr. Munhall, but when it came to a vote Mr. Peshall's decision was sustained. The dissentient votes were Boston, Hartford and Cleveland and no votes were cast for the New Haven, New Jersey, Westminster or Fox-Terrier clubs.

The Stud Book committee presented a report and after some discussion the subject was referred to another committee.

MINTING AND ORION.—Cranbrook Lodge, Ilford, Essex England, Nov. 22.—*Editor Forest and Stream:* I shipped last week for Mr. E. H. Moore, Melrose, Mass., two of the finest young mastiffs this country has produced for many years past. These dogs are the well known Minting and Orion, both first prize winners. Minting, born May, 1885, is by champion Maximilian out of champion Cambrian Princess, by the late old champion Beau out of Mr. Woolmore's Modesty. Maximilian, by the late champion The Emperor out of Mr. Woolmore's Merlin, the dam of Crown Prince. Orion, born June 25, 1885, is by Boatswain out of Mr. Gustav Lang's Nelly, by Young Victor. Boatswain, by the late old champion Beau out of Princess Royal, own litter sister to Crown Prince. These dogs will make their mark on the American show bench and prove themselves valuable at stud.—RICHARD COOK....MELROSE, Mass., Dec. 6.—*Editor Forest and Stream:* Minting has not won equal with Beaufort, but I have it from as good judges as are in England that he is as fine a mastiff as there is living.—E. H. MOORE.

MASTIFFS.—*Editor Forest and Stream:* Mr. Mason appears to disparage Mr. Wade's letters on mastiff type, while at the same time he has a profound respect for the opinions of Mr. Wynn. In his "History of the Mastiff" Mr. Wynn regards Mr. Wade as the "great American authority on the mastiff." He also gives Mr. Wade credit for "his carefully gleaned knowledge," and in some respects sound judgment of the breed. Of course Mr. Wynn objects to Mr. Wade's assertion that the bulldog layback is not a characteristic of the mastiff. If Mr. Wade is wrong why do you not prove him so? He has made statements based upon facts. Either disprove Mr. Wade's assertions, or in event of your inability to do so, "give us a rest."—VICTOR M. HALDEMAN. [We have a communication from Mr. Wynn on this subject which will be given as soon as possible.]

SAVANNAH, Ga., Nov. 30.—*Editor Forest and Stream:* Please find list of awards at dog and floral show held in Savannah, Ga., Nov. 18. We have some very fine specimens and fine bred dogs here, owned by kennels and private parties, but were not entered. The prize winners were the only entries: C. T. Goodwin's bulldog, Thos. W. Keene, diploma; N. V. Ketchum's cocker spaniel (name not given), diploma; Chas. D. Russell's Gordon and Laverack setter Bo, diploma.—SPECTATOR.

THE BEECH GROVE FARM KENNELS, of Beech Grove, Ind., publish a neat and meaty little pamphlet about mastiffs with the farm catalogue.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

INQUIRER, Austin.—At what age is a dog capable of service in the stud without injury to himself? Ans. One year and a half to two years.

SUBSCRIBER, Charlestown.—My cocker pup, which is 2mos. old, has great difficulty in breathing. The symptoms are more apparent when excited or after taking exercise. Inclined to choke after eating. Eats well and appears healthy in all other ways. Ans. If you can, give vapor or steam inhalations. Give 3grs. of calomel. After a day give three drops of Fowler's solution of arsenic in the milk night and morning.

SUBSCRIBER, Pt. Rowan.—I have a setter dog about a year and a half old and seems healthy except a pain or ache he seems to have in his head; he shakes his head and rubs his ears against my leg as though he has earache. Please prescribe. He also has little insects on him which look like ticks. Please prescribe. Ans. Your dog has canker of the ear. Get the following: Of bromo-chloral and of laudanum each 1dr., of water 6drs. Mix. Drop in ear night and morning. For the ticks use insect powder.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE FRERE TARGET.

MR. THOMAS FRERE, of Bay Ridge, L. I., has for some time past been using a modification of the ordinary Creedmoor target. He invited his friends to use the target, and such general satisfaction resulted from its use he has finally prepared a series of them reduced for gallery practice and has placed them on the market. He designed them, he claims, in order to secure more equitable scoring than is usually awarded by the old target for accurate line shooting at the short ranges and for true elevation shooting at the middle and long ranges. He discards the present circular bullseye, or rather modifies its shape, so that it becomes a diamond, and the other subdivisions of the target follow the same plan, producing a target diagram as shown in the cut. For long

No. 1.—FRÈRE'S SHORT-RANGE, LINE-SHOT TARGET, here reduced from "Creedmoor" 100 yard Range, for 12½ feet; from 200 yard Range, for 25 feet; from 300 yard Range for 37½ feet.

Entered according to Act of Congress, in the year 1886, by THOMAS FRERE, in the Office of the Librarian of Congress, at Washington.

range work the same general scheme is followed, but the target drops upon its side and the diamond rests with its longest axis in a horizontal position, giving the greatest preference to shots of good elevation in the scoring.

The idea has a special bearing upon military marksmanship, where the single soldier at short range and the massed company front at long range is the target of ultimate practice. To the beginner at short range work the importance of a steady, upright holding of the piece is very effectively impressed by the use of this target.

Mr. Frère's post office address is Box 555, New York city, and for general convenience he has placed a series of target diagrams upon a large sheet, so that for any distance within doors the marksman may find a properly graded target.

GALLERY SCORES.—A jolly crowd assembled at the Mammoth rifle gallery on the evening of Dec. 1 to witness the presentation of the prizes for the month of November. A substantial collation was served, after which Mr. W. J. Melefont of the *Herald* presented the winners with their prizes, which were handsome gold and silver medals. Following are the scores of the prize winners:

Decimal Off-hand Match.

J W Blake	91	90	90	89	88	87	87	86	85	85—878
W S Harris	92	91	90	87	87	86	86	85	85	85—874
I Hittam	92	89	88	87	86	86	86	85	85	85—869

Maj. Blake also wins the $5 prize for largest number of consecutive bullseyes, 15.

Military Match.

H L Charles	46	46	45	45	45	45	45	44	44	44—450
H O Arnold	45	45	45	45	45	45	45	45	44	44—448
S C Henry	45	45	45	44	44	44	44	44	43	43—441
H S Williams	43	43	43	42	42	41	41	41	41	40—417

Amateur's Match.

W T Bates	49	49	49	49	48	48	48	48	48	48—485
W H Smith	48	48	48	48	48	48	48	48	48	48—480
D H Bastman	48	48	48	48	48	48	47	47	47	47—476
A B Wilson	48	47	47	47	47	47	46	46	46	46—467

Mr. Bates also gets $5 for the largest number of consecutive bullseyes, having 17 to his credit.

For December Mr. W. H. Harrison, the manager, proposes to offer prizes for all-comers' rest match; all-comers' off-hand match, decimal target; amateur match, decimal target; military match and a special prize for a pistol match at 50yds.

NEW ORLEANS, Nov. 28.—There was a rifle match to-day at the range at the United States Barracks, between teams from Battery B, L, F, A, and the Louisiana Rifles. The wind was switchy, the air cold, so the shooting was not up to the average. The majority of the members of the Louisiana Rifles and several in Battery B shot for the first time at the long ranges. The following are members of the team of Battery B: Lieutenant Thompson, Sergeants Uter and Hanswald, Corporals Bowles and d'Hemecourt and Privates Hammet, Sallean, Herbert and Kerr. The best scores are subjoined: At 200yds., 119; at 300yds., 94; at 500yds., 110. Louisiana Rifles: Captain Adams, Lieutenant Maier, Surgeon Schuppert and Privates Boissonean, McIntyre, Reynoir, Pava, Vienne and Rolling. At 200yds., 104; at 300yds., 77; at 500yds., 77. The match was won by Battery B by 65 points.

GALLERY SHOOTING.—New York, Nov. 20.—For the purpose of infusing a little life among gallery shooters, I hereby challenge any gallery shot of New York or vicinity to shoot me the following match at Zettler's rifle gallery, No. 207 Bowery, for a trophy or whatever may be mutually agreed upon, to take place two weeks after acceptance of challenge: Rifle .22-cal., off-hand, not over 10lbs. weight, 3lb. pull, 12-ring target, 100 to 500 shots, 100 shots each night, other conditions as may be agreed upon.—M. DORLER, 207 Bowery.

WALNUT HILL, Boston, Nov. 25.—To-day marked the largest attendance at Walnut Hill for several months. Three matches closed, and a large number of militia came out for practice. Messrs. Frye and Washburn each made a clean score of 100 in the rest match and others distinguished themselves in the off-hand matches. Following are the best scores made and the list of prize-winners in the various matches closed:

Decimal Off-Hand Match.

C E Berry, A	10	8	10	10	10	9	8	7	8	8—88
W Henry, A	10	10	8	6	9	9	8	8	10	6—84

W H Oler	10	8	10	8	10	10	10	8	10	10—94

The new series of competions include eight matches in all, including a revolver match at 50yds. and all will be open for competition each Saturday. Match A is a practice match at 200yds. Match D is for the Victory gold medal and four other medals of silver and bronze. Match F is a rest match, to be shot on the Standard American target, with 10 prizes. Match B will be shot at rest for the Victory gold medal and two other medals of silver and bronze. Match C is a decimal off-hand match at 200yds., prizes, a percentage of entry fees, divided into 10 prizes. Match E is a military match at 500yds., and will close Feb. 22. A State military match will also be shot, open only to members of the M. V. M., distance 200yds., four scores to count. The prizes are gold, silver and bronze badges. A military match on the Standard target will be one of the features.

MANCHESTER, N. H., Nov. 25.—The team rifle match, 10 men to a team, took place to-day between Manchesters and Lawrences, and resulted in a victory for the Manchesters by a score of 704 to 688.

THE MARYLAND RIFLE CLUB has been organized at Baltimore with sixteen members.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

PATERSON, N. J.—Pigeon match between Edward Berry, 20yrs. old, and Abram Harris, an old pigeon shooter, 10 birds each, old Long Island rules to govern:

E Berry	1101111101—8	A Harris	1011110010—6

The birds were an exceptionally good lot of strong flyers. There is talk of a match between Berry and Wm. Bunn.—J. C. W.

LA SALLE, N. Y., Nov. 30.—Niagara River Shooting Club sweepstakes day, 7 live pigeons:

Kellogg	1111101—6	Hopkins	1110011—5
Case	0111111—6	Jenne, Jr	0111010—4
Shirley J W	1011111—6	Jewett	0111111—6
Smith E H	1111111—7	Gombert	1111000—4
Shirley C H	0111010—4		

Jewett and Case divided second, Gombert fourth.

Ten Niagara Falls blackbirds:

Gombert	1111101100—7	Shirley, C H	1101111000— 6
Smith	1111101111—9	Jenne	0110110001— 5
Shirley, C H	1101000011—5	Kellogg	1011101111— 8
Hopkins	0110010110—5	Case	1111111111—10
Jewett	1111101101—8		

Case first, Kellogg and Jewett divided second, Gombert third, C. H. Shirley fourth.

Seven blackbirds:

Gombert	0111111—6	Jewett	1110011—5
Smith	1111111—7	Shirley, C H	0101111—5
Shirley, J W	1110101—5	Jenne	1111101—6
Hopkins	1011011—5	Case	1110111—6

E. H. Smith first, Jenne second, Shirley third, Kellogg fourth.—J. H. J.

JERSEY CITY HEIGHTS GUN CLUB.—The seventh regular monthly shoot for cup of the above club took place on the club ground at Marion on the 2d inst. Owing to the severe weather or perhaps to the very high and piercing wind, there was but a small attendance of club members. The wind, at the rate of sixty or seventy miles an hour (more or less) swept directly across the traps to the right. When the bird sprung from the trap it was whirled like a flash, almost out of shot at once. It balked the best of the shooters. Even "Old South Paw," winner of cup last month, couldn't "get on to 'em." Al is a left-hander, hence the name South Paw given him, I believe by the genial co-reporter and fellow sportsman, Jake Pence. The birds going to the right went Al's way, only they went too fast. Score. Members' handicap, second barrel counts ½ bird, gun below elbow, etc.:

Heritage (O S P), 26yds	0 0 1 1 0 0 0—2
Dickens, 26yds	1 0 1 1 0 0 1—4
Cannon, 27yds	1½ 0 0 0 0 0—1½
W Siegler (Reliable No. 2), 28yds	1 1 0 1 1 1½—5½
Burdett, 25yds	0 0 1 1 0 1 1—4
Dezuba (first shot at trap), 21yds	0 0 1 0 0 0 0—1

Siegler cup and first money, Dickens won on tie with Burdett, second money, Heritage third money. Sweepstake shooting until dark was joined in by members from out of town who came later, among whom we were pleased to see Mr. Pilkington, of Oak Point, a good shot and a gentleman.—JACOBSTAFF.

ST. LOUIS, Nov. 28.—A match at 50 glass balls, revolving traps, 20yds. rise, was shot at the Riverside Gun Club grounds, to-day, between Messrs. Burgdorf and Maune, with the following result:

Burgdorf	1011010101111111001111101111000011100000111011111—32
Maune	1111001111111010101001101100001110101031101110011—31

LONDON, Ont., Dec. 2.—A pigeon shooting match came off at Strathroy this afternoon, in which several London shots participated. A. C. Smith, of this city, officiated as referee. The medal recently won by J. Paine was won by J. P. Evans, of London, who killed 10 straight birds. Richard Smith, of Strathroy, was second, and B. Drake and G. Rapley, of London, divided third and fourth money. In a sweepstakes W. C. Drake and C. N. Simpson, of London, tied for first on 5 straight birds each, and divided first and second money. H. Mayor and R. Smith tied for third and fourth on 3 birds each.

MEDFORD, Dec. 4.—There will be an all day shoot at the Wellington Gun Club grounds Dec. 16. One of the principal events of the day will be the contest for the Climax diamond badge.

SACRAMENTO, Nov. 26.—At Agricultural Park to-day the Forester Gun Club and the Pacific Sportsmen's Club shot the match for a supper, which has for a week or two formed the subject of conversation and discussion among those who delight in the use of the shotgun. The weather was delightful, though perhaps if there had been a little more breeze to blow the smoke away after the discharge of the first barrel, the scores would have been better. The birds were a fine lot, big and strong as a general thing, and many of them, hard hit, succeeded in carrying their loads of lead outside the flags. The shooters were in excellent humor, and there was not a hard word or dispute from first to last. There was a large attendance of spectators, who evinced much interest in the match, and it really was a very close contest, neither team ever succeeding in getting more than four birds in the lead. In the first round the Pacifics made two less misses than the Foresters, but the latter improved in the second round, and at the close of the third round were two birds ahead. At the commencement of the ninth and tenth rounds the teams were tied. At the beginning of the eleventh the Pacifics had the advantage of one, but the teams were even when they began the twelfth. The Foresters in it missed only two to their opponents' four, and won by a total of 102 to 100. The shooting was not up to the average of those engaged in it, but it may be remarked that very few birds escaped unhurt. In the following score the figure 2 denotes when the second barrel was used, which in many instances was only to "make sure" after a bird had been brought to grass. The match was under Hurlingham rules, members of the teams shooting alternately:

Foresters.		Pacifics.	
J Gerber	110112111011—10	Parrott	102011111111—10
H Gerber	202221121200— 9	Pedlar	211100111010— 8
W E Gerber	010011021021— 7	Flohr	100222111000— 7
Todd	022201111211—10	Wittenbrock	120012211111— 8
Biderman	112010111102— 9	Routier	222212012000— 8
Ankener	202012220001— 5	Chapman	200110213022— 8
Kane	022001010121— 6	Dandini	002212112111—10
Zuver	211212220222—11	Vaughn	121201102202— 9
Coffey	102012121001— 8	Kunz	221102212202—10
Ruhstaller	121220101201— 9	Morrison	100101210201— 7
Shepler	121101110211—10	Nesbitt	120000120110— 6
Hamilton	111010121201— 8	Graves	120012111201— 9

The Foresters considered the opportunity a good one for their medal shoot also, and five of their members took part who were not in the team match, as did also Louis Nicolaus, of the Pacifics, making the following scores:

Schrott	1101121111101—10	Young	1222221100211—10
Miller	0000011222201— 6	Tebbetts	0011222211012— 8
Chapman	1111211112211—11	Nicolaus	1102121022111—10

SAN FRANCISCO, Nov. 25.—The open tournament given by the Lincoln Gun Club to-day at Alameda Point did not bring together as many shooters as was anticipated, most of the gun men preferring to take a day at quail or duck to breaking pottery. The few shooters present, however, went to work early in the day and some good sport was had. The first match was at 10 single clays, 18yds.:

Donaldson	0101101000—4	Hober	0110000000—2
Dunshee	1100110011—6	Scovern	1101011011—7
Campbell	1100100100—4		

The second shoot was at the same number. Three men, Dunshee, Campbell and Donaldson tied and on a freeze out Campbell froze out and the other two divided the pot:

Dunshee	0110111011—7	Brown	0000010001—2
Campbell	1111010110—7	G Donaldson	0111011101—7
Hober	0011001001—4	Schultz	0001111100—5
Scovern	0111010011—6		

BOSTON, Dec. 1.—The trap-shooters had a pleasant meet at Walnut Hill to-day, although a raw wind blew across the range during most of the contest. The match was the last one for this winter. The winners in the sweepstake matches were: 1. Six clay-pigeons—Nichols first, Eddy second, Swift third. 2. Six clay-pigeons—Snow and Stanton first, Nichols second, Lewis and Eddy third. 3. Six bats—Stanton and Nichols first, Swift and Eddy second, Lewis third. 4. Six clay-pigeons, straightaway—Swift first, Nichols second, Eddy third. 5. Six clay-pigeons—Stanton first, Snow second, Eddy third. 6. Six clay-pigeons—Swift first, Stanton second, Snow third. 7. Six clay birds—Stanton first, Swift second. 8. Six clay-pigeons—Stanton first, Nichols second. 9. Six blackbirds—Stanton and Nichols first, Eddy second. 10. Six clay-pigeons—Nichols and Swift first, Stanton second. 11. Three clay-pigeons—Nichols first, Stanton and Swift second. 12. Six clay-pigeons, straightaway—Nichols first, Stanton second. 13. Six quail—Nichols first, Stanton second. 14. Six quail—Stanton first, Snow second.

TORONTO, Nov. 27.—A shooting match took place this afternoon at Oulcott's Hotel, Eglinton, between A. Wyness and J. Bailey, at 10 birds each, Bailey winning, he scoring 8 out of 10, while his opponent only grassed 6. Wm. Smith acted as referee, and S. Townson and Jeff Worden as judges.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WIDE VS. NARROW CANOES.

Editor Forest and Stream:

I have read the article on "Wide vs. Narrow Canoes" with considerable interest, because I have sailed wide canoes for eight years and know that for sailing they are preferable every way, but have been satisfied with reading until "S." came along in the issue of Dec. 2 and tread on my corns.

I am inclined to think the past season must have been "S.'s" first on the Delaware, otherwise he would not have claimed to have beaten duckers with a canoe. The duckers he speaks of were open pushing boats, without centerboards, and are not designed for sailing. They carry 9 or 12yds. of canvas (54 or 72sq. ft.), not square yards, as "S." says. Sails on the Delaware are spoken of according to the number of yards of canvas 27in. wide they are made of, and deducting bights and corner pieces, a yard of canvas makes 6sq. ft. of sail. The sails on these Gloucester pushing boats are used only in running from the boat house to the gunning grounds, so that there is little credit in beating them. If he thinks he can beat a sailing ducker, and will call at Boat House 15, Shackamaxon Wharf, I will see that he has a fair opportunity. On this wharf are 55 duckers 15×44, they carry 18yds. of sail (108sq. ft.), with a crew of two. There are two duckers on Allen's slip that carried last year 25yds. (150sq. ft.). They will sail 2ft. to 1 with any narrow canoe 15ft. long.

Canoeing on the Delaware has not met with favor. The owners of canoes are usually boys who have built their own boats (many of them very creditable jobs), or gentlemen who have taken the sport up recently, and who know but little of boating. It takes but a short time for them to graduate into larger and better boats. The fact of the matter is canoes are not adapted to these waters, for cruising in shallow water and where carries are necessary. I can imagine nothing better, but where we have plenty of water, wind and tide, a more roomy boat gives much more comfort, in our sailing duckers and tuck-ups we rarely touch an oar, but when we do we want to go faster than a paddle will carry us.

Then again, both duckers and tuck-ups travel in fleets of from a dozen to a hundred; all land at about the same places, meeting the same people week after week. This association is a pleasure equally if not more appreciated than the sailing. Any other type of boat is out of place, so that gradually canoeists are found joining the majority in duckers, and again single-hand sailing is a sport few enjoy. A boon companion adds spice which every sailor appreciates.

The champion flag for duckers is carried by a boat built for me three years ago, she carries 18yds. of sail (108 sq. ft.) and a crew of two. I can speak for the present owner in saying that if there is any canoe on the Delaware that can beat it he would be pleased to give it an opportunity.

I was in Bridesburg, Sunday, and saw one of the finest jobs of boat building ever turned out on the river, a 15ft. canoe, just finished by Wiser, it is polished like a piano top, and if finish will make a boat sail, it is going to set the river on fire next year.

One of the canoe clubs has been talking of building a canoe house for forty canoes at Louder's Slip, Camden. It will be a big thing if they do. They are now scattered over two slips. The closer you can bring boatmen together the greater the pleasure for all.

Among the fifty-five duckers on Shackamaxon Slip I heard of only four capsizes the past season. Contrast that with the canoe record.

CHAS. L. WORK.

PHILADELPHIA, Dec. 3.

WESTERN MEN AND WESTERN MEETS.

Editor Forest and Stream:

I have been greatly interested by the letters from canoeists to your paper, and am ashamed to admit that the canoe items are the only ones that interest me, and that we subscribe to it only for such news. The type is wretchedly small for us old men, and the FOREST AND STREAM would please several thousand readers by printing that portion of their paper in readable print.

I was one of the fortunate beings who attended both the W. C. A. at Ballast and the A. C. A. at Grindstone, but note the difference. To the former I traveled 150 miles, arriving at my destination the same day, and enjoyed ten days of solid pleasure. For the latter I could only spare six days, four and a half of which were consumed in getting there and returning, but the day and a half amply repaid the exertion and necessary heavy expense, though I thanked my lucky star my canoe did not accompany me. There is an impression that the Western canoeists oppose the A. C. A. This, no doubt, originated by articles that have appeared from the pens of Eastern canoeists. Surely no Western man can say anything against the A. C. A., for many are members and all have the warmest and kindliest feeling for the old flag, but can we be blamed for our enthusiasm in the kindred sport? The A. C. A. for the past three years at Grindstone was beyond our reach, and now set for Lake Champlain it might as well be on the Bermudas, not that we asked for salt water, however. The West is enthusiastic, and the A. C. A. not coming to the relief by giving a taste of her society, she launched herself in the Lake Erie Islands, and within a year enrolled a hundred canoes. With delightful surroundings, sheltered waters course and very tiresome cruising waters, Ballast Island presented the Mecca the Western canoers had long sought. Can any right-minded brother in the East blame them for the action or envy the rapidly increasing roll?

The W. C. A. men are as sociable and whole-souled a set of tars as ever gripped a paddle or held a sheet, with no petty jealousies or dislikes and willing to enter into any division that will result in a mutual benefit, but looking at it from a bird's eye view, are we not rapidly growing into a big tub upon a very flat bottom, for very lack of inducements offered by the A. C. A. in past and

No. 76, W. C. A.

[Our correspondent infers that the A. C. A. has made no effort to give increased facilities to its Western members, but if we are not mistaken the first meet at Ballast Island arose from the agitation of the question of extending the A. C. A. by means of a Western branch, as talked of at the meet of 1884. In our review of the season, Dec. 11, 1884, the matter was alluded to, and three weeks later it was discussed at length in our columns, a scheme being outlined which would have placed the proposed Western Branch on the same footing which the Eastern and Central Divisions now occupy. It was the desire of many of the organizers of the first Ballast Island meet to form a division of the A. C. A., and why a separate organization was formed is now pretty well known. At that time it was proposed to elect a Western canoeist as Commodore at the meet of 1885, just following the Ballast Island meet, and to provide for an A. C. A. meet in the West in 1886, but the action taken at Ballast Island made this impossible. It has long been realized by all thinking A. C. A. men that one meet will not do for so large a country, and even now the plan of establishing several in various locations is in actual operation. With interests in common and working for the same ends it is to be regretted that the two organizations are separated even in name.]

A RUN ON THE UPPER MISSISSIPPI.

MY first visit to Brainerd, Minn., was in 1873. The day of my arrival was wintry and the snow lay deep in the silent and dark pine forests, through which the train had been speeding for twenty-four hours. Brainerd was then a thriving little lumber town of three or four hundred inhabitants, who had followed the fortunes of the Northern Pacific Railroad, and, when the great financial crash of that year came, in which Jay Cooke figured so prominently, they had settled down in seeming content to await the arrival of better times. An incident will show the condition of the town at that time. Like all frontier towns, business was all done on one street, and along its entire length there were alternately stores, saloons, dance houses, and hurdy-gurdy halls. Outside of these places signs were displayed to entice the red-shirted and blue-breeched lumberman into these dens to be fleeced. Down by the "Last Chance" saloon, whose sign signified that it was the last chance one had of procuring a drink of "headlight" at that end of the town, stood a large pine tree, with stout limb extending in a patronizing manner over the sidewalk and building, twenty or thirty feet above the ground. This limb was decorated with the bodies of two Chippewa Indians, who had been lynched the night before for the murder of a white family, a short distance from town. Slowly the bodies oscillated as the breeze gently swayed them to and fro, with the twisting and untwisting of the ropes. The uncovered faces had a horrible appearance. It was a sight I cannot efface from memory. Judge Lynch was well represented by the stern-faced and determined crowd assembled to carry out his decree, and to see that justice was meted out to the murderers who had been caught red-handed. There was no other law in those days, and the town was overrun with renegades.

I had not long been there before I found a chum in Al. Wilson, a companion after my own heart, as fond of outdoor life as I. He enjoyed both fishing and hunting, and we had many a delightful tramp throug the great pine forests, and jolly canoe rides on the Mississippi and the many lakes in the vicinity. These waters were full of fish, and in the fall were resorts for ducks, on their southern flight, which stopped to feed on the wild rice that grew so abundantly along the shores. When summer asserted itself and the warm days had come, Al and I grew restless and longed to get out again into the free air of the woods. We hired an old Chippewa Indian to make a birch bark canoe, for which we paid him $10. Charley Elliot and Tom Fernald, two old canoemen and thorough woodsmen, invited us to join them in exploring the outlet of Serpent Lake to determine whether it emptied into the Mississippi River. Our craft were loaded on a flat car. After making the portage from the track to the lake, a fire was soon sending the smoke in a thin, straight column up through the trees, and we were busy getting dinner. Two young ducks, a few partridges and some black bass were quickly done to a turn, and we all sat down, using pieces of birch bark for plates. Then the outfit was carefully packed in the two canoes to trim them perfectly.

Our party numbered five now, as a Mr. Stauff joined us at the last minute. He was a German, of a very jolly disposition, a florid face, speaking of copious draughts of beer, and he weighed 300lbs. Elliot was of medium height, a mass of bone and muscle, and weighed about 175lbs. He had a pleasant, agreeable face, and a pair of deep blue eyes, and a nerve like steel. His partner, Tom, was a man of similar disposition, but stood over six feet, and was as slender as the German was stout. Al was a slim youngster like myself, and neither of us carried any extra flesh on our bones, as we kept ourselves thin by our long walks. Elliot, Al and I occupied one canoe, while Tom and Mr. S. took the other. After arranging ourselves comfortably—Charley in the bow, I amidships and Al in the stern—we dipped our paddles and were soon racing across the smooth and mirror-like surface of the lake. Our little bark cut the water like a knife, and as we brought the paddles out behind, long sprays of bubbles would follow in the wake, and drops adhering to the paddles would not have time to fall before we had them under again. The air was delightful, a little bit warm, and the perspiration stood in beads on our faces and slowly trickled down the bridge of our noses as we bent our heads and bodies to our work. Elliot started a song, and kept time with his paddle, as he reached well forward and with a long, steady pull and a peculiar turn under water guided us in a direct line to the outlet of the lake. Five, six, yes, seven miles we raced, and when we reached the outlet we were only a length ahead of Tom and S.

What a miserable little outlet for that immense body of water. Not more than 5ft. wide and not as many inches deep. Through the heart of the forest it ran its silent course, and as we entered and started down I could not see how we could go very far. About three miles down we came to a series of falls, filled with rocks and impossible to pass in our boats. The only thing was to make a portage of several miles by land and carry both boats and baggage through the heavy undergrowth of the forest. We held a council and decided to retrace our steps, take the boats back to the track, put them on the next train and go down to Mud River, a few miles further east, and from there go down to the Mississippi River and home. By river back to Brainerd was ninety miles.

By 5 o'clock we were gliding down Mud River, a little bit of a stream with muddy banks and muddy bottom, and in an hour were floating down on the bosom of the Mississippi. Rain began to fall in a little misty drizzle and we pulled to the shore, landed and carried everything to the high bank. We could hardly get a blaze for supper, and nothing but smoke seemed to reward us as we stood around and rubbed our red and aching eyes. The bacon sputtered and spit in the pan, while drops of rain hissed as they fell into the hot grease, and soon the rain came down in torrents and put out the fire. "Cold wittles" had to satisfy us for that night, and as we crawled under our upturned canoes, we knew we were in for a most uncomfortable time. From above the rain could not touch us, but before long we felt the cold embrace of water coming in under, there was no help for it.

The long, dismal night ended at last and we crowded out into the sunlight of the morning. No dry wood could be found and again a cold meal had to satisfy us. We were all glad to leave such an inhospitable camp and were soon dashing down the rapid current of the river.

"What's that roar, Charley, that we can hear ahead?"

"That is from the first rapids we have to go over, and when we turn the next bend you can see them plainly. Now, a word of advice to you boys, when we enter the rapids take your paddles from the water, and hold them ready to use when I give the word, sit quietly in the boat, and under no circumstance make a sudden move, even if you feel the canoe upsetting, but let your bodies sway with her every motion, and I'll take you through all right."

"By Jove, Al, look there!" As we turned the bend the rapids were seen below, boiling and whirling in mad delight, with the deep blue of the water curling and lashing and dashing over the rock-dispited passage. Our little bark danced gaily along, and, as we were fairly into them, Al and I ceased paddling, and kept our eyes on Elliot, as he stood leaning a little forward, with his body lightly swaying with the lively motions of the canoe, and silently and slowly dipping his paddle into the turbulent waters, just enough to keep her steady in her course. The excitement was intense, and when Elliot, in a very quiet voice, told us to pull, we eagerly dipped our paddles and shot down into the quieter waters below.

All day long, until the sun slowly hid himself behind the dark forests that lined either bank, and the quiet of eventide and twilight settled over the river, and the low songs of the birds came clearly to us from on shore, we went steadily on. Then the moon shone white and grand, as its full, through an occasional opening in the dense pines, until it rose above the timber belt, throwing rays of light across the murmuring waters. As the luminary of night rose higher and higher, and illumined with a broad belt of light the stream between the dark shores, the river ahead looked like a broad silver line, winding in and out of the gloomy banks.

"Hark! Are there more rapids ahead, Charley?"

"Yes, and the worst one we have to pass. Keep your nerve."

We quietly settled ourselves in a kneeling position, ready for the worst. The roar of the rapids was deafening, and as they came in view their grandeur was sublime. Leaping in the air the water fell in spray, through which the moonlight shone with silver radiance. Down whizzed our frail canoe, dancing, jumping and leaping almost out of the water as the boisterous waves roughly embraced her; into the midst of all the fury she sped with lightning speed, guided by an arm of steel. What a picture to transfer to canvas! Bare-headed, wet locks clinging to bared neck, the white spray dashing and drenching him, Elliot stood in eager attitude, facing undaunted the rapids. The coolness of the man was reassuring. Al and I lost fear and knelt in our drenched garments, ready for the word. "Pull!" sharp rang the command; and before the word had fairly left his lips our paddles were dipped deep in the seething mass, and the canoe shot, with a sudden turn, missing by less than half a foot a sharp and ragged rock. Had we struck the shock would have landed us in the other world. Loud was the yell Elliot gave as we passed safely out into the river below, and as Al and I took up the yell, it was echoed back to us from the canoe behind, that had also passed safely over.

Away we went on the swift current, and the roar of the rapids was now a murmuring sound that gradually died away faintly as we increased the distance between us. In the still night our songs were caught up by the lumbermen on shore, and the chorus followed us from camp to camp, and only ceased as we glided to the bank at the bridge at Brainerd, and went ashore, well satisfied with the result of our glorious ride.

JACK.

BISMARCK, Dak.

THE KEYSTONE C. C.—*Editor Forest and Stream:* The Keystone C. C. is a Philadelphia club whose boats are canvas with one exception, a birch bark. The founder of this club is Mr. Norgrave, a veteran canoeist, who after several failures succeeded in organizing the present club. Mr. Norgrave is a good sailor and a designer as well, four canoes in the club being built from his designs: Nameless, owned by Mr. Wm. Squires; Mohawk, Mr. R. Binder; Belle, Dr. Little, and his own, Picnic. The beginning of the present year found him the only member of the club, but by August there were eight members in the club, and now we have ten members and eight canoes, with three canoes building, a good showing in a few months. We claim our canoes to be the best now afloat. The dimensions are all alike, 15×30, with two air-tight compartments and one dry stowage. They are made as strong as canoes can be made, the ribs red elm, the decks Spanish cedar, with ash combings, and the trimmings nickel plated. The sails are all of the lateen pattern except Picnic's, which is a lug. We have had no club cruise this summer, but all of our canoes have been on cruises at different times. Nameless made a trip of two weeks as far as the Water Gap; Picnic made several, one down the river and through the Chesapeake Canal, and Mohawk down the river on the 3d of July, intending to spend several days, but had to come back on the 4th, having met with an accident which might have resulted fatally. Several smaller cruises were made by members of the club. I wish to call attention to Mr. Boshart's canoe Osscola, which we claim is the best and handsomest canvas canoe afloat. It was built by himself, of the same dimensions as the rest, but is much handsomer. Paint is used only on the canvas, every piece of wood in the canoe being varnished. The other canoes of the club are Witch Apple, Mr. Conly, Mr. Watt's new canoe not yet named, and two canoes now building. We are to hold a meeting very soon to elect officers, to adopt a constitution and to decide what to do for more room, as we are already crowded. There is a rumor of a new canoe paper to be published in this city next spring.—KEYSTONE.

FLORIDA C. C.—*Editor Forest and Stream:* The first race of the Florida C. C. took place Nov. 25, the following canoes entering: Ida C., R. M. Call; Pelican, C. Buckman; Ibis, Chas. S. Adams; Madeleine, Bion Barnett. The race was 1¼ miles dead to leeward and return, sailed in a heavy N. W. wind. The Ida C. got away first, quickly followed by the Ibis. Pelican and Madeleine were cut off by a raft coming down the river, and were several minutes behind at the start. Ida C. turned the buoy with a long lead, but in the beat back against a strong tide was overhauled by the Madeleine, which came in first, Ida C. second, Pelican third. Ibis capsized soon after starting, but her skipper very pluckily bailed her out and sailed over the course. This is the first of a series of races to be sailed during the winter on the first and third Thursdays of each month, the canoe winning the most races of the series to receive a cup presented by the captain. Our club is a sub-organization of the Florida Y. C., using the same club house, which is very advantageously situated in the heart of the city. Visiting canoeists will receive a hearty welcome and the hospitalities of our club house. No more beautiful stream for canoeing exists than the noble St. John, and I hope the day is not far distant when a sufficient number of canoeists desiring to escape the rigors of a Northern winter will assemble here to give us a winter meet.—MADELEINE.

CONEY ISLAND CREEK.—*Editor Forest and Stream:* I noticed in your issue of Nov. 4 that Mr. C. M. Shedd states that if the meet of 1887 is held in Shinnecock Bay, those desiring it could cruise from Far Rockaway Bay to Shinnecock Bay all the way inside. Four years ago I cruised from a point about two miles from Sheepshead Bay to Great South Bay, taking advantage of the canal between Jamaica Bay and Far Rockaway Bay. One may easily cruise from New York by this route up Gravesend Bay, through Coney Island Creek, Sheepshead Bay and a creek north of Barren Island, up Rockaway Channel past the railroad bridge and then through the canal mentioned. After that the route as described by Mr. Shedd. One must be at the canal at about half tide, as at low water it is nearly dry, and at high water a canoe can hardly pass under the bridge. Coney Island Creek runs nearly dry at low water near Sheepshead Bay, so it would be necessary to catch the tide pretty well up there, too.—A. W. B.

THE A. C. A. REGATTA COMMITTEE.—*To the Members of the American Canoe Association:* After consultation with the following active members and in pursuance with Article VII. of the Constitution, Mr. Henry Stanton, of New York (Chairman), Col. H. C. Rogers, of Peterboro, Ont., and Mr. Geo. M. Barney, of Springfield, Mass., have been appointed the Regatta Committee for the annual meeting of the Association, and they will be respected accordingly. Members are requested to address all communications relative to matters within the jurisdiction of the Regatta Committee to the chairman thereof at Mills Building, Broad street, New York city. I am, with great respect, ROBERT J. WILKIN, Commodore (Brooklyn, N. Y., Dec. 1).

A PECOWSIC FOR NEW YORK.—An order has been placed for a Pecowsic with slight alterations for a member of the N. Y. C. C., and the boat will receive a thorough trial next summer on New York Bay.

STILLWATER C. C.—This club was formed last spring at Dayton, Ohio, with 20 members. Cruises have been made on the Stillwater, Miami and Ohio Rivers, and Miami Canal.

THE LIST OF CLUBS.—The Oskosh and Yonkers clubs should be added to our list. The Newburg B. and C. C. reports 34 members, 12 of them canoeists and 9 A. C. A. members.

OSHKOSH C. C.—This club has built a club house this year, but as done little racing.

A LOCAL MEET ON SALT WATER.—Springfield, Mass., Nov. 26.—*Editor Forest and Stream:* I am glad to see there is one man who favors a salt water meet who signs as "Stiletto," and all I have to say is, "Old man 'Stiletto,' I am wid ye's always," and if you want a good salt water meet next August, with some 25 or 30 good canoeists, just drop me a line.—C. M. SHEDD, S. C. C. [Cannot a meet be arranged early enough not to conflict with the A.C.A. meet in August. If a good site on the Sound (such as Thimble Islands) could be found, easily reached from New York and New England, many would attend. Peconic Bay is too inaccessible for a short meet.]

Yachting.

A LENGTH AND SAIL AREA CUTTER.

INTERIOR AND CONSTRUCTION.

THE subject of interior fittings is one that has received comparatively little attention in the past from American builders, partly from the fact that, all the boats being of one general type in which the design and construction of the hull dictated imperatively a certain arrangement, one stereotyped plan was followed year after year with no attempt at improvement. In the old centerboard sloop for instance, of the length under consideration, it followed that the cabin must be immediately abaft the centerboard trunk; the forecastle and galley just ahead of the same, and a passageway from one to the other on one side of the trunk next the center, to obtain the greatest head room. This left a fairly large space on one side of the trunk which was utilized naturally for a stateroom, while the smaller space on the other side by the passageway, and partly under the side deck, was available only for w. c., pantry and icebox.

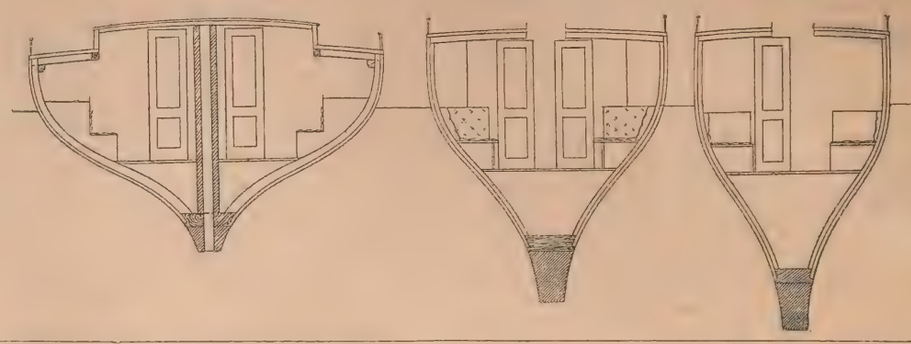
The cockpit, always found in these boats, swallowed up a great deal of room abaft the cabin, leaving a waste space of doubtful utility beneath it, and a similar space on each side. Thus it followed that between centerboard trunk, cockpit and side decks, an arbitrary division of the entire bulk of the boat was made, and all that was possible for the builder or owner was to use the various divisions to the best advantage. In any given hull he had a certain amount of space, divided not according to his taste, but according to the position and size of the centerboard and cockpit, and he made the best of what he had.

Now to look at the matter in another way, let us suppose a man to be about to build a house in which he is limited to one story, and in which it is necessary that width should be restricted far more than length. He would take naturally a height that would allow him to stand erect with ease; next for his sleeping apartment he would take a length at least a little greater than this height, while as to breadth he would be less particular, leaving room for a chair on each side, a table in the middle, and a passage on each side between them. Now he has all the room necessary to stand, to sleep, or for free movement in any direction. If he wants more than one apartment he will add one forward for kitchen and one in the rear for bed-room, retaining the middle one as a living and dining-room. These are the essential elements of a house in their simplest form, and if at the same time it is the builder's object to inclose the least possible bulk and with the least area of surface, it is evident that he will adopt the simple box-like form of the mansard roof rather than the angles and gables of the Gothic order.

These elementary ideas should guide the yacht builder or designer, as the necessity for an economic division of space is always more imperative afloat than on shore, and the conditions he labors under are practically those we have described. Suppose that in place of having his space already divided into certain portions by the form and construction of the boat the problem is given to him under altered conditions; to utilize to the best advantage a certain bulk of so many cubic feet. The natural method of proceeding would be as above, to place it in the form of a prism, a little deeper than a man's height, say 6ft. to 6ft. 3in., as narrow as is consistent with a free fore and aft movement, and as long as possible, giving several apartments 7ft. long or over for a crew, galley, saloon and sleeping cabin. It is evident that such an arrangement as this is the most convenient and comfortable that can be had under the assumed conditions, and at the same time an examination of the accompanying plans will show that the boat of good depth and of 4 to 6 beams in length is the one best adapted to such a disposition. The plans show the deck, vertical section and cabin floor plan of the cutter described last week, while the three small cuts show the midship sections of Cinderella, the Design and a typical cutter of Clara's beam. The arrangement of berths, etc., in the first, is not to scale, but merely shows the general plan followed in boats of wide beam. The wood and lead keels in all three are only approximate.

"Room" is a rather indefinite term, its meaning differing with each individual, from the young sailor who rolls in a blanket and turns in contentedly on top of a 20in. locker to the man who wishes to entertain on his yacht as he would at home and whose menu each day must rival that of his club in town. In its ordinary application, however, to a yacht of sufficient size to make life aboard not only practicable, but comfortable, it includes of necessity quarters for two or three besides the owner and crew; a comfortable cabin that shall always be available, and a sufficient space for steward's pantry, icebox, stores and galley. To do this, say for a party of four, requires not only a certain number of cubic feet of space, but also that this bulk shall be disposed of in such shape as to be readily utilized.

In this disposition of the space at their disposal American and English builders have differed as radically as in other details. In the old American sloop of great beam and shoal draft the space was divided up about in this manner: A cabin of good size, obtained by a high and wide house, easily entered from the cockpit by a short flight of steps, and lighted by large windows in the sides of the house as well as by a skylight. In a boat of 50ft. or upward the centerboard trunk occupies a space at least 15ft. long, 1ft. wide and extending from keel to cabin top; enforcing a certain fore and aft division, occupying the best space in the boat, and driving the cabin as far aft as possible. The cabin itself, of good size, has a wide floor where not encroached upon by the centerboard, it has a locker on each side, perhaps making up into beds, and back of each of these under the wings is a permanent berth, the cabin being the main sleeping apartment. Forward, on the starboard side, is a very fair stateroom for the owner, and forward of this in turn is sometimes a captain's room, rather cramped and contracted, as it is only partly under the cabin trunk. On the port side of the centerboard is a passage from main cabin to forecastle and galley, opening on which are pantries, w.c. and perhaps a small stateroom. The forecastle is but a poor hole at best, low, cramped and difficult of ventilation, and the galley is sometimes doomed to form a part of it, a very undesirable arrangement. Abaft the main cabin is a waste space beneath the cockpit, small, dirty and inaccessible, used for stowage of lines, anchors, etc., while beneath the floor the ballast and water tanks occupy all the space. Besides the berths the wings also afford room for some extra lockers. The principal space then is in the cabin, where most of the party must sleep, the stateroom making up only one berth.



On deck the space is largely taken up by the cabin house, the gangways, 2½ or 3ft. wide, give little aggregate room, especially as the boats partly obstruct them. The cockpit, however, is apt to be large, and from it the cabin is easily reached.

In the new type of centerboard boat, such as Cinderella, there is an improvement over the old; the beam is less and the freeboard greater, while the cabin house is lower for the same amount of head room. The forecastle and galley are better, and the outside keel may leave some room for stowage under the floor. The cockpit, however, coupled with the necessity of keeping the cabin abaft the centerboard trunk, prohibits an after cabin, and entails much waste room aft.

Not merely the altered proportions of the boats, but the different climate, uses and general conditions, have brought about a totally different disposition of space in English yachts. The increased depth and lessened beam have cut off the house, giving a flush deck, and at the same time removed the wings at each side, which space is of little use, while the whole form of the boat gives an excellent fore and aft arrangement of two or three separate rooms, of moderate width, but of good length and height. The odd corners and angles of the sloop, such as space about and below cockpit, in wings under side decks and far in the bows, disappear almost entirely.

The general arrangement includes a flush deck, a companion leading to a passageway below, and abaft this a separate ladies' cabin, with lockers, wardrobes and two good berths. Forward of the passage is the main cabin, used as a common meeting room and for dining, but not, as a rule, for a dormitory in a boat of any size. In all large yachts the owner's stateroom is forward or abaft the saloon, and one may be had in a boat of the size of the design, at the cost of some other features. The general points of the two methods, to compare them, are in the American a large cockpit, a main cabin of good size, used also as a sleeping apartment, and a single stateroom for the owner; in the English there is no cockpit, but a good double stateroom reached from a passage, a stateroom for the owner opening into the saloon, and one or two berths in the passage, while the saloon itself is not used for sleeping, but is always neat and in order for use as a parlor or dining room. This plan, of course, secures a greater degree of privacy, and is specially desirable where ladies are of the party. Besides these features there is a roomy portion of the boat about the mast devoted to the steward's department, while the forecastle, long and high, is sure to be roomy and well aired and lighted. The increased depth of hull and the entire ballast on the keel also give a large space below the cabin floor, not only for watertanks and chain locker, but for sails, anchors, warps, coal, stores and other articles, a clear gain over the sloop.

MIDSHIP SECTIONS OF TYPICAL BOATS.

Looking first to the extreme type of boat, Clara presents a very good arrangement of internal space. The main cabin is 8ft. 9in. long, 8ft. 4in. wide, and with 6ft. 6in. under deck and 6ft. 2½in. under beams. The room is square, well lighted by a skylight 3x2ft., and contains a large locker in each side, and at the forward end a sideboard and closets. A swing table is permanently fixed to the floor. The breadth of floor is 3ft. 3½in., and of the lockers 2ft. Abaft this room is a space 4ft. 6½in. long, in which is the companion ladder. On the port side is a single berth extending partly into the after cabin to obtain the required length, under which are drawers and and closets. On the starboard side of companion is a toilet room with w. c. and a folding washstand of compact form. From this passageway a door opens forward into the saloon and one opens aft into the ladies' cabin, a room 8ft. 9in. long and 6ft. 4in. high under deck. On each side is a good berth with a seat or locker in front; between the berths at the after end is a washstand, and at the fore end of each a closet, that on the port side forming part of the berth previously mentioned.

Forward of the main saloon is a space 6ft. long and 6ft.8in. under beams, the port side of which is taken up by a closet 20in. square and by a large bin for sails, a very convenient feature. On the opposite side is a closet table and locker, above which a swing berth is made up for the captain, sole occupant of this room. A light iron ladder leads to a square hatch in the deck, also used for sails. It is worth noticing that this room as well as the entire forecastle is handsomely paneled in Spanish cedar, neat, clean and light. The forecastle is 17ft.6in. long and 6ft.4in. high, the after end being devoted to the galley and pantry. Below the floors is a large space for sails, stores coal, water, lines, etc., while abaft the ladies' cabin is another compartment for sails and lines, opening from the deck, and far cleaner and dryer than the similar space beneath the sloop's cockpit. The deck space is 9ft. wide by 63ft. extreme length, and though narrow for handling big spars its available area is better than in the sloop with a cabin house and a cockpit. Clara is designed for racing rather than any other purpose, and the owner's cabin has been omitted, but if desired the main cabin could be shortened so as to admit of a fairly large owner's cabin.

The design shows a different arrangement, the captain's room being omitted to give more space to the owner and his friends. The saloon is 9ft. long and nearly 10ft. 9in. wide, with a height of 6ft. 2in. under beams. The lockers are large and comfortable, 6ft. 6in. by 2ft. 4in. At the head of each is a sideboard, 2ft. 3in. square, above one being a bookcase and above the other a plate cupboard. The floor is 5ft. wide between the sideboards and 4ft. 6in. between the lockers, a width that is ample for table and passageway. The ladies' cabin is 8ft. 9in. long and 10 to 10ft. 9in. wide, with 6ft. 3in. headroom. The berths are 6ft. 4in. long and 2ft. 3in. wide, and the lockers are 10in. wide. There are two wardrobes 2ft. 5in. by 3f., and reaching from floor to deck, and a large washstand against the after bulkhead. This room—large, well aired and lighted—is far superior to any apartment on board a sloop, even of larger size. The space between the saloon and the after cabin is 6ft. 3in. long and 11ft. wide. In the center is the companion ladder, 1ft. 6in. wide, a gain over the narrower boat. On the port side is a locker in the form of a large sofa, used if necessary for a bed. On the starboard side is a berth, or by a slightly different arrangement a good stateroom may be had there.

This space is also used for a smoking room, while the closet under the stairs serves for oilers and such gear. The captain's cabin is dispensed with, a disadvantage, as his dignity and authority are better maintained if he is not berthed with the crew, but in its place is a large toilet room with w. c. and folding lavatory, and on the opposite side a dresser and steward's pantry. The forecastle is 15ft. long and has over 6ft. 3in. headroom. The galley is in the after end, and there are besides, lockers, folding cots, and a large closet in the bow. The deck, 7ft. long and 11ft. 4in. wide, gives plenty of room for all purposes, as it is only obstructed by the skylights and companions, 2ft. wide. Even with boats swung in there is good space between them and the hatches, while the available room for handling canvas and spars is greatly in excess of the wide sloop or the 6-beam cutter. Forward of the main skylight is a flat hatch for sails, with a corresponding hatch in the floor of the cabin, by which the sail bins in the hold are reached; while under the main companion is a second hatch in the cabin floor.

An inspection of the drawings will show that the interior of the yacht is utilized to the last inch, the only waste space being in the extreme end of the counter, the bow being filled by a large locker or closet, which, owing to the height, is readily accessible. Every part is easily reached and of such form as to be available for stowage of some kind. Part of this is due to the general form, but the interior space is still further increased by the improved construction, and this opens up a most important subject which we can only touch briefly on now. The construction of the American sloop is familiar to all; a frame of heavy moulding, at least 5in. at heels and 3in. at heads, planking of 1¾in. yellow pine spiked or perhaps part treenailed on, and inside a 1¼in. skin of more "yaller pine," nice and fat in all probability, laid on the frames about as carefully as the siding is laid on a barn. This makes a side of 7 to 8in. thick, increased still further by the interior paneling and purely decorative part of the cabin.

Cinderella is probably the best built boat of her class yet turned out, the limit of lightness is probably reached in her, and her scantling cannot be cut down without a loss of necessary strength, and yet of her displacement of 42 tons only 17 is in the form of ballast, while in Clara's 37.5 tons the keel claims 21 tons, or the hull of the former weighs 60 per cent. of the total displacement, and of the latter only 44 per cent. In the design the figures are, displacement, 39.5 tons; ballast, 23 tons; ratio, 42 per cent. Cinderella is a remarkably well built yacht, and her scantling makes a fair showing for her class. The frames, sided 3in., are moulded 5in. at heels and 2¾in. at heads, the wales are 2in. thick and the other planking 1¾in. The garboards are of 2½in. oak, carefully fitted so as to unite the keel and frames as firmly as possible, the upper edges being squared with the adze to the thickness of the adjoining planking, 1¾in. Ample shelves, clamps and bilge clamps, all well fastended, dispense with the necessity of heavy ceilings, and that much weight is saved.

Now to contrast this construction with Clara or the design: The frames are of steel angles, 2×2×¼in., spaced 30in., with two steamed oak frames 2½×2in. between, the actual spacing being thus but 10in. The planking, 1½ to 1¾in., is bolted to the steel frames and copper rivetted to the oak. The frames are braced by diagonal straps of plate iron on their outer surface, over which the planking is gained. Suitable bilge clamps under the lockers serve to stiffen the whole structure and there is no interior ceiling. Above the tops of the sofas and up to the clamps is a thin paneling 1in. thick, so that the extreme thickness of side is but 1½ and 2 and 1in., equal to 4in. in cabin. The strength of the construction has been proven in such boats as Clara and Genesta that have not only raced hard for several seasons, but have crossed the Atlantic in safety.

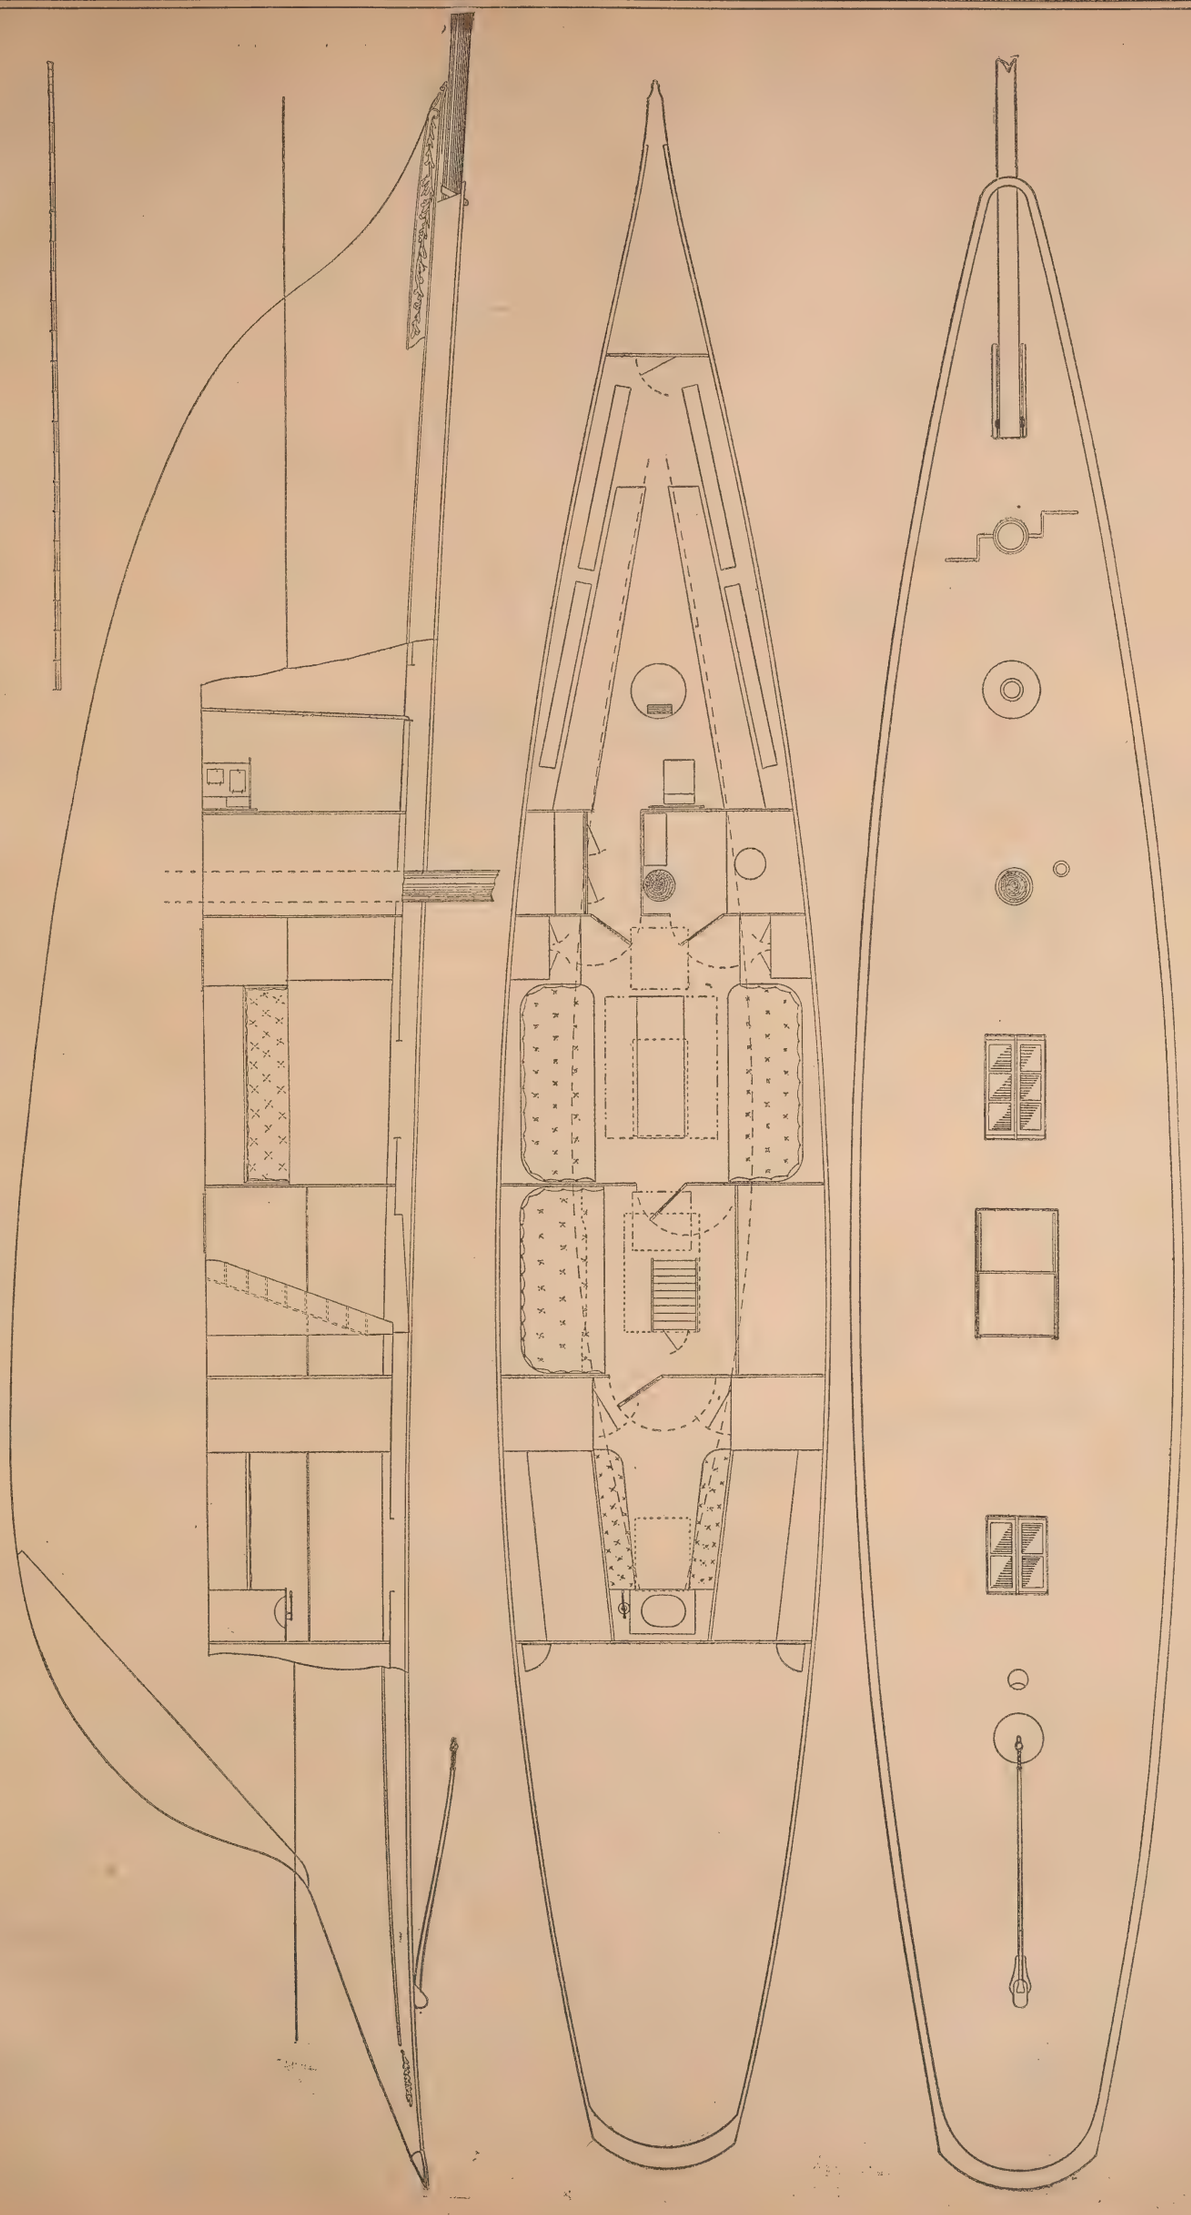
Why such yachts are at once strong and light is evident from an inspection of the three sections. In the first place, the easy form, slight bilge and reduced sail area makes the strain to which they are subjected comparatively light. In the second place, the sides of the hull approach a straight line form from keel to gunwale, making approximately a box girder effectually braced to stand all strains. In the third place, instead of being cut in two in the most vital part by a cabin trunk above and a centerboard slot through the keel, these two sides are firmly united to the solid keel at their lower edges and to the uncut deck beam and the deck at their upper edges. The importance of this point is evident on reference to the cross sections. It is well known that the strongest of all forms is the triangle, and that all bracing of bridges, roofs or girders is simply a division into a series of triangles. If three spars of equal length be lashed together to form a triangle, no amount of pressure can change the form; the strain on any angle is transmitted to the other members. Now, suppose four spars be lashed together to make a square; a pressure on any one angle will change the shape of the figure, and its rigidity can only be secured by adding a fifth spar from corner to corner diagonally, thus dividing the figure into two triangles. This simple idea is the basis of all framing and bracing. Now to apply it to the yachts under consideration.

In the keel cutters of moderate beam the transverse section of any point approaches a triangle, two sides being made up of the sides of the boat from keel to planksheer, the third being the deck beam, whole and uncut. In Clara and the design all the deck beams are uncut save one at the companion and two abreast of skylight, so any pressure is transmitted from side to side by the deck beam and the form remains unchanged.

In the center-board boat, however, the conditions of the square are carried to an extreme. The sides, instead of being approximately straight from keel to deck with a light bilge well reinforced by the fore and aft arch of the bilge clamps, are composed of a more or less flat floor, a marked angle at the turn of the bilge, a straight side above; another angle at the deck, still another at the joint of cabin trunk and deck, and a fourth at the union of side and roof of cabin trunk. Thus there are three if not four distinct angles on each side, beside that at the keel, so that instead of the simple triangle the section now represents a polygon, having for its sides the floor on each side, the part from the bilge to the deck, the two half-decks or gangways, two sides and top of house, or nine sides and nine angles if in a very flat floored boat, or in the case of Cinderella as shown, seven sides and seven angles, without any chance for a diagonal brace. What figure in itself could be weaker than that shown? A blow or pressure on the side at planksheer would at once crush in the cabin trunk, as the plain uncut deck beam of the other figures is replaced by a collection of five pieces and four angles. Again the long, narrow and deep boat is effectually braced in a vertical direction, a point in which the flatter form is conspicuously lacking, as the keel receives no vertical stiffening from the sides or floor, and the result is apt to be a hinge joint under the mast and at the fore end of trunk, requiring huge side keelsons to keep the boat tight. The subject of the strains to which a yacht of any form is subjected, and the best methods of neutralizing them, is of the first import and worthy of being treated at far greater length, but the few hints above, incomplete as they are, may serve to make some of the leading principles more plainly understood.

JULIA, SCHOONER.

OVER a year ago Mr. A. Cary Smith designed for Mr. C. W Chapin a shoal draft cruising schooner, the Whim, in which Mr. Chapin cruised about the Florida coast all last winter, the little boat making the trip down the coast and back. Her owner was so well pleased with her successful performance that he ordered a larger yacht from him, another cruiser, but with speed more prominently in view than in the Whim. The new yacht has just been completed by Messrs. Harlan & Hollingsworth, of Wilmington, and was successfully launched on Nov. 30, being christened Julia by Mrs. S. K. Smith. The model is considered by those who have seen it as one of Mr. Smith's best efforts, the dimensions being as follows:



Length over all	95ft.
Length L.W.L.	80ft.
Beam, extreme	21ft.
Beam L.W.L.	20ft.
Draft	9ft. 7in.

The keel rockers upward from a moderately raking sternpost into a clipper stem, the forefoot being well cut away. The midship section is quite deep but of an easy form, and from the method of construction followed the lead keel is practically "outside." The hull is of steel except the keel, the garboards being ⅜in. thick and the other plating ¼in. The lead ballast, 42 tons, is cast in large blocks and stowed directly on the skin, the blocks being recessed to fit over every rivet head, so that the result is the same as it would be with a solid lead keel bolted beneath the boat. The frames are of 2½x2½ steel angles, spaced 21in. with floors of 5-16in. plate, 30in. deep. The keel construction differs from that of Priscilla in having a regular taper to the siding, 8in. wide abreast the trunk and diminishing to 1¼in. at stem and stern, with a moulded depth of 3½in. The hull is divided by three watertight bulkheads. The room below is larger than usual, owing to the reduced scantling due to the use of steel. Besides a large cabin there are six staterooms and a cabin for the captain, the lighting being partly by deadlights in the sides. The rig is adapted for cruising, the lengths of the spars being as follows:

Foremast, deck to hounds	48ft.
Foremast head	7ft. 6in.
Foretopmast, heel to hounds	27ft.
Fore boom	24ft. 6in.
Fore gaff	23ft.
Mainmast	50ft.
Mainmast head	8ft.
Maintopmast	30ft. 3in.
Main boom	46ft.
Main gaff	28ft.
Bowsprit outboard	11ft.
Jibboom, extreme	25ft. 6in.
Jibboom, outside of cap	15ft.

The overhang is 10ft. aft and 5ft. forward. Mr. Smith is not only an advocate of the clipper stem, which he has given to Cinderella and the present craft, but he goes still further in advocating the adoption of figureheads on yachts in place of the plain, straight stem on the one hand and the commonplace and meaningless gilt scroll on the other. The idea of a full-carved figurehead on a boat of 50 to 80ft. is quite a novelty; whether it will take must depend largely on the manner in which the design is worked out by a competent sculptor. To many yachtsmen the plain plumb stem will always seem most appropriate and suitable, but there are others who prefer the overhang forward with some ornamentation; and we should like to see this feature, which now seems likely to be largely adopted, treated by competent hands from a purely artistic standpoint.

NEWARK Y. C.—The Newark Y. C. has put down a fine set of marine ways capable of hauling out a boat 75. long. As usual, the club house will be kept open all winter, and every effort will be made to make it an attractive and pleasant place to spend an evening, to plan for next season's sport and to discuss the cruises and races of the past. A number of additions to the club fleet are anticipated. Price, of East Newark, has completed a handsome cabin catboat 22ft. long, for Mr. Fred Mueller. She is intended as a cruiser and as a roomy, comfortable boat, will rank ahead of many boats much longer than she is. As soon as she is out of the way he will set up a 20ft. catboat for Mr. E. L. Phillips. He has also finished a model for a 38ft. racing sloop that is greatly admired.

DECK AND CABIN PLANS "LENGTH AND SAIL AREA" CUTTER—WM. FIFE, JR., FAIRLIE, SCOTLAND.

THE ICE YACHT SEASON.

As usual, the ice yachtsmen are ready and waiting only for more cold weather. The Hudson River I. Y. C. has elected officers for 1886-7, as follows: Commodore, John A. Roosevelt; Vice-Commodore, J. C. Baron; Secretary, E. P. Rogers; Treasurer, Archibald Rogers; Measurer, C. Van Loan; Regatta Committee—J. A. Roosevelt, H. Livingston, J. R. Roosevelt, N. G. Morse and N. H. Storms.

The sailing regulations were also altered at the last meeting, the classification now being as follows:

First Class—Measuring 600sq. ft. of sail and over.

Second Class—Measuring over 300sq. ft. of sail and less than 600.

Third Class—Under 300sq. ft. of sail.

The officers of the Poughkeepsie I. Y. C. for 1886-7, elected Dec. 2, are: Commodore, Theo. Y. Johnson; Vice-Commodore, Wm. R. Innis; Secretary and Treasurer, Thos. H. Ransom; Regatta Committee—Theo. Y. Johnston, Theo. Van Kleeck and Wm. F. Booth.

Mr. Philip Phœnix was elected a member. He has just had shipped to Tuxedo Park a new ice yacht built for him by Jacob Buckhout, of Poughkeepsie, builder of the finest yachts on the Hudson. Her dimensions are: Center timber, over all, 31ft.; center of runner plank to rudder head, 16ft. 8in.; beam (track between runners), 18ft.; length of main boom, 25ft. 6in.; length of jibboom, 10ft. 6in.; length of gaff, 11ft.; length of spar, 21ft.; hoist, 14ft.; mainsail on boom, 24ft.; mainsail on gaff, 10ft.; mainsail on beach, 27ft.; jib on foot, 9ft. 6in.; jib on hoist, 10ft. 6in.; jib on leech, 15ft. 6in.; area mainsail, 239sq. ft., and area jib, 75sq. ft. The runners are 5ft. 2in. long, and rudder 3ft., with cast iron shoes. The standing rigging is of ⅜in. galvanized iron wire rope, sails of No. 9 canvas, by Sawyer, and blocks and cleats of rustic wood, made by the builder. The lateen sail has fallen into disfavor on the Hudson, as it is considered dangerous by many; but the Shrewsbury River sailors still prefer it on account of the extra speed. The Scud, brought from the Shrewsbury last winter and still stored at Poughkeepsie, has her big lateen sail on her. The Dreadnaught has been sold by Capt. Chas. Throckmorton to Mr. Geo. B. Moffat, of New York. Her former owner reserves his sails and racing runners and will probably build another boat. No dates have been set yet for the race for the championship pennant held by the Poughkeepsie I. Y. C.

NARWHAL, STEAM YACHT.

On Nov. 29, at Noank, Conn., Messrs. Robert Palmer & Sons launched a new steam yacht for Mr. Chas. H. Osgood, formerly owner of the Sophia. The Narwhal, as she was christened, was designed by Mr. Gustav Hillman, designer of Nourmahal, Electra, Reva and Radha, and is of the following dimensions.

Length over all	138 ft.
Beam	18 ft. 4 in.
Hold	11 ft.
Draft	6 ft.
Displacement	125 tons.
Area midship section	75 sq. ft.

The yacht is of wood, the keel, stem and sternpost being of white oak, deadwoods and keelsons of yellow pine and frames of white oak, hackmatack and chestnut. The keel is sided 7in. and moulded 9 to 18in.; frames sided 6in. abreast of engines and 4in. elsewhere. The main keelson is sided 8in., moulded 10in., with boiler keelsons 7x12in. and 50ft. long. The planking is of 2in. white oak, treenailed and copper-fastened up to 4ft. above the loadline. The shelf is made up of three pieces 2½x8in. The clamps are each 2½x7in., making a total width of 14in. on each side. The bilge strakes are 2½x9in., all, with the 4in. ceiling between, being of yellow pine. The deck beams are of white pine with yellow pine over the engine space, and the deck is of 2in. square white pine, blindfastened with a 3in. oak planksheer.

There are three transverse bulkheads of iron, one in the bow, one forward and one aft of the engine and boilers. The fore part of the boat is given up to the officers and crew, with mess room and galley. Aft is a wide companion leading to a passage with a stateroom on each side, and also opening into the main saloon, 14ft. long and finished in mahogany, oak and maple. Between the saloon and the boiler space are two large staterooms on the starboard side, and two others, with a passageway, to port. The pantry is just abaft the bulkhead, and has a dumb waiter leading to the deck. Beneath the floor are water-tanks of 2,000 gallons capacity. On deck there will be a pilot-house and smoking-room. The side will be finished with netting in place of a bulwark, in true steamboat style.

There are two inverted direct acting vertical compound engines 14 and 24½x16. There are two Scotch boilers, 6ft. 6in. diameter and 10ft. high, working at 125 lbs. The wheel is of composition, 5ft. 10in. diameter and 8ft. pitch, with a 5in. steel shaft. The vessel will be schooner rigged.

LIGHTNESS IN CONSTRUCTION.

Editor Forest and Stream:

It was not my intention in my former letter to create the impression that the advantages of light build are only limited to the extreme type of English racing yachts, and I regret that such a construction should be put upon my remarks.

Although the speed of the four-beam vessel is not affected detrimentally to so great a degree by the lack of stability and consequent loss of forward impulse as the latest racing cutter, nevertheless the statement holds as true in her case as in that of the racing crack, hence my objection to stability is well founded and does affect the question.

If the reader has followed my former letters he will see that I had no intention of dealing with construction except as it related to the confessedly representative racing types of yacht, to which the four-beam cutter does not at as yet belong. Whether she will be classed with the cracks or not in the future is a matter of conjecture, but the fact remains that the possibilities of her dimensions have not been intelligently worked up.

Handicapped by the too large displacement invariably dealt out to her, is it at all surprising that the four-beam boat is in such disrepute among the cracks?

In the cruising boat, pure and simple, to err in the direction of large bulk is permissible, as space is, of course, a *sine qua non* in that class of yacht.

The axiom that large displacement and beam are incompatible with speed is too often forgotten. Here is a large field for study and comparison; this is where the educated designer possesses an immense advantage over the "rule o' thumb" apostles of yacht modelling. Let the eye whittler deviate from his native style of yacht and the result is a lamentable failure like unto the yacht Atlantic, epitome of all that is great and good in Bay Ridge architecture.

Length for length the vessel possessing the most stability and consequent increased sail-carrying power will be the faster, supposing the water always be smooth. (These remarks do not refer to tubs.)

But these conditions in the natural order of things cannot be; therefore, beam being inimical to speed in troubled water—up to that point when a further decrease would be of no more benefit to performance on account of wasted wind energy—a happy mean in that important element must be sought. This, I claim, has been found incorporated in the cardinal dimensions of the

DEEP DRAFT CENTERBOARD.

THE CLYDE CHALLENGE.

The following correspondence has passed between the New York and Clyde Clubs:

NEW YORK, Oct. 28, 1886.—Dear Sir—Your favor of the 15th inst. was duly received and read last evening in connection with the other documents heretofore received by me from you. I herewith inclose an authentic copy of the letter of gift of the America's Cup, as requested by you. I have further to advise you that the New York Yacht Club sincerely regrets that it cannot regard your favor of Sept. 21 as a sufficient challenge for the America's Cup. It heartily appreciates the sportsmanlike tone of your club's challenge. It, however, acts merely as a trustee under the letter of gift. It neither builds nor owns a yacht or vessel. It has no control whatever over the Mayflower or any other vessel owned by a member of the club, except while sailing under the club's rules. It is respectfully suggested that a legal challenge can emanate only through a club in favor of a member owning a boat already built; otherwise the conditions as to place of construction, custom house certificate of measurement, and a statement of the dimensions, rig, and name of the vessel might be evaded. It is also thought that the acceptance of your challenge in favor of a yacht not yet even designed might put the trustee in a false attitude if the club were to receive a challenge from the owner of an already constructed yacht, who would comply with the letter of gift. The condition as to giving six months' notice, was, no doubt, inserted that the club holding the cup might build a boat, should such action become necessary, after receiving a statement of the dimensions and rig of the challenging vessel. The club is at pains to make this statement, because it desires not to be misunderstood by such a straightforward, courteous adversary. It is needless to add that if a challenge in compliance with the letter of gift be forwarded, the New York Yacht Club will promptly accept the same. Yours very truly, JOHN H. BIRD.

GLASGOW, Nov. 18, 1886.—Dear Sir—I have to acknowledge your courteous letter of the 28th of October (which, I may mention, did not reach me till the 12th inst.) inclosing an authentic copy of the letter of gift. When my cable message and letter of Sept. 21 were dispatched to you, on behalf of Mr. Bell, we had before us only Mr. Schuyler's letter of gift as printed in the *Field* of Sept. 26. That copy did not contain the condition that a statement of the name, rig, dimensions and custom house certificate of measurement should accompany the six months notice, which, from the authentic copy you have now sent, I see is a condition to be observed in challenging for the Cup. I mention this to show that there was no intention on Mr. Bell's part to omit the observance of any of the conditions of the gift. Having made this explanation, Mr. Bell desires me to express his entire concurrence in the views so frankly and clearly stated in your letter of the position of the New York Yacht Club as trustee of the Cup, and to say how he appreciates the spirit in which his notice of challenge has been received. I am now able to inform you that the yacht Thistle, which is to contest for the Cup, is already in hand, and that the progress in her building will be such as to enable me to send you a certified statement of her rig, dimensions, and tonnage from the board of trade certificate, along with the prescribed six months' notice, in good time for your next year's racing season, which I see from your rules extends from the third Tuesday in June to the third Tuesday in October. I have already sent you documentary evidence of Mr. Bell's authority to challenge on behalf of the club, and when I have sent you the six months' notice of the day for the proposed races, accompanied by the British equivalent to your custom house certificate of measurement (viz., a certified extract of the vessel's register stating her rig, dimensions, and tonnage), the formalities of the challenge as stated in the letter of gift will, I believe, be fully complied with. If anything else is necessary, please advise me of it. Yours truly, WILLIAM YORK.

THE DEATH OF PEGGY.—The pennant of the British cutter Galatea, in winter quarters at South Brooklyn, drooped mournfully at half mast yesterday. Peggy, the pet of the master, mistress, skipper and crew of the white-hulled racer, is dead. Peggy was a female whose species has been immortalized by Darwin. Captain Daniel Bradford of the Galatea says he believed Peggy exemplified the truth of a theory opposed to Darwin's, that the monkey descended from man. He thinks Peggy descended a few pegs and then hove to. "All that creature wanted to make her human," said the black-bearded British sailor, "was the English language. She could learn almost anything but that. She had a language of her own that we couldn't understand, which shows how dull we are, but she could understand our language although she couldn't talk it." Peggy died at noon on Tuesday, in the cabin of the cutter. She was ill about six hours. Her sickness began with convulsions. Captain Bradford bathed her in mustard water, and gave her several doses of brandy, which she accepted with great docility. While doctoring her himself, he sent for a regular physician, and notified Lieutenant Henn of the monkey's sickness. When the Lieutenant and the doctor boarded the cutter, after a hurried drive from the Victoria Hotel, Peggy was dead. Captain Bradford wrapped the body in the Union Jack, and made preparations for a Christian burial. He got four skippers of yachts lying in the basin to act as pall bearers. They carried the body to the head of the pier, where a grave had been made. Peggy was lowered into the grave, and the captain put over it a little slab of pure white marble. Peggy was born in Malta, about three and a half years ago. She was purchased from one of the natives of Malta by the mate of the schooner yacht Shamrock, and thus had Irish blood in her veins. The mate of the Shamrock took her to Southampton, where Captain Bradford, at Mrs. Henn's request, bought her and took her to the Galatea. Peggy could pull on a halliard like a trained sailor, and she always helped the crew to make and lower sail. She manifested a great interest in the cutter's races. When the Galatea slipped ahead of her rivals, Peggy would run out on the bowsprit and jump up and down and chatter as if she had gone mad. Captain Bradford said there would be mourning in England when the Galatea's crew over there heard that Peggy was dead.—*New York Sun, Dec. 2.*

COOPER'S POINT CORINTHIAN Y. C.—The prize winners in this club for 1886 are as follows: First Class—Humes, 13 starts, 5 firsts, 4 seconds; Norcross, 12 starts, 6 firsts, 5 seconds; Fitch, 9 starts, 1 first, 3 seconds. Second Class—Wilkins, 15 starts, 10 firsts (2 firsts over the fleet), 4 seconds; Almond, 15 starts, 4 firsts, 6 seconds. Third Class—Anderson, 16 starts, 1 first, 3 seconds; Touxen, 2 starts, 1 first, 1 second; Waif, 3 starts, 1 first. First Class Tuckups—D. McCarty, 2 starts, 1 first. Second Class—Clara H., 3 starts, 3 firsts. Third Class—Sharp, 3 starts, 2 firsts; Little Boy, 2 starts, 1 first. Tri-weekly races took place through the season without a single postponement on account of heavy winds or stormy weather, commencing 1st of May and ending in November. Two second and two third class boats are in course of construction for the club. The fleet will make their first cruise in salt water some time in May next. Twenty-seven members joined the club during the year. The officers now are: Commodore, W. G. Cook; Secretary, Charles Anderson; Treasurer Theodore Jones. Eight captains passed a successful examination during the year. This club has been perpetuated (being the first on the Delaware) purely for the benefit of amateurs. And it is certainly wonderful how rapidly they learn, especially the youngsters. The strictest discipline is observed. The season has been a very prosperous one, and the races have been sailed without any disputes. The men are improving rapidly in seamanship, the sailing rules are rigidly observed and the members are Corinthians in the true sense of the word.

THE CONSTRUCTION OF CENTERBOARDS.—The sloop yacht Norah of Belleville, Ontario, has sailed this season with a centerboard constructed on Capt. Moody's plan, described in the FOREST AND STREAM of July 23, 1885, and it has proved very successful. The owner of Norah writes as follows concerning it: "The centerboard as built is about 19ft. long and about 6ft. deep. The bottom bar which turns up at each end of the board is made from a bar of iron 2½in. square, planed to an edge in V-shape. The wood consists of hard maple plank, 6in. wide and 2½in. thick. Beginning at the bottom between the first and second plank there is a bar of iron 2½in. wide and ⅝ thick the whole length of the board, between the second and third the same sized bar, and so on to the middle of the board, above which the iron bars are ½in. thick. The builder would not undertake to put bolts through from top to bottom as suggested in the diagram you sent, but it was put together with long, heavy dowels, and plenty of them, so that it is as stiff as possible. The result was, the yacht's performance here at the Lake Association regatta last July, and the further result that we can raise and lower the board when she is at full speed with her sail on her without shifting her course. The Norah is now having a new stern put on her, and we are, under Cuthbert's direction, having her lead put along but on top of her keel, extending through her deadwood to the sternpost. It would not do to put the lead outside in our waters on the Bay of Quinte."

AN ENGLISH CENTERBOARD YACHT.—Mr. W. J. Hodge will this week lay the keel of a cutter yacht of 15 tons B.M., to be built to the order of Dr. W. Chalmers, Charmouth, Dorset. This vessel designed by Captain H. E. Bayly) will be somewhat of a novelty as being intended to cruise principally from Lyme Regis (the harbor of which dries at low water, and is subjected at times to a heavy run). The keel is to be of iron 3ft. wide at the bottom in the center, tapering toward the ends, its weight will be upward of 7½ tons. Although necessarily of light draft (4ft. 6in.), and having a centerplate, the yacht will be of comparatively large displacement, to give as much accommodation as possible. The owner intending to live on board almost entirely during the summer months, there will be an after cabin with two sleeping berths, and the sofas in the main cabin will have folding backs, which, if required, will turn down and form beds, thus giving comfortable sleeping accommodation for four persons. The forecastle will have nearly 5ft. 9in. head room, will be large and commodious, and have cots for two hands. The main and after cabins, both under a coach-house roof rising 6in. above the deck, will have 6ft. 2in. head room. This cutter (which we understand is to be named the Murre) is to be ready for sea by the 20th May next. Should she prove a success she may be only the first of others of a like type which would appear to be well adapted to yachtsmen restricted to dry or bar harbors.—*Exeter (Eng.) Post.*

ARAB AND GLEAM.—Mr. T. L. Arnold who, with Mr. Lawton, built the Arab last winter, has sold his interest to Mr. Lawton, and purchased from the latter the sloop Gleam. Under the new rules of the A. Y. C., a longer stem is permissible and will be added, to the extent of 2ft., and her afterbody above water will be altered, giving an easier form. The mainsail will be shortened 2ft. on luff, with the same peak and gaff and masthead lowered 3ft., with a housing topmast and big topsail. The Gleam has been noted as a fast boat in light weather, and these alterations should improve her considerably, as she has always carried too much weight aloft.

PELHAM Y. C.—At a late meeting this club voted to disband and on Dec. 4 they met again and reorganized with the following officers: Wm. E. Wilmerding, Commodore; Geo. C. Foster, Vice-Commodore; F. D. Pelton, Rear-Commodore; F. H. Ballard, Secretary; Philip Cross, Treasurer, and Thomas E. Brown, Jr., Measurer. It is proposed to unite with the New Rochelle Y. C. and plans for the union are under consideration. The two clubs, if joined, will number 245 members.

A CRUISE AROUND THE WORLD.—Captain F. A. Cloudman, an old sailor, has just started on a long cruise alone in the little keel sloop Outing. His boat was launched at Savannah, whence he will sail for the isthmus, the boat being carried across by rail. Coasting up the Pacific coast, the Outing will work her way across by Behring Straits, thence down the Asian coast by India to Suez, up the French and English coasts to Iceland, Greenland and across to Labrador, following the coast down to New York. It is expected that the voyage will take two years. The yacht is fully fitted out for a long and trying voyage, and her commander, a seaman of long experience, expects to make the trip a success.

WINTER CRUISES.—Wizard, sloop, Mr. C. H. Colt, is fitting out at Tebo's Pier, for a southern cruise. Hessie Wright, steam yacht, of Perth Amboy, was at Beaufort, N. C., on Nov. 28, on her way to Brunswick, Ga. Her screw was broken in the Chesapeake Canal. The Faunie, sloop, Twilight and Talisman, steam yachts, were also at Beaufort last week. Ladoga, steam yacht, has left Newport for Baltimore. Reva, steam yacht, was at Norfolk on Nov. 30, bound south.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. M., Brooklyn, wants good shooting in Missouri.

C. D. C., Hartford.—The puppies of a bitch which is in whelp when imported should be registered as imported.

MUZZLELOADER.—Tell us what kind of arm you want, whether to shoot conical and round bullets, price, etc., and we will direct you.

J. W. J.—We have heard Georgetown, on Winyaw Sound, spoken of as a desirable locality; or, try Beaufort and its surrounding waters.

A. A. A., Rhinebeck, N. Y.—1. Stoddard's Guide to the Adirondacks is the one. 2. We cannot tell you of a good locality for trapping mink and beaver.

S. H. E.—1. The bitch Temptation (A. K. R. 1590) is by Fogg's Don, out of Alden's Maud S. 2. The use of ferrets for rabbit hunting is forbidden in Massachusetts.

LOWER JEMSIG, New Brunswick.—1. For registry of your horse apply to J. H. Wallace, No. 241 Broadway, New York. 2. It will be necessary to register sire of dam.

A CONSTANT READER.—The two makes are about equal, an individual arm of one make may excel an individual arm of the other, but which is better can be told only by actual test.

E. N. B.—Gibson's "Complete American Trapper" will give information about the fox skin, and Manton's Taxidermy will be the thing for the bird stuffing. See list of books elsewhere.

S. D., Hastings-on-Hudson.—We know of no way of ridding your vines of English sparrows without at the same time destroying or frightening away the other birds. One successful device is to filter a liberal dose of red pepper down through the vines.

HAINES, Massachusetts.—1. We think the firm still supply the goods; write to some of the New York dealers. 2. The rifle stands well for accuracy and reliability. 3. The track we judge from the drawing to be that of a deer; it may possibly have been that of a caribou calf. The "barren doe" track notion is erroneous.

G. H. P., Centre Harbor, N. H.—Will you kindly give me through the columns of your paper the address of some good, reliable fur dealer where I can send my fur, as I have quite a collection, and oblige a constant reader of your paper? Ans. Send to Wm. Macnaughton's Sons, 79 Spring street, New York.

E. B. B., Hartford, Conn.—Can you give me a receipt for a dog food that will keep sweet for one or two weeks? I wish to avoid this everlasting food manufacturing. The patent foods do not "go down" with my animal. Ans. We know of no food that can be home-manufactured to equal the regular article supplied by the trade.

C. E. W.—Different breeds vary; the time is from 10 months on. Age for breeding depends on breed; smaller breeds may be bred earlier than large ones, which are fit at the second period of coming in season. Dogs should only be used in the stud sparingly until 18 months old.

AMATEUR.—Should a rifle bullet, when pushed into the breech fit tight enough to fill grooves or is the bullet large enough when it fits snugly to the rifling, but allows space between bullet and bottom of groove? Ans. Bullet is right when it fits snugly as described. When it is fired the pressure expands the lead so that it then takes the grooves.

NED, Fair Haven, Vt.—1. What varities of fish do the Government distribute for stocking waters? 2. Will landlocked salmon or lake trout thrive in same water as large-mouth black bass? Ans. 1. Carp, salmon, lake trout, whitefish, landlocked salmon, etc. 2. It depends on the size, depth and temperature of the water. You do not give particulars enough to base a reply on.

NOVICE, Boston.—1. Is it not inconsistent with the best results in shooting to have the hammer of the rifle "bob up serenely" into the line of sight in pulling on the firing pin, as is the case in many makes of rifles? 2. Why will Nimrods, in describing their adventures in your columns, persist in using the redundant phrase "fore-shoulder"? Has any animal a hindshoulder? Ans. 1. No. 2. No.

W. B. W., Danbury, Conn.—1. It will probably not injure your 30in. barrel to shorten it to 28in., on the contrary we have known several guns to be improved in their shooting by such modification. It will destroy the choke of your gun. A skilled machinist can do it for you; or if you wish to send it to a regular gunsmith, send it to the American agent of the gun. 2. The cartridge belt is largely used and is liked.

G. W. W., Fitchburg, Mass.—For trap shooting use an 8 or 10-bore; for field shooting a 10 or 12-bore. The gun you name is as good as any make. We do not express an opinion as to the best gun made in America, because there are several which are, for same money, so nearly equal in merit that there is no difference among them worth considering, just as there are many makes of carriages equally good.

BARCHLAND.—A commonly accepted theory is that, other things being equal, a 32in. barrel will shoot stronger than a 30in. barrel, because it will consume a heavier charge of powder. Practically, however, it has been proved that the shorter barrel is as effective as the longer one; in fact, some barrels have done better work after being shortened from 32in. to 30in. or 28in. This holds good with both 10s and 12s, choked and cylinder.

E. B., Boston.—1. Is it safe to trust a bitch six weeks with whelp for tape worm? 2. After whelping, would the treatment affect the milk? 3. In hunting rabbits with 14in. beagle, is it best to let them run in and kill? Can they go fast enough? Ans. 1. No, it would not be advisable. 2. It depends on the remedy. Giving a teaspoonful of powdered areca nut, and following this with a castor oil purge would be the best treatment. 3. If you want them to catch the game.

G. B., San Francisco.—Can you kindly inform me whether chilled shot (say in sizes from Nos. 5 to 8) is injurious to fine shot-gun barrels? There seems to be considerable difference of opinion upon the subject among gunsmiths of experience here. Could you refer me to any book or treatise where the relative merits of chilled and soft shot are considered? Ans. It is not injurious. We know of no work where the subject is discussed; there has been much about it in former numbers of the FOREST AND STREAM.

J. A. F., Lowell, Mass.—We know of nothing that will keep fleas off from dogs permanently. The flea powders are good so long as they last, and so are other remedies. If dogs, after being cleansed of fleas, get them in a day or two after, perhaps you will find on examination that their kennels need thorough cleaning, or if there are cats about the latter will serve as a constant source of flea supply. A Long Island dog owner recently solved the problem by killing all the cats on the place.

KEY WEST, Fla.—I would like to know what kind of ammunition was used in the revolver shooting of which score was given Nov. 25. With the fixed ammunition sold for S. & W. .32-cal. revolvers one cannot do close shooting, even if the pistol is screwed in a vise. Something else must have been used. Ans. The ammunition used was 5grs. powder with regular bullet; the shell is 19⅛in. in length. The regular charge is 17grs. The reduced charge of 5grs. was used to reduce noise and smoke in the gallery. Capt. Ira A. Paine has used the same weapon at Walnut Hill range, at 50yds., on the American Standard target, and only missed the six ring twice in 100 shots, shooting the pistol strictly off-hand. The scores we published are duplicated almost every night in Conlin's gallery.

Among the Many Novelties

Introduced by us last spring were the

Dead Finish, Waterproof, Braided Silk Fly Lines,
FOR SALMON, TROUT AND BLACK BASS.

These lines have given perfect satisfaction and stood the most severe tests. *They do not crack, chip or become sticky and stiff*, but remain soft and pliable. These lines are waterproofed through and through, not merely on the surface. They will not become tender in use or by age.

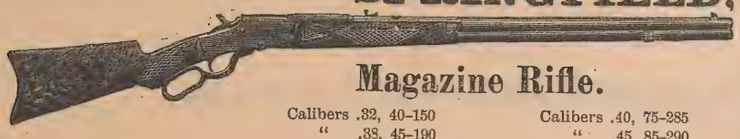
Also a new style **LANDING NET,** made of *waterproof braided linen line,* which prevents the hooks from catching in the meshes. The prices of these nets are only a little in advance of the old style made from twisted thread.

ABBEY & IMBRIE,
Manufacturers of every description of
FINE FISHING TACKLE,
18 Vesey Street (Fourth door from the Astor House), **New York.**

A NEW RIFLE.

Can now furnish guns for the following sizes Center-Fire Cartridges:

.32-38 and .44 Winchester,
.32-40, .38-55, .40-50 S. S.,
.40-70 S. S., .40-70 Ballard,
.45-70 U. S. G.



RIM-FIRE GUNS
Not Yet Ready.

Marshall, Texas, Nov. 23, 1886.

MESSRS. SCHOVERLING, DALY & GALES:

Gentlemen—I bought a Charles Daly Hammerless shotgun about six months ago, which came through your house. I don't think there is a gun in the State that can beat it shooting at the trap. It is superb—beautiful as a picture of one of the old masters. It is just simply a daisy. What I write you for now is to find out what it will cost to put a pair of cylinder bore barrels to it, as it shoots too close for birds.

Respectfully, (Signed) W. C. FIELD, of First National Bank.

Manhattan Hammerless.

This gun has been on the market for a few months, and has already made a reputation as the best medium-priced hammerless gun ever offered to the public. It is a machine-made gun. The workmanship and fitting are of the very best, only first-class workmen being employed. The material is the best that can be procured, the barrels are fine Damascus; the engraving is neat and clean.

PRICE:

12 Gauge, 7 to 8 1-2 lbs., - - - - $75.00
10 Gauge, 8 1-2 to 10 lbs., - - - - 80.00

CHRISTMAS PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of Christmas gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for Christmas. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL. D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2 50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR. C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

The Forest Waters the Farm,

OR, THE VALUE OF WOODLANDS AS RESERVOIRS. By ANTONIN ROUSSET, translated by REV. S. W. POWELL. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual of boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Fyshhe and Fysshynge.

By DAME JULIANA BERNERS. An elegant fac-simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By CHAS HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

DOGS FOR SALE.

Setters, pointers, spaniels, foxhounds, beagles, dachshunde, Newfoundlands, German tiger mastiffs, fox-terriers, Scotch terriers, Skye terriers, Yorkshire terriers, bull-terriers, bulldogs, pugs, French poodles, St. Bernards, mastiffs and black and tan terriers. Pups of all the above breeds constantly on hand. Those desiring to purchase will do well to consult me. WM. W. SILVEY, 135 South Eighth street, Philadelphia, Pa.

FOR SALE.

Pointers, Setters, Collie Shepherd and Beagles. Box 472, Pittsburgh, Pa.

HANDSOME LAVERACK SETTER BITCH, 6 mos. old, $15. A blue belton English setter dog, 18 mos. old, trained; sent for approval. Address F. N. FRIEND, Middletown, N. Y. dec2,2t

BLACK PETE EX ALTHEA.—ORDERS booked for choice cocker pups. Price $15. Althea never had a poor one, and has had three 1st prize winners. Also a fine Willoughby brood bitch, weight 10lbs. Price $20. HARRY D. BROWN, Waterbury, Vt. nov18,4t

Scotch Deerhounds.

Two fine bitch pups, whelped April 29, by Clovernook Kennels' Roy (Puddy ex Lassie) ex Gladys (Spring ex Fly II.). Pups are in fine condition, strong, healthy and immense frame, standing 24in. high and 5ft. 4in. in length from tip to tip. For extended pedigree and price

Address LEDGETOP KENNEL, dec9,2t Box 217, Port Henry, Essex Co., N. Y.

FOR SALE.—TWO HANDSOME BEAGLES, 9 mos. old, male and female, out of imported stock; have hunted this fall. Price reasonable. PAUL MASSEY, Newport, R. I. 1t

ST. BERNARD PUPS.

For Sale—A litter of smooth-coated pups, whelped Sept. 25, 1886, by Laurian (A.K.R. 4074) out of Lotta (A.K.R. 833); color, orange tawny and white and brindle and white; large and handsome; prices low. Address with stamp, FOREST CITY KENNELS, Portland, Me. dec9,2t

A RARE CHANCE.—BROTHER OF NED Obo for sale (A.K.R. 1476), black, white frill on breast, whelped April 29, 1884, is in perfect health, has had distemper and is offered for no fault; a fine hunter, perfect retriever from land or water, will not mouth his birds. Reason for selling—I have two setters and cannot keep three dogs. This dog is very tractable, can be taught almost anything and now does some thirteen tricks. Address DR. E. S. GAYLORD, New Haven, Conn. dec29,2t

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 16, 1886.

VOL. XXVII.—No. 21. NOS. 39 & 40 PARK ROW, NEW YORK.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price. $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

THE SCHEMERS BALKED.

GOOD news comes to us from Washington. There is a little gleam of comfort for the friends of the National Park in the first congressional action taken with regard to this reservation. A most pernicious bill has received its quietus, and far more important than that, a strong man, an accomplished parliamentarian, a skillful and experienced legislator, and a man of the highest integrity and honor, has been found in the House of Representatives to range himself on the side of right and justice and to do battle for the Park. We may all take courage again.

On Tuesday last Judge Payson of Illinois brought up the bill granting to the Cinnabar & Clark's Fork Railroad a right of way through the National Park. The bill came up during the morning hour, and from Judge Payson's influence and standing it was supposed by many people that he would have little trouble in passing the bill. He urged its passage, and was supported by Mr. Toole, the delegate from Montana, who in this instance at least does not seem to have proved a very efficient implement. In opposition to the bill, however, a wholly unexpected champion of the Park presented himself in the person of Mr. Cox. Notwithstanding his long absence in Turkey, this gentleman has kept himself thoroughly informed on all matters of interest in his native country, and he vigorously opposed the bill.

He asserted that to introduce a railroad into the Park would be an act of desecration and spoliation, and showed that the Secretary of the Interior, the General of the Army, the engineer officer in charge of improvements in the Park, and all other well-informed people were unalterably opposed to such action. He showed further that the bill was wholly in the interest of a few selfish speculators, and urged that the rights and privileges of the people should not be sacrificed for them. Mr. Cox was supported by Messrs. Holman and McAdoo, while Judge Payson and Mr. Grosvenor favored the bill.

The arguments against it were so convincing that the Committee of the Whole, by a vote of 107 to 65, struck out all after the enacting clause. Before the House had time to act upon this report the morning hour had expired, and the final killing of the bill is thus postponed until the next morning hour, when the matter will come up as unfinished business.

This action in the House will be a great encouragement to Senator Vest in his efforts to help the National Park.

It is extremely disappointing to find a man with the ability of Judge Payson lending his name and influence to a bill so vicious as this one. Judge Payson has traveled in the Park, and should therefore have been able to comprehend the damage which a railroad built there would work to the reservation. We had looked for better things from him.

The killing of this project in the House is a most important victory for the friends of the Park. This bill has been lobbied for in the most shameful manner for a long time. The House Committee on Pacific Railroads and the Senate Committee on Railroads have both made favorable reports on it, reports which the FOREST AND STREAM has already shown to be wholly made up of misstatements furnished to the Committees by persons interested in the building of the roads. With the backing of the lobby and the moral support of these two reports it was feared that possibly this railroad bill might pass in the House, though there was good hope that the able work of Senators Vest and Manderson might kill it in the Senate.

To find in the House of Representatives so strong and able a friend of the Park is, after all, the most satisfactory point about the matter, and we hope that Mr. Cox may take hold of the bill for the enlargement and better government of the Park, and do for that in the House what we hope Senators Vest and Manderson may do for it in the Senate.

The railroad schemers have been defeated. From their desecration the Yellowstone wonders have been preserved. Much still remains to be done to secure complete protection, and for the attainment of this end the FOREST AND STREAM will exert the same energy with which it has fought the Park grabbers.

NEW YORK TROUT LAWS.

NO doubt with the meeting of the State Legislature the annual tinkering of the trout laws will begin. That we will ever obtain a law which will suit all sections and all counties, and will remain unchanged for a period of years, is extremely doubtful. The so-called six-inch law should be restored and the slaughter of the innocents made a crime, even if, as some persons claim, it does not stop the evil. Few anglers know to what an extent trout under six inches in length are deliberately caught and cooked in the Adirondacks and at the hotels on its borders, especially along the West Canada Creek. It is time that something should be done to stop this, and the accidental omission of the six-inch clause from the law for the past year is regretted by all who believe that the infants should have a chance to grow up to be trout in fact as well as in name. We believe that few of these small fish are sent far out of the woods. There would be no sale for them in New York city, we think, and we have never seen them in the markets here or in other cities, although some may have been sent as far.

Owing to the differences in latitude and altitude of the waters in the great State of New York, a uniform open season for trout all over the State seems hardly practicable. In the Adirondacks the ice remains on the lakes from the first to the middle of May, at times, and there should be no trout fishing there until about the latter date. Through the middle of the State there is seldom good fishing before the middle of April, while on Long Island trout sometimes rise early in March, although the raw winds threaten rheumatic pains to the angler who braves them. Even on the first of April there are often cold storms, yet the trout are in good condition and ready to be caught at that time. A correspondent recommends the 15th of April as a right time to open the season for the whole State, but that date is too early, by a month, for the Adirondacks, and we doubt if a uniform date for the entire State would be satisfactory to all. The great preserves on Long Island, which are owned by clubs which raise their own fish and keep their waters stocked, have been fished on April 1 for years, and as the members are mainly from the city they naturally wish to take their fish home without being taken into custody at the ferry by a game protector for having trout in possession in another county, as could have happened under a late law.

We once suggested dividing the State by the Mohawk River and the Erie Canal, and making separate open seasons north and south of them, and a correspondent followed with the suggestion that the New York Central Railroad be made the line. This is a subject on which we would like to hear from our correspondents, and so get at the views of those who fish for trout in the different waters which, as we have shown, differ in the time in which the ice leaves them, and in the time in which the trout are in good condition and the weather is suitable for fishing.

THE CROW INDIAN RESERVATION.

SOMETHING seems to have struck the Crow Agent. He is reported to have developed all on a sudden a great amount of energy. A press dispatch from the West states that: "On Saturday last Agent Williamson issued an order to drive off the Crow Reservation all cattle now pasturing there, also to burn some buildings and corrals recently erected near Bull Mountain Station. If he meets with any resistance he will call for troops. He says no cattlemen have received permits to graze on the reservation. It is anticipated that trouble will ensue in enforcing the order."

Just six months ago, the FOREST AND STREAM exposed the condition of affairs on the Crow Reservation, making known to the public, for the first time, the fact that cattle and sheep men had thrown a large amount of stock on the Indians' lands, and asserting that the latter received no proper compensation for this use of their reservation. We showed that the few head of stock owned by the Indians would be likely to be absorbed in the large herds of the white men, that permanent improvements in the shape of buildings and corrals would be erected on the desirable locations of the reservation, and that when—if ever—the reservation should be thrown open to occupancy and settlement by the public, all the good farming lands would be found in the hands of the cattlemen, whose possessory right would be a claim that the homesteader could not break down.

We requested a searching investigation of these matters by the Department, and asked that if our statements were found accurate the abuses might be corrected. It was a matter of general knowledge that thousands of cattle and sheep were grazing on the reservation, and it was generally believed that a portion of this stock was there under authority of permits granted by the agent.

In reply to the article in FOREST AND STREAM, the Interior Department made a general denial that permits had been granted by the Crow Agent or that the reservation was used by stockmen for grazing purposes. This was rather a rash statement to make, and no doubt the investigations of the past six months have shown the Department that our allegations were true. FOREST AND STREAM is not in the habit of making assertions without having accurate information on the subject of which it speaks.

Agent Williamson's action in driving the cattle off the reservation is praiseworthy. It is, to be sure, rather a pity that it has taken him so long to reach a decision in the matter, but better late than never. The cattle should be driven off unless there is warrant of law for their being held there, and, until the Indians are willing to have them remain, there can be no such warrant nor legal occupation of the reservation by the cowmen.

We are not now considering the question as to whether the reservation should be leased to the cattlemen or not. We merely insist that the law as it stands should be enforced, and that the Crows—miserable people as they are—should have fair treatment at the hands of the Government.

THE IMPORTATION OF FOREIGN GAME.—A correspondent writes that he proposes to introduce Belgian hares into Maine, to put out on the coast when the native hare has disappeared. This is an enterprise which should be undertaken only after careful deliberation and a consideration of the consequences. There is always the danger that a species transported and placed among new and favorable surroundings may develop an unexpected capacity to increase. Witness the Australian and New Zealand rabbit plague, and our own English sparrow nuisance. The hare experiment has already been tried in this country. The Fisher's Island Club put out a stock on their island preserves in Long Island Sound, and the creatures proceeded at once to increase and multiply and cover the face of the earth. They threatened to lay waste the island, and the club had no other course than to exterminate them as vermin then and there. If like results would follow the introduction of hares into Maine, it is well to pause before going any further with the project. There are laws forbidding the introduction of pickerel and certain other fishes into waters now stocked with choicer varieties; it might not be a bad plan to restrict the introduction of foreign animals into this country. Two or three public-spirited individuals brought in the English sparrow. Now there is not ingenuity enough in America to cope with the multiplying hordes, and remedial legislation is impotent to check their increase.

The Sportsman Tourist.

THE SEAL ISLANDS.—I.

[The following extracts are from the manuscript of a forthcoming book by J. M. Le Moine, of Quebec, author of the well-known series "Maple Leaves," of which the new volume is, we understand, to be a continuation. This chapter is from the cruise of the yacht Hirondelle in the lower St. Lawrence, in 1886. The characters are: The Commodore of the Quebec Yacht Club, J. U. G.; Mac of the Isles, Saganan, old sportsman, navigator; Jonathan Oldbuck, antiquary, naturalist, discoverer; Carleton, sailing master, old mariner; Jean Lavoie, steward, chef de cuisine, weather prophet; Napoleon Mathurin, able-bodied seaman; and lastly, Fox, a Sillery collie and water dog, on board the Hirondelle, St. Thomas, Sept. 9, 1886.]

"JUST ease her off a point or two, Commodore, don't hug these muddy flats too close; they run out nearly three miles from the mouth of the Basin; I have known them well from my youth. Now, I think we can sail clear of this land-locked harbor. Do you see that group of white dwellings? These, in 1837-8, used to be one of the strongholds of the Patriots of 1837, and in 1759 the ruthless invader of the soil left his indelible mark on these Canadian homes." Such the words of Jonathan Oldbuck, the respected guest of the Commodore of the Quebec Yacht Club, more generally known as the Antiquary.

"*Très bien, Monsieur l'Antiquaire,*" replied the burly Commodore, "I always thought St. Thomas, or Montmagny, as it is now styled, was rich in historic lore. Dame Nature seems also to have played some strange pranks in scooping out these channels amid the shoals, and in forming this sheltered basin at the foot of the roaring waterfall of La Rivière du Sud. Might not the removal of these boulders in the basin and a little judicious dredging of the mud make this into a snug harbor for the coasting craft and even foreign vessels; that is, provided the neap tides of summer did not choke the harbor with mud?"

"Do you see," said the Antiquary, "those eel fishery stakes, nearly covered by the tide, a mile from the shore? There or close by stood, at the end of the last century and even later, the Roman Catholic parish church. The river has eaten away the clay soil which clothed the whole area occupied by the old church and its cemetery, and even beyond. A new church site became necessary. In 1822 the present one was built two miles inland. The harbor has also undergone a great change within a hundred years; tradition tells how its entrance was once spanned by a single plank; the shores are now more than a mile apart."

"Carleton," said the Commodore, "let us shake out two reefs of the mainsail; we have yet plenty of flood and with such a spanking breeze on our beam, we can yet make Cape Brulé before the turn of the tide. I shall show our friend as we sail past the place of the memorable shipwreck of the French man-of-war L'Elephant, stranded there in September, 1729. We will, once there, drop down with the ebb under the dizzy heights of Cape Tourmente, so named by Champlain, and where I have shot in December more than one woodland caribou. They come every fall from the interior, pick their way through some of the pine-clad ravines of the sombre cape, to this abrupt shore below, lap up the salt lick and return. I recollect shooting one close to the cross on the summit."

This landmark, erected in 1869 and since enlarged, looks from the river like a white speck amid the blooming shrubbery. The party looked out, as the yacht sailed past, for some of the ravines in the neighborhood of the three diminutive lighthouses perched on the rock high above the St. Lawrence; some fine old pine trees grow there, which, with the lofty Cape Tourmente, form part of the vast seigniory, ten leagues in front, of the Quebec Seminary. More than two centuries back the great Bishop Laval selected the Petit Cape of St. Joachim—which our excursionists could see to the west—and the reedy meadows and fertile cornfields at the base for a settlement, where he, in verity, established in Canada the first model farm. Through a gap in the waving treetops they also saw the Château Bellevue, where, under the shade of green groves, the Laval University and Quebec Seminary professors each year spent their well-merited August vacation. This is assuredly one of the most beautiful spots in all Canada. During the occupation of the country by the French, inward-bound ships used to hug the north shore of the St. Lawrence as far up as Cape Tourmente, and then cross over past Pointe Argentenay, on the eastern end of the island of Orleans, in the direction of the Point of St. Michel, on the south shore, thereby avoiding Beaujeu's Bank and the dangerous St. Thomas Shoals; this channel is now used chiefly by the Richelieu line of steamers, conveying tourists to Murray Bay and the Saguenay.

"'Bout ship, let go and haul," sung out the Commodore, and the Hirondelle, flapping her white wings in the breeze, turned from the frowning cape, shot ahead like a bird, and pointed for a low ledge of rocky islands, after passing the Battures Plates, a famous resort for Canada geese and white wild geese, leased by the Quebec Seminary to a Quebec sportsman. The rocky isles, on which the surf rippled, were barely visible in the distance.

"There, gentlemen," exclaimed Mr. Oldbuck, "there are the famous Seal Rocks."

Forty-five miles below Quebec, about mid-channel in our noble river, which even here expands in breadth to twenty-one miles, there rises a bleak, uninhabited island, at low tide five miles long by one mile broad. From time immemorial it has been known to the English as Seal Rocks or Seal Islands; to the French as Battures aux Loups-Marins. Doubtless the seals, for ages as plentiful here as the walrus on the Magdalen Islands, up to the middle of the last century, have found a safer and more secluded habitat in the far North, though each winter they still venture to the ice-bound coast. Long after the seals had bidden adieu to these solitary Canadian downs the native sportsmen put in an appearance. For many years past, with each autumn and often in advance, the gunners found their way to this favorite sporting ground. A few years ago a club of sportsmen of St. Jean, Port Joly, purchased this game resort from the Provincial Government.* The August high tide, exceptionally high, reduces the seals' old haunts to about one mile in length and seven acres in width. At the northwest point there exists a diminutive mound or knoll, on which are perceptible, among the few other signs of vegetation, a grove of spruce, fir and wild cherry trees. Conspicuous to this day is the ancient apple tree, of which Mr. De Gaspe, in his "Memoirs," records that "one half bears sweet and the other half sour apples, though there exists no trace or record of the tree having ever been grafted." This weird relic of the past still endures and yielded fruit this very summer. Thereto hangs a tale of woe, with which doubtless the Antiquary will favor us.

The other portion of Seal Rocks, bare at high water (though there is an instance on record of a party of sportsmen having once to seek asylum in their boat to escape the rising flood), trending southward, is very properly styled the Sportsmen's Refuge. A channel running northeast and southwest separates the shore, where stands the refuge or shooting box, from the mound or knoll, known as Chatigny's Knoll, the channel fordable at low tide only.

It is well called the Sportsmen's Refuge, and here only, in a rude hut erected by them, they find shelter against the easterly gales, which sweep over this forlorn shore with great violence.

Animal and vegetable life is indeed scanty on this solitary down. Few if any singing birds there; the minstrels of the grove seek the companionship of man. What use, indeed, would be to them the sweet gift of song, without an appreciative audience. Each summer, however, a colony of noisy crows, detached from and not missed by the black hordes frequenting the adjacent group of islands and whose headquarters are Ile aux Corneilles, Crow Island, a few miles to the west—claim possession, doubtless by prescription, of the fir and spruce grove overshadowing Chatigny's Knoll. Here they nest. Occasionally may be heard overhead and seen, some hoarse old raven, winging his heavy, laborious flight toward the bleak ledges of Cape Tourmente, to the northwest, or, mayhap, further north, to his callow brood in their nest among the cloud-capped peaks of Passe des Monts, in the Saguenay district. His funereal, unearthly *kra-ac, kra-ac,* seems in keeping with the dismal aspect of the land. In September a silvery gull occasionally lights in the mellow sunshine amid the eddies round the shoals, in quest of smelts. Save the report of a gun or the whistle of a passing steamer, no sound invades this lone, arid beach, quite extensive at low tide.

"But," asked the Commodore, "why did not the sportsmen build on Chatigny's Knoll, so well protected by trees?"

"For divers cogent and powerful reasons," retorted Mac of the Isles, "which we will allow the Antiquary to expound to us, for who here can compare to him for historical, antiquarian and legendary lore? But before we hear him let me speak of the game. At Seal Rocks, as elsewhere in the Province of Quebec, the law tolerates no spring or summer shooting. The island is especially famous for ducks, and the 1st of September is the time fixed by the Legislature for the opening of the season. These downs seem to particularly attract the old and young birds, returning at the beginning of September from their breeding grounds at Hudson's Bay, in several islands on the Labrador coast and some of the solitary isles of Lakes St. John and Mistassini. Tired out by storms they congregate in vast flocks on the reedy, muddy and sandy beaches of Seal Rocks at low tide. At present the locality supplies the Quebec markets with quantities of game, such as Canada geese, a few white geese, black and gray ducks, brant, blue and green-winged teal, snipe, godwits, golden plover, ring plover and smaller beach birds. The smaller beach birds are ushered in with the high tide of August, about the 21st of that month, and precede duck shooting. The game season lasts about three months, August, September and October. The Messrs. Toussaint and others, of Quebec, proprietors of the island for the last eleven years, intrust the care of their preserve to a game keeper who lands at Seal Rocks about Aug. 1 and leaves about beginning of November."

*Seal Islands and Shoals, in River St. Lawrence, opposite River Trois Saumons, were rented on April 18, 1854, to O. B. Fournier, of Islet, at an annual rent of $50.40, rent redeemable by payment of capital at the rate of 6 per cent. to Government of Province of Quebec.

ROD AND GUN NEAR THE CAPITAL.

Editor Forest and Stream:

Three miles below Arlington Cemetry and the Long Bridge is a quiet and picturesque spot known as Four-Mile Run, the name being taken from the stream that there broadens into a wide basin, forming part of the noble Potomac, as our vainglorious local scribblers are found of calling that muddy, malarial river. No other locality near this city and easily accessible offers equivalent attractions for the disciples of "dear old Ike." Several kinds of game fish may be found there, while mullet, chub, carp and winter shad are occasionally caught. Eels, sunfish and catfish are of course abundantly present as nearly everywhere else, save in mid ocean and the Polar seas. On the arches that there span the Run, or in boats furnished by mine host Taylor (by the way a fine fellow and dead shot), one may often see a notable company—politicians and statesmen (like Gen. Hampton), distinguished military men (like Adj.-Gen. Drum, who affects the fly alone), many actors and actresses from companies sojourning in Washington, local celebrities of various kinds, and the "unwashed," in the form of Sambo with his everlasting handline and pound sinker, which makes him "dead shuah ob dat catfish, boss," and the urchins who have escaped parental eye, bringing with them the inevitable tow-string, eyed hook and "the best worms you ebber seed."

There is, however, one distinguished and never-absent angler who has fairly earned the title of "Fishing Crank" (as he often calls himself). Save in December and January, daily, at any hour from 3 A. M. to 12 P. M. (omitting the mid-day time when professionally employed in the city), Jessie may be found, in fair weather or in foul, somewhere about the place, diligently, enthusiastically and successfully throwing the fly or trolling the minnow, with "malice prepense" toward our finny brethren. His annual catches have run into thousands and he has grown to be a Mascotte of no small reputation. He is in fact authority on all subjects relating to piscatorial amusements in that locality, and if his advice were every time sold for a penny he would soon become the Astor of the Potomac. But it is not so well known that he is an all-round sportsman and excellent shot, from long practice in many places at home and abroad. When the bird season comes he even forgets that fish swim or bite and lies him down the river to well-known "stamping grounds." He took along the writer on his last trip, as a kindness, and perchance as a foil to his superior skill with the gun. We went, Thanksgiving week, to Shamrock, forty-seven miles from Washington, to mine host Wolfe's, who had kindly made all arrangements for our pleasure. Birds were plentiful. Indeed, coveys were to right of us, to left of us and in front of us, continually. It was, so to speak, a bountiful repast of fat quail, with woodcock for dessert. When surfeited with these, we had br'er rabbit, and squirrels *ad nauseam,* with ducks, wild geese, doves, hawks and owls for experimental side dishes. We dined sumptuously every day, and shall never forget the culinary skill of our hostess, especially not her preserves and jams, which ranged through all the fruits and berries of that region.

It might be believed if I should say my friend returned laden with birds, but I fear no one would credit me if I should tell how many I missed; so it shall remain a secret until I cease to be a NOVICE.

WASHINGTON, D, C., Dec. 4.

Natural History.

SONG BIRD LEGISLATION.

Editor Forest and Stream:

In your issue of Nov. 11 a report of some "committee" on song bird protection is noticed, in which birds of prey, such as herons, bitterns, ibis, hawks, owls, blackbirds, butcher birds, etc., are stated as intended to be protected, as not injurious to husbandry. This claim for them seems to grow out of some vague "ornithological" research, or perhaps some (city bred?) refinement or tenderness, that will take a long while and a good deal of educational effort to make it "wash" among practical farmers or sportsmen. Take for example hawks, other than night hawks. Every farmer knows they "steal chickens," and after the first taste will quickly acquire an increased habit if protected in the theft, and the habit will multiply in proportion with the birds. Sportsmen know they attack out of season his broods of partridges, woodcock and the like. The farmer's poultry is his money. Shall this kind of theft be protected and legalized, and he be punished for defense of property upon the refined theory that the hawk may also now and then catch mice, birds or frogs?

So of the crow. The farmer knows, without "theory," that crows pull up his corn and grain after he has with hard labor, plowed, tilled, and planted; that they will destroy crops by the acre as often as replanted till the season is too far advanced for any crop. The farmer knows too well the labor of planting crops. His time and crops are his money. And when some ornithologist (city refined collector of bird skins and eggs, as he would term them) should undertake to teach him that the crow is his friend and must be protected and multiplied by law at the expense of his crops (because the crow likes carrion, robs small ground birds' nests, catches toads, frogs and a few bugs and grasshoppers), he would most likely be told "to talk to the marines." What is said of the crow is true of the blackbirds. And what is said of hawks is true of owls, that rob the hen roost at night and are most destructive. Of butcherbirds (shrike) that kill small birds and impale them upon thorn apple spikes, nothing good can be said. Of herons, bitterns, and the like, the food is principally toads and frogs, that are wholly insectivorous.

In respect to these birds of prey, it is notorious that they have been treated as enemies of husbandry for time out of memory, and as such war for their destruction has been constantly waged. Yet like rats they have held their own in spite of civilization and all the destructive arts and appliances. So they will continue, and if the "theories" and aims of bird skin collectors or fanciers prevail, will overrun the country. It was only recently that the sparrow was proclaimed a benefit out of such refinement, and we know the result. Similar theoretic refinement protected briefly the skunk, another pest and robber of birds' nests and poultry yards. Who knows but we next may be asked for the protection of rats and mice, species that have multiplied in opportune seasons in spite of crows, hawks and owls, and the destructive appliances of mankind, rat poison not excepted? Farmers know, moreover, that 25 cents worth of rat poison about the fields and nurseries will destroy more mice in a week than hawks, owls and crows can dispose of in years.

The further assertion is ventured that if these wise and learned ornithologists were personally engaged in husbandry, by the end of the second planting of the first crop, of the third year of crow protection, there would be an end of their wise notions on the subject.

To be serious, protection of song and insectivorous birds will receive public favor and sentiment because it has merit, but when it is overdone by protecting doubtful or injurious species, against which public sentiment has for ages been at war, merit and favor cease and the opposition of public sentiment is at once encountered in its enforcement, notwithstanding the opinions of a committee of a dozen that public prejudice "is unfounded."

Without going into the defects of Chap. 427, L. N. Y. 1886, it occurs that the "way to protect" song birds "is to protect." Why protect with a non-protective qualification (§ 4) by which permits are given without limit by any "incorporated society" of natural history at $1 per permit, to kill song or wild birds without limit? Now every lawyer knows that any ten or a dozen persons may form an "incorporated society" without much trouble and go into the "permit" and "natural history" business all over the State. Then where is song bird protection, and what is it? A like loophole is in the game laws (§ 14) by which any person may kill birds (professing?) to study habits, history or stuff, etc., by which the law is nullified. The question arises: Who are these ornithologists? What the "museums of natural history?" How many are there? What their necessities? Why they be given unlimited power? and like questions show how crude the law is. It may be assumed the intent was good enough in the draft of the law, but when it comes down to consideration of objects, purposes or necessities, it is open to suspicion, for it may be asked, why this permit and monopoly business in indiscriminate hands? Knowledge of birds is all well, but have not the full "habits and history" been written and published over and over? The birds are protected against everybody except those who wish to deal in them (under corporate franchise) for profit or pleasure, or except those who wish to go into the "permit" granting business at $1 each per year. Is it to be supposed that corporate franchises may not be obtained by the worst as well as best of men, or that the fee of $1 will ever be refused? Further comment is unnecessary. JOHN D. COLLINS, Secretary.

UTICA FISH AND GAME PROTECTIVE ASSOCIATION.

THE SPORT OF HAWKING.

V.—The American Merlin and Kestrel.

THE American merlin or pigeon hawk (*Falco columbarius*, Linnæus) is found throughout the North American continent and also on the northern borders of South America. It closely resembles in form and habits the European merlin—the lady's hawk when falconry was at its brightest—but is somewhat larger, and stronger and bolder than that species. The female pigeon hawk measures about 13in. in length, the male about 11in.; the female from tip to tip of her expanded wings from 26 to 27in. This is a very beautiful species. The coloration varies somewhat with age; in the adult male the entire upper parts are of a bluish slate color, every feather being lined longitudinally with black; forehead and throat white; under parts yellowish white, the feathers being lined longitudinally with brownish black; tail barred with black and tipped with white. Younger individuals are less brightly marked, the upper part being mostly dusky brown in color. The merlin is a true falcon, though a little one, and, for its size, is hardly exceeded in courage, power and dash by the noble peregrine, the type of the genus and of daring courage. It is not very rare as a spring and autumn visitor in the New England States, and is frequently found in most of the Middle States.

For food the pigeon hawk mostly depends on the smaller birds; grackles (crow blackbirds), red-winged starlings, robins and wild doves and pigeons forming the greater part of its bill of fare. It has been known to kill the active and muscular California partridge and also the still larger "willow grouse" (*Lagopus albus*). Several of our woodpeckers, even the strong and agile flicker, also frequently fall victims to the insatiable appetite of this bold little marauder.

The merlin has the true falcon flight, flapping rapidly like a pigeon; it has perhaps more tendency to soar than the other falcons. The stoop of this species has but little force or grandeur, and is more like the stern chase of the true hawks than the arrow-like dash of the peregrine or lanier.

The pigeon hawk seldom breeds south of the 44th parallel in the Eastern States, certainly never in Massachusetts or southern New York. The nest is generally built in a thick foliaged tree at no great height from the ground. This species has also been occasionally known to build upon high cliffs. The nest is composed of sticks, grass and moss, and is as rough as the domicile of the hawks in general, being often hardly a nest at all. Like all the true falcons the American merlin is brave and reckless in the defense of its nest. The European species—which builds upon the ground—will often feign to be injured, and flutter along the ground away from the nest to try and lead off an intruder. The eggs number from four to six. They measure 1⅜ inches in length. The ground color is light reddish buff, which is clouded with deep chocolate and reddish brown blotches. They are very rare in those most useless and senseless of collections, "cabinets of birds' eggs," and are in much demand among collectors. In Europe the merlin is used for the taking of larks, blackbirds and pigeons, and is remarkable for its docility and tameness, and the ease with which it can be trained. It is certain that a strong female of the American species would take quail and the Western partridge brilliantly, and a fast one would kill woodcock and snipe. Both females and tiercels would kill wood doves and tame and wild pigeons most successfully. It is probable that a cast or pair of powerful pigeon hawks could even take grouse, and they would give grand sport with bluejays.

The taming, training and use in the field of merlins are conducted on exactly the same principles as the education of the peregrine and gyrfalcon, with the difference that the smaller falcon is always trained to come to the wrist when called as well as to the lure, while the large falcons are frequently trained to come to the lure only, and are hence called "hawks of the lure." The merlin cannot be taught to "wait on" satisfactorily, and is therefore always flown "out of the hood;" but Freeman narrates that so tame does this little hawk become that his birds frequently perch on his head while he tramps the fields for game, and are off as soon as a bird rises. If game "puts in," the trained falcon will either desert it entirely or perch near where the quarry was seen to enter. Merlins must be "served" with the utmost promptness when disappointed in a dash after prey, as they quickly become discouraged, and will give up hard flights at once if the quarry has been lost several times in succession. Whenever possible a captive bird of the species they are pursuing should always be ready to be thrown to the hawks when they fail to capture the wild quarry, during the first few weeks they are hunted. The hood for the pigeon hawk must be very soft and light; the birds must be thoroughly broken to it, but it is very seldom worn, the hawks becoming so tame as to even sit quietly upon the wrist while being carried unhooded. The jesses must also be of the lightest and softest leather, and this small falcon is not able to carry a swivel, and but one very light small bell when flown at game.

Merlins cannot be "sharp set" like laniers and gyrfalcons, or they rapidly get out of condition; ordinarily they must be fed at least twice a day, being given only a very light meal without castings the morning before they are flown. Indeed this little hawk must be regularly and plentifully fed if you wish it to live in captivity.

One advantage the merlin has over the large falcons in the field is that in using it no "field" is required, the falconer and a friend or two being able to do all the "serving" and beating and "taking up" on foot.

Pigeon hawks require plenty of fresh birds and the freshest of beefsteak to keep them in condition; field mice and rats also make excellent occasional diet. The general treatment of merlins is the same as that proper for the peregrine, but the lady's hawk must be very carefully protected from wet and requires the shelter of a room throughout the winter in the latitude of New York.

The smallest of the American falcons is the sparrow hawk or American kestrel (*Falco sparverius*), the total length of this species being only from 11 to 12in., the tail is 1in. long and the wings measure from 21 to 23in. across from tip to tip. The following is the coloration of the adult: Frontal band and throat white, head and neck marked with black spots and bars, the top of the head and upper parts light cinnamon, under parts light cinnamon, or almost white, marked with spots of black, tail tipped with white and barred with a broad band of black.

WOMAN'S TENDER HEART.

Tender-Hearted Young Lady: "OH! YOU CRUEL, HEARTLESS LITTLE WRETCH! TO ROB THOSE POOR BIRDS OF THEIR EGGS!"

Wicked Little Boy: "HONH! THAT'S THE OLD ONE 'AT YOU'VE GOT ON YER BONNET. GUESS *she* WON'T CARE."

Many specimens are barred on the back with transverse stripes of black, and the young are generally barred freely with brownish-black.

This handsome little hawk is, according to Jordan, found abundantly throughout the United States. In northern New England it is common and I have found it not rare in all the Middle States, and in Maryland even near midsummer. It breeds along the northern borders of the United States and comes southward in winter.

The mode of flight, as well as many of the habits of the sparrow hawk, closely resembles that of the European kestrel. Flying irregularly, it hovers a moment over a particular spot and then shoots off in another direction in search of prey. Its power of flight is trifling compared with the dash of the great falcons, and it has the hawk-like habit of taking stand in a tree to wait for quarry. Jays have a particular antipathy for this little falcon and lose no opportunity to mob one whenever found. Wilson states that in revenge the hawk often makes a meal off one of his persecutors, but I think it at least doubtful if this hawk can capture and hold the active and cunning "crow." Another authority states that the sparrow hawk occasionally preys upon even the thrasher (*Harporhynchus rufus*), which rather more than equals it in size. I have certainly never seen this falcon kill any bird larger than a red-winged starling. The American, like the European kestrel, is of real service to the farmer, from destroying many field mice and grasshoppers which constitute its principal food. It also feeds upon small birds, lizards and small snakes, and occasionally bears off a downy chick from the barnyard. This species is as bold as any hawk that flies, and very rapid in its short pounces after prey; it not infrequently happens that it dashes down and snatches a coveted specimen of finch or warbler from before the very gun of the naturalist. On one occasion one of these birds plunged after a red-headed woodpecker I had just shot, and which fell within 15ft. of me, and would have captured it had not a charge of "dust shot" knocked out a handful of his feathers and forcibly reminded him of important business in another place, which he immediately left me to attend to.

The sparrow hawk builds no nest for itself but takes possession of an old woodpecker's hole or other tree hollow, or more rarely of a deserted crow's nest. The eggs number from four to six, and are dark cream-colored variously marked with spots of brown. They are nearly spherical in shape, and measure 1-⅜ in. in extreme length.

This species breeds much later in the year than our other hawks. In Maine the eggs are laid early in June. The young birds are covered with white down when first hatched, through which the feathers soon appear.

The sparrow hawk is easily tamed when taken as an eyas, and has often been kept at hack as a pet; but the kestrel is useless to the sportsman, not being able to take any adult game bird, unless we except reed and rail birds. This species is, however, a good hawk for the falconer to practice on, and is easily captured by a small bow net baited with a live sparrow. Even haggards soon become docile in captivity, and may be kept at hack provided with bewits and tiny bells.

All falcons moult once a year and this is a most trying and dangerous period to the trained bird in captivity. Eyases moult much more quickly and easily than haggards, and for this reason are often preferred to the latter. As soon as a hawk fairly begins to moult he must be no longer flown at game, or on any account allowed to become "sharp set." Feed the bird generously twice a day if a peregrine or gyrfalcon, and three times daily if a lanier or pigeon hawk, and allow him to become as fat as possible—which greatly shortens the period of moulting. If carefully watched and protected from wind and rain falcons may be moulted on their ordinary blocks in the open air or under their shed; a somewhat better plan, however, is to leave them at liberty in a well sanded room, in which there are no points or edges against which they might injure their new and tender feathers. Feed from the hand and lure throughout the moult and exercise the hawks daily by compelling them to fly repeatedly across the room to your wrist or the lure for food. The food and general care of the hawk during the period of moulting is exactly the same as when he was in full plumage and flying at game. After moulting is completed and the new feathers fully developed and strong, the falcon will have to be rebroken to the hood—which he has half forgotten, as the cap is never worn during the moult—and will require re-"entering" at quarry. The lure, whistle and call of course he has not been permitted to forget, both being constantly used during feeding time. The trained bird must also constantly see dogs and strangers, and horses also whenever practicable. The hawk must be re-entered at game precisely as at first, and a week or two after the completion of the moult should be flying at prey as well as ever; of course, however, the reentering will be a much shorter and less tedious process than when the falcon was first trained.

The falconers of a century or two ago wrote whole columns on the treatment of the diseases of hawks, but it has been our experience that the American falcons, if properly fed, exercised and cared for, are exceedingly healthy, and our knowledge of hawk physic is therefore limited. Should a hawk fracture its leg, carefully set the bone and apply a neatly fitted stocking of soft flannel, and then bandage with a strip of muslin which has been dipped in strong starch water or rubbed on dry plaster of Paris and then dipped in water just before applying. The starch or plaster when dry will immobilize the limb, and in three or four weeks the bone will be united as strongly as ever. Fractures of the wing bones are mostly incurable in a falcon used for hunting; the wing will almost always be lame even if the bones can be made to unite. Should such an accident occur, the kindest treatment is to put the poor bird out of its pain with a charge of heavy shot fired at close range.

When prolonged wet weather or other cause has prevented tame hawks from having proper exercise their excreta frequently become tough and caked, instead of being moist and full; the birds are then much benefited by a dose of from 2 to 4grs. of rhubarb, to be repeated if necessary. It may be given wrapped up in a small piece of meat. All other medicines given to falcons are at best only an experiment. Plenty of small gravel stones must always be strewn round the flocks of falcons, which the birds occasionally swallow and appear to relish.

For parasites in the feathers (bird lice) and in the nares (*acaridæ*), tobacco water carefully used, kerosene or dilute carbolic acid (ten grains of pure crystals of the acid in an ounce of glycerine) are useful. Of course these poisonous agents must be used with the greatest circumspection or the hawk may be killed along with the vermin. Of the numerous inflammatory diseases to which European tame hawks are subject we have no knowledge, and the treatment for them recommended in works on falconry is frequently worse than useless, and often absurd. Care, careful feeding, attention to the bath, cleanliness, etc., and plenty of exercise, are the only rational methods of preventing and curing the diseases of hawks.

Falcons, although not by nature affectionate, often show much attachment for their masters, and even when gorged with food will bate hard from their blocks to get to him if he walks near where they are tied, and are not content until permitted to leap upon his wrist to have their breasts stroked. Eyases when lost in the field frequently return home by themselves, and lost hawks have even flown of their own accord to the falconer asleep on the ground hours or days after they have been lost. Eyases have come to lure and call after having been at

Fig. 1.

liberty for above two weeks, and haggards have been retaken on game after nearly a week of recovered freedom.

Even apart from the stirring sport of hawking, the beautiful and striking appearance of the gallant birds upon the blocks on the falconer's lawn or standing upon his wrist will amply repay one for the trouble the hawks give, and there is a charm about possessing, training and hunting falcons which belongs to no other sport.

Now that game is everywhere becoming rare, it is most ardently to be wished that some less murderous means

Fig. 2.

than hound and gun be brought into the field for the capture of game that will at the same time yield sport of a high order, and that means we have in a most spirit-stirring form in the keen-eyed "greyhounds of the air," the members of the genus *Falco*.

Fig. 1 is a portrait of an adult American merlin in full plumage. The attitude represented—the wings tightly closed and the head and breast feathers slightly raised—is one frequently assumed by all the falcons.

Fig. 2 is a drawing of the wing of the European merlin (*Falco æsalon*), and shows the peculiar form of the wing and its exceedingly close resemblance to that of our species—the pigeon hawk. R. W. SEISS.

PHILADELPHIA, May 5, 1885.

SNOWY OWLS.—Birds of this species are reported so far this season to be quite rare. Wallace, of this city, has had none at all sent in to him, and has heard of but few captures. One of these birds is recorded from Mumford, Munroe county, N. Y., by Mr. Jay Merrill, a nephew of our correspondent Major Merrill. Mr. Merrill writes: "I have a pure white owl, received to-day, which measures 5ft. from tip to tip, which I intend to stuff. It is said that it came here from the Green Mountains, as they have not been seen anywhere but there. The owl is alive yet; only wounded slightly."....Mr. J. L. Davison writes from Lockport, N. Y.: "Nov. 17 I purchased a snowy owl of Mr. L. Bigelow, of the town of Wilson, eight miles north of here. On the same day Mr. Hallenbeck, of Royalton, five miles south, reported to me that he had killed one that morning, which I also bargained for but another man got. They were both males and measured 22¾in. in length, 58in. in extent, wing 16½in."

HYBRID GROUSE.

STORIES about hybrid grouse (both ruffed and pinnated) continually float about the country, some in and some out of print. With varying minutiæ the central statement about which most, if not all, these stories resolve, is that somebody has had chickens running at large in new or thinly-settled country and that a cross has been effected between them and a member of the grouse family, resulting in a hybrid. Here are some of the stories that have come to my notice within the past year or two, and which are cited to show their general similarity.

No. 1. In his "Field, Cover and Trap Shooting," Mr. A. H. Bogardus says: "Last spring, at Omaha, Neb., I saw in the possession of Mr. Geo. A. Hoagland, president of the Shooting Club, a bird of the preceding year which had been shot out of a covey of seven or eight, and which was believed to be a hybrid. There was another of the same brood in the town and both were well stuffed and set up. All the brood were alike as to markings and appearance, and their size was that of a grouse two-thirds grown. In shape they were more like the bantam or barn door fowl than the grouse. The ground color of their plumage was a dingy white, but they were spangled all over with feathers colored and barred like those of the grouse. That they were hatched by a (pinnated) hen grouse is unquestionable, for she was often seen with them. She made her nest close to the house and it was believed that a domestic cock was the father of her young ones." This is the most specific and best authenticated (supposed) case of the hybridizing of the pinnated grouse of which I have any knowledge.

Case No. 2. Some years ago a farmer living near Fremont, Ohio, had some gray Irish game bantams running at large, and one of the hens stole her nest and brought out a brood of chicks some distance from the house. It was currently reported and believed in the neighborhood that this hen had previously mated with a ruffed grouse cock, and that her chicks were hybrids. None of these, however, reached maturity, or were ever examined by any authority competent to pass upon their real character. They were very wild, and were all "potted" when not more than half grown by the murderous young vandals in the vicinity. This case, it will be seen, rests merely on common rumor.

Case No. 3. This is the case noted in the FOREST AND STREAM, of July 29 last, in which "J. E. H.," of Phillippi, W. Va., alleged that a friend in a neighboring county * * * last summer had three or four dunghill hens, each of which brought off a brood of hybrids. Procuring the name and address of this gentleman from "J. E. H.," I wrote him something more than two months ago inclosing a stamp, and asking for particulars. So far I have never received any reply.

Case No. 4. Last summer a western poultry paper printed a paragraph to the effect that Mr. So and So (name not now at hand) of Greenville, Mich., had some poultry which were a cross between the ruffed grouse and the common barnyard fowl. This man I followed by mail to Orlando, Fla., before reaching him, when I learned from him that he was not the man who had the alleged hybrids, but a former neighbor. To the latter I wrote at some length, but as in the case of the gentleman in West Virginia, never received any reply. Both these letters bore the usual "return" request, but as they never were returned, it is fair presumption that they were taken from the office by the persons to whom they were addressed.

Case No. 5. In a late number of the *New England Homestead*, H. B. Powell (whose address is not given) claims to have a breed of fowls which he calls the "Tappan," and which are said to be from a cross between a prairie hen (pinnated grouse) and a brown leghorn rooster. These birds were received from a brother at Tappan, Oak Ferry, and Mr. Powell thinks should have been named "Cyclones" from their unceasing activity and restlessness. He has crossed them again with the Plymouth Rock, and says he has a fine breed of chickens as a result, the (supposed) wild blood having thus been diminished to one-fourth.

Case No. 6. Some four weeks ago, I was informed that a gentleman in this city (whom I knew personally) had some birds which were half game bantam and half ruffed grouse. I lost no time in hunting him up, and without repeating the story directly, led him up to the subject so that he might a (voluntary) tale unfold. Whereupon he told me that he had some game bantam pullets that were the third remove from a pair of birds brought to Dayton, Ohio, some four years ago, which birds were said to have come from Indiana, and to have been a hybrid between the common fowl and "some kind of grouse." Having examined these birds shortly afterward, I came to the conclusion that their resemblance to "some kind of grouse" was more fanciful than real. My letter to the Dayton gentleman, who was said to have owned the original pair, was sent back stamped "Return to writer."

These cases show that the belief in the hybridization of both pinnated and ruffed grouse with the barnyard fowl is very common, and that such belief is not confined to any particular locality. But do they prove any such hybridization? For myself I am inclined to the opinion that they do not. And yet some of these cases (if not all) may have been actually what they were claimed to be. But it will be noticed that Bogardus, who had the Omaha birds in his hands (and who ought to be a judge), cautiously says they were "believed to be hybrids."

In the summer of 1885, one of my ruffed grouse hens hatched and reared four game bantam chicks, her own eggs having been infertile owing to the absence of a male grouse. One of these chicks was a cock, and surely here would have been an opportunity for hybridization if it were practicable. But as they grew up the chicks became so quarrelsome and vindictive toward their foster mother that I was obliged to remove them from the coops, the cockerel last of all, and only after he had repeatedly abused his relative most shamefully. Perhaps some one can give us clearer light on this interesting question.

TOLEDO, O., Lock Box 110. JAY BEBE.

BIRD MIGRATION.—The superintendent in charge of the bird migration work of the American Ornithologists' Union for Long Island has issued the following circular: "American Ornithologists' Union, Committee on Migration, District of Long Island. Dear Sir—The superintendent solicits correspondence with residents of Long Island, relative to its birds, especially those of rare or infrequent occurrence. He will consider it a pleasure to give the name of any birds sent to him for identification. Blanks for recording the arrival and departure of birds in the spring and autumn migrations will be sent on application. Address all letters, and send all packages by express to Wm. Dutcher, Superintendent, 51 Liberty street, New York city." It is hoped that all residents of Long Island who are interested in birds will communicate with Mr. Dutcher.

THE GREAT SQUID.—London, England.—*Editor Forest and Stream:* Can you inform me at which of the United States museums the largest specimens of the Atlantic squids may be seen and what is the extreme length of one of the feelers or suckers of these creatures? If my memory serves me, one was killed a few years ago whose "arms" or "suckers" measured 30ft. So the newspapers said. But I shall be glad of authentic information. As the story went, an arm thrown over and nearly capsizing a fishing boat was "chopped off" and measured 30ft. Where is this preserved?—CATHERINE C. HOPLEY. [We believe that the largest specimens of the great squids are at the Peabody Museum of Yale College, New Haven, Conn. The arm referred to by Miss Hopley is there, we think.]

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One rhesus monkey (*Macacus erythræus*), one brown macaque (*Macacus arctoides*), two great kangaroos (*Macropus giganteus*), two brown-throated parakeets (*Conurus aruginosus*) and one ring-necked parrakeet (*Palæornis torquatus*). Presented—One woodchuck (*Arctomys monax*), one mocking bird (*Turdus polyglottus*), one Acadian owl (*Nyctale acadica*), one short-eared owl (*Brachyotus palustris*), one golden eagle (*Aquila chrysaëtus*), one chameleon (*Anolis principalis*) and three alligators (*Alligator mississippiensis*). Born—Two male and two female dingoes (*Canis dingo*) and one hybrid macaque (*M. nemestrinus*, female, and *M. cynomolgus*, male).

Game Bag and Gun.

Address all communications to the Forest and Stream Pub. Co.

HOSPITALITY AND BOB WHITE.

MY friend G. T. L., who is engaged in business in New York, wrote to me during the month of October, that he would forego the pleasure of voting for ——— as Mayor, and leave for his father's home in North Carolina on the first day of November. He and I have long desired an opportunity for a friendly contest in the field; and it was agreed that I should meet him at Moncure, a station on the R. and A. Air Line Railroad, on Thursday morning, the 4th, duly equipped for any struggle which might take place. Accordingly, I left home "that hour o' night's black arch the keystane," with my little bob-tailed pointer, of no known pedigree, a 6lb. 8oz. hammerless, 14-bore, and over two hundred loaded shells. On reaching the station where I was to debark, I saw my friend, ready to accompany me; and near him his two high-bred setters, who respectively bear the names of Pendragon and Corinne. G. T. L. seems to have a penchant for peculiar names, and is decidedly classical in his selections. With all respect for him, I beg to suggest that he has put too heavy a load on his dogs, for they are incapable of bearing with intelligence such a sesquipedalian nomenclature as he has chosen. He knows that, I feel sure, for on the field, and when my little dog—whose name is rather classical, too—was taxing all their powers of endurance, he came down to "hard pan" and called them Pen and Rin. But let all that pass.

The people of Pittsboro had nearly completed a short railroad, connecting at Moncure, and at the time of my visit a construction train was running within two miles of the town, and within a very short walk of the paternal mansion whose hospitality I was seeking to enjoy. The authorities had kindly offered to run a locomotive to suit my convenience, and to carry me to the place of my destination. Accordingly, we placed our luggage on a flat car, and he and I availing ourselves of this courtesy of the engineer, took a place with him in his cab. The distance we had to go being short of ten miles, we were not a great while in making the highway on which lived the father of my companion. We were met by him and I had a cordial greeting. Walking to the house I found the "latch string out" and met with a hearty welcome from all the members of the household. Inasmuch as we had not breakfasted, we were soon rejoiced to hear the summons, which advised us that our sharpened appetites were to be gratified.

Having returned to our room and changed our apparel, we concluded to try some inviting looking fields adjacent to the residence, and putting a few shells in our pockets, we whistled up Pendragon and Argo and proceeded to the sportsman's business. Unaccountably, we found no birds in the stubble where we expected them, the reason being, doubtless, that owing to the abundance of food, they had filled their craws and gone into the woods for wallowing. Crossing the highway both dogs indicated that they scented birds, and Argo, ranging more freely than his noble companion, was soon hidden from view by some high sedge. We hunted him up, however, and found him upon a dead point. Approaching, and getting near him, he was ordered on; up rose a nice covey of well-grown strong-flying birds. Each got in two barrels, and but one bird fell; that one did not go into my pocket. The birds sought cover in some thick woods and thus escaped further pursuit. Passing into another field L. flushed a nice covey of birds, from which he got one. They took refuge in a hedge row and adjacent sedge, and then we had a "hot corner" for probably ten shots. Out of that covey we got probably a half dozen. Passing on another covey was flushed (no fault of the dogs) and all of them, except one which I killed, went to an unknown locality, and could not be found. It being about lunch time, we went to the hotel and refreshed. In the afternoon we took another stroll, and succeeded in getting about ten birds more.

In the morning, after an early breakfast, with the atmosphere sharp, as it always is immediately after a killing frost, we placed our shells, clothing, and the two

dogs, Pendragon and Corinne, in a wagon, and set out for "the hills beyond Pentland," or, in plain English, for some splendid country on the east side of Haw River and about midway betwixt Pittsboro and Chapel Hill. The gentleman, on whose lands we proposed to hunt, not being at home when we reached his house, at my suggestion we went on to a large old plantation, at present the property of the University by devise of the late owner, Miss Mary Smith. We found the superintendent, who very promptly informed us that the land was "posted." To this I replied, with significant emphasis, that I had in that locality a right of eminent domain, and no one could forbid my entrance. He saw the point, and we soon commenced shooting. Our chief objective point was the residence of Edmund Atwater, Esq., an intelligent and thrifty farmer, who lived about two miles east of the place where we got out of our vehicle. The superintendent, Mr. Cole, promised to take the wagon to Mr. Atwater's, while L. and myself ranged the fields. Corinne was left, and we depended upon Pendragon and Argo. The latter took it on foot for the eleven miles we had traveled. Going hurriedly along, we found a small covey, and upon shooting we were hailed by a plowman and ordered off the premises. I approached him and told him who I was, and informed him of my right, as one of the legal owners of the estate, to hunt on it with my friends whenever I chose to do so. He did not know me; but then my determined manner and authoritative style of talking had their effect, and we were not further molested. When we reached a point near the residence of our friend Atwater we had fifteen birds, and I had besides a skinned place at the lower extremity of the *tendon Achillei*—whatever that is—which boded badly for my capacity to walk. L. and I were exactly even in our trophies, one bird being in dispute.

Our wagon with Corinne came to us about 1 o'clock, and our lunch basket was eagerly sought and its contents joyously appropriated. After a good rest Mr. Atwater made his appearance and welcomed us to his house and his lands. He had a muzzleloader, but being out of ammunition, we offered to let him have the use of our guns, when he chose to shoot. This he declined, alleging his preference to see how we could do. Pendragon was tied up, being somewhat sore-footed from his morning's tramp, and Corinne and Argo, the indefatigable, irrepressible, untiring little phebian, were to do the labor. We found birds abundant, well-grown and fat, and the fields excellent for shooting. When we reached the house at night we had twenty-five more birds, of which L. had thirteen, I had eleven and our host one, which he had killed very nicely with L.'s gun.

Our friend lives in a comfortable and commodious home which is nicely furnished, and our room contained every convenience to make our stay in it a matter of luxury. All the appointments were simply excellent and our host and his wife and daughter knew exactly how to make our sojourn as pleasant as heart could wish. The hospitality was simple elegance—unstudied and hearty—elegance in its highest and best sense. And just such as this was our portion at every dwelling which we had occasion to visit during the trip, a part of whose incidents it is my present purpose to describe.

That night we slept soundly, and my friend L., whose nocturnal lullaby in New York is that peculiar din, composed, in the main, of the contact of iron with cobblestones or other paving material, made no complaint that his repose had been disturbed by less harmonious sounds. At a comfortably early hour we were summoned to a substantial breakfast of broiled birds, buttered toast, good butter, coffee and other country delicacies, and were ready for another day's tramp. Our dogs were in excellent trim, having fared sumptuously the preceding night, and Pendragon and Argo were cast off to do their best ranging. We were joined by John W. A., a cousin of our host, but courtesy induced these gentlemen to allow L. and myself to take the lion's share of the amusement. We found several coveys, but they sought safety, as a general thing, in the woods. Still we bagged some. Unfortunately, we went too far, and got off of the best hunting grounds. At lunch, we had twenty-five of as splendid specimens of Bob White as ever charmed a sportsman's heart. Of these your correspondent claimed thirteen, L. ten, and the others fell before the guns of our friends, who occasionally shot to show us that we were not the only followers of Nimrod to be found in the country.

The clouds had now begun to thicken in the west and southwest, premonitory of a rain. This was far from agreeable to us, inasmuch as we confidently expected to bag more than thirty birds on our way to the house. At half past two o'clock we started and had not gone more than a hundred yards before the dogs were on a full stand. Notwithstanding the rain commenced falling, we braved the storm and got five birds from the covey. But the grass was too wet, and we, reluctantly, took refuge in an old stable and found even its shelter far better than an exposure to the weather. We gave up all hope of further hunting, and so soon as there was a lull in the tempest we "dragged our slow lengths along" toward the dwelling of our hospitable friend. On the way our irrepressible dogs started two more coveys, from which L. got five and I got two.

We spent the night with our kind friends and left, after breakfast, for other quarters. An earnest invitation to come again was extended, which was accepted with the usual conditions. Proceeding toward Pittsboro, we reached the home of my old friend, R. J. P., and I stopped to remain with him and his excellent wife during the day, while L. went on to spend Sunday with his father's family. By agreement he was to come up at an early hour on Monday morning so that we could see what sport the fields in that neighborhood afforded. I had a pleasant sojourn with T., during which we talked over past reminiscences of the locality where both of us were born, and in which we lived until we reached man's estate, when the demands of business led us to try our fortunes at other places. In the afternoon I was honored with a visit of several of the leading citizens of Pittsboro, who are generous enough to regard me as a well-wisher of their town and county.

The following morning my sporting companion, L., drove up to the gate, and soon thereafter we took all our dogs and began to range over some good looking stubble on the estate of the gentleman with whom I was stopping. We found very few birds, and succeeded in getting, after a laborious tramp, less than ten. During our walk I was shown the site of an old dwelling, in which once lived a citizen who was the father of one of our governors, of one of the Justices of the Supreme Court, and of one of the most eminent of the Baptist divines in the Southern States. All of them were born at that spot.

After an excellent lunch we tried another farm, and met with poor success. At about 4 P. M. we bade our friends farewell and took the road for the residence of Mr. L., the father of my companion. Just about sundown we reached a small stream, not over 500 yards from the house, and my little dog Argo, who as usual was "working his passage," came to a stiff point through an old fence which inclosed a sedge field. L. got out of the vehicle and secured the nervous canine, to keep him from doing harm by his untameable eagerness. We hitched the horse, and turning Corinne loose, the field was entered. It took less than ten minutes to get fourteen shots and bag nine splendid birds. Two others were brought down, but we failed to find them.

We hunted but little the following day, partly because walking was painful and laborious to me and partly to enjoy the company of our friend P. and his wife, who had visited the family of Mr. L., and were to dine with us.

On Wednesday I bade my hospitable entertainers farewell and G. T. L. and I took the locomotive for Moncure. Soon after arriving we started for the railroad bridge over Deep River, on our way to the residence of Mr. N. M. Bryan, who had generously offered to meet us with a carriage and take us to his house, where we proposed an afternoon's hunt with some of the canine nobility who were receiving collegiate training under two professors, preparatory to the commencement exercises at High Point on the 22d. Mr. B. was on hand. We lunched at his house and afterward looked at the juveniles in their quarters. Some of them were suffering from distemper of a malignant type. Quite a number of these dogs were good looking specimens of their respective races, but there was one liver colored pointer, who at a bench show where ugly commanded a premium, would have "taken the rag off of the bush" against all competitors. He had the head of Harlequin, intensified, and was profusely suggestive of Comedy. After inspecting as much as we desired, one of the professors kindly offered to take two of the students under him, and let us witness an exhibition of their qualities. I shall not mention their names. One was a fine-looking, well-marked pointer, "whalpit some place far abroad," and to import whom the owner "parted" with money enough to buy a respectable farm. The other was a splendid specimen of a blue belton bitch. The style of movement and acute sense of smelling of both were faultless; but they appeared to me to be lacking in some valuable qualities. They were cautious in the extreme, and, as I thought, did not thoroughly understand the art of locating the birds. They both showed fatigue in a greater degree than my unpedigreed Argo would have done at the close of a three days' hunt. With all this, I would have accepted the bitch as a present, much preferring her to the dog. We got about eighteen birds and did some very unskillful shooting. This I deeply regretted, because I was anxious to "show off" in the presence of the L.L.D.'s, both of whom were courteous and accommodating. That night I took the train for home, where I safely arrived.

I noticed that L.'s dogs did not seem to be able to locate as well as my dog Argo; nor could they range over so much ground. None of them were better retrievers than he, and none had the power of endurance which he possesses. Does high breeding beget constitutional weakness? If so, I prefer a lower grade. WELLS.

ROCKINGHAM, N. C., November, 1886.

A VISIT TO THE STIKINE FLATS.

SITUATED in the mouth of the Stikine River is a high island, which divides the river mouth into two branches. The upper of these empties into what is known as the Dry Passage, which connects Frederick Sound and Stikine Strait. The lower mouth is the navigable one, and discharges its waters into the Stikine Strait. The survey of these parts is not yet completed, and it may be there are more islands than this one in the mouth of the river. The side of the island looking up the river is high, while the other shore is low and forms the Stikine Flats. Between the flats and the base of the mountain is a large tract of level ground well adapted for cultivation. This is what they call in Wrangell the "Farm," and is probably the only tract of land in Alaska that bears that honorable name. It was formerly occupied by a transportation company doing business on the Upper Stikine, who brought their stock down there to winter. Enough natural grass was cut from the land to subsist the animals during their stay. It is now a part of a training school system carried on by the missionaries at Wrangell for the Indian youths of that part of Alaska. The good will of the transportation company, along with their buildings, was purchased for $500, and the money being raised in Pennsylvania, in honor of that State it was called the Pennsylvania farm.

The season of 1886 was very backward in southeastern Alaska; winter lingered late in the lap of spring. During April, and even as late as the early part of May, long flights of geese were seen cleaving the air in the neighborhood of Wrangell. They were bound for their breeding grounds in the interior—about the headwaters of the tributaries of the Mackenzie River. For weeks they remained on the flats at the mouth of the Stikine River, waiting for the ice and snow to disappear from their nesting places. These were white-fronted (*A. albifrons gambeli*) and Hutchins's geese. The Canada geese were already paired off, and were nesting in the long grass along the shores of the islands in the vicinity of Wrangell.

I was invited by Mr. Young, the farmer, to accompany him home for a day's shooting on the flats. Three of us, Young, a trader from the Upper Stikine and myself got into a canoe at Wrangell at 4 P. M., to go the distance of nine miles. I selected the middle seat, between the rowlocks, and pulled a pair of sculls. One of my companions sat in the bow and paddled, and the other in stern and paddled and steered. We made a straight course from the end of Wrangell Island across the head of Stikine Strait to the mouth of the river. The seats each had selected at the start had to be retained for the entire distance, for the canoes are so cranky there is great danger of upsetting them by trying to change places, and the water was too deep and cold to make any risky experiments. In consequence of my cramped position I was pretty well played out in my arms, and my feet were icy cold before we made a landing on the other side. Here two of us got out and walked across the flats, about two miles, to get warm and to have a trial at the geese. We saw flocks of them, also ducks, sprig, mallard and teal, but they were too wary to get a shot at.

The extent of ground uncovered by the tides is very great, being three or four miles in length and nearly as much in breadth. It is a yielding sand and is crossed here and there by sloughs. So level is the surface and so rapidly does the incoming tide sweep over it that, we were told, if a person were in the middle of the flat he would be submerged before he could reach high land. Along the margin there is a strip of higher ground that remains dry except at the time of large tides and during a southeast blow. This is sparsely covered with a coarse growth called goose-grass, which was just sprouting from the ground. The geese nip off the tender shoots and dig up the roots with their bills. About the farm land are many fresh-water ponds where the ducks love to gather. That evening, as we walked across the flats, we heard the blue grouse booming all over the steep mountain side at the back of the farmhouse. What an ideal place for a hunting lodge! Of big game, deer and bear are plentiful. The mouth of the Stikine is a noted place for the bears whose skins are prized for their glossy blackness. One hunter from Wrangell killed thirteen there in one week last spring. Further up the river are found the white goat and mountain sheep, and by traveling still further into the interior the hunter may find moose and caribou.

The farming is carried on in a primitive fashion. There were four cows, three sheep and some chickens on the place. The stock, we were told, needs very little sheltering during the winter. At the time of our visit they had no horses. The ground was turned up with spades by the Indian boys. The soil is light and warm and yields well of potatoes and other root crops. Barley also ripens. The household consisted of the manager, a son and daughter, and six or eight Indian boys. The family slept in two little cupboard rooms, and the Siwashes in a loft. They gave my companion and me the floor of the only other room in the house, alike the dining-room and kitchen. The planks were very hard and kept me turning over all night to find a soft spot in them where the sharp points of my bones would fit.

Our supper consisted of boiled breasts of teal, along with bread and canned peaches and one cup of weak tea. I was very hungry and filled up on the bread, of which, fortunately, there was plenty. The next day when I saw the process of bread-making I wished I had not eaten so much. The baker was a dirty little Indian boy about ten years, with a dirty nose. This bread-making is a part of their education. We had grace before meat, and a chapter read from the bible and prayers before turning in. Godliness goes before cleanliness somebody tells us; I would have it the other way. The Indian heathen child, I observed, was very much like his white brethren of the same age and condition, they skylarked and giggled during the time of worship.

After breakfast we started out for the flats. A few rods from the bank was a large snow bank, left over from last winter; on the north side of an island not far distant was a similar accumulation. The tide was in and the geese were feeding on the grassy area. There were thousands of them in flocks, it seemed. The sloughs were full of water and could not be waded, and we could not approach the game across the open ground. I shot two teal as we were going out.

About noon the tide had fallen enough to allow us to wade the sloughs. This was our only way of getting at the geese. When we saw a flock near the edge of a slough we would wade along it, concealed by its high banks. I got only one chance at them. A large flock were feeding at the edge of the flat where the bank was high enough on the water side to hide me from their sight. After a long and hot stalk down muddy sloughs and along the high shore I got within striking distance, poured both barrels into them, and when the flock had flown away I saw five of their number left on the ground. Before I could get to them three of these took wing. The two I secured were broken-winged. I was using Nos. 1 and 2 shot. They were the white-fronted geese. There were flocks of Hutchins's geese also. Young's boy, who accompanied me, got a shot at these and bagged one. I had an Indian boy to carry my game, and together we tramped the soft sand under a hot sun for two hours, trying to get another shot, but it was in vain. As the tide receded the geese went further out on the flats, where there was no more chance of getting at them than if they had been on the water. We gave it up about 2 o'clock and returned to the house. I bagged another brace of ducks on the way back. For dinner we had baked goose and it was delicious eating.

After the dinner we started for our boat to return, stopping at the famous Garnet Ledge at the mouth of the Stikine to gather some of the fine crystals. We found our canoe high and dry on the sand, a mile from the house, and a long distance from the navigable waters of the river. But the two of us managed to drag it down to the river, and got aboard about half past three o'clock. We carried a boy to pilot us to the mine, and a hammer and cold-chisel to chip the rock. It is on the right bank of the river's mouth, about 50 rods from the shore. A winding, and in some places a steep trail follows the general course of a little stream, to where it pitches over a rocky ledge as a waterfall. There is the mine, as any one can see, by the garnets everywhere sticking in the rock. A sign-board had been nailed to a tree claiming ownership to the ledge and warning others from mining for the garnets. This we tore down. The rock is a mica-schist and is full of crystals, which are very perfect. The largest I obtained measures 1½in. in diameter. The state of the tide limited our stay, else I verily believe we could have gathered a half a bushel that afternoon. We skirted the shore going to Wrangell, so that we could shift places when we became stiff from sitting in one position. I got on board the ship at 5 P. M., tired enough. T. H. S.

SOUTHERN PINES, North Carolina, is a new town, in the vicinity of which we are told there is good quail, turkey and deer shooting. It is west of Raleigh, on the Air Line, reached in twenty-two hours from New York. There is a hotel kept by W. R. Raymond.

FLORIDA.—Tampa, Dec. 6.—Ducks are plentiful around here now, and I see a good deal of venison brought in from the country. Fishing is also good, sheepshead, salt-water trout and redfish biting freely.—B.

THE NEW LAW OF CUBA.

Editor Forest and Stream:

By royal decree promulgated in Cuba by publication in the Official Gazette of Nov. 16, the anomalous law of requiring one license to carry a fowling piece and another to use it, has been superseded by the following, viz:

Art. I. No person will be permitted to use arms of whatever kind, or go hunting or fishing, without having previously obtained the corresponding license issued by competent authority, subject to the conditions prescribed in this decree.

Art. II. The civil governor of each province will issue these licenses under his responsibility after proper investigation in regard to each applicant.

Art. III. There will be six classes of license.

1. For use of all kinds of arms not otherwise prohibited.
2. For the use of firearms for defense of rural property.
3. For the use of pistol or revolver for personal defense outside of cities or villages.
4. For the use of pistol or revolver for personal defense inside of cities or villages.
5. For the carrying of fowling piece and to use it, and
6. For fishing in rivers, lagoons, tanks and pools.

Art. IV. The license of the first class may be obtained by all Spaniards of twenty-five years of age, heads of families and taxpayers, excepting criminals.

Art. V. The license of second, third and fourth classes may be obtained by all Spaniards of more than twenty years of age, except criminals.

Art. VI. The license of the fifth class may be obtained by those competent to obtain those of preceding classes, also persons between the ages of fifteen and twenty years, who are guaranteed in writing by their parents or tutors.

Art. VII. The license of the sixth class may be obtained by all Spaniards without exception.

Art. VIII. In order to obtain any of these licenses a petition to the civil governor will be required, written upon government stamped paper and accompanied by the personal *cedula* of the applicant, and said petition shall be registered and filed in the archives of the government and the *cedula* returned.

* * * * * * *

Art. XIII. In extraordinary cases or for motives of public order, the civil governors are authorized to declare suspended all or any of these licenses which they may have issued. NEMO.

THE CARE OF QUAIL.

BALTIMORE, Md.—*Editor Forest and Stream:* I intend to keep over some live quail to turn out next spring. Will you please let me know the best food for them? I have kept them successfully, but forget the exact food; I know too much wheat is too heating. Should there not be a variety of food? H. M. W.

Editor Forest and Stream:

The experience of the Brooklyn Gun Club, on Long Island, after trying two winters, has taught us not to keep our quail in confinement, but to turn them out as soon as we get them. We have spent hundreds of dollars on coops, with running water, gravel, etc., but have lost 95 per cent. of our birds. We now turn them loose in the coldest of weather, but before liberating them we prepare the ground for them by putting a scattering of wheat sheaves all over the ground where we want them to stay. The sheaves attract their attention and they come right back to them; in fact they stop around them all winter. We put new sheaves out twice a week to give them plenty of food. After a little while they get quite tame, so much so in fact, that we can count them and know exactly how many we lose, which does not amount to 10 per cent. The sheaves must be placed on high ground, so that in case of a freshet or heavy rain followed by a cold snap, they do not get buried under the ice during the night. As an experiment we built a hut for our birds last winter, with the opening toward the south, putting sheaves inside of the hut, and after a few nights the quail went in and roosted inside the hut. We intend to build several of these huts this winter.

MEMBER BROOKLYN GUN CLUB.

[We advise "H. M. W." to try screenings as the right food. Will others who have had experience with quail kindly give any information likely to be of benefit to others?]

NEWFOUNDLAND CARIBOU.

Editor Forest and Stream:

I your issue of the 25th ult., "R. Langrishe-Mare" is polite enough to insinuate that I have written several untruths in my contribution to a late number of your periodical, entitled, "Caribou Stalking in Newfoundland." He refuses to believe that I had good sport or shot so many deer in the peninsula of Avalon, and states that caribou are so scarce in the peninsula that the Legislature has been obliged to protect this game by special laws. Of course I am not here to defend my veracity against the imputations of a writer whose name I never heard till I saw it in the accusing letter; but your paper is a respectable one, and this I think justifies my reply. I do not know how scarce deer may be on the island now. My hunting excursions, the imperfect accounts of which I have given to FOREST AND STREAM, were made fifteen years ago; for I have not set foot in my native island since 1874. My hunting, as described in your weekly, was chiefly confined to the isthmus joining Avalon to the great northerly portion of the island. I leave it to those who have hunted in this region at that time to say how much I could have exaggerated the number of northward-marching deer at that place in the spring. Mr. Mare recommends to sportsmen the books of Capt. Kennedy, R. N., and General Dashwood (I presume the Captain has become a General since the publication of his book), but I beg to add to his list the book brought out in London by the Rev. Moses Harvey and Mr. Joseph Hatton. This work makes a much higher estimate of the number of marching deer than I have done. Mr. Mare says that he has "crossed the country from sea to sea half a dozen times." As he has taught me a lesson in rudeness, I beg to say that I do not believe he has crossed it half a dozen times, or ever crossed it. There are several resident and visiting sportsmen in Newfoundland, Mr. Editor, who, because they shoot along the Placentia road in the autumn for a few days, straightway imagine that they have "crossed the country," and set themselves up as authorities upon island sporting. Now and again a bewildered deer turns up along this track, but no genuine hunter will bother about such sport. To get deer in Newfoundland you must "rough it" and lie out in the "drokes" at night; while your correspondent, I am credibly informed, is a man who would not stray away for a six-hours' tramp from the warm beds and the ham and eggs of the "Mountain" or the Half-way House.

I shall not discuss gestation, the dropping of horns, or such other questions with your "nauseated" correspondent; but I would add, taking into account the tone and terms of his letter, and his eulogy upon Captain Dashwood's book, that his literary and intellectual discernment are on a par with his manners. Pray, excuse this trespass. EDMUND COLLINS.

NEW YORK, Dec. 8.

SHOOTING IN ASSAWOMAN BAY.

SOME good shooting in the goose line has been done by members of the Jersey City Heights Gun Club of late. There are two bays of the above name on the eastern coast of Maryland, the Little and the Big Assawoman, the former celebrated for its excellent duck shooting in its season, principally redheads, pintails and a few canvasbacks. The larger bay is a good resort for geese. Ben Payne and his young son, a *bona fide* "chip of the old block," returned about the 1st inst. with 44 geese besides their ducks. Rumor says the younger Benny rather wiped the paternal eye on several occasions. On the 11th, Chas. B. Jordan and Jerry Maher, two more of the club members, returned with 33 geese, 28 ducks, 62 quail and 2 woodcock, the result of ten days' shooting, and a good bag considering some of the weather. The old residents say that for years there have not been so many geese in that neighborhood. What would not Bill Lane do down there with his educated honkers? Two of the geese Charlie Jordan brought home to present to friends weighed 29lbs., more than 14lbs. apiece. The subscriber was remembered by the returned wildfowlers, two *Anas canadensis* dropping at his door last evening, one weighing 11½lbs., the other 10½lbs. One will be mounted with wings spread, just drooping to stool, as Jerry M. shot him, and will adorn the walls of the club room.

Col. John J. Toffey and Wm. B. Wheeler, two members of the J. C. H., with friends left on the 13th for St. Martin's River, a tributary of Big Assawoman Bay, where they have a commodious schooner fitted up with all the accommodations for a sportsman's party. Eight bunks in an ample cabin, with a good kitchen, first-class steward, with Captain Dukes (and no better gunner or truer-hearted man can be found on the beach) for the skipper. All this, with a locker full of the good things, necessaries and luxuries, and where the birds are we speak for Col. Toffey and party a glorious and successful time. We would like to be there. Will let you know how they fared.

JACOBSTAFF.

GUNS IN THE OLD COUNTRY.

I FEEL that I am but reflecting the sentiments of every intelligent lover of field sports when I say that the journal you so ably edit rendered a service to the science of gunnery and to the shooting world, in your last year's tests of trajectories, that cannot be measured in words. It is what has long been required, but it was your act that gave us in figures the facts we have all so greatly desired to know. If you would add to the obligation already imposed upon us, and make a test of the relative power and penetration of double shotguns, the work would be complete.

The tastes and opinions of Englishmen are so different from those held in America in respect to sporting guns, that many of those best known and most popular here are scarcely ever heard of in England. There the guns in use among the gentry are generally from London builders. Of these, Purdey stands at the head in point of workmanship and price. His average make of hammerless .12-bore cannot be had for less than £80, and the highest grade Purdey guns cost about £100 or $500 in American money.

Next to Purdey come Boss, the Lancasters, Woodward, Baker of Cockspur street, Holland, a famous builder of large-bore rifles for elephant shooting, Lang, Westley-Richards, Grant, Reilly, Greener, Cogswell & Harrison, Williams & Powell, Turner, another famous rifle-maker; Dougall, Beattie, Murcott, Rigby in Dublin, and Henry in Edinburgh, both of whom build Express rifles of unequalled accuracy and power, and Tolley. You see I have left Scott out of the list because I never saw one of his guns in the hands of an English gentleman. There are many other capital gun makers in England and you can scarcely go amiss in ordering from any of the Birmingham makers. One of the best guns I ever owned was made by Needham, in Piccadilly, and Daw, the father of the Modern breech-loader, is still to the fore, while Egg (who fifty years ago had scarcely a rival in the making of duelling pistols, and how many a fine fellow has gone down on the sward of a morning before one of Egg's "neatest tools" held by a steady hand and sure eye) still has a regular lot of old-time clients, generally well-to-do country squires, whose fathers "when George IV. was King," shot with Egg's guns, and their sons cling obstinately to family tradition.

Moore & Grey are another old-time house whose work is honest and true. I think one of the handsomest guns I ever saw was the workmanship of Hollis, of Birmingham.

There are certain well-known country makers of a century's standing, whom we seldom hear of on this side of the Atlantic. They are somewhat like old Patrick Mullen used to be in New York, having but a few customers and doing their work deliberately, but with the most perfect neatness and care.

Of this class the best types are Turner, of Reading; Piper, of Cambridge; Webb, of Oxford, who has had on his books the names of nearly all the great men of England; Burtenshow, of Leeds; Little, of Stafford; Jeffry, of Norwich; McLeod, of Aberdeen; Gartside, of Sowerby; Bales, of Ipswich, and Hugh Snowie, of Inverness, with many others, whose name on a gun is a guarantee of its excellence in every respect.

The handsomest work that comes to America in large quantities for the trade is from the Scotts, at Birmingham. They will do what you ask, which is more than can be said of some other makers, and will take the trouble required in a special order out of the common line without extortionate charge or grumbling. Every deer hunter—in the South particularly, where we shoot about 60yds. at running deer—knows the difficulty in getting a gun bored to shoot buckshot effectively.

In 1881 I went down to Birmingham and visited the Scotts' factory. I found them extremely pleasant people, with a better knowledge of America than one often finds in Merry England. I explained to the senior member of the firm that I wanted a 10-bore gun for large shot and took out of my pocket a load of our target shot or "blue whistlers." Three months thereafter I got the gun. It had two sets of barrels. The entire weight with the 10-bore barrels was 10¾lbs., with the other set almost 2lbs. less. The balance with either set was admirable. At fifty measured yards the 10-bore barrels—cylinder—would put nine buckshot inside a 2ft. circle, right or left, the left shooting a trifle closer than the right. With No. 1 and 2 BB. nothing could have been better than the shooting of this gun. I had the old-time, wide, flat rib on both sets (I found it so much better than the narrow concave), roughed, as it is on rifle barrels. I advise every sportsman in ordering a gun to try it.

At the suggestion of Sir Samuel Baker—the most famous of the old-time elephant hunters—I had Silver's anti-recoil heel plate put on the butt. It takes up the recoil in a wonderful way. Sir Samuel told me that with this heel plate on a 10-bore, 15lbs. double rifle, he could shoot ten drams of powder with no more inconvenience than one feels in a 3½-dram charge in a 12-bore. Some time, when your patience, Mr. Editor, shall be great, and my leisure permits, I would like to tell you of some shooting and gun tests made in the MISSISSIPPI LOWLANDS.

NOVEMBER 15, 1886.

VIRGINIA GAME NOTES.

LEXINGTON, Va., Dec. 10.—I have been reading with pleasure the FOREST AND STREAM since Oct. 7, 1886, and observing that your game notes from Virginia are meager, have thought it might not be amiss to give you some information as to game in this, the great valley of Virginia.

Our hunting club took its annual hunt early in November, and notwithstanding the unfavorable condition of the weather, succeeded in bagging four deer, one an unusually fine buck. About the same time another party in this county killed seven; and large numbers have been killed in the adjoining counties.

Quail are more plentiful than for years. On Saturday, Nov. 4, a companion and myself were out, and although it snowed vigorously all day, we succeeeded in bagging forty-five by 2:30 P. M. This was accomplished by abandoning the open fields and confining our work to low and sheltered spots. We worked three dogs, two setters and a pointer bitch. One of the setters, a large black puppy, of the Bridget Plunket strain, did capital work and gave promise of making a most valuable dog.

Bags of forty and fifty have been made to the single gun. Grouse, though somewhat scarce, have been brought in in considerable numbers. T. M. S.

ORNITHOLOGY OR TYPOGRAPHY?—New Jersey's legislators don't know the difference between a wild turkey and a prairie chicken, says the editor of the Rahway, N. J., *Advocate*. The two birds are almost as distinct in form and appearance as the dodo and the dove, but our lawmakers in 1874 cared naught for ornithology, and passed the following act, which was approved March 27, 1874, and which stands to-day on our statute-books as follows: Sec. 9.—That no person shall kill or expose for sale or have unlawfully in his or her possession after the same has been killed, any pinnated grouse or *wild turkey, commonly called prairie chicken*, prior to the first day of November, anno domini one thousand eight hundred and eighty, under a penalty of fifty dollars for each bird so killed or had in possession. The law has since been changed. Was this legislative ignorance or a transposition blunder in the State printing office?

MANITOBA.—Toronto, Ont.—In the notes I sent you of a canoe trip, I mentioned the system of appointing game wardens in Manitoba as being one that answered very well, and suggested its adoption in Ontario. I inclose a paragraph from the Neepawa, Man., *Register*, which will speak for itself and illustrate what I said: "Four gentlemen from Toronto, including an alderman from that city, came to Neepawa last week and proceeded to bag all the prairie chickens in the vicinity. They were permitted to carry on their work of destruction for several days, but complaint was at last made to Game Guardian Brownell, and they were promptly notified to quit. Constable McLean seized upward of 200 chickens which they had shot. They, however, satisfied the guardian that they would not ship them East, whereupon they were permitted to take them and go."—J. A. W.

MAINE LARGE GAME.—Rockland, Me., Dec. 8.—I have just returned from a deer hunting trip on Machias waters, near the scene of the Fletcher Brook tragedy. We found game plenty; got four deer, all we wanted. After reading the communication from "Special" I agree with him, as I have tramped and canoed, hunted and fished over Maine, from the coast to St. Francis. Just as soon as the State appropriates a sufficient sum to make it an object for the local hunters to turn game wardens, it will be unpleasant for poachers. I was informed that some chaps from Lowell and Passadumkeag were camped near Nicatous and were putting out dogs. It is a hard job for a game warden not familiar with the country to get evidence sufficient to convict them.—BUCK.

CHINESE PHEASANTS IN OREGON.—According to the San Francisco *Bulletin*, there is talk of introducing a bill at the coming session of the Oregon Legislature to repeal the law protecting the Chinese pheasants shipped to this country by Judge O. N. Denny. Both hunters and farmers have grievances against the foreign birds, which, they claim, are becoming a pest. The former claim that the Chinese pheasants have driven all the native grouse and pheasants away, and but few can be found where a few years ago they were as thick as crows in a cornfield. The farmers say they infest the grain fields and make short work of growing crops.

AUBURN GUN CLUB.—Auburn, N. Y., Dec. 10.—At a meeting of Auburn, N. Y., Gun Club Dec. 1, the following officers were elected for ensuing year: President, C. W. Tuttle; Vice-President, H. N. Howland; Secretary, H. R. Kidney; Treasurer, S. F. Rathbun; Executive Committee, H. N. Howland, J. M. Munro, Frank Steel.—H. R. KIDNEY, Secretary.

MICHIGAN DEER.—Detroit, Mich., Dec. 7.—*Editor Forest and Stream:* The following from the principal sportsmen's outfitting point in the Upper Peninsula of this State tells its own story: Munising, Dec. 6.—During the season just passed two deer hunters, who came here from the lower part of the State, killed 284 deer within ninety days. The saddles, which are worth on the average $5 each, were shipped out of the State. The hunters subsisted almost entirely on the meat they killed and their only outlay was for ammunition. Their net profit was, therefore, nearly $1,400. Other pot-hunters at other points have done the same, and in consequence game in the Upper Peninsula of Michigan is growing scarce. There is a law to prevent shipping deer out of the State, but it is not enforced. There is a law to restrain hunters from killing deer in the water with a light, but it also is practically inoperative. So great has been the slaughter of deer in the only parts of the State where they exist in any numbers that the Legislature will be asked this winter to enact still more stringent laws, which will be enforced by the local sportsmen's and game associations which have been formed recently in nearly all the cities in this part of the State. The statute asked for will be to prevent the shipment of game out of the Upper Peninsula. The present law prohibiting the shipment of deer out of the State can be easily evaded. It is very easy to ship a deer to some point in the State near the Ohio line, then reship it to any part of the country desired. Wholesale slaughter in the herds of deer that roam through parts of the Upper Peninsula has been no greater than the havoc made among the finny residents of the small rivers and creeks. Brook trout have been taken with nets and shipped away by the ton. Unless a stop is speedily put to it the hunting and fishing grounds of the Upper Peninsula will soon exist only in the memory of the past.—F. I.

BELGIAN HARES FOR MAINE.—*Editor Forest and Stream:* I intend introducing an alien hare into the covers of the coast of New Hampshire, and should like much to know if any of your readers have tried the Belgian hare in New England or the Middle States. This hare is of large size, is said to leave a scent that dogs follow well, and breed every month, even in New England during the winter months. I should be greatly obliged for any information in regard to this or any other hare available for the chase in New Hampshire. The large white hare (*Lepus americanus*) has disappeared from the sea coast of the State and all attempts at rebreeding have been failures.—A. C. H.

THE WEST.—Nantucket, Mass.—I have just returned from an extensive hunting trip through Minnesota and Dakota. We had good success and found game quite plenty.—W. N. F.

MORE ABOUT RIFLES.

Editor Forest and Stream:

By your leave I desire to make a few comments on Mr. Romer's supplementary report on the FOREST AND STREAM trajectory tests contained in your issue of Nov. 25. The heavy target rifles in the test were not practical sporting or hunting rifles, mainly on account of their weight. The sighting and manner of loading is also against them when used for hunting. For target play they ought to be fairly successful, especially from a shooting house, as is the custom in target matches with muzzleloaders. For open air shooting, in all kinds of weather, the breechloader is generally considered the best gun.

Now in regard to shot No. 5 of the Maynard series at 200yds., Mr. Romer says it was a flopper, dropper, unaccountable or goose egg. What is the proof? It struck the 50yds. screen 3.10in. below the mean horizontal line of the other shots. At 100yds. it was about 6.30in. below. If the rifle was so aimed as to strike the 50yds. screen 3.10in. low, where in the name of common sense would he expect it to strike the 100yds. screen? About 6.30in. low if the gun was accurate and not addicted to shooting spirals, as were some of the other guns. Supposing Mr. Romer's "about 6.30in." to be exactly correct, the shot should have struck the 50yds. screen 3.15in. low. The error was then 3.15—3.10 or .05in. How many rifles in the 100yds. tests did not put one or more shots 1-20in. above or below the average of the other shots? The error is infinitessimal and of no practical account. Supposing again that about 6.30in. would pan out by careful measurement 6.20in. Then that shot would be an exact average of all the shots fired from the gun. Supposing a small error in measurement on the 50yds. screen and that the figures should be 3.15in. Then again would the shot be an exact average for the gun. It was not a flopper, a dropper, or an unaccountable. A goose egg it certainly was. So have many thousands of shots been; but has not the holding, the sighting, the judgment of the shooter anything to do with the making of goose eggs? We are distinctly told that the Maynard rifle was removed from the rest after every shot. Is it impossible that the gun might have been aimed differently for the different shots? Is it not rather impossible that it should have been aimed exactly the same for any two shots? A very slight error of adjustment, such as might easily have been made with plain open sights, would have caused the error of 3.10in. on the 50yds. screen. Who among the readers of FOREST AND STREAM never made an error of 3.10in. at 50yds.? If the test had been one of accuracy, with no restrictions in regard to weight, trigger pull, and sights, there would have been very few practical hunting rifles voluntarily offered for the test. The test did, however, illustrate the steady shooting, which is one of the most important elements of accuracy, of all the rifles entered. It proved beyond the possibility of a successful contradiction, the positive inaccuracy of all the rifles tested by showing the variation of their curves. Not a single rifle in the test made two curves alike. This variation in curves is, then, a fair basis of comparison of the accuracy of the various rifles tested. The comparison made by Mr. Burns between a muzzleloader and the Maynard breechloader is a fair one when looked at in this light. The difference of .06in. shows that the muzzleloader beat the breechloader for regularity of curves just that much in a range of 200yds. The bunching of the shots on the screens is not a fair comparison between these two or any other two guns in the test.

NORRISTOWN, Pa., Nov. 29, 1886. E. A. LEOPOLD.

Editor Forest and Stream:

I was much pleased and instructed by the article of Mr. Wilcox in a recent issue of your paper, as he evidently understands what he is writing about. I too have been brought up in an atmosphere of gunpowder, having passed much of my boyhood in the Canadian backwoods, and my visits to their solitudes have been very frequent, so, as a natural result, I have seen and used a great variety of firearms. As far as my observation goes I fail to find in the modern rifles the accurateness of the old muzzleloaders. I agree with Mr. Wilcox when he says that the charges of lead are too heavy, but I should not, as he does, want the space in the cartridge occupied usually by lead, filled up with powder. In my opinion it is better to leave the powder charge as it is and decrease the weight of lead as he suggests. The reason is that it is very difficult to shoot accurately heavy charges of powder in an off-hand position. The recoil being felt at the shoulder before the bullet reaches the muzzle must, of course, in some degree alter the position of the rifle from the place it occupied at the time of pulling the trigger. This will certainly be more apparent as the powder is increased. The recoil is not noticed in target shooting, as there is plenty of time to firmly adjust the rifle to the shoulder and brace the body to offer resistance. In hunting there is no time for thought about this matter, and if there was, very few would be deliberate enough to take advantage of it. Practically then, it is desirable that as little powder and lead should be used as it is possible to do without sacrificing too much the power of the arm.

The flattest trajectory I ever saw was produced by a double barreled muzzleloading rifle, manufactured by a German, in Belleville, Ontario. This arm, which is still in existence, though some twenty years old, had the barrels perfectly parallel, that is the axis of the bore at the breech was the same distance apart as the axis at the muzzle, using a bullet about .32-cal. The owner was a very skillful hunter and killed plenty of deer both by still-hunting and hounding into the lakes. He scarcely ever missed a shot and had full confidence in his rifle.

I have shot the weapon myself at 50 and 100yds. without any perceptible variation in the flight of the bullet, using the same elevation for both distances. The owner claimed that he only took a slightly greater portion of the front sight when shooting 40 rods (all backwoods hunters measure by rods). I never fired it at that distance so I cannot say as to its execution at 200yds. range.

As an experiment I once tried to convert a smooth bore "Indian Chief" gun into a rifle, as follows: I placed a round bullet inside a piece of cork, on which were cut spiral curves converging toward the point. The cork fitted very tight in the barrel, which was about 14-gauge and 36in. long. The shooting was very accurate at short distances of about 50 or 75yds.

So much for the old style of weapons, but they have had their day, for no person but a fossil would carry one of them into the woods when he could have the modern repeater, even if the others do a little finer work.

There is no doubt but the present style will be improved, if not in mechanism in the manner of loading.

I wish some of your readers who have time would try an experiment with a hollow iron cone, covered with lead to catch the grooves of the rifle. It would be much lighter and not require so much force of projection for an equal initial velocity as the lead. It would also have the advantage of retaining its shape after striking an object, thereby cutting a clean hole, which would let the blood run freely, and also breaking all bone it struck.

TORONTO, Ontario. W. R. W.

Editor Forest and Stream:

In your issue of Dec. 2 "Maynard" says the guns made by the Massachusetts Arms Co., of Chicopee Falls, Mass., would not shoot well after being chambered for the Remington .32-40-125 cartridge, claiming as the reason that the proportion of the powder and lead was not right—too much powder. Allowing that to be a fact, *i. e.*, that those rifles would not shoot that ammunition, it by means proves the ammunition at fault. I happen to own one of those Remington .32-40-125 rifles and with it can do accurate shooting 200yds. and under—never fired it at greater distance—and have killed squirrels, partridges, ducks and deer with it. I do not believe a more accurate rifle is made, either muzzle or breechloader. I never shot one and have shot and owned a number.

I once owned a Remington .45 and had it chambered for Sharps' special .45-105-550 cartridge, and that rifle never shot a little bit—wasn't sure of hitting anything with it. I know a .40-60-210 single shot Winchester that did most excellent shooting, it was chambered for the Remington .40-65-310 cartridge, and it does not shoot as well as before. I do not claim that those charges will not produce good, accurate shooting. Why those guns did not shoot well after being rechambered I do not know, but would like to very much. The .45 Remington I never fired till after it was rechambered, so cannot speak for its good qualities before, though have had very satisfactory results from four of same make that I have owned.

"Maynard" winds up by asking if different guns using same cartridge kick differently? My experience is that they do. Two guns that I tried, of like weight and dimensions, made by same company, using same cartridge, showed a very marked difference in that respect. My idea is that guns having deeper or quicker twist kick more, all else being equal. WELLS.

MEDFORD, Wis., Dec. 8.

Editor Forest and Stream:

In regard to rifles, I used a new model Winchester magazine, 90grs. powder and 300grs. lead, .45-cal. Anybody who wants to use a small bore is at liberty to do so; but it will take lots of argument to convince me that a deer struck with a lead from that gun is not more liable to die suddenly than if he were shot with a .38 and a smaller charge of powder. Every man to his fancy, however. I do not care to argue the case, as I have shot different rifles for more than twenty years and know what suits me. BUCK.

Camp-Fire Flickerings.

"That reminds me."

200.

LAST June I passed several days on a friend's estate in Scotland, and though no game was in season, it was delightful to roam over the heather-covered hills and study the habits and characteristics of the birds and bunnies. Old Ben, the head game keeper, had been unusually successful with his pheasants, having hatched out, with the help of a dozen accommodating old hens, almost a hundred fine young birds. The oldest, four weeks out, were allowed full liberty during the day, and kept their mother hens continually clucking in alarm and amazement at their friskiness and pranks. All grasshoppers and bugs took their lives in their hands on approaching these youngsters, for with wings outstretched and regardless of all obstructions, they bore down on their quarry with a rush, each striving to be in first at the death. Even the little chicks, mere balls of down, toddlying on their two-day-old legs through the feathers of the hen and in and out the slats of the coop, waged incipient war on the flies. At night they had to be closely confined, for Brer' Fox had no gun or trap to fear, and thinking of the amount of leg muscle necessary for the coming winter runs, accepted every chance for a square meal. The rabbits had been very troublesome, destroying the plants the moment they pushed their green shoots out of the ground, and the farmers complained so much that Ben and the under keepers had, for the past ten days, shot and trapped over forty dozen, which, however, seemed to make no impression on their numbers.

The second morning I started out to see if I could lessen the number perceptibly, taking old Ben as master of ceremonies and one of his assistants to manage the ferrets. I had never shot any rabbits before except "jacks" out in Wyoming, the occasional streak of fur seen while bird shooting in New England not counting, and ferrets were entirely new to me. We saw quantities of rabbits all over the fields, but they were this year's, and being not much larger than an ounce of shot, were undisturbed.

Coming on one suddenly, how he would drop his long ears on his back and squeeze himself close to the ground, thinking to escape your eyes, but keeping his own wide open, and how soft and pleading they were! I never could shoot an animal after looking into his eyes. For that reason I am glad I was not at Bunker Hill to obey that command, "Wait till you see the whites of their eyes and then shoot!" I should have bolted.

Reaching a warren, one of the ferrets was slipped into a hole, and, taking my position back twenty or thirty feet, I waited. In a moment a head, and then a whole rabbit appeared and sat still. I was amazed. He was altogether too accommodating. Thinking he would run and so have a fair chance for life, I "shooed," and like a flash he was back again in his hole. Ben was disgusted and said, "Shoot the next one sitting or running, and shoot close." In a moment, bang! went my gun at a head, and Ben, running over to the edge of the hole, held up the rabbit—and the ferret, both stone dead. I had shot a little too close. F'LIN.

EXTRACT of a letter received by the U. S. Cartridge Co., Lowell, Mass., from Hildebrand Fitzgerald, gun editor of the *Item*, Philadelphia, Pa., date of Nov. 7, 1886: "I have no hesitation in saying, and you are at liberty to quote me (if you desire), that your shell is not only the best shell on the market, but the only waterproof shell, other shells being waterproof in name merely."—*Adv.*

Sea and River Fishing.

AMERICAN SILKWORMS.

Editor Forest and Stream:

For some time there has been an interest felt among fishermen in regard to the possibility of procuring great lengths of silkworm gut from the American silkworms, which are so much larger than the familiar *Bombyx mori* or Chinese silkworm.

As most of your readers know, the strands used by fishermen for leaders, or casting lines, as our English friends call them, and for the snells to which are attached hooks, is the substance which the silkworm possesses, and which if left to its own devices would spin into a cocoon, enveloping the chrysalis. For ages this cocoon has been appropriated by man—unreeled and woven into various silk threads and textures. Anglers and physicians have made another use of the unwoven silk. Just before the worm is ready to spin, the silk is in a soft, gelatine-like mass. By properly preparing the worm, cutting off its head, the silk sacs can be removed, and, taken between the thumb and forefinger of each hand, drawn to a considerable length. This must be stretched, dried, cleansed and polished, and it is ready for use, giving you a transparent strand of great strength and lightness, most valuable to anglers, and to surgeons also for surgical purposes.

Communications from Dr. Garlick, Dr. Sterling and others added to my interest in this subject, aside from difficulty experienced in trying to obtain good quality of gut from Spain, and I determined to endeavor to raise the American silkworms and inform myself if they could be reared in any numbers and give us a desirable product. I regret that I cannot say that my experiments, on the whole, gave a satisfactory result; but I give my experience, or method of rearing the worms, hoping it may interest or be of profit to some one and perhaps lead to better success. I will first say in brief that I found it perfectly possible to raise the worms in great numbers; it requires no expensive apparatus; they grow, thrive and attain a great size. If one desires to obtain the cocoons I should imagine no obstacle. I would suggest that experiments be made with the cocoons by those interested in silk culture, and if they unreel readily and produce desirable silk for weaving, the worms can be raised, I believe, successfully.

Upon investigation I decided to try and obtain only two kinds of moths, the *Platysamia cecropia* and the *Telea polephemus*. I was told that it would be difficult to raise the larvæ of the former, but that I would have no trouble with the latter. Contrary to this Dr. Garlick has written: "The *cecropia* can be raised as easy as young chickens." I found it only required care and patience to raise either.

In an article written by M. Trovelot in 1867, he pathetically says: "At first the undertaking seemed very simple; but who will ever know the difficulties, the hardships and discouragements which I encountered. This worm (the *Telea polephemus*) having never been cultivated, of course its habits were entirely unknown, though all my success in my undertaking depended very much upon that knowledge." It was five years before M. Trovelot succeeded in raising any number; but at the end of that time he had "not less than a million, which could be seen feeding in the open air upon bushes covered with net—five acres of woodland were swarming with caterpillar life." We were more fortunate and succeeded in procuring all we desired the first year. We were surprised, however, to find upon trying to obtain information in regard to the American silkworms how little has been written upon the subject. We found that nearly all the printed matter dated back to M. Trovelot's statements in the articles before mentioned, published in the *American Naturalist*, March, April and May, of 1867.

By persevering we overcame the chief and first difficulty, which was to obtain the cocoons from which to hatch the moths to produce the worms. From different naturalists and collectors we obtained eighty cocoons of the *cecropia* and twenty-five of the *polephemus* moth; the latter we paid twenty-five cents each for and had much trouble in procuring, in consequence it is said of their being extremely difficult to find. This cocoon is attached to a tree by a slender thread of the spun silk, usually spun round the stem of a leaf, the first strong wind is apt to detach it from the tree, when it falls to the ground, and among the usual deposit of dry leaves it is not usually discovered. The cocoon is about two inches long and one inch in diameter, is cylindrical in shape, with both ends round and closed, the color is a very light gray, similar to that of a wasp's nest; the cocoon is shaped and appears much like that of the well-known *Bombyx mori*, differing chiefly in size and color, the fibres of this cocoon seem specially tough and strong.

The cocoon of the *cecropia* is considerably larger, being from three to four inches long, an inch and a half in diameter and pointed at each end. It is apt to be somewhat angular, but is not uniformly so, the texture is loose and spongy, the fibres when held in the sunlight are exceedingly glossy and appear of considerable length, but being open at one end I am not sure that it would unreel as well as the cocoon of the *polephemus* and so be useful to silk growers, but for our purpose this could make no difference.

We kept the cocoons in a cool place, an upper room of the house away from the fire, and moistened them occasionally—our idea being to follow the course of nature as nearly as possible, and not wishing them to hatch too soon and so bring forward the worms before the leaves were out on the trees.

April 21 we received from Providence forty-one *cecropia* cocoons, packed in a box with some bird skins, which were strongly scented with carbolic acid. Fearing this might affect the life in the cocoons, we spread them in a box and placed them on a south porch in the sun and air. About 6 P. M. a fine moth came forth, a few minutes later another and soon after the third; all male moths. It may be well to explain here that the noticeable difference between the male and female moths consists in the breadth of the antennæ, that of the male moth being wide and feathery compared with that of the female. The spots in the wings of the male are somewhat larger also and more vivid in color, but the body of the male moth is not as large and full as that of the female.

We found the importance of having many cocoons, the tendency seemed to be that the males should hatch out

first, as each came forth from the cocoon we placed it in a cage about 3ft. square, made by nailing strips of lath together and covering this frame with a lace or mosquito netting.

When the moth first emerges from the cocoon it seeks to crawl upward until it can rest with its body nearly horizontal and its wings perpendicular. At first the wings will be less than the length of the body, giving it the appearance of a deformed insect, but they develop rapidly, and if undisturbed within an hour will attain their full size, the insect meantime remaining motionless except for the gradual expansion of the wings. It has been said that the moths hatch only between the hours of 2 and 5 P. M., but although this is usually the time it is not the positive limit, for we have many times known them to hatch earlier in day, in fact almost any time during the daylight.

The *cecropia* while in the cocoon seems only passive and cannot be readily aroused; but the *polephemus* is much more restless and will move perceptibly in response to any slight shake or a change to a warmer temperature.

The *cecropia* seldom gives warning before emerging, but suddenly creeps forth through the small loose end of cocoon, leaving it apparently in the same condition as before, no change except in the weight of the cocoon. The *polephemus* appears to have a hard struggle to reach the outside world, beating against its tough little case for days, patiently, persistently crowding until at last it bursts open the end and slowly works its way out, and seeks to crawl upward after the manner of the *cecropia*.

Both moths are extremely beautiful and of great size compared with the useful *Bombyx mori*. The usual size of the *cecropia* and *polephemus* is 5½in. across the wings and the body 1½in. long. The prevailing color of the *cecropia* moth is a cinnamon brown with brilliant spots. The *polephemus* is a delicate fawn color with equally handsome markings and shadings. It is not easy to describe these various blendings and changes of color, so I will not attempt it. Those interested will find cuts and descriptions of each in the *American Naturalist*, published at Salem, Mass., No. 8, March, April and May, 1867; in "Our Common Insects," by A. S. Packard, and in Vol. XVIII. of *Scribner's Monthly*.

As before stated, we had great difficulty in obtaining a pair of either moths, owing to their not coming forth from their cocoons at the same time. The moths, as I have said elsewhere, commenced to appear April 21, the males coming forth first, the cocoons were not all "hatched out" until some time in July. The male moth will live for a number of days, possibly two weeks, but if confined flutters all the night against the sides of the cage, and so in time becomes sadly frayed and worn. The female moth lives a few days, then lays her eggs, whether fertile or not, and soon after dies. As you probably know, during its existence the moth takes no sustenance but the air it breathes.

Should you be able to obtain a pair of *cecropia* moths, there is no trouble in regard to their mating, but in our experience the *polephemus* will not mate unless out of doors; with either moth there is a necessity for plenty of fresh air and a fair amount of room. It is an advantage for several reasons to place only one pair in a cage. When the cages are placed outside the house the female moths will attract the wild moths. Four *polephemus* moths were found clinging to the outside of one cage in a night. In a section where the moths are numerous there probably need be no trouble in calling in plenty of moths. So far as we can learn the moths are generally distributed throughout the temperate portion of our country. The *cecropia* seems more abundant in Ohio, Kentucky, New Jersey and States of about that climate, and revels in swampy growths. A correspondent writes to us that "It flourishes in swamps carrying water from two to three feet deep, and where so dense is the growth that a 'machete' is required to clear a path. Feeding and spinning on the 'button bush' or 'water sycamore,' I have seen, while sitting in my boat, twenty-seven almost within reach. When you consider this was in a patch of bushes covering fifty acres or more, you may know there were many cocoons being spun there at that time. As long as there are marshes in the West covered with the 'button bush' and inhabited by the great caterpillar, it would hardly be worth while to make a plantation for them after the mulberry and modern silkworm mode of culture. This is the way Dr. Garlick and myself looked at the matter; we certainly put a good deal of thought and time in it. The general impression was that they spun twice each season, the last cocoons remaining over winter for the continuation of the crop."

This same correspondent gives his ideas of proceeding to obtain the cocoons and raise the worms in these marshes in a semi-wild state, but they were not practicable for us, although undoubtedly wise suggestions for any one in that section of country. We were high and dry at the foot of a Vermont mountain and only found the *cecropia* cocoons upon our apple trees, although we heard of them as being on the bushes along the streams in the valley. Lumbermen and river drivers told us that they had frequently seen both cocoons and moths while at their work in early spring. But to continue with our own experiments and what we learned we must leave these statements from others.

The *cecropia* lays a round, slightly flattened egg of a deep cream color, with a small depression in the middle of coffee color; these eggs will be deposited in rows or clusters usually of seven, but sometimes more, occasionally less; they adhere to whatever they are deposited upon, but not so tightly but that they can easily be removed. One moth will lay about two hundred and fifty eggs.

The *polephemus* moth lays a tiny kidney-shaped egg, not so often in clusters, but scattered one or two or three in a place. Neither does the *polephemus* seem quite as productive as the *cecropia*.

The eggs are expected to hatch in twelve days after being laid, but as the moth is usually four, six or even more days laying her eggs, the hatching of the same is in successive stages, therefore requires constant watching after the twelve days to remove the larvæ as it hatches out and place it upon food. I say *upon* food. We found this a necessity, for to simply place the food near the eggs or larvæ was not sufficient, for although when first hatched they move rapidly and easily, yet their instinct does not seem to lead them in the direction of the food; this adds greatly to the care, for they must not only be placed upon the leaves but they must be watched until they attain some size to see that they stay there, for if they fall from the food they will not seek it again, unless returned they will shrivel and die.

The larvæ of the *cecropia* when first hatched are about ⅛in. long, are black and fuzzy, covered with short hairs like a caterpillar—these hairs they afterward lose.

They are slow to attack the food, and slow in growth for about two weeks. They can be fed in the house on fresh apple leaves for a time or placed on the trees out of doors. They do not seem to thrive until about two weeks old or until they commence to change color. M. Trouvelot and others describe this change or the moulting as of five degrees and clearly defined, and of marked progression. With the most careful observation we did not find this to be so; the change seemed gradual and almost imperceptible: the casting of the skins or moulting was manifested in only a few instances, the only skin or part of a skin which I ever obtained from this process was the head of one insect, and I assure you this was from no lack of watchfulness. The *cecropia* slowly changes from black to a yellow tint, which brightens in hue until it becomes a deep gold color, the black hairs do not disappear until they begin again to change color, losing the golden shade for a green, this green is most peculiar, being more of a bright robin's egg blue, deepening at the sides. On the head are four tubercles of intense red, the most brilliant you can imagine, with black hairs protruding arranged in the form of a star. The whole coloring of the *cecropia* is wonderful and beautiful.

We found by continued experiments that they only thrive on apple leaves (we were not able to procure the leaves of the buttonwood) and in the open air. We, therefore, inclosed low branches of the apple trees in a wood frame, and over this frame stretched a netting to prevent the worms from getting out and the birds from getting in. Underneath was stretched a white cloth of cotton to catch any worms which might fall. Should the weather be continually dry, it is beneficial to sprinkle this cloth with water to give the worms some moisture. We also built a shield of boards beside each tree to break the wind from the worms. At one time we had more than a thousand worms feeding and growing finely.

The *polephemus* were raised entirely within the house. They would eat several varieties of food, but none as heartily as the oak. We made boxes about three feet long, one foot wide and the same in depth. These were filled with wet sand, leaving a little space between it and the top of the box, which we covered with manilla paper. Through this paper into the wet sand we thrust the ends of the branches from the oak trees, and then placed the larvæ upon the leaves. Arranged in this way, the leaves will remain fresh for one or two days. To prevent the worms from creeping away we placed over the boxes, branches and all, the cages which we had used for the moths.

The larvæ of the *polephemus* are nearly white when first hatched and of the same size as the *cecropia*. They are more active, eat more readily and grow much more rapidly. When they get to be about an inch long their appetite increases and they feed eagerly and greedily. They do not show the great changes of color which the *cecropia* does, but attain soon a pale sea-green color, which they retain throughout the time of their existence.

We found it a great trouble when the worms were small to change them to the fresh leaves, as each worm or cluster had to be moved carefully on to another leaf. When they were nearly grown they would move of their own accord to the fresh food. Aside from this trouble the worms are easy to raise, do not seem delicate, and grow well in the house, always being careful to give them plenty of fresh air and food. I think if for any purpose it should be desirable to raise two broods in a season there would be no difficulty in doing so. Our moths in the cocoons of the *polephemus* began to hatch in ample time to have raised a second brood of worms and secure the perfected cocoons. I add here a list which has been given me as the result of experiments in feeding both the *cecropia* and the *polephemus*. The trees are mentioned in order of their value:

Cecropia.—Apple, maple, wild cherry, alder, poplar, willow, basswood, currant, ash, plum, oak and elm.

Polephemus.—Oak, cherry, maple, elm, basswood, poplar, willow, beech.

The *polephemus* matured in less time than the *cecropia*, but the latter reached a greater size, some of them growing to be 4¾in. long and ¾in. in diameter, and of varying but remarkable weight.

We drew many strands from both varieties, each worm giving two stands, *i, e.*, one from each sac. Before drawing we put the worms in a dilute solution of acetic acid, or of weak vinegar, which seems to render it more tenacious; after leaving them for a few hours they were taken out and drawn to their greatest length, as related in regard to the Chinese worm. The length was all that could be desired, for we obtained from the *cecropia* strands over 3yds. (9ft.) long, and from the *polephemus* strands nearly as long; and the color was perfection, *i. e.*, delicately tinted either green or pale brown, according to the variety. But alas, our hopes were vain, for the next day when they had dried we found that they had but little strength compared with the product of the Chinese worm. It could hardly have been in the drawing, for we had previously drawn gut from the Chinese worm, proceeding in the same manner, and it was hard and strong. We drew many strands, but all with no better success.

Now the questions arise: Will these worms feed on any other untried food, the mulberry or "button wood" especially, and perhaps produce stronger gut? Was there any fault in my experiments which was the cause of the weakness in these strands? If we could overcome this defect there is great profit and gratitude for the man who does. Our supply from Spain of the gut from the Chinese worm is limited and unsatisfactory, and to obtain the casting lines of proper length for the fisherman's use involves careful labor in sorting and knotting together the short lengths. All this labor could be dispensed with if the silk of the American silkworm could be strengthened. Dr. Garlick assures us that the worms he raised gave "strands of unusual strength and great length." I have in my possession a round, perfect strand of gut which is now six feet long and a piece has been broken from it; it is large and strong. It was given to a friend of mine by an old fisherman of New York city, Peter McMartin, who told us at the time that "it was drawn from some big silkworms, by a man in New Jersey." This was years ago, more than twenty, before I had thought of investigating for myself. Mr. McMartin has been dead a number of years; there is no way of learning more of this perfect strand, whose history, could we know it, might help us very much. This may fall under the notice of some one who can give information regarding their own or other people's experience. I shall be glad if they will write to me, for I am anxious that some one shall succeed in this, for the worms seem hardy, prolific, are native to this country, can be cared for by uneducated people, and it seems a pity that they should not be made a source of great revenue and release us from our dependence upon the supply from Spain. I hope some one may yet succeed.

CHARLES F. ORVIS.

MANCHESTER, Vt., Nov. 30, 1886.

NUMBERING OF HOOKS.

Editor Forest and Stream:

Will you kindly allow us a little space in your valuable columns to reply to your article on "Numbering Fish Hooks"?

In Redditch we number from 1 to 20, the size becoming smaller the higher the number, in the same way that the wire is numbered. This is logical, for the finer the wire the more frequently must it be drawn through the plates to reduce it. The sizes larger than No. 1 we number 0, 00, 000, etc. This system has worked well for centuries, all writers on fishing have adopted this numbering, all anglers and fishing tackle dealers understand it, we have spent thousands of pounds on catalogues and labels bearing these numbers, the stocks so numbered in the hands of dealers amounts to hundreds of thousands of pounds, we have between 5,000 and 6,000 hands employed in the trade who are all used to this numbering, and any change in numbering would entail great loss to the manufacturers and dealers, would create great confusion and cause innumerable errors.

Now, however, a manufacturer employing a very few hands chooses to number his hooks backward, 20 being a large size and 1 a smaller size; those smaller than No. 1 he calls 0, 00, 000, etc., and Mr. Pennell has written a book in which he adopts this numbering, but the only reason given for this new system is that "it is sufficiently elastic, allowing of extension either way."

We fail to see that this system is more elastic than ours. It is like saying that a piece of india rubber, held by one end in each hand, is more elastic if pulled with the left hand than it is if pulled with the right. In fact, it appears to us a left-handed system altogether.

The best thing that could be done in this matter would be that this small manufacturer should conform to the Redditch numbering and that Mr. Pennell should correct the next edition of his book in the same way; but if they should not do so, we have no doubt that the generality of anglers will continue to enjoy their sport without suffering much from the confusion which has thus been introduced into "hook numbering." S. ALLCOCK & Co.

REDDITCH, Eng., Nov. 29.

ALASKAN TROUT AND THE FLY.

Editor Forest and Stream:

Since the time when Capt. Beardslee exercised sovereign jurisdiction over Alaska—he being the law's sole representative in those days—a change has taken place in the country. It has grown into a summer resort. By traveling overland on the North Pacific Railroad, a thousand miles of ocean travel may be enjoyed without any of the discomforts of the sea. For one man who then visited it hundreds now go there. Every two weeks excursion steamers leave the ports of Puget Sound carrying passengers to their full capacity. These people come from the south, east and west; and among them are many who indulge in the pastime of fishing. The usual anchoring places of our vessel have been in the thoroughfare of these steamers, and we have frequently been appealed to by the excursionists for information in sporting matters. On the last steamer we met this year was a gentleman from New York who sought knowledge of this kind, it being his intention to return next year with a party of friends in a vessel under their own control for the sole purpose of enjoying the hunting and fishing of the country. Therefore, I think, it may make a difference to the angling fraternity whether the trout of Alaska will or will not take the fly.

My fishing experience has already been fully related in the columns of this journal over my initials, "T. H. S." in the issues of July 8, Aug. 26, Sept. 30 and Oct. 14 of the present year. I especially refer the Captain to the two first mentioned dates for the identification of the species.

The bulk of my fish were not *S. spectabilis*. I took a very few of this species, probably not more than a dozen, with the fly, and the largest weighed only ¾lb. My experience has been similar to the Captain's in regard to this fish. It is exceptional that they will take the fly when following a run of salmon. These I caught in this manner were taken in the riffles and rapids of the streams. But to take them in quantities and of large size one must, as he says, use bait, and the salmon roe is the bait *par excellence*. This fish I have seldom seen before the middle of July, August is the best month for them. My experience does not extend later in the season, as it has been our custom to go south in September.

The fish that furnished my favorite sport was the genuine brook and lake trout of Alaska, and the fishing was always best far removed from the salmon and salmon trout. I have been in the habit of calling this fish the *Salmo purpureus*, the rainbow trout, although the color markings are identical with those given by Captain Beardslee for *S. clarkii*. Concerning the variations in the markings of this fish I refer him to the communications in the FOREST AND STREAM of July 8 and Aug. 26 over my initials.

In the matter of the food of these trout. One evening last year while fishing a stream on Prince of Wales Island I saw large numbers of a small gray, or dun-colored, moth fluttering over the water, and the trout rose greedily to my artificial flies at the same time. It was not uncommon to see insect life of a similar kind about the streams of the other islands, but I don't remember having seen them so numerous as on that occasion. One evening this year as I stood upon the shore of a lake at the southern end of Etolin Island, I saw the trout rising every where to the surface, sending wavelet after wavelet in receding circles to the shore. I imagined them to be rising to the small insect life on the water. Unfortunately I was not able to get at them on account of the wide stretch of lily pads which fringed the shore. I have opened the stomachs of trout caught in Wrangell Lake

and have found them to be filled with water bugs and leeches.

I think Captain Beardslee has had the salmon trout too prominently in his mind when writing about the trout of Alaska; on the contrary the fish which has occupied my thoughts from first to last in my communications to this journal has been the brook and lake trout of the country —his *clarkii*, I should judge from the similarity of the markings, but what I have thought to be *purpureus*. Mr. Hallock's fish was of the same species, and was caught in the stream emptying into Ward Cove. T. H. STREETS.

MARE ISLAND, Cal., Dec. 5.

BLACK BASS IN ENGLAND.—Some conservative English anglers have strongly objected to the introduction of black bass in England. On this subject Mr. T. R. Sachs writes to *Land and Water*, as follows: "There seems to be an opposition to the introduction of this fish in the Thames. I cannot see the reason why. It is an old woman's story to say they are a destructive fish. So are perch. Do we not fish for them with a live minnow? and will they not take a small one of their own species or any small whitefish? Why, our Thames fishermen always use small whitefish when they can't procure minnows. They certainly grow to a large size. There is one in the Piscatorial Society's room, given to me by the late Frank Buckland, which weighed 4lbs., and from report they are very good to eat. I hope some one will introduce the black bass into our waters. The same outcry was made about the pike-perch. The Duke of Bedford introduced them into his waters some few years since, and they must be plentiful there now. They are a river fish, for I have caught them in the Danube and the Elbe." Just why any one should fear to introduce black bass in waters where pike live we fail to see, the bass are not as destructive, for they eat worms, insects and larvæ, as well as fish, while the pike is purely piscivorus. The bass will be a wonder to men who find sport in taking barbel, bream and dace, and who consider a pike royal game.

Fishculture.

RESULTS OF CARP CULTURE.

MR. CHARLES W. SMILEY, in charge of the Division of Reports and Publications of the United States Fish Commission, has compiled from the letters received in answer to questions sent out a great deal of valuable information concerning carp culture in the United States, which comprises some 880 pages, and has been printed in the form of an extract from the annual report of the Commissioner of Fish and Fisheries for 1884.

A report of the distribution of carp made by the U. S. Fish Commission from the young reared in 1879 and 1880 has already appeared in the Commissioner's report for 1882. In order to ascertain what success these persons may have had in rearing them, a circular was prepared and sent out in 1883 to cover 2,000 addresses of persons who had received carp. The circular was accompanied by a blank form containing fifteen questions relating to the subject, and from the replies received and from the correspondence of the Commission 1,036 statements have been compiled by Mr. Smiley. These answers are compiled geographically, as follows:

New England States	40
Middle States	176
Southeastern States	364
Southwestern States	249
Northwestern States	175
Pacific Slope and Great Plains	32
Total	1,036

These statements of persons who have been engaged in carp culture are given under the name and post-office address of the recipient of carp, and the entire testimony both for and against carp culture is given in order that the reader may form an accurate judgment as to the value of carp as an American food fish. The report, of which this is an extract, has not yet been distributed, but we have seen an advance copy of the extract, and find a great deal in it which will interest those who wish information upon the subject of which it treats.

EXCHANGE OF FISHES WITH FOREIGN COUNTRIES.—For several years there has been a systematic exchange of fish and fish eggs carried on between this country and Europe, mainly by the U. S. Fish Commission, on our side of the water. Last winter we received brown trout eggs from Germany and sent them whitefish and landlocked salmon eggs. During the summer we received soles from England. This winter we have a promise of brown trout and salbling from Germany, and of Loch Leven trout from Scotland. On the 22d, the North German Lloyd steamer Werra will take to Herr von dem Borne, Berneuchen, Germany, some brook pike and white perch, and later some rock bass, or redeye, will be sent. These exchanges are all made through the station at Cold Spring Harbor, Long Island, where eggs are repacked for foreign shipment or for home distribution. She saibling or salbling, for the Germans spell it both ways, and the Loch Leven trout will, no doubt, prove valuable additions to our stock of fishes.

NEW YORK FISH EGG DISTRIBUTION.—New York State Fishery Commission, Rochester, N. Y., Dec. 6.—*Editor Forest and Stream:* In behalf of the New York State Fish Commission I desire to announce that any parties desiring to obtain a supply of fish from the Caledonia State Fish Hatchery for the purpose of stocking any of the public waters in this State can be accommodated by addressing the undersigned. The list of fish offered for distribution includes salmon trout, whitefish, speckled trout, California trout, black, Oswego and rock bass, yellow perch and bullheads, also a limited number of brown or German trout. Application blanks with printed directions will be furnished when desired. My order book will close March 1, 1887. As we have on some occasions in the past been imposed upon, in order that we may be convinced of the good intent of the applicants they will be required to have their applications indorsed by a member of the State Legislature.—SETH GREEN, Superintendent Caledonia Hatchery.

SALMON IN THE HUDSON.—In a private letter to me, dated Glens Falls, N. Y., Dec. 8, Mr. A. N. Cheney writes the following, which I am allowed to publish: "A few days ago two of our young salmon were caught in a mill flume two miles above this place and about three miles below the mouth of Clendon Brook. They were returned to the river and allowed to go on to the sea. The man who took the salmon from the flume said that one was about ½lb. and the other ¾lb. in weight. We were having a fall freshet in the Hudson at the time." This letter of Mr. Cheney's gives further promise of our success in stocking the Hudson with salmon. —FRED MATHER.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 15 to 17.—Second Annual Dog Show of the Western Connecticut Poultry Association. Frank D. Hallett, Superintendent, Winsted, Conn. Entries close Dec. 4.

January, 1887.—Bench Show of Poultry and Pet Stock Association, at Adams, Mass. W. F. Davis, Secretary.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1333, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

May 3 to 6, 1887.—Eleventh Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **4311.**

THE IRISH SETTER TRIALS.

[From a Special Correspondent.]

SALISBURY, N. C., Dec. 8.—The inaugural field trials of the Irish Setter Club, booked to commence to-day, have been indefinitely postponed on account of the weather. A snow and hail storm came Dec. 5 and 6, covering the ground to the depth of ten inches, and at the present writing it is still on the grounds, and unless there should come a warm rain the present indications are that the trials could not take place in a satisfactory manner in some time. Messrs. Wm. Dunphy, J. T. Walker, W. H. Pierce and R. C. Van Horn, the only members of the club present, held a meeting, and it was resolved that, "owing to the condition of the weather and the utter impossibility of running the trials for an indefinite period, the trials be declared off and the entrance money be returned to the owners; also that the president be authorized to make all needful arrangements for the trials next year, subject to the approval of the club at its annual meeting."

The number of entries was twenty-two and twenty filled, being drawn as follows: C. T. Thompson's Nellie against Dr. W. Jarvis's Lorna. W. H. Child's Leigh Doane II. against Max Wenzel's Cat-Foot. I. H. Roberts's Daisy against J. T. Walker's Glenclair. I. H. Roberts's Bruce against M. Wenzel's Tim. I. H. Roberts's Luray III. against M. Wenzel's Jersey Beauty. I. H. Roberts's Creole against M. Wenzel's Ready. J. Grosvenor's Banker against C. T. Thompson's Mollie Bawn. Dr. W. Jarvis's Elcho, Jr. against I. H. Roberts's Jessie. E. W. Clark, Jr.'s Blarney against R. W. Van Horn's Patsey. W. H. Pierce's Kildare against Parrott Bros.' Gerald. MAN.

THE NATIONAL FIELD TRIALS.

[Special to Forest and Stream.]

GRAND JUNCTION, Tenn., Dec. 13.—The National field trials began to-day with the All-Aged Stake. Twenty-two starters were drawn to run as follows:

BEN HILL (B. M. Stephenson), black and white dog (Druid—Ruby)

against

BEAUMONT (W. R. Huntington), black, white and tan dog (Prince Royal—Nettie).

GLADSTONE'S BOY (Dr. Geo. G. Ware), black, white and tan dog (Gladstone—Sue),

against

LILLIAN (P. H. & D. Bryson), black, white and tan bitch (Gladstone—Sue).

DON'S DOT (John E. Gill), lemon and white bitch (Vandevort's Don—Cremorne),

against

DORA (J. H. O'Reilly), red bitch (Box—Rowena).

DAISY F. (R. M. Dudley), orange and white bitch (Gleam—Dean),

against

PET GLADSTONE (P. H. & D. Bryson), black, white and tan bitch (Gladstone—Sue).

LADY C. (B. M. Stephenson), black, white and tan bitch (Coleman's London—Belle of Hatchie),

against

DAN GLADSTONE (P. H. & D. Bryson), black, white and tan dog (Gladstone—Sue).

LUFRA (N. B. Nesbitt), blue belton and tan bitch (Dog Whip—Harrison's Juno),

against

NOBLE C. (B. M. Stephenson), black, white and tan dog (Count Rapier—Belle of Hatchie).

SPORTSMAN (J. W. Murnan), black, white and tan dog (Gladstone—Sue),

against

CHICKASAW (P. H. & D. Bryson), black, white and tan dog (Gladstone—Sue).

MINNIE S. (B. M. Stephenson), black, white and tan bitch (Dashing Berwyn—Romp),

against

BRIDGEPORT (E. E. Pray), white, black and tan dog (Dashing Monarch—Vinetta).

RICHMOND (John E. Gill), orange and white dog (Vandevort's Don—Beulah),

against

JACK CADE (E. V. Hale), black, white and tan dog (Lug Dhu—Mollie C.).

BOB GATES (Wyt- Bedford), black, white and tan dog (Count Rapier—Belle of Hatchie),

against

NIOBE (T. L. Martin), white, black and tan bitch (Maxwell—Juno II.).

GAY GLADSTONE (B. P. Holliday), orange and white bitch (Gladstone—Florence),

against

PATSY D. (R. C. Van Horn), red dog (Lord Dufferin—Queen Bess).

The heat between Ben Hill and Beaumont was undecided. Lillian beat Gladstone's Boy in a brilliant heat. Don's Dot beat Dora. Daisy F. beat Pet Gladstone in a good heat. Dan Gladstone beat Lady C. Noble C. beat Lufra.

It was cloudy in the morning with a cold wind, and birds were scarce. There were not many spectators.

GRAND JUNCTION, Tenn., Dec. 14.—The weather to-day has been good. The first heat run yesterday was decided in favor of Ben Hill. In the first heat to-day Sportsman beat Chickasaw. Minnie S. beat Bridgeport. Richmond beat Jack Cade. Bob Gates beat Niobe. Gay Gladstone beat Patsy D.

In the second series there was a protest against the order of running; the first two brace passed, and Dan Gladstone and Noble C. were run, Dan winning. The next heat, between Sportsman and Minnie S., was not finished. This ended the work for the day.

Birds were not found plenty, and some of the heats were tiresome. The race between Dan Gladstone and Noble C. was a very good one, much of the work being very fine.

At a meeting of the club this evening Gen. W. B. Shattuc was re-elected President; J. W. Renfroe and J. S. Wise, Vice-Presidents; Secretary, C. W. Paris; Executive Committee—T. A. Logan, L. A. Harris, E. F. Stoddard, F. J. Stone and B. P. Holliday.

GYPSIE'S KNOWING WAYS.

Editor Forest and Stream:

The following instance of reasoning power in a dog is so far ahead of any other I have either witnessed or read of that I think it worthy a place in your columns. Three years ago while staying on a friend's plantation in Franklin Parish, Louisiana, I passed portions of every day in quail shooting, which is there of the very finest. My friend, Mr. Bryan, of Hope Estate, and myself, were one day, as usual, shooting in the cotton fields of the estate. To save unnecessary walking, as the fields were of great extent, we were mounted, each having a little darky behind to mind the horses when we dismounted to shoot.

Our only dog was my setter bitch Gypsie, an old and thoroughly trained animal. We had been out several hours with good success, and were about returning to the house, when the bitch established a strong point at some distance from us. Hardly caring for more birds we sat on our horses admiring her, when suddenly she broke her point, and making a wide circle stopped again at the same place but a little nearer the adjoining timber. We still sat our horses watching her. Again she broke, circled and stopped still nearer the timber. Four times was this repeated, and each time she half turned her head toward us as if to call us to her assistance.

Finally Bryan said, "By Jove, Val, that's the queerest thing I ever saw a dog do. She must have a 'rattler' there." We put our horses into a lope and cantered toward her. As we drew near I rose in the saddle and looking down the cotton rows saw a bevy of scattered quails running for the timber. When those at each side had passed her Gypsie made the fifth circle and rounded them up, as was at once evident she had done four times before. My friend broke out into a volley of adjectives to express his admiration of the act, while I—well, I owned the dog. We got between the birds and the timber, flushed and drove them into a ditch bank and made havoc among them.

Now that's what I call an exercise of reasoning power in a dog. She clearly understood that once in the timber they were lost to us, and by successive circlings kept them huddled together until we could arrive on the scene. Can any one of your readers give a better illustration of mind in the dog than this? I have owned dogs and dogs, but her equal on all birds I never saw, and, alack, I never expect to. Poor old girl! Ten years have rolled over her faithful head, and her best days are gone. A warm berth in the furnace room is now her chief desire. While writing may I be permitted to tell and pardoned for telling the best score I ever made at quail shooting, which was only a short time after the above occurrence?

Just beyond the negro quarter on the estate was a large cornfield, going through which we had every day started a fine bevy of birds, which we allowed to go unharmed, saving them for a time when we would be too lazy to go far afield. That day came when my friend was absent and my wife had told me she wanted quail for dinner only an hour before the big bell would ring us to the table. Taking my horse and the inevitable darky I rode into this cornfield. In less than five minutes Gypsie had found her covey (she knew exactly where to look for them), and riding in I flushed and counted them, eleven in all, as they flew to a near by bayou, and pitched down on the far side among the grass and bushes.

Crossing the bayou I turned the horse over to the darky and started in. This bayou ran alongside the quarters and houses were close at hand. Darkies innumerable watched the fun and I warned them to dodge the shot. "Hi, yi, Mistah Valentine, neber you mind us, we likes to see you shoot," one of them sung out. So I didn't "mind" them. The birds lay like stones, secure in their close hiding. From under a root here and a tussock there Gypsie started them, one after another, and one after another they went down before my storm of shot until ten were gathered to ten straight shots. The eleventh and last flushed across the bayou and was out of range before I saw it. My reputation among the darkies was made forever. How many of them I might have "gathered" I didn't inquire, though I spattered number tens around "right smart."

We had quail for dinner, and sitting out on the gallery after it, I heard that poor eleventh quail piping mournfully in the cornfield for friends departed. I have always been proud of that score. I couldn't do it again, though. Northern Louisiana is a sportsman's paradise. I am the owner of a plantation adjoining this Hope estate, and though raising cotton isn't a money-making business, one can always raise a lot of good fellows to help him raise a deer, and that makes up for the other deficiency to one who don't depend on the cotton for bread. Besides the deer can always be raised, and often several of them. As for smaller game the country is alive with it. A. M. VALENTINE.

ST. JOHN BENCH SHOW.—St. John, N. B., Dec. 10.—*Editor Forest and Stream:* At a meeting of our club held last evening, the following resolution was offered, and after most of the members present had spoken in very complimentary terms of Mr. Mason, was unanimously carried: Whereas, at the fifth annual bench show of dogs held under the auspices of the New Brunswick Kennel Club, in this city, Oct. 18 to 21, 1886, Mr. Chas. H. Mason, of Brooklyn, N. Y., officiated as judge, therefore, Resolved, that we, the members of the above club, desire to express to the said Chas. H. Mason our appreciation of him for the very able, honest, impartial and intelligent manner in which he has discharged the arduous duties as judge; and, Resolved, that the thanks of this club are due to the said Chas. H. Mason for the gentlemanly and kindly way in which he imparted such information as was asked of him by exhibitors and others, and also for the very particular pains he has taken to correct the erroneous ideas the exhibitors of certain varieties have held in regard to their dogs, and therefore, Resolved, that a copy of these resolutions be sent to the said Chas. H. Mason, as well as to the different sporting papers.—H. W. WILSON, Secretary.

SPRATTS PATENT.—New York, Dec. 8.—*Editor Forest and Stream:* Would you kindly notice that the American Institute Fair have awarded us two medals, one for the excellence of our dog foods and the other for our cattle food?—SPRATTS PATENT (AMERICA) LIMITED.

MASTIFF CHARACTER.

TYPE AND DISPOSITION.

Editor Forest and Stream:

My excuse for not replying sooner to Messrs. V. M. Haldeman and W. Wade on mastiff type, in your issue of Aug. 12 and 19 last, must be that I only received those particular numbers a few days since. I am glad Mr. Haldeman disclaims that the muzzle can be too short. With regard to the particular instance of Ilford Caution, did it never strike Mr. Haldeman that the want of squareness and truncated appearance he complains of in that dog may arise, not from the upper jaw being too short, but from the lower jaw being too long? I should have liked a piece more cut off. Master Haldeman, you have not yet learned your lesson. *Trunco-as-āvi* is the verb you must study.

Mr. Haldeman says "the bulldog layback is a positive malformation and is more objectionable than the hound muzzle." How does he prove this? I must once more inform him, in arguing on the points of a breed, we cannot allow the mere *ipse dixit* or prejudice of any beginner to unfairly influence the subject.

I fail to see anything anomalous or irregular to the mastiff group in the formation of the muzzle of Ilford Caution. It cannot be too strongly enforced that houndiness about the head of a mastiff is a sure sign of mongrelism. The breeder of Governor's sire, in "Stonehenge," says of the head: "No characteristic is so quickly affected by impurity in the blood," and as great or even greater authority, Idstone, says: "A long, pointed muzzle, or a muzzle which is not blunt, would make me suspicious of the purity." Mr. Haldeman states I would have my readers believe the layback he complains of in Caution "is a true characteristic of the breed." Now I do not think I ever advanced anything of the sort; but I do maintain that it "is a characteristic of the group" and no malformation. It is therefore admissible in the mastiff, and to be encouraged rather than houndiness, which is certainly a malformation in the mastiff, being a sign of mongrelism, and therefore far more objectionable than any amount of layback can possibly be. I cannot allow Mr. Haldeman's statements, or rather misstatements (unintentional, I have no doubt). He may mislead himself into the belief that the evidence is on his side, but I shall be content to leave the decision to the jury—our readers.

Now for Mr. Wade, who, what with his peculiar logic, evident good intentions, real love for the breed, and a certain amount of knowledge of its history and characteristics, is a much more difficult party to deal with. As he has compared himself to Tantalus, in trying to grasp facts, let me warn him to be careful not to bring the weight of Mt. Sipylus on his head. He continues to mislead himself, if not others, by arguing from copies of photographs and fancy portraits, false and misleading as photos alone are known to be. However, Mr. Wade gets very near the mark when he says "very few square-muzzled dogs are level-jawed." This is hopeful. I am glad he will allow that the mastiff "should be slightly undershot."

Now, I cannot help Ilford Caution having a characteristic of the group very strongly marked, but either Messrs. Wade or Haldeman may see by referring to the points in page 219 of my work, "The History of the Mastiff," that I have stated, "Head short," 'squareness and bluntness of muzzle," "muzzle short and truncated," "line of profile from stop level," "teeth, lower incisors projecting slightly beyond the upper."

Both Messrs. Haldeman and Wade will have to grasp the fact before they can be considered to know what the English mastiff should be, that houndiness cannot be tolerated any more than indications of St. Bernard or boarhound crosses.

I cannot glide from type to disposition better than by quoting a statement made by Mrs. Lukey to the effect that "Mr. Lukey never would have the houndy cone, ears and narrow skull, not merely because it spoilt the beauty and purity of the type, but because it tinged the noble disposition of a pure-bred mastiff with something sly, sneaking and treacherous."

I could mention several instances illustrative of the noble disposition of the mastiff that have come under my observation, only for the fact they would occupy more space than the editor would care to bestow. Still, there is little reason to fear that the variety has grown any less vigilant or intelligent, through cultivating the external typical characteristics so carefully, if we frequently let the mental characteristics lie dormant.

Only a short time since my mastiff bitch Phœnix (a very short-muzzled specimen and closely inbred to the King line on her dam's side) showed how naturally vigilant the breed is. I had occasion to go to a village, about a mile off, just as the light was falling. I took Phœnix with me for a run, she was in front, when suddenly she gave a peculiar bark, followed by a growl, and as I came up she drew stiffly up to what turned out to be a man lying by the side of the road. Calling her in, I went up to the man and found he was simply in a state of intoxication. I got him on his legs and saw him start on his way homeward, much to the satisfaction of Phœnix, who evidently perceived all was not right.

A short time after, having to go to the doctor's after dark, I took Phœnix with me for company. She kept close to my side all the way and I could tell by her manner whenever we were meeting any one. Suddenly she stopped and made a peculiar little noise. I stopped to listen and soon heard voices somewhere close, but it was too dark for me to see any one. Although a most good-tempered, playful animal when loose in the daytime, when on chain she is a good watch. When loose she shows a decided liking to dash round and round cows and bark at them, and it would take very little encouragement to set her on either cow or bull and a donkey, she sniffs at and walks round in a most peculiar and inquisitive manner. Her dam has the same high courage and good tempered, gentle disposition. On the other hand, a puppy Mr. Wade sent me once from America was the most abject coward with cows I have ever come across. I often wished her shot for being such a poltroon. She traced back to Trajan, whose dam's pedigree I could never obtain, and his pointed but not long muzzle suggested some mongrel blood. The bitch puppy inherited the pointed muzzle, as well as being inferior in bone and size.

Like Mr. Lukey, I like mastiffs to be truly handsome and characteristic in head, and possessing high courage, however defective in limbs and loin through bad rearing. As Mr. Thompson said so truly, "Outward appearances are such very necessary points, that hidden treasures can never wholly supply; in fact, immediately a dog comes before you, the eye naturally wanders in search of this grand outward necessity. I think if a head measures a little more, if the formation is defective, it loses caste."

Mr. Wade takes exception at my dictum that "badly reared, crooked-limbed, but typical-headed specimens" should be placed over animals showing evident signs of the hound and other mongrel crosses. The instance of our grand-headed Orlando shows the soundness of the dictum. His stock, Holda, Mrs. Cantiffe Lee's Rose, and others by him, have come out, under good rearers, remarkably good in body and straight in limb, at the same time inheriting much of his grandeur of head. Unless judges discourage houndiness and other signs of crossing, how can we conserve the mental characteristics of the breed?

Does Mr. Wade think thistles will bear grapes? From a dog with houndy or faulty characteristics about the head what does Mr. Wade or any one else hope or expect to get but progeny showing the same and kindred signs of mongrelism?

Ilford Caution has been pulled to pieces and well abused by men who know very little about the true type of the English mastiff, and still less about breeding and judging them. For my own part, I would sooner have Ilford Caution for stud purposes than any other dog in America at the present time. I say the present time, for I hear £200 has been offered and, I am glad to hear, refused for Beaufort, the best all-round specimen we have.

Whatever Messrs. Haldeman and Wade may think, I can assure them we had mastiffs fifteen years since, with quite as short an upper jaw and quite as much layback as Ilford Caution has.

I should have been content to bury the hatchet with them on the subject of mastiff type, but Mr. Wade has seen well, owing to my silence, to "carry the war into Africa," as he terms it. By opening fire on me on the subject in our English *Stock-Keeper* here he will simply be laughed at, and like a second Don Quixote, knock himself out of time by attacking that windmill, Dame Fashion; but I should be sorry for your readers to think by my silence I am beaten, or funk the subject.

M. B. WYNN.

ENGLAND.

TEACHING BEAGLES A THING OR TWO.

LINDEN, Mass., Nov. 4.—We had laid our plans for a rabbit hunt the 28th of October, to start at 6 A. M.; but it was raining hard at that time, so we waited till 9 o'clock, and by that time it was a little better weather; then, though it was very misty and looked as though it might rain again at any time, we decided to risk it and started off with the four beagles for an all day's hunt, and with the determination of teaching our dogs to stop at the hole after they had driven the rabbit in. The little brown rabbits will not run over five minutes before they run into their hole, and as soon as the dogs had put them in they would not stop at the hole, but us off after another. Several men that have been out with be occasionally got the impression that they lost their game, and we were bound to remedy it if possible, and we started off this time with the idea that when we got home at night our dogs would know a little more than when starting away. We went into the woods and tramped over an hour without a start, but at last we had one and it was a good one. It proved to be an old one and gave the dogs a run of about ten minutes, then went into a ground hole very near where they started him. The minute the music ceased we knew he had gone in, so we started for the spot and caught all the dogs and commenced to dig the rabbit out, and give the dogs their first lesson. The digging was quite hard and it was some time before we got to where the game was, but when we got to about a foot from him we held all the dogs so they could see him, and then we let them go and they were very anxious to get him out as they made the sand fly pretty fast for a few moments. All at once the rabbit bolted out in the face and eyes of them all and they made a jump for him, but he was too quick for them and the way he went was a caution. By the noise they made you would have thought there were a dozen dogs instead of four. He ran but a few minutes before he ran in again, and when we caught up to them one of the dogs was in the hole as far as she could get and digging for all she was worth, with the rest of the pack looking on very much interested. We took right hold and dug him out again, and this time one of the dogs caught him as he started to run out and quickly finished him. Then we started off to hunt up another one and soon found one. He didn't run two minutes before he went in, and we dug him out. Before the afternoon was over we had dug out five rabbits, and every hole the dogs would put one into after the first one we would find them all there and one of the number would be digging as hard as he or she could. We returned home at 6 o'clock P. M. with five rabbits to our credit; three we shot before the dogs and two the dogs killed in the hole. We were very well satisfied with our day's work, and when any of our friends go out with us again we can show them just how many rabbits the dogs lose and how many they drive in. It was the most satisfactory hunt I ever had and the music was the best I ever heard.

W. S. C.

INQUIRY ABOUT MASTIFF PEDIGREES.

SEEING your editorial footnote under the above heading in issue of July 30 I beg to say, Mr. Craig having written asking me to trace the pedigree of his dog Corsair for him I find, after making the fullest inquiry, that he has evidently been swindled. No such persons as either Miles or Anderson have been known at Lochhead for the last fifteen years. No such printer as McPherson is known in Aberdeen, and no such dog as Ben Lomond is known to any Scotch mastiff-fancier I have written to. The whole is evidently a make-up—seemingly from entry No. 2,282 of the Kennel Club, which seems to have furnished the groundwork for the invention.

Tracing this unscrupulous person's swindling fabrications is so amusing that a slight exposition will not tire the honest, and may deter other cheats, for it will show them that it is of little use trying to forge pedigress, for sooner or later they are sure to be detected and exposed.

In order to fabricate the pedigree, he has seemingly thought well to get up a little British geography, and, curiously enough, the places seem to intrude themselves upon his mind while at his work for his Yankee dupes. No doubt he thinks they will swallow anything in the way of pedigree, however un-English in idea the names may be. The lively swindler seems to have attended a curriculum at which the "noble Romans" (as the schoolboy says) were not neglected, but his mind seems to have retained the names rather than the morals of a Cicero, etc.; however his imagination, like that of Macbeth and most rogues, evidently is troubled with the unpleasant misgivings of a retribution—

> Conscience, anticipating time,
> Always rues the unacted crime.—*Rokeby*—

and, consequently, the names of Pluto and his Satanic Majesty are seen crammed into the pedigrees, jumbled up with that of Godolphin and other famous race-horses. Thus, to fabricate pedigrees, this bungler appears to think a few names from a geography as a basis, a few names from a classical dictionary as packing, a few names from novels, race-horses, etc., by the way of spice, with just a flavoring of one or two noted mastiffs' names thrown in at random, will pass muster with the American *gobe-mouches*. But this sort of thing will not pass with an English breeder of twenty years' experience, who wants no written pedigree to guide him, being able to tell the strain a mastiff is of fairly well on seeing the animal, or having it carefully and accurately described. The bungling American pedigree forger has evidently never taken it into consideration that there is such a thing as family type. The old proverb, *Nunquid potest, ficus oleas facere, aut vitus ficus*, still holds good. Foxhounds will not throw bulldogs, neither from dogs of the Salisbury and Monarch strain will animals of the King or Crown Prince type be brought forth. I would warn American readers against purchasing imported stock from or through professional American dog dealers, without having the pedigree stated—authenticated by the English breeder, and also the owner of the sire given. If they would only take this precaution we should hear less inquiry about pedigrees, and fewer refusals to enter in the American studbooks, the compilers of which cannot be too careful and strict.

Mr. Craig states to me that he purchased his mastiffs, Corsair and Bianca, both from Mr. Fred Grant, of Boston, U. S., who has previously had "unpleasantry" over the pedigrees of his dogs. On seeing the pedigree of Bianca I at once pronounced it to be a sheer fabrication, and now that of Corsair turns out the same. It remains with Mr. Fred Grant to clear up the matter and satisfy Mr. Craig as best he can—for I may say in the words adapted from the "Antisillyass"—

> Eureka, I have found him!
> Herein is my reward;
> Mayhap I have not hit him
> Sufficiently hard.
>
> He might have made his money,
> In clean and wholesome ways,
> But took to forging stud cards,
> And also pedigrees.
>
> Exegi, I have done it,
> I have made my promise good;
> I've caught the Sillyasstes,
> As I averr'd I would.
>
> Eureka, I have found him!
> And I had a deal of fuss,
> Now sure, de republicâ
> Sum bené meritus.
>
> —*M. B. Wynn in Stock-Keeper.*

COURSING.—The long talked of coursing match between the two greyhounds, Lady Harkaway and Duke of Belmont, came off on Saturday, Nov. 27, on the open field between South Belmont and West Farms, N. Y. The hares were procured from the Green Mountains, Vermont, and although confined on their way to New York four days, were in excellent condition, and showed a vast amount of speed and endurance. Mr. J. Malone, the owner of Lady Harkaway, carried off the honor, his dog having gained all the points in the second course. She took the first turn out of the hare, had the go-by, made the second turn, and took the hare on the straight run. The first course was undecided, there being some dissatisfaction on the part of the owner of Duke at the way the dogs were slipped. Both courses were very exciting, the first lasting 8 and the second 11½ minutes. The decision of the judges, Messrs. J. Schaeffler and J. Crosby, both experts on this sport, was very fair and satisfactory to all parties concerned. Lady Harkaway shows excellent qualities as a courser, and her owner feels confident that in a very short time she will be able to compete with any greyhound in the country. Mr. Geo. N. Seger, who is not in the least discouraged at the defeat of his dog, has again challenged Mr. Malone, and will this time enter his bitch Maid of Athens, mother of Duke, the run to come off over the same course at an early date.—C. S.

DOGS AND TRANSPORTATION.—New York, Nov. 13. —*Editor Forest and Stream:* I notice that the Pennsylvania R.R. has begun a much needed reform in the matter of transporting dogs, and gunners can now have their pointers and setters checked through to different points for a small consideration, without being robbed of all their small change by baggage masters. This is a move in the right direction. It is time this railway robbery were stopped. It costs a man a small fortune nowadays to take a dog any great distance. For instance, suppose you go from the Grand Central station in New York to Pennsylvania. You must hire a cab to take you through New York, as dogs are not allowed on elevated trains or horse cars, although drunken men seem to have that right. Then the baggage master on the railroad wants half a dollar or as much more as he can get. I recently took a trip to a town in Pennsylvania for a few days' shooting. The excursion rate on the railroad was $4.60, the expense of taking my dog from Westchester county and return was $4.70, ten cents more than it cost me for myself. I think hunting trips would be taken by a great many more men if the cost of dog carriage was not so great. The railroad companies should be getting their eyes open to an abuse that has already outlived the age in which it was born.—REFORM.

AMERICAN KENNEL CLUB.—Might I suggest that as soon as practicable you should publish a list of the club shows which are members of the A. K. C.? If you remember last season at New York I showed you the St. Louis premium list, in which they stated that they possessed the membership, and it was only through your courtesy that I was saved a long journey to that place. Surely the A. K. C. should stop such piracy.—X. [The clubs now members, as given us by the secretary, are: Westminster, Philadelphia, Cincinnati, West Pennsylvania Poultry Society, New England, Cleveland, New Haven, New Jersey, Hartford, National Field Trial, Rhode Island, Hornell, American Fox-Terrier.]

WESTMINSTER KENNEL CLUB SHOW.—Dec. 12.—The Westminster Kennel Club will hold their eleventh annual bench show of dogs at Madison Square Garden, on May 3, 4, 5 and 6, 1887.—JAS. MORTIMER, Supt.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope. Sets of 200 of any one form, bound for retaining duplicates are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Dago, Mojo and Chloe By A. P. Kitching, Roxbury, Mass., for black, with white breast, and two black cocker spaniel bitches, whelped July 14, 1886, by Ned Obo (Obo II., A.K.R. 432—Smut, A.K.R. 858) out of Sparkle (Phillip—Florence).

Boy. By Frank F. Dole, Philadelphia, Pa., for white bull-terrier dog, whelped Sept. 16, 1886, by Count (Marquis—Kit) out of Bertha (Dutch, Jr.—Young Venom).

Silver. By Frank F. Dole, Philadelphia, Pa., for white bull-terrier dog, whelped February, 1885, by Rebel (Eclipse—Rose) out of Lilly (Little Madman—Queen).

Bruce. By J. N. Holton, Jersey City, N. J., for white, with black spots, fox-terrier dog, whelped May 6, 1884, by Terror (Field's Tyke—Belmont's Fide) out of Tassel (Field's Tyke—imported bitch).

Lady Croxteth. By B. F. Seitner, Dayton, O., for bitch registered as Actress (A.K.R. 1249).

Silvia. By A. C. Krueger, Wrightsville, Pa., for white, black and tan beagle bitch, whelped May 12, 1886, by imported Ringwood (Ranter—Beauty) out of imported Music.

Little Queen. By A. C. Krueger, Wrightsville, Pa., for white, black and tan ticked beagle bitch, whelped Oct. 11, 1886, by Racer (Rally—Lill) out of Maggie (Sport—Fanny).

Fannie Bell. By A. E. Nickerson, Bangor, Me., for black, white and tan English setter bitch, whelped Nov. 11, 1885, by Gun (A.K.R. 1538) out of Morning Star (A.K.R. 1541).

Dell B. By Geo. W. Lovell, Middleboro, Mass., for black, white and tan English setter bitch, whelped April 9, 1886, by Roderigo (Count Noble—Twin Maud) out of Gypsey Maid (Dashing Lion—Roxey).

Dian. By Henry H. Stoddard, New London, Conn., for orange and white English setter bitch, whelped March 27, 1882, by Dr. Stoddard's Breeze II. (Lathrop's Dick—Ely's Sylph) out of Dr. Stoddard's Mag (Ely's Breeze—Stoddard's Flora).

Kerry. By Edwin F. Bishop, Buffalo, N. Y., for red Irish setter dog, whelped May 9, 1886, by Elcho (A.K.R. 295) out of Ino (A.K.R. 3789).

Toot. By J. L. Wyckoff, Perry, N. Y., for black, white and tan foxhound bitch, whelped June 23, 1886, by Roderick out of Spotty (Music—Sailor).

Nellie. By White Mountain Kennels, Littleton, N. H., for brindle bull-terrier bitch, whelped Oct. 10, 1884, by Trip (Balif—Sall) out of Molly (Buchey—Old Bessie).

Glen Graphic. By Geo. W. Lovell, Middleboro, Mass., for black, white and ticked pointer dog, whelped June 10, 1886, by Graphic (A.K.R. 2411) out of Zitta (A.K.R. 1358).

Monk. By J. E. Stryker, St. Paul, Minn., for imported red and white St. Bernard dog, whelped June 25, 1886, by Barry II. out of Bella.

Shell. By H. B. D. Bruce, Ottawa, Ont., for lemon and white Clumber spaniel dog, whelped Feb. 12, 1884, by Ben out of Joan (Flash—Flirt).

Johnny III. By F. H. F. Mercer, Ottawa, Ont., for lemon and white Clumber spaniel dog,whelped Aug. 28, 1886, by Johnny (Ben—Joan) out of Jess (Jack—Jill).

Bramble. By D. S. Gregory, Jr., New York, for liver and white pointer dog, whelped July 19, 1886, by Bracket (Graphic, A.K.R. 2411—Bloomo) out of Lucia (A.K.R. 209).

Lurline. By Clifton Kennels, Jersey City, N. J., for liver and white pointer dog, whelped July 19, 1886, by Bracket (Graphic, A.K.R. 2411—Bloomo) out of Lucia (A.K.R. 209).

Pommery Sec. By Clifton Kennels, Jersey City, N. J., for liver and white pointer dog, whelped Aug. 3, 1886, by Graphic (A.K.R. 2411) out of Vinnie.

Guillermo II., Sepoy and Princess Rhoda. By Thos. W. Mills, Montreal, Can., for two white bulldogs and one bitch, whelped Nov. 12, 1886, by Guillermo (A.K.R. 671) out of Princess Ida (Byron II.—Rhodora).

Royal Prince and Zanitta II. By S. A. Burnett, North Woburn, Mass., for liver and white pointer dog and bitch, whelped Aug. 14, 1886, by Croxteth out of Van (Bang Bang—Zanitta I.).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Belle—Cameron's Racket. A. C. Krueger's (Wrightsville, Pa.) basket beagle bitch Belle (Dodge's Jack—Pigeon) to his Cameron's Racket (Rally—Louise), Nov. 15.

Arly—Bannerman. Associated Fanciers' (Philadelphia, Pa.) beagle bitch Arly to A. C. Krueger's Bannerman (Marchboy—Dewdrop), Oct. 15.

Fly—Cameron's Racket. A. McCurd's (Columbia, Pa.) beagle bitch Fly to A. C. Krueger's Cameron's Racket (Rally—Louise), Oct. 7.

Cricket—Cameron's Racket. L. D. Sloan's (Philadelphia, Pa.) beagle bitch Cricket (Bounce—Krueger's Myrtle) to A. C. Krueger's Cameron's Racket (Rally—Louise), Oct. 1.

Kitty—Bannerman. Chas. Richardson's (Pittsburgh, Pa.) beagle bitch Kitty (Flute—Bunnie) to A. C. Krueger's Bannerman (Marchboy—Dewdrop), Sept. 30.

Pet—Cameron's Racket. Chas. Richardson's (Pittsburgh, Pa.) beagle bitch Pet (Racer—Vic) to A. C. Krueger's Cameron's Racket (Rally—Louise), Sept. 30.

Vic—Bannerman. J. Annin, Jr.'s (Caledonia, N. Y.) beagle bitch Vic (Darwin—Lady) to A. C. Krueger's Bannerman (Marchboy—Dewdrop), Sept. 15.

Bonnie—Cameron's Racket. Mrs. C. E. White's (Cleveland, O.) beagle bitch Bonnie (Searcher—Maybelle) to A. C. Krueger's Cameron's Racket (Rally—Louise), Sept. 10.

Maggie—Racer. A. C. Krueger's Wrightsville, Pa.) beagle bitch Maggie (Sport—Fanny) to his Racer (Rally—Lill), Aug. 12.

Krueger's Myrtle—Cameron's Racket. A. C. Krueger's (Wrightsville, Pa.) imported beagle bitch Krueger's Myrtle (Minstrel—Handmaid) to his Cameron's Racket (Rally—Louise), Aug. 12.

Blemton Gingerbread—Bacchanal. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Blemton Gingerbread (Spice—Blemton Arrow) to his Bacchanal (The Belgravian—Bedlamite), Oct. 4.

Marguerite—Bacchanal. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Marguerite (Brockenhurst Spice—Daisy) to his Bacchanal (The Belgravian—Bedlamite), Oct. 13.

Blemton Vic—Bacchanal. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Blemton Vic (Jock—Verity) to his Bacchanal (The Belgravian—Bedlamite), Nov. 13.

Terra—Regent Vox. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Terra (Decker—Vixen) to his Regent Vox (Tackler—Sandy Vic), Oct. 26.

Frolic—Bacchanal. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Frolic (Buff—Jeopardy) to his Bacchanal (The Belgravian—Bedlamite), Nov. 5.

Vickey—Cameron's Racket. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Vickey (Racer—Vic) to his Cameron's Racket (Rally—Louise), Oct. 10.

Hazel—Bacchanal. A. Belmont, Jr.'s (Hempstead, L. I.) fox-terrier bitch Hazel (Raby Tyrant—Fay II.) to his Bacchanal (The Belgravian—Bedlamite), Sept. 23.

Killarney—Chief. R. Q. Taylor's (Baltimore, Md.) red Irish setter bitch Killarney (Rufus—Moll II.) to M. Wenzel's Chief (A.K.R. 231), Nov. 7.

Lassie—Chief. W. H. Pierce's (Peekskill, N. Y.) red Irish setter bitch Lassie (Glencho—Sweetheart) to M. Wenzel's Chief (A.K.R. 231), Nov. 5.

Little Nell—Count. C. A. Barnes's (Boston, Mass.) bull-terrier bitch Little Nell (A.K.R. 2905) to Frank F. Dole's Count (A.K.R. 3178), Nov. 30.

Jenny Lind—Buckeilew. W. A. Coster's (Flatbush, L. I.) English setter bitch Jenny Lind (Rake—Fanny) to his Buckellew (A.K.R. 30), Nov. 15.

Swift—Marchboy II. Oscar Smith's (Wilkesbarre, Pa.) beagle bitch Swift (Blue Boy—Fly) to W. F. Streeter's Marchboy II. (A.K.R. 2919), Nov. 24.

Dido—Marchboy II. W. F. Streeter's (Lehigh Tannery, Pa.) beagle bitch Dido (Marchboy II.—Lizzie) to his Marchboy II. (A.K.R. 2919), Oct. 7.

Bessie.—BOSTON, Mass., Nov. 29.—*Editor Forest and Stream:* I noticed in Sales, Nov. 25, that J. Tenny, Haverhill, Mass., has sold a black and white setter bitch Bessie (Mingo—Fausta II.) to H. L. Tibbals, Port Townsend, W. T. I know there were only two bitches of this breeding, one black and white, now owned by the owner of Mingo, the other lemon and white, owned at Hillsdale, Mich. I should like to have Mr. Tenny state what authority he has for claiming the above pedigree.—J. W. BROWN.

IMPORTATIONS.

Clifton Maid. The Associated Fanciers, Philadelphia, Pa., have imported from J. J. Steward, Clifton, Eng., the collie bitch Clifton Maid (The Squire—Jean). She is said, next to the phenomenal Pitch Dark, to have been the best collie bitch in England, and is unquestionably the most expensive bit of collie flesh in America to-day. She has been shown five times, has won five first prizes, three second prizes (Pitch Dark beating her), and a Collie Club cup.—X.

Clifton Beauty. Fawn mastiff bitch, whelped February, 1886 (Prince Imperial—Peaultina), by R. J. Aston, Orlando, Fla., from Miss Walker, Clifton, Bristol, Eng.

DEATHS.

Lady May. White, black and tan beagle bitch (Rattler III., A.K.R. 2798—imported Myrtle), owned by Woodbrook Kennels, Baltimore, Md.; distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. L., Bordentown, N. J.—I have three terrier puppies; their hair is coming off in spots. Can you tell me what will stop it? Ans. Give the puppies two drops of Fowler's solution of arsenic three times daily in the food.

F. W. F., Albany, N. Y.—I have a Great Dane dog, one year old. His eyes are continually running, and he cannot look at a bright light and is constantly scratching them with his paws. Will you please let me know what is the matter with him and how I shall cure him? Last spring when but four months old and for two months after he was with me in the woods of Florida and Georgia, and during that time I was obliged to feed him principally on crackers and salt pork, and he drank a good deal of swamp water. It stunted him so that he is now only about 25in. high. I have a Great Dane bitch not stunted. Will you please tell me if the bitch has pups by the dog will they be smaller than they would be if he was full size? Ans. 1. Bathe the eyes with a solution of sulpho carbolate of zinc, two grains to the ounce of water. Give two grains of reduced iron in a pill morning and evening; conceal the pill in a bit of meat. Put five drops of Fowler's solution of arsenic in the food every evening. 2. The puppies will be full size, we should think.

A MATTER OF OPINION.

While away from home I have missed the weekly visits of FOREST AND STREAM more than I supposed it possible to miss any one publication. To the tired worker or the man harassed with business cares, a couple of hours spent each week in the perusal of FOREST AND STREAM will prove a better tonic than any physician can prescribe. And if every publication in our land could be lifted up to the same moral plane occupied by FOREST AND STREAM, coming generations would have much to be thankful for. SILAS WILKINSON.

WILMINGTON, Del.

EXTRACT of a letter received by the U. S. Cartridge Co., of Lowell, Mass., from A. F. Brown, East Tawas, Mich., date of Oct. 30, 1886: "I will say, with the experience I have had with your *rifle cartridges*, that they fully sustain the reputation you have achieved in your *revolver cartridges*, which, in my experience, are unequalled by any other make."—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CALIFORNIA RIFLE ASSOCIATION.

SAN FRANCISCO, Dec. 5.—The fall meeting of the California Rifle Association at Shell Mound Park to-day was fairly successful considering the weather. There was no sunlight whatever, and a heavy mist rendered the day additionally dark and hazy. The shooting was, of course, considerably below the average, and the trophy was won by 10 points less than ever before. The attendance was rather small. The matches occurred in the following order:

Director's match, open to the directors of the California Rifle Association; distance, 200yds., with any military rifle under the rules; seven rounds; prize, a silver enameled medal, to be returned to the California Rifle Association at the next meeting. The match resulted as follows: Major E. G. Sprowl 31, Major J. F. Klose 30, Sergeant A. J. Ruddick 30, Sergeant Charles Nash 29, Captain H. T. Sime 29.

Diamond team match, open to teams of six representatives from any military company, field and staff in the country, board of officers, police department or rifle club now in existence, with Springfield rifle at 200 and 500yds., rounds seven, at each distance. First prize, a trophy presented by Gen. W. H. Dimond, to become the property of the team winning it three times at regular meetings of the C. R. A.

Police team—W. Bixby (200yds.) 31, (500yds.) 32, total 63; A. T. Field 31 and 32, total 63; Chas. Nash 30 and 32, total 62; George Gano 30 and 29, total 59; J. P. McCarthy 28 and 29, total 57; George Whitman 28 and 22, total 50. Grand total, 354.

National's Shooting Club—J. E. Klein (200yds.) 31, (500yds.) 35, total 66; E. E. Hovey 29 and 31, total 60; A. Johnston 31 and 28, total 59; T. E. Carson 31 and 27, total 58; P. M. Diers 29 and 27, total 56; O. H. Wiscott 28 and 27, total 55. Grand total, 348.

The police team won the match and keep the trophy, having won it twice before. The police beat the Nationals by Creedmoor rule.

Siebe team match, open to teams of six representatives from any company of the national guard or police department who have never made more than 70 per cent. in any California rifle association company team matches since Jan. 1, 1884. Rounds 7, with Springfield rifles, at 200yds. Prize, a trophy, given by Captain Ludwig Siebe, retired, National Guard of California: A. J. McGrath 24, W. T. Scott 23, T. F. Connolly 21, A. Williams 21, Wm. Bingle 20, E. B. Alford 17; total 126.

National Guard team match, open to teams of 12 active members from any company of the National Guard of California; distance 200yds., rounds 7, with Springfield rifle; prize, a trophy given to the California Rifle Association and to become the property of the company winning it; Company C, First Infantry Regiment—C. L. Lodds 33, C. F. Waltham 31, A. P. Raye 30, J. E. Klein 30, T. E. Carson 29, E. N. Snook 29, A. J. Ruddock 28, C. Meyer 28, Julius Klein 28, O. H. Mescott 27, M. J. McGrath 26, A. J. Mullen 24; total 343. Company G, First Infantry Regiment—E. Hovey 32, S. J. Pembroke 31, A. Johnson 31, J. F. Norton 30, P. M. Diers 29, R. Palm 28, W. L. Brown 28, George E. Baldwin 26, C. L. Tilden 26, P. E. Vandor 25, J. A. Bowers 24, William Sumner 17; total 337. Company C accordingly won the match by 16 points.

Kohler consolation match, open to all competitors who have no record exceeding 70 per cent. at the meetings of the California Rifle Association since Jan. 4, 1884; distance 200yds., 5 shots with any military rifle under the rules: Williams 23, Pendleton 22, W. D. Scott 21, Alford 20, Raisbeck 20.

C. R. A. champion medal, open to all members of the association, the national guard of California, army and navy, or police department. Entries unlimited. Rounds 10, with any military rifle under the rules. Distance 200yds.: A. Johnson 47, J. E. Klein 46, A. T. Fields 46, Ed. Hovey 45, W. Bixby 45, Chas. Nash 44.

California Powder Works medal, open to all members of the association, national guard of California, army and navy. Distance 200 and 500yds., 7 shots at each distance, with any military rifle under the rules. To become the property of the marksman winning it three times at regular meetings of the California Rifle Association: A. Johnson, 200yds., 33; 500yds., 33; total, 66. W. Bixby 30 and 33, total, 63. Capt. J. E. Klein 30 and 31; total, 61. A. T. Fields 31 and 30 total 61.

Ring target, open to all comers, distance 200yds., with any military rifle under the rules, viz.: the Springfield, and Sharps-Burchard rifles, rounds two, entries unlimited; 3 cash prizes: A. Johnson 21, C. T. Waltham 21, Pendleton 21, Field 21. L. Barrere 20, Sprowl 20, John Klein 18, Bixby 18. The match was awarded to Johnson.

Centennial trophy team match, open to teams of 10 representatives from any regiment or battalion of the National Guard of California, distance 200 and 500yds., rounds 7 at each distance, with Springfield rifles. Prize, the silver trophy presented to the Association by the city of San Francisco in 1876, and won by the First Infantry Regiment, National Guard of California, in competition for six years previous to and including 1882. To become the property of the regiment or battalion winning it five times at regular meetings of the California Rifle Association, commencing in 1882. First Infantry Regiment Team—C. L. Lodds, 61, C. F. Waltham 60, P. M. Diers 59, T. E. Carson, 59, O. H. Wescott 59, A. P. Raye 58, Julius Klein 56, C. Meyers 54, E. F. Snook 53, A. S. Buddick 50; total 568.

Pistol trophy match, open to teams of four men from any company, National Guard of California, Police Department, Signal Corps or Pistol Club. Distance, 30yds., with Smith & Wesson 45-caliber revolvers. Prize, a trophy given by Captain H. T. Sime, Company A, Second Artillery Regiment, National Guard of California. Company A, Second Artillery, Team 1—Sergt. Elliott 48, Sergt. D'Arcy 48, Capt. Sime 47, Sergt. Cummings 47; total, 190. Company A, Second Artillery, Team 2—Pvt. A. Smith 49, Pvt. McVicker 44, Pvt. E. Smith 44, Pvt. Wickenhauser 43; total, 180. National's Shooting Club—J. E. Klein 49, E. Hovey 48, A. Johnson 47, T. E. Carson 42; total, 186. Police Team—Gano 48, A. T. Field 46, McCarty 44, Whitman 44; total, 182.

BOSTON, Dec. 11.—The fine weather occasioned a good attendance at the matches at Walnut Hill to-day. Following are the best scores made during the week:

Decimal Off-Hand Match.

J Francis, B (mil)	7	9	9	9	9	6	9	9	9	10—86
C E Berry, A	8	10	9	9	7	6	10	8	10	9—86
W O Burnite, A	8	8	9	9	6	9	10	10	9	6—84
H Cushing, C	9	8	6	8	9	10	10	8	7	7—82
W H Oler, B (mil)	8	10	6	8	10	7	10	7	7	9—82
N F Tufts, D	10	10	9	8	8	6	8	7	5	10—81
A L Brackett, A	6	8	10	7	9	9	8	6	10	6—79
R Davis, C	8	8	10	8	10	7	7	5	7	10—78
W Henry, A	7	9	5	6	5	10	9	10	8	8—77
J P Bates, C	5	7	8	9	8	7	7	7	7	6—72
H Withington, C	4	4	10	6	7	10	6	7	4	9—67

Rest Match.

D L Chase	9	10	10	10	10	10	10	10	10	10—99
S Wilder	10	9	10	10	10	10	10	10	10	10—99
W O Burnite	10	10	10	10	9	10	9	9	9	9—95
A C Gordon	9	10	10	10	9	8	9	9	10	10—94

The 500yds. military match is discontinued until further notice. Those who have partially filled in the match will have an opportunity to complete their scores early in the coming season. The victory medal rest match has been withdrawn, but it is probable that with the commencement of the new year another similar match will open, to continue during the year. The team match committee of the Massachusetts Rifle Association is contemplating sending an acceptance to the conditions of the Bullard Arms Company's match, and entering a team of ten men to compete for the prizes offered.

SARATOGA, Dec. 4.—At the last three meetings of the Rifle Club, held Friday, Nov. 19, Thursday, Nov. 25, and Thursday, Dec. 2, 1886, the appended scores were made on the Massachusetts target, at 200yds. off-hand. All scores shot between Friday, Oct. 8, 1887, and the last Thursday in January, 1887, apply on the White and Levengston handicap prizes:

J N Crocker, Jr	12	11	9	11	9	11	11	12	12	11—109
Wm H Gibbs	12	8	12	11	8	8	10	12	10	8—100

D F Ritchie	7	7	8	8	7	4	11	8	9	12— 81

BOY MARKSMAN WANTED.—New York, Dec. 9.—*Editor Forest and Stream:* I, William Smith, better known as Buffalo Bill, Jr., will shoot any boy at the age of 10 to 18 years, a rifle match from 90ft. to 200yds. Can be seen at Zettler's rifle gallery, 207 Bowery, New York. I will shoot a match with any boy for the championship of New York for any suitable trophy.—BUFFALO BILL, JR.

SAN FRANCISCO, Nov. 28.—A large number of marksmen congregated at Shell Mound Park to-day, the occasion being the regular monthly shooting of the National Shooting Club and the match shoot of a team composed of fifteen members of the Nationals and a like number of the Nevada Rifle Club, both to shoot on their own range. The Nevada team was to shoot to-day at Carson City and the team from the Nationals shot at Shell Mound. This match hung fire for a long time under some misunderstanding, until finally the date was fixed for to-day. George C. Thaxter attended to the Nevada Club's interests at Shell Mound and the Nationals had a party superintending the shooting at Carson City. Following is the score made by the Nationals:

Ed Hovey	5555545554—47	A P Raye	5443444444—40
A Johnson	4545545555—47	A Waltham	4444444444—40
P M Diers	4554555544—46	O H Westcott	4442544454—40
Captain J E Klein	4544554455—45	M J MacGrath	4453434444—39
T E Carson	4554545454—45	A J Rudduck	2344444544—38
C Meyer	4544445445—43	C Nolte	5444453443—38
S J Pembroke	4545444444—42	C Petry	3434344544—38
Charles A Lods	4434454454—41		

620

Following are the prize winners and scores made in the regular monthly medal shoot of the National Shooting Club:

Champion Class.

	200yds.	500yds.

Fourth Class.

F H Nulls, 200yds	3	3	4	4	4	3	3	3	3	4—34

VIRGINIA CITY, Nev., Nov. 28.—Col. E. D. Boyle received a letter early in the present month from the National Shooting Club of San Francisco, composed of Companies C and G, First Regiment California National Guard, challenging the Nevada Rifle Association of this city to shoot a friendly match with 15 men selected from each team, at the 200yds. target, each shooting over their own range, the result to be announced by telegraph. The challenge was accepted and the contest took place to-day, resulting in a decisive victory for the Rifles, who made a total score of 640 points, against 629 made by their opponents. Following are the individual scores made by the members of the Nevada Rifle Association team:

X Stocker	5555545554—48	W Vardy	4544445455—42
S E Gillis	4454545455—45	J Laity	4555443554—42
J Spargo	4555445544—45	T O'Brien	5534513554—41
J E Wratten	5445544445—44	B J Genesy	5434444444—40
S Curmore	4445455544—44	H Cardew	4445514444—40
M H Burke	4445455544—44	T Uren	4454444443—40
J D Cameron	5445444544—43	J C Dunlop	4345443445—40
J Ferris	3454545444—42		

640

A project is under consideration by the members of the various rifle teams in this city to get up a magnificent State trophy costing $1,000 and to challenge all the rifle teams on the Pacific slope to come here and take it away, provided they can win it in a friendly shooting match against a team selected from the crack shots on the Comstock. If they fail to win it a challenge will then be issued to the world. The sum required for the purchase of this trophy will be raised by subscription.

CHICOPEE FALLS, Mass. Dec. 11.—The Maynard Rifle Club of Chicopee Falls shot as usual at their Riverside Range to-day, and have these scores to show for it:

A W Clark	8	8	8	8	10	9	10	6	10	8—85
Jones	8	6	10	10	8	9	9	6	8	7—81
Engle	6	6	6	7	10	8	7	9	8	7—74

MALDEN, Dec. 11.—A championship rifle match was shot at the Bears Den Range this afternoon, between J. Staples and J. H. Whittekind, members of the Malden Rifles, Company L, Eighth Regiment. Following is the result of the match:

J Staples	54451—22	35444—20	55444—22	44445—21—85
J H Whittekind	34555—22	44545—22	45445—22	45555—24—90

SAN FRANCISCO, Dec. 5.—There was good shooting at Harbor View Park to-day. The California Schuetzen Club, the Germania Schuetzen Club and Eintracht Rifle Section held their regular monthly contests, it being the wind-up of the year's shooting for the two latter clubs. All the contests were with 25-ring targets, 20 shots a man. The winners of the December medals in the California Club are: Champion medals, 401 rings, F. Freeze; first class medal, 383, A. Daunbier; second class medal, 369, A. Stamer; third class medal, 370, O. Burmeister; fourth class medal, 345, A. Tieschig. The contest for the year's medals will take place in two weeks. The score of the Eintracht Club for the month's prizes was: Champion medal; 408 rings, Captain F. A. Kuhls; first class medal, 361, H. Gumbiel; second class medal, 350, L. Schmidt; third class medal, 305, R. Overmohle; center medal, 22, F. Kuhls. The medal winners for the year 1886 are the same as above, except for the second class medal, won by John Young. The winners in the Germania contests for the month are as follows: First class medal, 386 rings, L. Klotz; second class medal, 363, Philip Klare; third class medal, 326, C. A. Fabian; first best shot medal, 23, L. Klotz; last best shot medal, 25, G. Robertson.

SPRINGFIELD, Mass., Dec. 11.—The Rod and Gun Rifle Club at their meeting to-night voted to challenge the Holyoke Rifle Club to shoot a friendly match at the standard American target with teams of 10 men and 5 shots each, time and place to be mutually agreed upon. The club will also revise its by-laws, and Messrs. Cartwright, T. B. Wilson, Field, McDonald and Hindley are the committee to do it. The membership will be cut down to the active only, if is probable. At Lake Lookout range to-day these scores were made with the regulation military rifle at the standard American target: M. W. Bull 67, H. McDonald 66, T. B. Wilson 65, E. T. Stephens 61. By the Creedmoor count the scores would be 43, 43, 42 and 42.... T. T. Cartwright, of this city, and O. W. Horr, of Chicopee Falls, are matched to shoot a 100-shot match, off-hand, in the Bullard closed range on Wednesday evening at 7:30 o'clock. The Creedmoor count and Creedmoor rules will govern. Cartwright will use the Bullard single shot .22-cal. rifle with Union Metallic Cartridge Company's ammunition, and Horr will use a rifle of his own invention of the same caliber with reloaded ammunition. A number of marksmen will witness the match and considerable interest is manifested.

HORATIO ROSS.—The cable brings word of the death at the age of 86 years, of Horatio Ross, one of the best examples of a sportsman and marksman which Great Britain has had for a half century past. Speaking of his death and his work, a writer recently said: "He was not only a great hunter himself, but was also the father of great rifle shots. Hercules, Colin and Edward, his sons, are all more or less renowned for their prowess with the rifle, and the name of Edward Ross has of late years almost eclipsed that of his father, for he not only won the Queen's prize, but alone holds the gold and silver medals of the National Rifle Association. Hercules Ross won the Cambridge Cup, and was the champion shot of India for three successive years; while in 1863 Mr. Ross and his three sons formed four of the Scotch eight in the International challenge match for the Elcho Shield. But stranger still, the expert use of the rifle is not merely confined to the men of the family, but extends in a remarkable degree to some of the ladies. Mrs. Horatio Ross, *née* Miss Macrae, has in her day been a splendid shot with her rifle, and Mrs. Colin Ross is scarcely less dexterous with her gun. Mr. Ross became a leader of volunteers in 1859, going as a pupil to the School of Musketry at Hythe, and seeking instruction from General Hay in the art of military rifle shooting. These two crack shots passed many an afternoon together on 'the shingle' in friendly contest at the experimental target, and many were the bullseyes implanted by them, firing standing at the 600yds.' distance. It is now more than half a century since Mr. Ross astonished the world as a steeplechase rider on his famous horse Clinker, against Captain Douglas on Radical, over Leicestershire; and indeed, steeplechase riding, as now practiced, may be said to date from that event, it being the first steeplechase on record. In former days, when dulling was in vogue, Mr. Ross was accounted the best pistol shot in Europe, yet such was his consideration for the feelings of others that he never had a serious quarrel. But as a proof of his dexterity he once killed 20 swallows before breakfast with a dueling pistol. As a pigeon shot he was not a whit less noticeable. At the Red House, in a match with Lord MacDonald, he killed 52 pigeons out of 53 shots at 30 and 35yds. rise. In 1828 he won the Red House club cup, scoring 76 out of his 80 birds at 30yds. rise. Nor will it be merely or entirely by his unrivalled skill and dexterity with the fowling piece, the rifle and the pistol that Mr. Ross will be remembered in the sporting world. His success as a steeplechase rider has already been referred to; but it remains to add that he likewise in his day proved himself an expert yachtsman, while his eats as an athlete in walking are remarkable. He walked from the River Dee to Inverness, a distance of ninety-seven miles, on one occasion without stopping; again, after a laborious contest in shooting partridges with Colonel Anson in Norfolk, when the latter retired from sheer exhaustion, Mr. Ross was so fresh that he challenged any of the bystanders to walk to London, a distance of seventy miles. Mr. Ross lived in Wyvis Lodge, near Wyvis, a mountain in the Highlands of Scotland. The walls team with trophies of the chase in the shape of deer heads, etc. The sideboard in the dining-room groans under the weight of the numberless prizes won by his rifle at the target butts. Among these are the Wimbledon cup, only competed for by winners; the Association cup and the Duke of Cambridge cup. In 1867, at Cambridge, after two long days' shooting at 900, 1,000 and 1,100yds., 15 shots at each range each day, he—then in his sixty-sixth year—vanquished some thirty of the best rifleshots of the kingdom and added thereby the Cambridge cup to his collection. For a short time he sat in Parliament. The sport, there, however, was not to his taste."

GALLERY SHOOTERS.—Among the best scores made at the Bullard inclosed range, Springfield, Mass., last week were these. The range is 123ft. long, and the target is a Creedmoor reduced to the proper size for the distance, and the strings are of five shots each. The scores: On the 6th, Cartwright 18 and 21; McDonald, 17 and 20; Russell, 17 and 14; First, 17; Dickinson, 13; Kane, 12; on the 7th, Cartwright, 21 and 24; Horr, 20; Russell, 19 and 21; on the 8th, First, 18; Russell, 16; Kane, 16; on the 9th, 10-shot match, Kane, 38; Russell, 38; tied; on the 10th, Cartwright, 24 and 25; Russell, 22 and 23; Kane, 17; on the 11th, Russell, 22, Horr, 21; First, 19; Dickinson, 17. All used the Bullard, 22 caliber, rim-fire rifle.

ZETTLER RIFLE CLUB.—New York, December, 1886.—In the annual meeting the following officers were elected: B. Wahlter, President; C. W. Karcher, Vice-President; C. G. Zettler, Treasurer; N. D. Ward, Secretary; Olonso Hunt, Corresponding Secretary; A. Lober, Shooting Master. Our season shoot will commence on Tuesday evening, Dec. 14, 1886, for prizes denoted by the club.—N. D. WARD, Secretary.

UNION SHOOTING CLUB.—At Falconer Crossing, two miles below Jamestown, N. Y., Jan. 11, 12, 13 and 14. Distance, 40 rods, string measure. For particulars, apply to R. C. Rice, Warren, O.; H. F. Hart, Rochester, N. Y., or H. V. Perry, Jamestown, N. Y.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BOSTON GUN CLUB.—The excellent weather of Dec. 8 attracted a large number of trap shooters to the fine grounds of the Boston Gun Club at Wellington. The principal event of the day was the contest for the Macomber gold medal, which was won by Mr. O. Ross, of the Massachusetts Association. During the day several miss and out matches were shot, besides 20 events. Appended are the results of the day: 1. Five clay-pigeons—T. G. Stanton first, O. Ross second and J. Nichols third. 2. Seven Peoria blackbirds—Stanton first, Eager and Kirkwood second, T. J. Beaudry third, Adams fourth. 3. Ten Macombers—Stark first, Beaudry second and Eager third. 4. Five straightaway clays—Stanton first, Eager and Snow second, Nichols third, Adams fourth. 5. Seven clay-pigeons—Stark, Ross and Nichols first, Eager second, Snow and Beaudry third, Stanton fourth. 6. Five Macombers—Stark and Eager first, Snow and Beaudry second, Kirkwood third, Edwards fourth. 7. Seven Peorias—Eager first, Stanton second, Stark third, Snow and Nichols fourth. 8. Five Macombers—Stark and Stanton first, Kirkwood and Ross second, Wilson third, Adams and Baxter fourth. 9. Seven clay-pigeons—Swift first, Stark and Ross second, Nichols third, Stanton fourth.

Special match for the Macomber badge, 10 Macomber targets:

H W Eager	0111000101—5	S Bailey	1110010001—6
C M Stark	1011110011—7	J Nichols	1101111010—7
O Ross	1011111111—9	T J Beaudry	1111011000—6
Z G Stanton	0111111111—9	L Paxter	0000011101—4
D Kirkwood	0100100000—2	C Dimock	1001001010—4
C I Goodale	1100010100—4	G Hardy	0110011110—6

11. Five Peorias—Stark and Stanton first, Eager and Swift second, Hargrave and Kirkwood third. 12. Five straightaways—Stanton first, Ross second, Snow third, Stark fourth. 13. Seven clay-pigeons—Stanton first, Stark second, Eager third. 14. Five Peorias—Stanton and Stark first, Eager second, Hargrave and Baxter third, Snow and Wilson fourth. 15. Five Peorias—Stark, Snow and Eager first, Stark and Hargrave second, Kirkwood and Dimock third. 19. Five blackbirds—Eager and Stanton first, Swift second, Baxter third. 17. Three pair clay-pigeons—Ross first, Stark, Eager and Swift second, Wilson and Kirkwood third, Baxter and Nichols fourth. 18. Five straightaways—Eager, Stanton and Baxter first, Stark and Swift second, Kirkwood third. 19. Seven Peorias—Stark and Stanton first, Nichols and Eager second, Snow and Bailey third, Ross fourth. 20. Special match between C. M. Stark and H. W. Eager at 25 birds. Eager won with a score of 23 to Stark's 22.

FOUNTAIN GUN CLUB.—The regular shoot of the Fountain Gun Club took place Dec. 8 at the half-mile track, Parkville, L. I. This being the last shoot of the season, quite a number of the members turned out. The shooting was first-class, as out of the 111 birds shot at only 9 got away. In class A there were 3 ties, the final shoot-off of which was won by C. Jones, beating L. Duryea on the shoot-off, killing 10 straight. There were also 3 ties in class B, Dr. Leveridge being the winner, killing 6 straight in the shoot-off. Stewart won in class C, killing 7 straight. C. Wingert, referee; R. H. Hooper, scorer.

Eddy, 28yds	1111111—7	Lake, 22yds	1101101—5
Stewart, 24yds	1111111—7	Wynn, 30yds	1111110—6
Hayes, 21yds	0011111—5	Leveridge, 26yds	1111111—7
Donnelly, 25yds	1111111—7	Duryea, 30yds	1111111—7
Jones, 27yds	1111111—7	Kendall, 26yds	1111111—7

The long talked of shooting match between L. Duryea and C. Kendall, at 25 birds each for $50, also came off. L. Duryea allowed his opponent 4yds. handicap, he shooting from the 29yds. mark, which may perhaps account in his being defeated. Both shot well, Kendall killing 23 out of 25, missing his 7th and 24th bird, using his second barrel on the 9th and 18th birds. The loser missed his 10th, 15th, 14th and 23d birds, killing the 6th with the second barrel. The following is the score of the match:

C Kendall	1111110111111111111111101—23
L Duryea	1111111100110111111111011—21

UTICA, Dec. 10.—The Oneida County Sportmen's Club had its monthly contest for the Booth—Clark prizes at Riverside Park this afternoon. The weather was perfect for a shooting match. The following is the score:

Harris	1000001101—4	00	00	00	10	10—2—6
Scott	1000000010—2	10	10	11	10	10—6— 8

"Talk about the wild war dogs of Atlanta, if you want to," said an old citizen yesterday, "but the wild cats took my eye. When the city was in the midst of that desolation which marked the wild dog era, there was an old man who lived in a broken down box car which had been thrown off the track, near the State road round house. One day some of us soldiers went into the old man's house to fry some bacon that somehow or other we had gotton hold of. When the meat began to fry the odor was wafted about by the breezes. It was an exceedingly appetizing odor, the more so because it was rather strauge to Atlanta air and to Atlanta noses. Well, in a few minutes the wild cats began to come in from their hiding places, attracted by the odor of the frying meat. They came first singly, then in pairs, then by dozens, then by scores, then by hundreds, a great army of fierce eyes, yowling, howling mousers. When the old man saw the cats about to invade his home in such swarms, he got a club and stationed himself at a point near which the cats would have to pass. He went to work killing cats. He killed 5,000! I never in my life saw so many dead cats!" "I guess not," I remarked. "No, I never did," said my friend; "I never did. The cats were thrown into a big washout near the car, filling it up completely. There were enough of them to fill a room twenty feet square, and," added my friend as I prepared to leave, "3,000 additional cats died from their wounds and were found in various parts of the city next day." I forgot to ask what became of the little piece of bacon.—*Atlanta Constitution.*

THE TRAVELERS is the only large accident company in America and has paid over $8,000,000 to accident policy holders.—*Adv.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

A CANADIAN DIVISION OF THE A. C. A.

Editor Forest and Stream:

I have read "Idlemere's" article on the salt-water meet, and the editorial explaining why the executive committee chose Lake Champlain for the 1887 meet. It seems to me that "Idlemere" has good cause for complaint when he says that all the A. C. A. meets go north, and why, he asks, is this thusly. The editor, rising to explain, says that it is on account of the large Canadian contingent of earnest A. C. A. men, who are going to form a division next year but are at present in an unsettled state, and if the A. C. A. were taken to the salt water they would feel that they were deserted by the A. C. A., and the formation of a division among them would receive a severe check.

Now, if this was the cause that led the executive committee to appoint Bow-Arrow Point for the 1887 meet, I think it would be wise to hold a full executive meeting and reconsider the question, as they do not seem to have grasped the situation in Canada. Canadians have had the A. C. A. right at their door for the last four years, and have derived such benefit from it that now they are able to stand on their own legs and ask their daddy (the A. C. A.) for a part of the farm to fill for themselves, seeing that they cannot look after it all, and by doing that they thought to give the old man a chance to go and visit some of his sons further south and brace them up a little; but instead of going down to the salt water to see his sons there, the old man says, "I'll just go about half way and give all the boys a good long trip to get to me," and like the old man and his ass, he'll try to suit every one and he won't please any one.

To return to the situation in Canada, most A. C. A. men will remember that at the last meeting of the Association at Grindstone there was a strong feeling among Canadians that they should have a division, but they were prevented by a few who thought that a division meant breaking away from the A. C. A. entirely, and they were, so to speak, sat upon. A meeting was held at the Toronto camp shortly after, however, and the question was discussed. A committee consisting of E. B. Edwards and Col. Harry Rogers, of Peterboro; W. G. McKendrick and Colin Fraser, of Toronto, and Mr. McGachen, of Lindsay, were appointed to arrange for a meet at Stony Lake for 1887, that would not conflict with the A. C. A. meet.

As a sign that the committee are alive I will just mention that one member has twenty-two prize flags promised already for it.

This is not to be a spring meet but will take place some time in July, and will be a division meet we can get the Executive Committee to form a division for us and I see no reason why they should not, as we have west of Kingston the following clubs that are not likely to be represented at the A. C. A. meet of 1887; Toronto, Peterboro, Lindsay, Galt, Bobcaygeon, Ubique, Hamilton, Guelph, Brantford, Point Hope, Whitby and half a dozen places where there are canoeists not formed into clubs. Well, out of this list there are not over half a dozen members who can spare the time to go to Bow-Arrow Point, and for these the salt water would be quite as handy and much more of a novelty.

With regard to the other Canadian clubs in the neighborhood of Kingston, Brockville and Ottawa, who have had the meets almost in their front yards for the last three years they would be selfish indeed if, besides wanting all our own fish, they should want the A. C. A. to be held so as to accommodate them at the expense of the members further south, who have had the expense and trouble of going so far to attend the meets since 1883. Taking this view of the case, I think it would be wise for the Executive Committee to hold another meeting. They will need one to pass the necessary legislation for the divisions, and while they are at it they might put their heads together and see if they can make anything out of Mr. Colin Fraser's scheme of affiliating the clubs, and if they thought it necessary, might reconsider the meeting place for 1887.

TORONTO. WILL G. MCKENDRICK.

WIDE VS. NARROW CANOES.

Editor Forest and Stream:

Mr. Clapham's common-sense cruiser doesn't seem to take very well with the canoeists, and they argue away, each on their own side, being apparently unable to see that the other is partly right. The model, size and weight of a canoe depend altogether upon what a man wants to use her for and where he wants to use her. Few men would care to voyage for any distance on the Great Lakes or Long Island Sound in a cranky 14.6×27 canoe, nor would a 15×31 be the craft for such a cruise, or one which it would be convenient to shoot or fish from; not that such uses would be impossible, but a larger boat is preferable where there is water to float her and portages are few. Still fewer would be the volunteers to drag a boat like Red Jacket over the rifts and logs and carry her unaided over the portages wherever "Nessmuk" and his thistle-down craft could lead the way. Weight is what counts, and it surprises me to see how little attention is paid to it by the A. C. A.

Why not have a weight standard, since that is what counts in cruising, and the A. C. A. is supposed to be a cruising association, and let the length, beam, etc., care for themselves? Four or five inches in the beam of a canoe do not make any difference in portability if the weight is not increased. Another point that strikes one as ludicrous is the inane twaddle about, paddling being so much easier than rowing, that it can be longer continued, etc. Let some of the paddle-praisers put outriggers on their craft, get oars, seat and footrest to fit and try it and see if they fail to keep up with the boys on a cruise, instead of paddling a 14.6×27 past a heavy 20×54 and then whooping it up about the ease of padding. I have owned a 15×39 for two years and rowed her alongside of canoes, from a Stella Maris up to the limit, on several cruises, and have been as chipper as any of them at the finish. Being over 6ft. tall and weighing 145lbs., you may see it takes no Hercules to accomplish this feat. PERCH.

Editor Forest and Stream:

As a fitting reply to "Guenn's" communication, in your last issue, commenting on my letter published in the FOREST AND STREAM of Nov. 18, I would suggest that any one interested place the two letters side by side and compare them. Your correspondent does not reply to any of the objections I make to extremely narrow canoes, considered as unsafe, uncomfortable cruising craft under sail.

Red Jacket is a representative sailing canoe, and as sailing canoes she and her type must stand or fall. She can be paddled with comfort, but is not intended for paddling races.

Last year, when my sharpie won $25 for the challenge cup by outsailing "Guenn" with ridiculous ease, he stated that his boat was not in her best form because of her dandy being reefed, and he was not accused of pleading the "baby act." But he also said that he "hoped to meet again and turn the tables." He has genuine boating spirit, and shall not be denied the opportunity of doing so, if he can. He thinks Wraith can outsail Red Jacket. If Wraith can do so Red Jacket wants to know it, and hereby offers to sail a friendly match at any date during April, May or June next; also invites any or all narrow canoes to take a hand in the fun. Of course, some of the little sailing machines occasionally outsailed Red Jacket at the August meet when the wind, or the lack of it, just suited their comparatively enormous rigs, but such a sailor as "Guenn" should know that that was not racing. Red Jacket was not allowed in the races at Grindstone, was not even permitted to sail round the courses with the others when they were racing, and when under way usually carried bedding and other camping outfit, while instead of centerboard she used the weather grip, which, being on trial for the first time, was not fully perfected. Even under these circumstances and with cruising sail, she generally showed her stern to those that tried conclusions with her.

It is true that one race was open, as her owner understood, to all the boats there. She was the only one that appeared on hand for the starting signal. THOMAS CLAPHAM.

ROSLYN, L. I., Dec. 3, 1886.

Editor Forest and Stream:

I have been much interested in the discussion on wide and narrow canoes, so will give my experience. In July, 1885, I built a boat, following the directions given in "Boat and Canoe Building." After debating for some time whether to build a canoe or ordinary rowboat, I settled on the latter on account of wishing a boat in which I could take my friends. The following are the dimensions: Length, 15ft. 3in.; beam, 46in.; depth amidship, 15in.; depth at ends, 26in. She is clinker built and weighs about 100lbs. I take her in and out of my boat house, which is usually 2½ft. above the water, alone. I have the following rig for her: Mainsail—Foot, 10ft. head, 10ft.; leech, 12ft. 6in.; luff, 4ft. Mizzen—Foot, 5ft.; head, 5ft. 3in.; leech, 6ft.; luff, 2ft. 3in. Jib—Foot, 5ft.; luff, 8ft.; leech, 6ft. 10in. The latter is only used with a hand to tend sheets. The sails are lugs, the three spars for the main being the same length, 10ft. 6in. Having some ideas of my own I built rather flat amidship and sharp ends without hollow lines, and much sharper on deck than usual here.

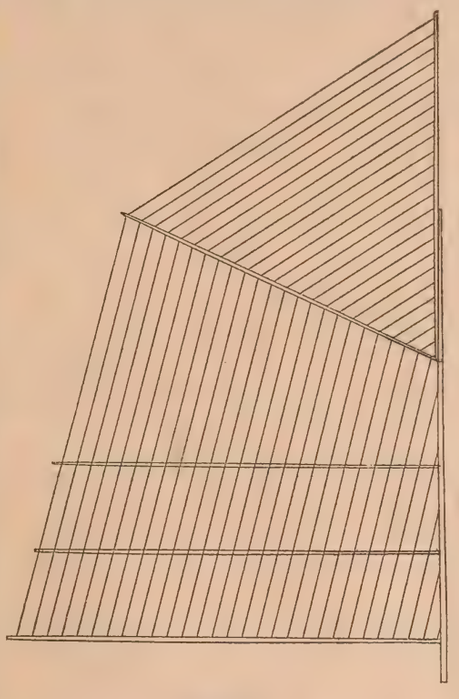
Now as to performance. On a wind I have beaten everything I have sailed against, including a sloop-rigged catboat of 22ft. length and 5ft. beam, in a stiff off-shore wind and choppy sea. Down wind I generally hold my own, although rolling badly once in a heavy sea so that I had to take in sail to keep from swamping. In going to windward my sharp bow would cut through the waves while the other boats would pound and stop. By the way, is not the failure of the Pecowsic to do as well to windward in a sea due partly to her full lines on deck?

I sail entirely without ballast, usually sitting on the bottom of the boat (not outside). Have reefed but twice and then shaking out in a few minutes. Could carry much more sail. Shall make one with 12ft. spars this winter. I was out on the 21st of November and carried main and mizzen in a breeze that the cutter Vera started to beat up the lake against under double reef. Sat as far to windward as possible that day.

We hear of many drop rudders being bent; mine is made of two pieces of thin copper (brass is better), one each side of a piece of thin wood, cut to shape and beveled to an edge all around, riveted and soldered round the edges, then polished and nickeled, is impossible to bend it and only weighs 2½lbs., is large and has a drop of 12in.

Can any of your readers tell me of a good form of centerboard to put in, my keel being only ⅞in. wide. I know of none but the Goodrich deflecting board, and don't think I should like that or the weather grip either. D. C. SCHAMP.

BUFFALO, Dec. 6.



A NEW CANOE SAIL.

Editor Forest and Stream:

Although I am located in a part of the country where we are deprived of canoeing, I am still greatly interested in it, both as a past pleasure and as a pastime which I am delighted to see growing year by year, thereby increasing the brotherly intercourse and competition of canoeists here and abroad.

Your valuable articles on canoeing, the meet of '86, sail and rig of the different canoes and the accompanying cuts have been a great pleasure to me in two ways: Firstly, informing me exactly what and how canoeists are improving; and secondly, offering me the pleasure of comparison between the latest models and rigs and my own past experiments. Now, while through ill health I am deprived of participating in the sport, I may be slightly useful to brother canoeists, in striving to extricate them from the quandary into which the present different styles of rig seems to have placed them.

Two years ago, after repeated experiments on both yacht and canoe rigs, I hit upon the following style of sail, which I put on to

CANOE SAIL.

a 16.8×3ft. canoe (of only ordinary lines), and obtained the best results. I had previously tried on the same boat the ordinary leg o' mutton, Mohican settee, lateen and balance lug rigs, neither of which can compare in windward work, handiness or completeness if the sails are carefully and properly made.

The main feature of this sail is the topmast, hinged on to gaff just back of jaw; this holds foot of topmast rigid. There is a small stout ring rove on to topmast about half way, the halliard is fastened to a mast ring, runs through ring on topmast and to a block at masthead, same as on Mohican, there are yokes on boom and battens, these requiring no mast rings or lacing if there are shoulders put on mast for boom jaw to work in, the sail can be set very flat, with the same tension on every part, the same reefing gear can be arranged on it as on Mohican; it leaves a better shaped sail when reefed, its center of effort is low, has the advantage of short mast and works equally well on either tack; it has all the advantages of the rig used by Pecowsic, together with the increased advantage of lower center of effort, reefing and stowing facilities. E. H. PECK.

OCCIDENT VILLA FARM, Colorado.

ROYAL C. C.—The autumn meeting took place at Anderton's Hotel on Tuesday last, the 23d inst., and was well attended. The following officers were elected, viz.: Commodore, H. R. H. the Prince of Wales; Captain, J. Macgregor (Rob Roy); Mates, G. Herbert and W. Baden Powell; Secretary, T. G. F. Winser; Committee, the Earl of Caithness, H. Church, A. B. Ingram, Dixon Kemp, Hon. A. F. Kinnaird, E. A. Leach, W. E. Graham, Major Roberts and E. B. Tredwen. The following alterations were made in the rules, after prolonged and animated discussion: Rule 28, page 18, add the words "No deck seat shall extend beyond the width of the canoe." Rule 23, page 17, after the words "thickness not exceeding five-eighths of an inch," add "except in the case of folding centerboards not exceeding 60lbs. in weight." Rule 29, altered to read as follows: "Second class cruising canoes, clinker built (so that the edges of the plank overlap, forming lands), dimensions as first class; but weight of canoe, including all spars, gear, fitting and ballast, must not exceed 200lbs., nor must sail area exceed 75sq. ft., mainsail not to exceed four-fifths of the total sail area; spinnakers are allowed untaxed." A proposition respecting the cruising sub-committee was referred to the general committee. A series of photograps illustrating a cruise in the West of Scotland, by some members of the Mersey C. C., and kindly lent by them, was handed round and much admired.—*Field, Nov. 27.*

THE CRUISE OF THE BETSY BOBBETT.—Dr. Neidé writes from Cumberland Sound, Ga., under date of Dec. 3, as follows: "The Betsy Bobbett and Mayblossom left the Savannah Y. C. house on Dec. 2, in company with sloop Outing, and remained by her until Dec 7, when she took a tow from Doboy Island to Brunswick, Ga. We have now crossed all the sounds and are ready to run down Cumberland Sound to-morrow, with the expectation of reaching Fernandina, Fla., with the flood tide. We will then run to Jacksonville and spend some time there." A postscript dated Dec. 9 announces their arrival at Fernandina,

A CRUISE ON LONG ISLAND SOUND.

THE O. K. Canoe Club, of Hartford, started on the second annual cruise with the following canoes: Nimrod, Flirt, Tramp, Dot, Petrel and Cricket; owned by Messrs. Tucker, Forrest, Gilbert, Hawley, Beardsley and Williams, respectively.

We had all the canoes on board the steamer Sunshine early on the morning of July 26, and then settled down to spin yarns of previous cruises till dinner time, afterward idling away our time reading, until we reached Sag Harbor at 8 P. M. As soon as the steamer was made fast we all started up the street to purchase some things we thought of during the day. We remained on board the steamer that night and slept just about as much as might be expected for the first night out.

The following morning we were up by 5 o'clock and soon had the canoes ready for launching. Once in the water we quickly got under way for Jamesport, at the head of Peconic Bay. Before we reached there it began to rain and we went into camp on Jessup's Neck at 9 A. M. Here we remained until the following morning when we started for Greenport, arriving about 10 o'clock. We laid in a stock of provisions, dined, and got under way about 12 o'clock for the "Promised Land," that region of sweet(?) smelling fish factories. As we went out of Greenport Harbor the N. Y. Y. C. fleet also got under way and we had a little race. We held our own and even gained considerably until the sails of the large schooner yachts took all our wind and we had to give it up. We made the run to the "Promised Land" in about four hours, a distance of twenty-five miles, and found a very good camp ground and also a farm house where we obtained fresh milk, etc.

The next morning we packed up and started for Manhasset on Shelter Island, but were becalmed; and toward 7 o'clock in the evening, when we found that it was impossible for us to get in that night, there being a head wind and tide, we camped on a woody point on the northern part of Shelter Island and sailed in the next morning. Two or three of us stopped at Greenport for provisions, as we were nearly out of them, while the others went on to find a suitable camp ground. This was found in a small bay between Prospect and Manhasset and we remained there over Sunday.

On Monday we took the steamer Sunshine for New London, arriving there at 10 o'clock, going up to the city, dining and laying in provisions and starting for Noank. We had a head wind and tide and so it took us some time to tack out of the harbor, but it finally being accomplished, we spun along with a fair wind for our destination. Two of our number becoming tired took a tow on a large catboat, and having made friends with the captain induced him to let us sleep aboard. The next morning, as it rained, he took us up to his house and surrendered the upper floor for the day and night.

In the afternoon one of the boys being in need of some alcohol for his stove and not knowing Noank was a prohibition place, sallied forth in quest of some. Arriving at the drug store he asked for some alcohol, but was informed by the druggist that none could be had, but that he could sell him some "violet water," which would burn just as well. Our canoeist understood the game and bought a pint of violet water. During the afternoon we all inspected the large shipyard.

Wednesday, July 28, was clear, but with no sign of wind. However, we set out with a fair tide and whistling for a breeze. We had drifted about half a mile when the tide turned, and at the same time a strong breeze came up which sent us bowling toward Watch Hill. As soon as we were inside of Stonington harbor we met a very strong head tide and were obliged to tack up Little Narragansett Bay, which took quite a while. We finally arrived at the dock, and, making fast, all struck out for the Shore Dinner House, where we made it lively for the waiters for about an hour. After this we set out to find a suitable camp ground, which we soon found not far off, and decided to stay there for a day or two.

Petrel and Cricket left on Saturday morning for Niantic to take the Monday morning boat for Hartford, as they were obliged to return to business. They reached Niantic at 11 o'clock at night, and, as it was dark and they had never been there before, they did not know where to camp, so pitched camp down on the bar below the village. When just snugly settled and about to go to sleep a terrible shriek was heard and a train flew past not 20ft. from the tent, startling the occupants greatly.

The other four canoeists remained at Watch Hill until Monday morning, then set out for Niantic, but were prevented from reaching there by the very heavy weather. We started from Watch Hill with a light wind, but it continued to increase until when we arrived at Mystic Island it was blowing so hard and such a sea had been kicked up that we decided to run in and wait for better weather. We had dinner here and afterward found the captain of a schooner, who had brought over a picnic party from New London, who said he would carry us all over to that place. We hoisted the canoes up over the side on to the deck of the schooner and were soon off for New London.

We arrived at 8 P. M., and it was too late for us to sail away from the city and pitch our tents, so launching our canoes, we paddled out into the stream and divided up into two parties of two each and went to look for shelter for the night. Two of us, Nimrod and Tramp, soon found the schooner Fleetwing of New York, and hailing the sailor on watch and stating our predicament were invited on board, given a supper, breakfast the next morning, and a place to sleep down in the cabin, for all of which we were duly thankful.

The next morning we went ashore for letters and provisions, and then found our two comrades, who had spent the night on a yacht near by. We then hoisted a reefed mainsail and stowed everything tightly below, as it was blowing great guns by this time. As soon as we reached the mouth of the harbor we perceived that it would be impossible to go on it was so rough, so we put ashore and waited for the wind to subside, but it failed to do as we wished it to, so we had to make the best of it and wait over until the next day. The next morning we set out for Niantic and soon reached there, camping until Monday, when some friends at White Beach asked us to come over there and camp, which we did until Wednesday, August 10, when we took the steamboat for home, where we all arrived in good order.

As it may be of interest to other canoeists to know what we carried in the way of baggage, the following list of one of our outfits is given:

One small bag of clothes and toilet articles, 1 bag for tent and pins, 1 bag which contained all the stores and cooking utensils, a water tight tin box 10×5×5 for bread, cake and berries, 1 tin box for butter, 1 bottle sugar, bottle of matches, bottle of condensed milk, bottle of salt, bottle of alcohol, can of chocolate, alcohol stove, and a can of oatmeal. A dish, a cup, knife, fork and spoon also went in this bag, and all was stowed in the rear compartment of the canoe with a tin pail and small sauce pan. A stone water jug, hatchet, lantern, woolen and rubber blanket completed the outfit. The whole outfit, including sails, paddles, rudder and hatches, weighed but 80lbs. TRAMP.

AN ENGLISH CAMP-FIRE.—We have received from Mr. Chas. Livingston, of Mersey C. C., Liverpool, a circular giving notice of the club's first camp-fire on the American plan as follows: "It has been decided that a camp-fire shall be held at the club boat house on Saturday, Dec. 18, at 6 P. M. prompt. A substantial tea will be prepared. Every member proposing to attend must send in his name to the Captain by the 16th at latest, and thus enable the club cook to complete the necessary arrangements. During the evening Sabrina will exhibit a series of lantern slides. Several country members will be present, so it is hoped that there will be a good muster. Hurry up with your answers and let there be an unlimited amount of merriment at the festive gathering.—T. H. R. BARTLEY, Captain." Such an invitation should bring out the canoemen of the Mersey in full force, and we hope to hear in time of a pleasant meeting.

NORTHAMPTON C. C.—The Northampton C. C. held a meeting at the house of the ex-Vice-Commodore, on the evening of Dec. 3, to decide as to the disposal of the club house. We are in a quandary concerning its safety as it is within reach of the spring freshets. We finally decided to plant posts at the four corners of the building and bolt them to it. This being decided we accepted an application for membership in the club, and also accepted Mr. W. R. Jones's resignation. The officers now at the helm are: H. C. French, Commodore; Wm. Clark, Vice-Commodore, and C. B. Swift, Secretary-Treasurer. Camp-fires are to be held twice a month until the first of April. The meeting adjourned after appointing Dec. 15 as the date of our first camp-fire. The club camped one week this last summer on the shores of Lake Sunapee, N. H., and then cruised from Claremont, N. H., to this place.—H. C. FRENCH.

HAMMOND, Ill., Oct. 31, 1886.

U. S. Cartridge Company, Lowell, Mass.:

DEAR SIRS—I consider your shells far ahead of any shell I ever saw. I can reload them six times, and this is a great item to market shooters, and the wet does not affect them in the least. I have let them lay often in water twenty-four hours, and kill ducks with the same shells. I have had constant experience in field and trap for nineteen years, and am in a position to know, and I consider the "Climax" the best shell in the world. Yours,

—*Adv.* (Signed) L. S. CARTER.

Yachting.

KEEL VERSUS CENTERBOARD.

Editor Forest and Stream:

In your issue of Sept. 16, summarizing the results of the America's Cup races of 1876, you raise a question which seems to me the most important which can be discussed by American yachtsmen, viz: that the possibilities of speed for all-round racing craft are greater with the keel boat than with the modern Puritan-Mayflower centerboard type; and that if the Cup is to remain much longer in this country, its defense will have to be intrusted to keel yachts but little differing from the English challenger. No more beneficial result could befall American yachting than the establishment of this opinion, for the introduction of large keel yachts would be followed by bolder open sea sailing than will probably attend the building of the large centerboards for some time to come. But, on the other hand, it must not be forgotten that the special purpose of the building of these large yachts (and the remark is fully as true of the large cutters as of the large sloops) is not to secure good heavy weather open sea cruisers, but yachts capable of the highest speed in the average conditions of yacht racing. By their all-round speed in racing and by no other criterion will these vessels be judged. Even granting superiority to the keel vessels as a heavy weather cruiser, unless their speed is at least equal to the speed of Mayflower and her improved successors, they cannot hope for preëminence among our yachts. Consequently, I say, the issue raised by you is the most important which American yachtsmen can discuss, and in the hope of drawing out from the FOREST AND STREAM a full statement for the faith that is in it I have put together the salient points of the adverse argument which bear strongly against its opinion.

As I understand the article in question, the FOREST AND STREAM there expresses its belief that as all-round racers in average yachting weather, the large vessels of Puritan-Mayflower type have a somewhat greater speed than the best of the existing narrow-beamed cutters, Irex, Galatea and Genesta. But, that these narrow vessels have not by any means exhausted the possibilities of the keel boat, rather, by a slight increase of beam and consequent changes of form, keel boats will be produced which, over large averages of races, will prove to be faster than the fastest successors of Mayflower, and consequently that Americans must build such keel boats, if for any considerable length of time they are to keep the America's Cup.

To put the pith of the counter argument in a few sentences at the beginning. Mr. Burgess, by slightly increasing the depth of the centerboard boat, and hanging the ballast on the lowest point, on the keel, while retaining nearly all the beam of the old-time sloop, in combination with beautiful modeling of the under water body, has produced a type in the large sizes with all these remarkable qualities:

1. Their initial stability has become so great that they possess a sail power far in excess of existing cutters of equal length.

2. The low-hung ballast, together with large size, has given them ultimate stability sufficiently great to enable them to carry their great sail power through a wide range of weather, in fact through by far the greater number of races to be sailed in any one season, or almost all weather, except very unusual, in a number of seasons.

3. By the small draft which the centerboard permits, their immersed frictional surface is kept small, and probably the chief source of resistance is kept low.

4. By the use of the centerboard, with moderate draft, the windward ability in ordinary weather of these vessels is among the highest of any sailing vessels afloat.

A few words may be necessary to substantiate these assertions, it being always understood that large vessels (80ft. waterline and over) are referred to, since they confessedly stand at the head, both in England and this country.

The comparisons of two years between the large cutters and the large sloops have demonstrated the value of the greater initial stability of the latter, as enabling them to carry sail power in moderate weather far beyond that of the cutters. Taking the published figures, according to the New York Y. C. rule, we find:

	Displacement.	Sail Area.
Puritan	105 tons.	7,982 sq. ft.
Genesta	145 tons.	7,387 sq. ft.
Mayflower	110 tons.	9,000 sq. ft.
Galatea	157 tons.	7,146 sq. ft.

Genesta's sail area must be a mistake, as it is given as greater than Galatea's, although all the latter's spar measurements are larger. But taking the figures as they stand, we find that for every ton displacement, Puritan has 76 sq. ft. of sail, Genesta 48; Mayflower 81, Galatea 46. No further proof of my statement is necessary.

That the ultimate stability of the new type is all that is needed to enable them to carry their sail through the average of racing weather, was demonstrated beyond dispute by Puritan's easy performance in the strong wind and ugly sea of the Goelet Cup race of 1885, and was again indicated by her work in the last Cup race of that year during the 35-mile-an-hour squall when, with her three lower sails, she was carrying a press of canvas certainly considerably in excess of all Genesta had, including the gafftopsail. Sachem, in the race with Miranda last September, indicated the same thing. All the reports of that race agree that the superior weatherliness of Sachem under canvas in that strong wind and tumbling sea was pronounced. But at any rate Puritan has settled the matter.

That the immersed friction surface of the new type is less than that of existing cutters of equal length, is a fact of measurement about which there is no dispute. In your issue of Oct. 21, I gave strong reasons for believing that the result is that within the range of ordinary speed (up to nine miles an hour) the resistances of the new type are less than those of the cutters.

Finally the ability of these new centerboards to point and fetch to windward has been proven in the last two years to be at least equal to those of the very best keel boats afloat. As for mild weather, the FOREST AND STREAM has stated that Puritan and Mayflower fetched higher than Genesta and Galatea. Puritan was not inferior to Genesta in the last 1885 race, and Sachem, in heavy weather, was easily superior to Miranda. Their at least equal ability in average racing weather to the best cutter in this respect needs no other defense.

So the modern centerboard boat has combined great sail power, high stability and great windward performance, with small resistance in average conditions, dependent upon small immersed surface.

How is it with the proposed keel boat?

I presume that she will have 3 to 4ft. more beam than Galatea, say 19ft. on a waterline of 85ft. If the beam is kept as low as 17ft. it is reasonable to expect her initial stability to still be too low to enable her to carry sail power comparing with that of the large centerboard.

Now, this increase of beam means that entrance and run will be blunter than those of the narrow-beamed cutter. In this respect she will stand between the narrow beam and the centerboard. Her wave-making resistance will naturally be greater than that of the existing cutter, and, though less than that of the centerboard, her superiority in this respect will be less than is that of the present cutter.

To stand a chance of success she must be able to point and fetch at least as high as the present cutter, and as her sail power and the force to drive her down to leeward will be greater, it seems evident that the area of her longitudinal immersed section cannot be practically diminished beyond that of the present type of cutter without risk of producing inferior windward ability. Consequently, for a given length we may reasonably expect to see her draft as great as the present cutter's. Now, greater beam, with equal length and draft, means greater displacement in a rapid degree; and probably her displacement cannot be much reduced (because her stability must be maintained) by high bilges and very hollow floors. But this greater displacement on a greater beam means decidedly increased friction surface, and the outcome will be that the keel boat (as compared with existing cutters) will be less superior to the sloop in the matter of wave-making and considerably more inferior in the matter of skin resistance.

As to sail power, even with 19ft. beam, the keel boat is still 4ft. less beam than Mayflower. It is not unreasonable to say that her initial stability will not admit of sparing the keel boat with the large spars of Puritan and Mayflower. Her sail power will be greater than the existing cutter's, but her displacement and friction surface will be also greater, and her sail power will still be inferior to the centerboards. In other words, it appears probable that without greater care your keel boat will exemplify that error which the FOREST AND STREAM has so denounced and found exhibited in Atlantic—that she will be "both wide and deep."

So, for all-round racing it seems to me the future keel boat has a very heavy contract in undertaking to prove its superiority of speed over Mayflower and her speedier successors which are certain to come.

Undoubtedly most of your cutter readers will forthwith declare that all this is pretty on paper, but there are Madge and Shona and Clara, etc., the equals or superiors of any centerboards of their inches, and consequently superiority may be looked for in the large sizes of cutters with equal confidence. If they will read an interview with Lieut. Henn, in the *Sun* of Sept. 24, they will find some reasons why such an argument cannot hold. It seems to me to be fundamentally fallacious. What we have to deal with in racing yachts is always relative performance in the range of weather met with in racing. Now mere increase of size gives increase of stability which outruns altogether the rate at which sail area increases, and mere increase of length makes a boat a good performer in a sea way, which will be fatal to a shorter vessel of the same type. For illustration: Suppose we have a cutter and a sloop each 28ft. long, and that the sloop under her sail is tender in fresh breezes, so that the cutter asserts an easy superiority. Now make them 34ft. long, and increase all other dimensions threefold, and give them spars three times as long as before (which in practice we would not do). Their weights, or displacements, will have increased 27 times, while their sail area, or upsetting force, will have increased only 9 times. Consequently, we may very easily have attained with the large sloop a stability sufficient for all the weathers usually sailed in, and at the same time her great length will make her a very good performer in a seaway which would have drowned out the small vessel. The big sloop will have all the stability and weatherliness needed for high speed, and the greater ultimate stability of the big cutter, and possibly greater weatherliness will become, for all ordinary racing, considerations of no practical importance, while the relatively high initial stability of the sloop and small immersed surface will remain.

Just this has happened in the case of Puritan and Mayflower, and it has been added to by the beautiful modeling and harmonious adjustment of all parts of these vessels. D. W. B.

Nov. 8, 1886.

[Our correspondent is correct in his assumption that for yacht racing the only criterion is speed, and that while it is in every way desirable to encourage the type of boat that is seaworthy and comfortable as well as fast, that the one that takes the prizes will be, not the handsomest nor the roomiest, but the fastest. The position which the FOREST AND STREAM has taken with respect to the international races and their results is substantially as he has stated it, but may be restated more fully as follows: While admitting the vast improvements of the Burgess boats over their predecessors we are unwilling to concede the hasty and extravagant claims made by some of their admirers, or the correctness of the grounds on which these claims are based. The new type possesses many merits; both Puritan and Mayflower are fast, able and seaworthy; but we are not ready to join the many voices that are crying Eureka, and to settle down comfortably in the belief that the "North Pole" of yacht designing has been reached and that there is nothing beyond. Very much to the contrary, while admitting the great step that Puritan's designer has made, we believe that it is only a step, and a comparatively short one, toward a something as yet very far beyond. Just now, however, in particular when our pleasure navy, though a grade above our national navy and merchant marine, is very far from what it should be; and when its future should engage the earnest attention of every friend of yachting, it is most important that a correct estimate should be had of the new boats and their relative performances. As believers in a different class of boat it is not a pleasant task to make comparisons which may seem invidious or to appear to disparage in any way the two boats which have successfully defended the America's Cup; but the whole future of American yachting, to say nothing of the chance of having to meet next year a more formidable rival than has yet crossed, demands now a careful consideration of the races of 1885 and 1886.

Naturally and properly a certain amount of prestige attaches to the victorious vessel from the mere face of the results, and for this due credit must be given; but beyond this are far deeper and more important questions. Of the four Cup races sailed in '85 and '86, all were won by the American boats, a fact on the one side.

Of these races three were sailed in weather that can be only characterized as at the extreme limit at which a race is possible, not one of the three being sailed in a true breeze from start to finish, or without one of the boats lying at times becalmed and dead. The results proved something, but not much, as a foundation for building a national type upon that a coming generation of yachtsmen shall be proud of. They proved, and all the other trials between the seasons in which the race was not made within the limit, corroborate this proof, that in very light weather, the lightest in which a race is possible, the two Burgess boats are faster than the two Webb cutters which opposed them. This of itself is nothing in support of the type when it is considered that in the same weather a big skimming dish, that would not be tolerated now even in America, could in all probability have done as much.

Of the four actual races one only was sailed under conditions which must be accepted as satisfactory to all; a breeze of ample strength and lasting from start to finish. This race, as all know, was won by Puritan, but by so small a margin that, after witnessing the race and weighing the arguments since made and the additional facts not known generally at first, we must adhere to our original opinion that the boats were very even between the two, and that in such weather the boats were practically equal; while we may now supplement this with the opinion that had Mayflower been in Puritan's place she would have been badly beaten. This season, at least, the chances have been in favor of the American boat, as every race was in light winds, when her stability was little taxed and she reaped the extreme of good from a sail area that would have punished her severely in a strong blow. Galatea, on the other hand, had a reserve of stability that she never for a moment drew on, and a sail spread far too small for such weather as every race day was blessed with. To sum up, then, either of the American boats are far better in a drift than their opponents, a fixed fact as far as it goes; in a strong lower-sail breeze they are, as far as tried in the case of Puritan and Genesta mentioned above, equal; and beyond this nothing is really known. In steady wholesail breezes the probabilities are that the American boats would outsail the others, but they have never met under these conditions; and in such weather as Genesta and Dauntless went through last year the narrow boats would be likely to win from either of the others. This does not agree with the claims made last year that Puritan was half an hour better than Genesta in the final race, but it is more in accordance with the facts. If we are wrong in our views and have underrated the boats, time will show it and we shall be the only sufferers; other Puritans will be built and America will still hold the first place in yachting. If we are right in our estimate, then it is time to consider what can be done toward a still more perfect craft, and what is the next step; for all improvement is by slow, but regular progression.

Looking at "D. W. B.'s" arguments for the Burgess boats his first claim is for excessive stability. In such light weather as has prevailed they are fully able to carry their sail, and Puritan has sailed twice in harder weather, in the latter instance at least, having all the wind she could take care of without a decided loss of speed. Mayflower on her first trial was sadly lacking in stability, and while she has been improved since, she is very tender and none too well able to carry her spars and canvas, in fact a few races in a strong lower sail breeze would probably demonstrate the advisability of a reduction of weight aloft, even at the cost of less speed in a drifting match. Her sail area, as given by the measurer of the N.Y.Y.C. is 8,634ft., while Galatea's is 7,505, a difference of 1,100ft. or nearly 13 per cent., and it seems evident that for ordinary racing weather Mayflower could reduce her sail with advantage, while Galatea could increase hers until the difference would be very much less. When sailing together on several occasions, even in moderate airs it was noticeable that the wide boat heeled to as great an angle as the narrow one.

The chief argument advanced by our correspondent is the difference in immersed surface, which he assumes is far less in the wide than in the narrow and deep type. We have not the figures for the four vessels, so cannot make an exact comparison; but a little reflection will show that the two types are about equal, and it would be possible to design a boat of Galatea's displacement and of more beam that would have a smaller area of immersed surface than Mayflower. Referring to the midship sections published last week, it will be found on measuring that the girth of Cinderella, from waterline to waterline, under keel, is but little less than the other two, the design representing a mean between the wide and narrow types. Now the immersed surface is measured by the girth at regular intervals and the lengths of each waterline taken along the boat's skin. The wide boat is not as deep at midships as the narrow, though her girth is nearly as great; but with less rocker she carries her depth further fore and aft, so that the sum of her girths would differ little from that of the other boats. As to waterlines, the length of loadline in a boat 16ft. wide is necessarily much greater than in one only 9ft. wide, and while there will be more waterlines in the latter they are not only shorter through the lessened beam, but also through the cutting away of forefoot and rake of sternpost. No account has been taken of the centerboard, but even without this the gain in immersed surface is but little, and with board down it may disappear entirely. Beyond this, while a small immersed surface is desirable, there are other considerations of far more importance, and the shape in which the surface is put is likely to tell far more than a few feet of area, one way or the other.

As to the last point, the boats have certainly proved weatherly, but on the other hand, in the light weather the two large cutters have proved conspicuously lacking in this quality, and so different from the other cutters, large and small, that have been seen here, that it is fair to assume that it is partly due to the form of the boats, and that this fault might be avoided in a different model. As the wind increases the cutter holds better to windward, and the fault was most apparent when merely drifting, as in the start of the first race in 1885. The design lately given in our columns shows very much such a boat as we had in mind, and though smaller, a comparison of her with Cinderella and Clara would give conclusions that would hold true in the case of larger boats. This design shows that it is possible to combine a displacement greater than Clara's with more beam and less depth, and yet retain a very easy form. The sail area of the new boat would be 3,483ft., N. Y. Y. C. rule, compared with 3,220 for Clara and 3,399 for Cinderella, the immersed surfaces varying but little, and she would in all respects be very different from the boats "both wide and deep" which we have condemned.

What a similar boat 85ft. long would do, is as yet a matter of conjecture, but it would seem that the difficulty of obtaining the advantages due to depth in a small boat, without too much draft, would largely disappear, that 13ft. 6in., the draft of Galatea, would be much more effective in the medium boat than in the extreme, and that lateral resistance need not be sacrificed to the same extent, nor need a draft of 17ft. be taken to carry the boat to windward. As yet only the two extremes, Mayflower and Galatea, and Cinderella and Clara, have been tried, is it not probable that there is a point between the two where a maximum of good qualities may be had with fewer of the disadvantages of both types? This is the point to which we would call attention. However good the present boats may be there is no safety in a blind confidence in them; what has been done in 1885 and 1886 is not enough but must be supplemented by constant and steady work if as good results are to be had in the future.]

THE LYMAN YIELDING MAST.

THE idea of a yielding mast that will give way under the pressure of a hard puff or a sudden squall, and so relieve the boat, is by no means a new one, and various devices have been tried at times in the form of a pivoted mast controlled by spiral springs at the heel. None of these have proved successful owing to inherent faults, the ordinary coil spring not being suited to the purpose, and none have stood the test of a practical working.

Some years since the idea of a heeling mast attracted the attention of Mr. William Lyman, of Middlefield, Conn., an inventor of considerable ingenuity, who is best known in connection with the gun sight and the bowfacing rowing gear bearing his name. Mr. Lyman devoted both time and money to his experiments, trying many plans which proved impracticable, until at length he hit on the solution of the problem here illustrated. A boat was fitted with the apparatus and tried under various conditions of wind and water until most satisfactory results were obtained.

The means employed is a variable spring readily adjusted so as to hold the mast perfectly rigid or to allow it to give to the least puff. Besides being adjustable the pressure increases regularly as the angle of the mast is greater. With this mast the speed of the boat is increased in squally weather, as she may be kept to her course without continual luffing, and the consequent loss of headway is avoided.

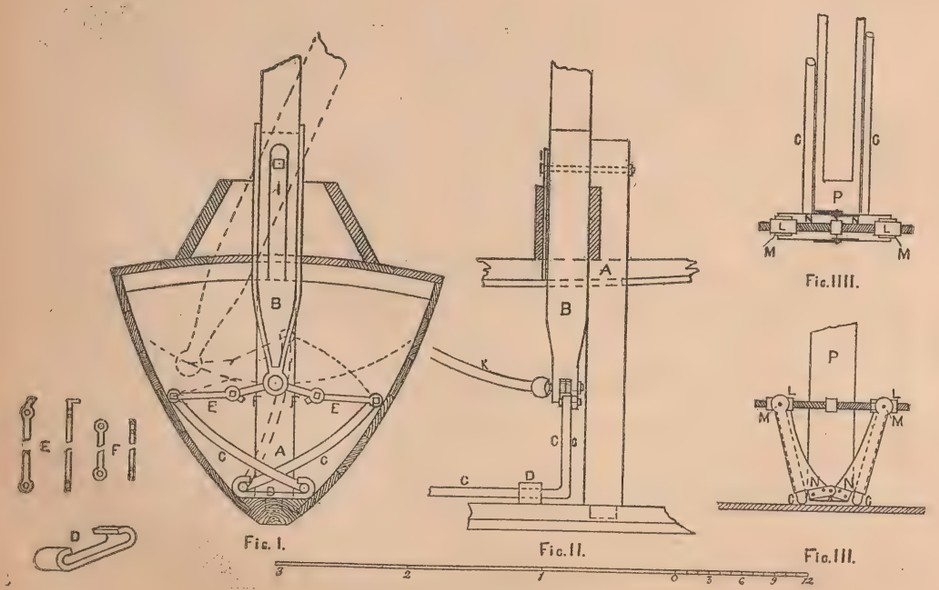
The drawings show the gear as fitted to a centerboard boat 16ft. long, the general arrangement being shown in the deck plan and longitudinal section, while the details are given on a larger scale in Figs. I. to IIII. The first figure shows a transverse section at mast. Fig. II. shows a longitudinal section at the same point. Fig. III. shows an elevation at after end of centerboard trunk looking forward, and Fig. IIII. shows the after end of trunk in plan. A is a stump mast stepped in the usual manner, and rising but a short distance above the deck. The mast proper, B, is joined to this stump by a ¾in. iron bolt passing through the two as in Figs. I. and II., so as to allow B to swing freely. The deck is cut away as shown, the opening being cased in to a height of about 8in. to keep out any water. The mast is controlled by two torsion springs, C C, pieces of 1in. round tool steel (not hardened), long enough to reach from the after end of the centerboard trunk to the mast. At the after end each is turned up at a right angle, leaving an end about 8in. long, Fig. III. Each end is forked, with two lugs, M M, between which is hung a nut, L, one with a right hand and one with a left hand thread. In these two nuts is fitted a right and left hand screw, N N, ⅞in. diameter, and with six threads to the inch. In the middle where the two threads meet is a square boss for a wrench.

By turning the double screw in one direction the ends of the two springs are thrown apart, and by turning in the other they are brought together. To keep them in their relative positions two blocks of wood, N N, are fitted, being hinged to each other at the bottom by two iron plates, shown in Figs. III. and IIII. Each block is hollowed out on the outer side to receive its rod. The springs being joined together, one always acts to reinforce the other; a feature not found in any combination of spiral springs. In all the figure P is the centerboard trunk.

Each rod is turned up at right angles, Fig. II.; and is also curved to fit more closely the side of the boat, Fig. I.; the two crossing each other as in Fig. I. They are held in place by a strap, D, of 2×⅛in. iron bolted to the keel.

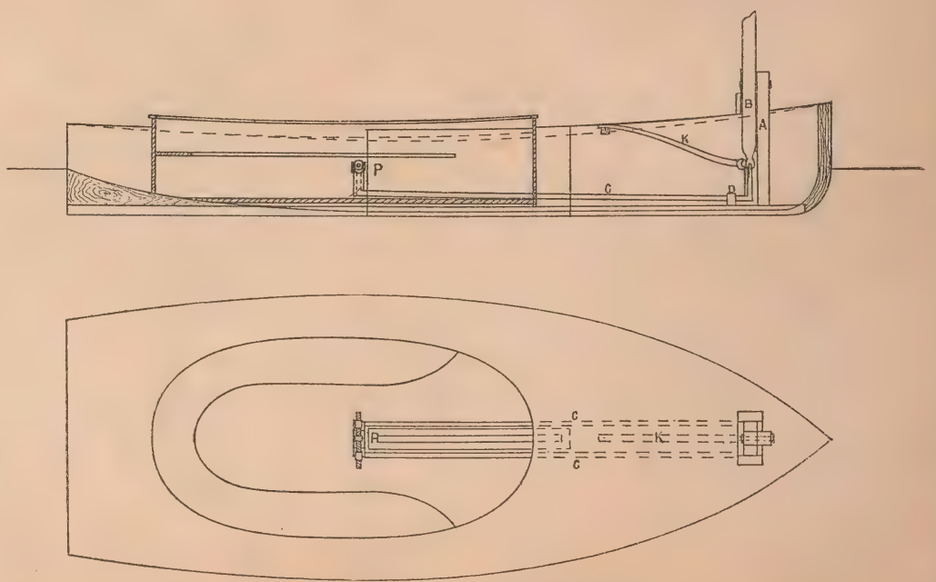
The lower end of the mast, B, is shod with a forked forging of iron, one arm extending up on each side of the mast to 4in. above the top of the stump mast, so as to strengthen the mast where weakened by the slot. The lower ends of the ball portion of the joint of the bar, K. This pin passes through the two lugs of the forging on the heel of mast and through the two rods, F F, Fig. II., thus allowing a free movement in a thwartships direction. If the mast be heeled to starboard, as shown in Fig. I., the lower end goes to port and through the two rods the pull is transmitted to the starboard spring, which takes the position shown by the dotted lines, Fig. I., the strain being transmitted to the opposite spring as well through the screw joint at the after end. When the mast heels to port the pull comes first on the port spring and is transmitted to the other in turn. If the after ends of the springs are brought closer together by the double screw the pressure is increased, and if the screw is slacked off the mast will heel more readily. When a puff strikes the boat there is no necessity to start sheet or to luff, and the boom need not be allowed to drag in the water. The device is adapted to all sizes and classes of sailboats and canoes. It has been patented by Mr. Lyman, but being busily engaged with his other inventions at present he is not prepared to manufacture it, but will allow any one to apply it for himself on payment of a small royalty.

The foregoing apparatus has been tried in practice on an actual boat and fully perfected in all its details, a representative of this journal having witnessed a successful trial of the arrangement and being able to testify personally to its utility to the full extent claimed.

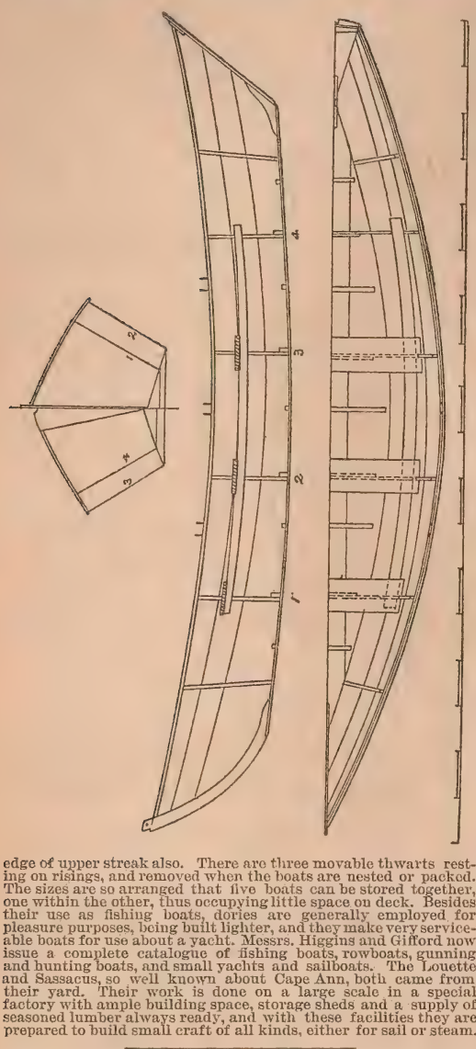


THE CLYDE CHALLENGER AND NEW YACHTS.—While there are rumors of several yachts to be built before spring, nothing definite is decided on yet, as all are waiting to learn the size of the new Scotch yacht. Mr. Burgess has cabled to Mr. Watson to know the length of waterline of the new craft, but the answer did not give it, and the Clyde men evidently intend to keep the matter secret as long as possible. Of course until the size is known no one will venture to build a boat to meet her, as no one will care to risk a size that may be out of the running entirely. Considering that the New York Y. C. were asked to set the size of boat they would prefer, and declined to do so, it is rather amusing now to see all hands waiting until the Clyde men are ready to enlighten them in turn on the subject. Four boats are now spoken of, one for Mr. Oliver Iselin, from a Burgess design; one for Dr. Barron, who has just sold Athlon to Mr. E. B. Havens; one for Mr. J. R. Maxwell, and one for Mr. Wm. Ziegler, owner of the sloop Thistle. All of these are intended to be of the supposed size of the challenger, 70 to 75ft.

A CURIOUS STEAM LAUNCH.—Mr. S. Ayers, at his new shop at Bay Ridge, is completing a curious steam launch for the U. S. Fish Commission. The new boat is 39ft. over all, 33ft. L.W.L., and 7ft. beam. The depth is 3ft. and draft is 16in., with a displacement of 15,320lbs. Toward the stern the keel curves up quickly, while the bilges are kept low and continued out aft, making a semi-circular cavity under the overhang, in which the screw works, being protected greatly from the chances of damage and fouling. Mr. Ayers has also nearly completed a twin screw launch to go to St. Domingo. She is 45ft. over all, 10ft. beam, 5ft. 9in. hold, 32in. draft. There are two single engines, 7×8, by the N. Y. Safety Steam Power Co. The screws, 4-bladed, of gunmetal, are 26in. in diameter. The steel shafts, 2¼in. in diameter, are bushed outside with ⅛in. brass tube. The launch will have a movable cabin house.



THE LYMAN YIELDING MAST.



DETAILS OF CONSTRUCTION

GENERAL ARRANGEMENT OF PARTS

A DOWN EAST DORY.

MESSRS. Higgins and Gifford, of Gloucester, Mass., for many years builders of dories and fishing boats of all kinds, have furnished us with the accompanying plans of a dory such as is used by fishermen. The boat is planked with white pine, the sides, of three pieces each, being 9-16in., and the bottom ⅞in. The laps of the siding are rabbeted, so as to make a flush surface inside and out. The timbers are of oak 1¾×1in. and 2½in. in thwarts. The gunwales are 1½×1¼in., with a ⅜in. strip on top, covering

edge of upper streak also. There are three movable thwarts resting on risings, and removed when the boats are nested or packed. The sizes are so arranged that five boats can be stored together, one within the other, thus occupying little space on deck. Besides their use as fishing boats, dories are generally employed for pleasure purposes, being built lighter, and they make very serviceable boats for use about a yacht. Messrs. Higgins and Gifford now issue a complete catalogue of fishing boats, rowboats, gunning and hunting boats, and small yachts and sailboats. The Louette and Sassacus, so well known about Cape Ann, both came from their yard. Their work is done on a large scale in a special factory with ample building space, storage sheds and a supply of seasoned lumber always ready, and with these facilities they are prepared to build small craft of all kinds, either for sail or steam.

SEA GULL.—Mr. Driscoll is pushing the work on the new keel boat he is building at Bay Ridge and the hull will soon be completed. In style she is far ahead of anything before attempted about New York of her dimensions, and in model as well as the mechanical feature of her construction she is a credit to her builder. The dimensions are:

Length over all	36ft.
Length L.W.L.	30ft.
Beam, extreme	10ft.
Draft	5ft.
Least freeboard	1ft. 10½in.
Rake of sternpost	2ft. 7 in.
Keel, iron	3,300lbs.
Ballast, total	5 tons.

The frame is of oak with a keel sided 18in. on bottom, giving a good width for the iron, and moulded 8in. The stem is sided 4½in, and sternpost 5in. The frames are all of hackmatack single and spaced 15in. They are sawn from knees of the proper curvature, sided 2¼in., moulded 3 to 2¼in. The floors are also of hackmatack and over the throats runs a keelson of 4×5in. yellow pine, through which the ⅞in. keel bolts are run, making a strong construction. The planking, 1½in. yellow pine, is in single lengths. The deck frame is of hackmatack, the beams being 2¼×2½in. The plank-sheer of oak 5×1¼in., is in a single length, while quarter timbers are worked on each side. The boat has a good overhang, 6ft., but it is light both in appearance and construction. There is a cabin trunk 13ft. 6in×6ft. and 15½in. at side. Under it is a full 6ft. clear of the beams. The cockpit is 7½×6ft. The yacht will be sloop-rigged with a single jib.

A SUCCESSOR TO THE MIGNONETTE.—So much has been said during the last two or three years about the two little cutters built for Dr. Loring, and the similar boats built from them for other parties, that the announcement that Dr. Loring is now building a centerboard boat will occasion some surprise. Several seasons in cutters have convinced him of their adaptability as cruisers about the coast, but in the future his home will be on an island about which only 4ft. of water can be had. To suit this location he has ordered from Messrs. Wallin & Gorman, of Bay Ridge, a new Mignonette of nearly the same model as the last one, but minus the keel, its place being taken by a centerboard. The boat will have several tons of lead in the form of a shoe, but the draft will be kept as light as possible.

A LAWSUIT OVER A STEAM YACHT.—The suit of Mr. Jas. M. Seymour, present owner of the steam yacht Radha, against her former owner, Mr. Pierre Lorrilard, was tried in the Supreme Court on Dec. 11 before Justice O'Gorman, in August, 1884, Mr. Seymour purchased the Radha for $65,000, her cost being given as $113,000. It is claimed that on her first cruise the yacht leaked very badly, causing danger and inconvenience to the new owner and his family. Mr. Seymour also claims that he spent over $20,000 in making necessary repairs to the yacht. The case was adjourned to Dec. 14 at 10:30 A. M.

CUTTERS ON LAKE ONTARIO.—At least two more cutters are promised for next season on Lake Ontario, both for gentlemen who have sold their present boats for larger ones. The owner of the yawl Molly, of Hamilton, has ready the plans for a cutter 40ft. l. w. l., 9ft. beam and 8ft. draft. She will be built at Hamilton, Ont., by Mr. Thos. Dalton, who built the Molly. Most of her gear and ironwork will come from New York. She will be designed for cruising, to carry two men forward and give a good cabin for her owner, but will be entered in the regattas of the Lake Y. R. A. Her keel will probably be of iron. Another yachtsman of Hamilton is making arrangements to bring out from England a yacht of about 20 tons Y. R. A., but of moderate beam, also for cruising and racing.

ICE YACHTS.—Messrs. Judson & Hancock, of Matteawan, N. Y., have lately sent several ice yachts to Tuxedo Park. They are of one size; center timber, 14ft.; bowsprit, 10ft.; runner plank, 12ft. 6in.; boom, 16ft.; gaff, 6ft., and hoist, 11ft.

PALMER.—This schooner has been hauled out at Piepgrass's for a survey and probably for extensive repairs, preparatory to a reappearance in the racing fleet.

PROVIDENCE Y. C.—On Nov. 16 this club elected the following officers: President, A. E. Flint; Secretary, E. Howard Wright; Treasurer, R. H. Carver. The commodore and vice-commodore will not be elected until February. A site for a club house has been obtained at Pawtuxet and work will be commenced in the spring.

A SIGNAL CODE FOR GERMAN YACHTS.—The *Wassersport* has lately published in a compact little volume a code of signals for German yachts, compiled by Lieutenant Munhall-Vielbrook. The list includes all the usual sea terms, names of ports, compass courses, list of yachts, etc.

THE TESTIMONY GIVEN BEFORE THE Y. R. A.—We have received a pamphlet containing the report of the Y. R. A. measurement committee with the evidence given by leading designers and builders. The report covers 60 pages, and though interesting, is too long to be republished.

CRUISING.—Talisman, steamer, J. W. Slater, left Beaufort, N. C., for Charleston, on Dec. 8. On Dec. 9 Magnolia, steamer, Mr. Fairman Rogers, was at Norfolk, where Falcon, Mr. James Stickney, was also at anchor.

JULIA.—Mr. Chapin's new schooner arrived off Staten Island on Dec. 10, having towed from Wilmington. She left on Dec. 4, but meeting a severe storm with snow, she returned to Newcastle and anchored, leaving on the 9th. She will start at once for the South.

NEW ROCHELLE AND PELHAM CLUBS.—On Dec. 6 a meeting was held at which a union of the two clubs was consummated, the name being the New Rochelle Y. C.

LADOGA.—Mr. Geo. Gordon King has sold his steam yacht to Mr. Geo. S. Brown, of Baltimore. She passed through New York last week on her way to Baltimore.

ATLANTIC.—Mr. Fish's sloop has been towed from the Atlantic Basin to the foot of Seventh street, South Brooklyn, for the winter.

DOMINO.—Mr. G. L. Haight's sloop is now hauled up at Tottenville for alterations. Her bow will be lengthened 5ft.

HULL Y. C.—On Dec. 11 the Hull Y. C. held its annual dinner at Young's Hotel. Com. Whitten presided.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. C., Oswego, N. Y.—A canoe 14ft. 6in. long may be 32¼in. wide.

J. E. G., New Haven, Conn.—See the FOREST AND STREAM of Nov. 27 and Dec. 11, 1884, for steam canoe.

C. G. W., Boston, Mass.—You will find plans of duck punts, sneak boxes, etc., in "Canoe and Boat Building."

L. M., Cosmopolis, W. Ter.—The Model Yachtsman, 161 High street, Hull, Eng. A good yacht 25ft. on waterline should be large enough.

J. H. B.—We have no particulars of boats run by hand power and a screw. You will find designs for hull in "Canoe and Boat Building," published at this office.

S. C. S., Williamport, Pa.—A and B each make a score of 100 points, C scores 95 points and D scores 90 points. We have 3 medals, for highest, next highest, and third best score. Does B receive the second prize if in shooting off the tie A beats B, or does B drop out altogether? You will place a great many minds at rest by settling this question. Ans. As we have said time and time again, this is a point which should have been agreed upon before the match, and in default of such agreement it cannot be decided now. There are two styles of shooting. In one the prizes go to the contestants who do the best work; by this method, if A beats B, A would take first, B second, C third. The other style is called class shooting, the prize going to classes, *i. e.*, A and B shoot off for first, the one defeated receiving nothing; second goes to C and third to D. It all depends upon whether this was a "class shooting" match or not. "Class shooting" is now the usual style. If you had no understanding about it beforehand, we fail to see how you can now decide the dispute save by acquiescence of all concerned.

New Publications.

THE BOYS' BOOK OF SPORTS AND OUTDOOR LIFE, edited by Maurice Thompson. The Century Co., 1886.

The Century Company have a notion that whatever of literature is prepared for young folks should be as excellent in its way as that which is designed for older readers. Witness the *St. Nicholas*. They have now supplemented their "Sport with Gun and Rod" by a magnificently illustrated volume for boys. The book is taking from cover to index. The pages are broad, the type handsome, the illustrations numerous and excellent, the contents varied and comprehensive. First comes a chapter on the benefit and abuse of outdoor sports, which, sensible as it is, the average boy will skip. Mr. Thompson's "Marvin and His Boy Hunters," originally printed in *St. Nicholas*, treats of game and shooting, and other divisions of the book include fishing, archery, boats and boating, camps and camping, swimming and walking, the camera, winter sports, tobogganing, iceboating, spearing through the ice, and outdoor sketches, the final chapter being Mr. G. B. M. Harvey's story of "How Science Won the Game" of baseball. The drawings are as a rule correct, and help to an understanding of the text. The boy who finds this handsome book among his Christmass gifts is to be congratulated. There were no such books when the men of to-day were boys, and we sometimes wonder if the young folks appreciate how much is being done for them by writers, artists, printers and publishers.

HOW TO HANDLE AND EDUCATE VICIOUS HORSES. Together with hints on the training and health of good dogs. By Oscar R. Gleason. New York: O. Judd Co., 1886.

A man who excels in boxing, wrestling or horse breaking is a "Prof.," and much of this book is taken up with personal accounts of Prof. Gleason's experience. It is a novel story, and will be found full of odd incidents. The Gleason method of subduing horses has been demonstrated to tens of thousands of spectators on the author's travels as a successful "horse trainer." There are full directions, with diagrams for adopting Prof. Gleason's tactics, and a number of useful hints about the choice of horses and their treatment in health and disease, add to the value of the book.

A MODERN TELEMACHUS. By Charlotte M. Yonge. New York: Macmillan & Co., 1886. Price $1.50.

A story of shipwreck, captivity among the Moors, and subsequent adventures of an English subject in the beginning of the eighteenth century, a time when on the high seas every nation's hand was against all other nations. The tale is founded on the Mariner's Chronicle, a curious old compilation of maritime adventures. There are many interesting episodes, the attention is held throughout, and the book is like all of Mrs. Yonge's works, of special interest to young folks.

THE PRINCESS CASAMISSIMA. A Novel. By Henry James. New York: Macmillan & Co., 1886. Price $1.75.

This is a long story, which ought to have been told in one-third the space.

POT LUCK FROM EXCHANGES.

A GROTESQUE CONCEPTION of the business of a sportsman's journal is entertained by a correspondent who writes to us from North Carolina, as follows: "I received instructions to-day from my son to offer you $500 if you secure for him a purchaser of his estate. He writes that the inclosed description of the estate will serve as a guide to you. Respectfully, — — — P. S.—The same offer has been made to-day to other journals likely to be successful; confer with my son as well as myself."

NEW HAVEN, Conn., Oct. 23.—Hunters have been having unusually good sport this year, and game birds are far more plenty than in former seasons. Quail, especially, are so thick that if they were not so hard to hit everybody who owns a gun could try the experiment of eating one a day for 30 days. Besides, the birds are tame beyond precedent. A day or two ago a small flock was found feeding in a yard in Bridgeport, and seemed very little more shy than so many pigeons. A small crowd watched the birds for some time before they flew away. In the Connecticut Valley towns quail seem to be holding conventions. Roads almost swarm with them, and their whistling is heard in every wood or thicket that ever sheltered any of them in former years. Saybrook residents were surprised one morning by seeing a large flock whizzing down the main street of the town. One bird flew against a window of Acton's store and was picked up stunned. Tennis nets, too, are found to serve as excellent traps when left out over night, and one of the birds, whose head was found sticking through the meshes of a Bradford net, was brought to this city and exhibited to the wondering population. Farmers occasionally find quail on friendly terms with their poultry, and a few grains of corn left in a quiet spot for a few days in succession will generally result in bringing some of the birds to make the place their headquarters. Sportsmen who know the lay of the land can easily get very respectable bags, and strings of twenty to thirty quail are not unusual rewards for a day's work. "Indian Joe," a Saybrook worthy, recently did something which will make him renowned among Connecticut hunters. He killed two foxes at one shot. It came about in this way: His dog got on the trail of a fox, and Joe making up his mind that the quarry would travel over a certain route, stretched himself out behind a bush, lighted his pipe and waited developments. His calculations proved correct, and when the dog came in sight a fine fox was a little way ahead of him. There was another fox running close beside the first, and as the two passed a pair of bars, almost neck and neck, Joe blazed away. When he ran up to the fence he found two foxes lying dead on the ground. His shot had been more lucky than any fired by any Connecticut sportsman on record.—*New York Times.*

WASHINGTON, Oct. 29.—A rare combat took place this afternoon in a building occupied by the Fish Commission between two little pets, whose likes have probably never found themselves in such close proximity since the age of featherless birds, winged reptiles and web-footed quadrupeds. The aggressor, and the victor as well, was the newly arrived Gila (pronounced Hela) lizard from the Gila River, in Arizona, the only species of lizard whose bite is known to be poisonous, and the victim was a two-year old alligator from Florida. The lizard is fourteen inches long, and about twice the weight of his antagonist. Both reptiles were in a semi-torpid condition, having ceased to take food a week or two ago, and for some purpose they had been removed from their glass cases and placed beside each other upon the stone floor. An attendant inadvertently touched the alligator's tail, and caused him to move sluggishly onward a few inches, where he came in contact with the blunt nose of the lizard. The snaky eye of the latter lighted up with a gleam of satanic malevolence, its black lips opened wide, and its jaws closed with a snap upon the fore paw of the alligator. The prisoner developed unexpected activity, and, though taken at a sad disadvantage, made for a time a gallant fight for its liberty and for its life. Its movements were marvelously quick, and its jaws closed a dozen times in succession upon the mailed head of the assailant. It soon, however, became exhausted, and, moaning like a suffering child, it relapsed into quietude. The attendant sought by a variety of means to release the wretched alligator, but was compelled, as may be supposed, to be very careful in handling the venomous lizard. He was seized by the tail and held up in the air, taken by the bloated neck and choked severely, plunged under water, and maltreated in other ways, but to no purpose. Then sharp wires were thrust into his nose, and finally a large trowel was forced into his mouth, but such was the force of his grip that the steel blade, though considerably bent in the effort, failed to release the imprisoned paw. Then the pair were replaced in the glass case which had been occupied by the lizard, and again the alligator renewed its struggles, thrashing its enemy with its tail and snapping at it with its jaws. In its struggles it had dislocated its shoulder, and its imprisoned limb became limp and powerless. Its moanings were pitiful, and the attendants were moved to renewed and at last successful efforts to effect a separation. The trowel was reintroduced into the lizard's mouth with no very gentle thrusts, and probably effected a severe wound in some tender part. Bubbles of grayish slime were exuded from mouth and nostrils, and finally the jaws slowly opened. Even then it was a work of several minutes to disengage the hook fangs from the wounded paw. The combatants were placed in their separate receptacles, the lizard lapping his thick black lips with his greenish forked tongue, while the alligator closed its eyes, probably to die of the venom in its system.—*New York Times.*

Some members of the Pittsburgh Rod and Gun Club have been hunting on the Sinnemahoning. Their adventures are reported by "Dick" in the Pittsburgh *Republican:*

On Saturday evening a party consisting of Alex. Reynolds, Harry Reynolds and Dr. C. J. Jessop, of Kittanning, and Dr. Joseph Dickson and Mr. Godfrey, of Pittsburgh, Pa., arrived at Sinnemahoning Station and put up with mine host, Hon. Jos. M. Schaffer, for the night. On Sunday morning 'Squire Durvil, the king of hunters and trout fishers, escorted the party to Wilbur, on the east fork of the Sinnemahoning to his residence, where they are now quartered, having in view the destruction of anything in the game line that has hair or feathers on, being prepared with rifles, shotguns, fishing-tackle and knives. Monday morning, long before daybreak, they were awakened to get ready for their initial hunt. While they were seated at breakfast Judge Sol. Ross, Ike Barber and the champion bear slayer, Hon. Jos. M. Schaffer, arrived and reported that a large black bear had been seen near Fred Martin's, Hull's and Wycoff's. It was at once proposed to capture bruin. The party got ready, divided in three squads and started in different directions. After one hour's travel in the direction of Silver Springs, Barber, Jessop and H. Reynolds found evidence of his bearship and at once started the dogs, and in less than twenty minutes they had the bear treed. Dr. Jessop, on account of his experience in slaying bears in Wisconsin, was honored with first shot. He took deliberate aim and fired. The bear dropped and had no sooner reached earth when he and the dogs were fighting. In less than no time five dogs were slain and the bear started for the hunters, who fired at him with their Winchesters, retreating the same time. Ammunition giving out and the bear still pursuing they ran for their lives, Barber and Reynolds leading with Jessop fifty yards in the rear, when his foot caught and he fell, and almost instantly he was in the embrace of the bear, when one of the most desperate hand to claw encounters in the annals of bear fights occurred. Jessop had succeeded in getting out his hunting knife and was making desperate lunges into the abdomen of the bear, while the bear was clawing Jessop's clothing into ribbons and hugging him. Reynolds and Barber ran to Jessop's assistance as soon as they could. Harry Reynolds stabbed the bear in the heart just as Jessop fainted from loss of blood. At about the same time the other parties, attracted by the shooting and heart rending screams, came upon the scene, to find the bear slain and Jessop almost. Preparations were made to remove bruin and Jessop to the deacon's, where Jessop was made comfortable and the bear skinned, and weighed when dressed four hundred and seventeen pounds, the largest ever killed in the county. The skin and part of the carcass will be taken home by the party when they go. Dr. S. A. S. Jessop was telegraphed to forward a suit of clothes at once for Charley, also stating with the exception of a few flesh wounds he was all right and able to walk around, but his hair had turned perfectly white. To-morrow the party, with the exception of Jessop, go to the crossings and await the coming of deer.

THOSE WHO preach, lecture, declaim or sing, will and *do* find Hale's Honey of Horehound and Tar the speediest restorative of the voice in cases of hoarseness. It cures coughs and sore throats rapidly and completely. Sold by all druggists. PIKE'S TOOTHACHE DROPS cure in one minute.—*Adv.*

Canoe and Camp Cookery.

By "SENECA."

A practical cook book for canoeists, Corinthian sailors and outers. Practical because the author gives explicit and intelligible directions for preparing such dishes as he has himself actually tested in camp and on a cruise. This is just where the recipes differ from the absurdly impracticable dishes given in some so-called camp cookery books. The cooking outfit is described, and numerous hints on camp economy add to the value of the work. Cloth, 96 pages. Price $1.00.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1886 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods. In other words, we have kept faith with subscribers by devoting our reading columns exclusively to honest reading matter, and have not given up our pages to extended paid puffs of railroad routes clumsily disguised as accounts of sportsmen's travel, nor alluring descriptions of wonderful agricultural regions, all paid by the column. The conviction that a sportsman's journal for sportsmen could be conducted without resorting to such questionable makeshift expedients have proved quite correct.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1887 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1887 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportmen, anglers and naturalists, make up these pages. The special work of the past year has been the establishment of the Audubon Society for the Protection of Birds, begun in February, and having now a membership approaching 20,000.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and blunder on the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $3 for six months.

Forest and Stream Pub. Co., 39 Park Row.

CHRISTMAS PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of Christmas gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for Christmas. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By Hon. J. D. Caton, LL. D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2 50.

Rod and Gun in California.

By T. S. Van Dyke. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By Dr. C. A. Neide. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. Bowyer Vaux ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In this book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

Their Design and Construction, by C. P. Kunhardt. This sumptuous quarto volume covers the whole range of yacht designing and care, and is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

The Forest Waters the Farm,

or, the Value of Woodlands as Reservoirs. By Antonin Rousset, translated by Rev. S. W. Powell. This famous French book has never before been put into English. Every farmer ought to have it, for the questions so intelligently discussed in it are of national importance; 109 pp. Price, paper, 50 cents; cloth, 75 cents.

Canoe and Boat Building

For Amateurs. By W. P. Stephens. A manual of boat building by the canoeing editor of Forest and Stream. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By Theodore Roosevelt. A delightful book of hunting adventure in Dakota and Montana. Price $3.50.

Training vs. Breaking.

By S. T. Hammond, kennel editor of Forest and Stream. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "Seneca." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Fyshhe and Fysshynge.

By Dame Juliana Berners. An elegant fac-simile reprint of a quaint old book written in the Fifteenth century. It is edited by an ardent angler and should find a place in every sportsman's library. Price $1.00.

Our New Alaska.

By Chas Hallock. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "Nessmuk." "Nessmuk" is a Nestor among America's sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. Wynn, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

DOG BUYERS' GUIDE.
Colored plates, 100 engravings of different breeds, prices they are worth, and where to buy them
Mailed for 15 Cents.
ASSOCIATED FANCIERS,
237 S. Eighth St. Philadelphia, Pa.

PRIZE AND PEDIGREE ENGLISH MASTIFFS.—Mr. James Hutchings, 25 Gandy st., Exeter, England, has several grand ones for sale, brindles and fawns, including stud dogs brood bitches and puppies. Tourists' inspection invited.

FOR SALE.—A NUMBER OF WELL BRED and well broken pointers and setters; also dogs boarded and broken; satisfaction guaranteed. Address H. B. RICHMOND, Lakeville, Mass. sept22,tf

Claire-Reeta Kennels.

PALMYRA, N. Y.

Irish and Gordon setters for work as well as show
dec17,tf

DOGS FOR SALE.

Setters, pointers, spaniels, foxhounds, beagles, dachshunde, Newfoundlands, German tiger mastiffs, fox-terriers, Scotch terriers, Skye terriers, Yorkshire terriers, bull-terriers, bulldogs, pugs, French poodles, St. Bernards, mastiffs and black and tan terriers. Pups of all the above breeds constantly on hand. Those desiring to purchase will do well to consult me. WM. W. SILVEY, 135 South Eighth street, Philadelphia, Pa.

FOR SALE.

Pointers, Setters, Collie Shepherd and Beagles.
Box 472, Pittsburgh, Pa.

Scotch Deerhounds.

Two fine bitch pups, whelped April 29, by Clovernook Kennels' Roy (Paddy ex Lassie) ex Gladys (Spring ex Fly II.). Pups are in fine condition, strong, healthy and immense frame, standing 24in. high and 5ft. 4in. in length from tip to tip. For extended pedigree and price

Address LEDGETOP KENNEL,
dec9,2t Box 217, Port Henry, Essex Co., N. Y.

ST. BERNARD PUPS.

For Sale—A litter of smooth-coated pups, whelped Sept. 25, 1886, by Laurian (A.K.R. 4074) out of Lotta (A.K.R. 933); color, orange tawny and white and brindle and white; large and handsome; prices low. Address with stamp, FOREST CITY KENNELS, Portland, Me. dec9,2t

A RARE CHANCE.—BROTHER OF NED Obo for sale (A.K.R. 1476), black, white frill on breast, whelped April 29, 1884, is in perfect health, has had distemper and is offered for no fault; a fine hunter, perfect retriever from land or water, will not mouth his birds. Reason for selling—I have two setters and cannot keep three dogs. This dog is very tractable, can be taught almost anything and now does some thirteen tricks. Address DR. E. S. GAYLORD, New Haven, Conn. dec29,2t

K 9 Breaking Kennels.

Pointers and setters thoroughly broken for field trials or private use. Reference given. W. G. SMITH, Marydel, Md.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 23, 1886.

VOL. XXVII.—No. 22. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

ANSWERS TO CORRESPONDENTS.

A MERRY CHRISTMAS.

THE FOREST AND STREAM presents to its friends this week, with many salutations of good cheer, a rich treat of Christmas time entertainment. It is a literary Christmas dinner.

Capt. Beardslee draws upon his store of reminiscences of the Southern seas, and gives us some pictures of life on a ninety-day gunboat. This extract from the log of the Aroostook is a graphic account of a life whose perils and privations, whose excitements and pleasures must ever remain unknown to most of our readers. They are fortunate in having so able and entertaining a historian as Captain Beardslee to record for them the phases of this life on the other side of the world.

From the mountains of far-off Colorado our correspondent "Bourgeois," equally well known as a lawyer of high standing, an author whose writings always please, and a devoted sportsman, sends a charming essay on angling. He is one of those "simple wise men" of whom George Dawson wrote; men who are the more successful in the ordinary walks of life because of their love for the forest, for the stream, for the life of out of doors—one of those who not only look at the pages of nature's book, but looking reads, and reading comprehend what is there written. The beauty of this sketch will be felt by all, but there is about it a more subtle charm, a something which can be felt but not characterized, and which is like the delicate, fragrant bouquet which rises from some rare old wine. And though this intangible charm may escape the many, it will be fully appreciated by the few who are wholly in sympathy with him.

Told at night in a rough blanket shelter, as the warriors sat around the flickering camp-fire, told with all the aids of gesture and intonation which lends so much added force to Indian narration, the story of the Boy who saw the Spirit Father was most impressive. And if in cold hard type it has lost much of its original force, we may still be thankful that another chapter from the Pawnee Bible, a fragment of the religious belief of a once great nation, has been put on record and preserved. The war party had been gone from the village for several days, and had almost reached the western boundary of Nebraska. Here in a camp carefully concealed among the desolate sandhills, the *Koo-la-hoosh* told his *Peekow-tah-kah* this tale of long ago.

The merry rollicking narrations of the misfortunes of the rabbit hunters of the Quaker City forms an agreeable contrast to the more grave and dignified character of some other contributions. "J. M. S." is a pleasant writer of pleasant tales—a jovial, happy-go-lucky sportsman who is sure to find the fun, game or no game.

Col. Cecil Clay recounts the adventures of mighty hunters, slayers of the giant game of our Northern forests, and no hunter of big game can read his account of the death of the great moose without being thrilled. How graphically he paints the scene! We see the quiet lake, the dark forest, the burned hills, the red western sky. The sun sets, the stars peep out, and suddenly over the ridge appears the big bull. All of us who are hunters know how the men felt in that canoe, how they held their breath as they waited for the rifle's crack, and how wildly their hearts leaped as the huge beast reeled and fell. Ah, it must have been a great day. And the tale is so earnestly told that we feel as if we had ourselves taken part in the scene.

From the posthumous papers of the late Joseph Goater, Mr. Bellew has fittingly sent us for this number certain passages descriptive of one of the national festivals of the Boon Gah Arrahbiggees. The savage rites and barbaric contentions of these heathen holiday-makers contrast strangely with the humanizing observances of our own mid-winter festival. There is in Mr. Goater's drawing of the *himpsa* tree contest the incongruous suggestion of a Sunday school Christmas tree bedecked with dolls; and may it not be a reasonable aspiration to indulge the hope that in that far away isle the heathen sport of the *himpsa* may yet be supplanted by the gift-laden Christmas evergreens so dear to American homes?

No feast is complete without good counsel; for our gathering "J. C. B." plays the part of sage. And last of all comes the minstrel with his hunting lay, faithfully picturing the garrulous old guide whose monotone has wooed the drowsy god to scores and scores of weary campers with his never ending iteration of

> how and where,
> Description of the cows, the calves, the bulls,
> The weight of each, the number shots he fired,
> The distance of each shot, each shot's effect,
> Till, half the camp asleep, he slumbered too,
> And dreamed the hunt again.

THE HILL FUND.

A NOTICE of the movement in behalf of the destitute family of Lyman O. Hill, the Maine game warden murdered by deer doggers, has already been given in our columns. The first response from FOREST AND STREAM readers was a subscription of $100 sent to the fund treasurer by Augustus Hemenway, Esq., of Readville, Mass. This the Forest and Stream Publishing Company supplement with $25, and it will give us great pleasure to receive and acknowledge in the FOREST AND STREAM such subscriptions as may be sent to us. Money received by us will be forwarded to the Rev. H. F. Harding, of Hallowell, Me., who has been selected to act as treasurer. Among the many appeals for aid which come from a score of different sources at the Christmas season, this one in behalf of the Hill family is deserving of consideration, and we hope to chronicle a generous response.

"NESSMUK'S" POEMS.—The exact date of publication of "Nessmuk's" poems cannot now be given; the book will be ready for delivery to subscribers in the latter part of January. As already stated the price has been advanced to $1.50, and we cannot now receive subscriptions at the one dollar rate. The portrait of "Nessmuk," which will go as a frontispiece, has been pronounced by his friends to be the best likeness of him ever produced. "Nessmuk" himself is in the office as we write this. He will start on Friday as a guest on the steam yacht Stella, of Brooklyn, bound for a cruise down the Atlantic coast and around into the Gulf.

THE MID-WINTER HOLIDAYS bring to a close in many States field sports of the year, but in the South the season for deer and birds extends, as a rule, until February or March. The severe snow storm in the South may have upset the plans of many intending tourists, though the snow has now disappeared.

ECONOMICAL FOX HUNTERS.—The West Chester, Pa., Hunt, the other day, ran a fox to earth after a chase of three hours, then dug him out and carried him home "to fight another day."

SNOW BUNTINGS AS GAME.

THE chief objection to side-hunts is that they encourage the destruction of illegitimate game. This might be easily remedied by withholding credit in the score for potting such animals as ought not to be killed; and in fact, the bagging of unlawful game might even be made to score a due scale of demerits. In some localities, particularly in New England, participants in side-hunts are given credit for almost every bird they can, by any possibility, bring to bag. The Essex Sportsmen's Club, of Gloucester, Mass., had a side-hunt the other day, and according to the Cape Ann *Advertiser*, among the game bagged were forty-eight snow buntings. The only two things to be said in excuse for potting snow buntings is: First, that they count points in a side-hunt, just as slain nursing does count in the rivalries of competing Adirondack deer butchers; and second, that they are good for food, just as in some of the far-away isles of the Pacific the natives eat, or used to eat, human babies. Neither of these pretexts, however, will excuse the Essex Club, for in Massachusetts it is expressly forbidden to kill snow buntings, under a penalty of $10 for each offense. In this instance the total fine called for is $480. This sum certain of the members of the Essex Club owe to the State whose laws they have defied. The men who shot the birds made no secret of it; they reported their prowess to the rest of the members, and, we presume, brought in the little feathered mites as proof positive of their prowess. Their names are therefore known, and as the club calls itself a "sportsmen's" organization, the officers, President J. E. Fuller, Vice-President D. B. Riggs, Secretary C. W. Chipman, and Treasurer E. S. Andrews, will probably be glad to furnish all the aid they can to secure the conviction and punishment of those who committed the detestable outrage.

SENATE BILL 2436.

THE bill reported in the Senate by Mr. Manderson, from the Committee on Territories, May 17, 1886, is entitled, "A bill to amend sections 2474 and 2475 of the Revised Statutes of the United States, setting apart a certain tract of land lying near the headwaters of the Yellowstone River as a public park." The bill provides for the protection, preservation and government of the National Park. The deplorable condition of affairs in that great domain has been made known in these columns. The bill S. 2436, if made law, will provide remedies for present abuses. The Senate should understand the sentiment of the people respecting this subject. The bill ought speedily to pass both houses of Congress.

That the public appreciates the Yellowstone Park more and more every year, and is solicitous for its care is becoming daily more evident to us, and we hope that the general press will join the FOREST AND STREAM in the effort to present this matter in its true light, so that it may be fully understood at Washington.

The Park Railroad bill, which received such a set-back last week in the House of Representatives, is not likely to come to the front again. The defeat which the schemers suffered was crushing, the vote being 170 against 65 in its favor, although by a transposition of two figures the types gave it last week as 107 to 65.

A COMBINATION SURE TO WORK.—One law-breaking fool with a bullet in a rifle, and another law-breaking fool with a leg to put the bullet into. Send them out deer hunting on Long Island on Sunday, and the chances are ten to one that the bullet will find its way into the leg. It happened so last Sunday. Leroy Hill, a hotel keeper of Ronkonkoma, had the rifle, Michael Downey supplied the leg. They were hunting deer. Downey hid behind a tree; Hill saw him, took him for a deer, smashed one of his legs and lodged another bullet in his side. We extend to these two Sunday deer hunters the sympathy due those who encounter misfortune while in the commission of a double misdemeanor.

THE NATIONAL FIELD TRIALS will probably close this week. The report given this week shows very clearly the need of new rules to govern a very peculiar course of action pursued by some of the handlers. If field trials are good for anything at all, and are to justify the time and expense devoted to them, they must actually execute their mission of testing the merits of competing dogs. Merit cannot be determined under such conditions as governed the Ben Hill-Lillian heat.

A Merry Christmas.

THE BOY WHO SAW AH-TEE-ASK.

TOLD BY LA SHAROO KITTIBUTZ.

MANY years ago the Pawnees started on their winter hunt. The buffalo were scarce, and the people could get hardly any meat. It was very cold and the snow lay deep on the ground. The people traveled southward and crossed the Republican, but still found no buffalo. They had eaten all the dried meat and all the corn that they had brought with them, and now they were starving. The sufferings of the people increased and the little ones began to die of hunger. Now they began to eat their robes and their *parfleches* and moccasins.

There was in the tribe a boy about sixteen years old, who was all alone and was very poor. He had no relatives who could take care of him, and he lived with a woman whose husband had been killed by the Sioux. She had two children, a boy and a girl, and she had a good heart and was sorry for the poor boy.

In this time of famine, these people had scarcely anything to eat, and whenever the boy got hold of any food, he gave it to the woman, who divided it among them all.

The tribe kept traveling southward looking for buffalo, but they had to go very slowly, because they were all so weak. Still they found no buffalo, and each day the young men that were sent out to look for them climbed the highest hills and came back at night and reported that they could only see the white, snow-covered prairie. All this time little ones were dying of hunger, and the men and women were growing weaker every day. The poor boy suffered with the rest, and at last he became so weak that he could hardly keep up with the camp, even though it moved so slowly. One morning he was hardly able to help the old woman pack the lodge, and after it was packed he went back to the fire and sat down beside it, and watched the camp move slowly off across the valley and up over the bluffs. He thought to himself, "Why should I go on? I can't keep up for more than a day or two longer, anyhow. I may as well stay here and die." So he gathered together the ends of the sticks that lay by the fire and put them on the coals, and spread his hands over the blaze and rubbed them together and got warm, and then lay down by the fire and pretty soon he went to sleep.

When he awoke it was about noon, and as he looked toward the sky he saw two spots there between him and the sun, and he wondered what they were. As he looked at them they became larger and larger, and at last he could see that they were birds; and by and by as they came still nearer, he saw that they were two swans. The swans kept coming lower and lower, and at last they alighted on the ground right by the fire and walked up to where the boy lay. He was so weak he could not get up, and they came to him, one on each side, and stooped down and pushed their shoulders under him, and raised him up and put him on their backs and then spread their broad wings and flew away upward. Then the boy went to sleep again. When he awoke he was lying on the ground before a very big lodge. It was large and high, and on it were painted pictures of many strange animals, Nahoorac, in beautiful colors. The boy had never seen such a splendid lodge. The air was warm here and the boy felt stronger than before. He tried to raise himself up, and after trying once or twice he got on his feet and walked to the door of the lodge and went in. Opposite the door sat *Ah-tee-ask*. He was very large and very handsome, and his face was kind and gentle. He was dressed in beautiful clothes and had a white buffalo robe. Behind him, from the lodge poles, hung many strange weapons. Around the lodge on each side sat many chiefs and doctors and warriors, Nahoorac. They all wore fine clothes of white buckskin embroidered with beautifully colored quills. Their robes were all of beaver skin, very beautiful.

When the boy entered the lodge *Ah-tee-ask* said to him, "*Looah, pee-kow, way-tus sooks-peet.* Welcome, my son, and sit down." And he said to one of the warriors, "Give him something to eat." And the warrior took down a beautifully painted sack of *parfleche*, and took his stone knife from its sheath and cut off a piece of dried meat about as big as one's two fingers, and a piece of fat about the same size, and gave them to the boy. And the boy who was so hungry thought that this was not very much to give to one who was starving, but he said nothing and took it, began to eat, and he put the fat on the lean and cut the pieces off, and ate for a long time. But after he had eaten for a long time the pieces of meat remained the same size, and he ate all that he wanted and then put the pieces down, still the same size.

After he had finished eating, *Ah-tee-ask* spoke to the boy. He said to him that he had seen the sufferings of his people and had been sorry for them, and then he told the boy what to do. So he kept the boy there for a little while longer, and gave him some beautiful new clothes and weapons, and then he told one of the warriors to send the boy back, and the warrior led him out of the lodge to where the swans were standing near the entrance, and the boy got on to their backs. Then the warrior put his hand on his face and pressed his eyelids together and the boy went to sleep. And by and by the boy awoke and found himself alone by the fire. The fire had gone out, but the ground was still covered with snow and it was very cold.

Now the boy felt strong and he got up and started running along the trail which the camp had taken. That night after dark he overtook the camp, for they traveled very slowly, and after walking through the village, he found the lodge where the woman was living and entered. She was surprised to see him in his new clothes, and looking so well and strong, and told him to sit down. There was a little fire in the lodge and the boy could see that the woman was cutting up something into small pieces with her knife. The boy said to her, "What are you doing?" She answered, "I am going to boil our last piece of robe. After we have eaten this there will be nothing left, and we can then only die." The boy said nothing, but watched her for a little while and then stood up and went out of the lodge. The door had hardly fallen behind him when the woman heard a buffalo coughing, and then the breaking of the crisp snow as if a heavy weight was settling on it. In a moment the boy lifted the lodge door and came in and sat down by the fire, and said to the woman, "Go out and bring in some meat." And the woman looked at him, for she was astonished, but he said nothing, so she went out, and there in the snow by the side of the lodge was a fat buffalo cow. Then the woman's heart was very glad. She skinned the cow and brought some of the meat into the lodge and cooked it, and they all ate and were satisfied. The woman was good, so she sent her son to the lodges of all her relations and all her friends, and told them all to come next morning to her lodge to a feast, "for," she said, "I have plenty of meat."

So the next morning all her relations and all her friends came, so many that they could not all get into the lodge, but some had to stand outside, and they ate with her, and she cooked the meat of the cow for them, and they ate until it was all gone, and they were satisfied. And after they had done eating they lighted their pipes and prayed, saying, "*Ah-tee-ask, way-tus kit-tah-we.* Father, you are the ruler." And while they were smoking the poor boy called the woman's son to him, and pointed to a high hill near the camp, and said, "*Looah, sooks-kus-sis-pah te-rah hah-toor.* Run hard to the top of yonder hill, and tell me what you see." So the boy threw off his robe and smoothed back his hair and started, and ran as hard as he could over the snow to the top of the hill. And when he got there he shaded his eyes with his hand, for the sun shone bright on the snow and blinded him, and he looked east, and west, and north, and south, but he could see nothing but the shining white snow on the prairie. And after he had looked all ways, he ran back as hard as he could to the village. And when he came to the lodge he went to the poor boy and said to him, "I don't see anything but the snow." And the poor boy said, "You don't look good. Go again." So the boy started again, and ran as hard as he could to the hilltop, and when he got there, panting, he looked all ways, long and carefully, but still he could see nothing but the snow. So he turned and ran back to the village and told the poor boy again that he saw nothing. Then the boy said: "You don't look good." And he took his bow in his hand and put his quiver on his back and drew his robe up under his arm so that he could run well, and started and ran as hard as he could to the top of the hill, and when he got there he looked off to the south, and there, as far as he could see, the plain was black with buffalo struggling in the deep snow. And he turned to the village, and signalled them with his robe that buffalo were in sight. And in a few moments all the Pawnees had seized their bows and arrows and were running toward him, and the women fixed the *travois* and took their knives and followed. And the boy waited on the hilltop until the warriors came up, and then they went down to the buffalo, running on the snow. And the buffalo could not get away on account of the deep snow, and the Pawnees made a great killing. Plenty of fat meat they got, enough to last them until the summer hunt, and plenty of warm winter robes.

And they did not have to move any further, but staid right here, killing meat and drying it until they were all fat and strong again.

And the poor boy became a great doctor in the tribe and got rich.

Before this the Pawnees had always had a woman chief, but when the woman who was chief at this time died, she named the poor boy as her successor, and the people made him head chief of the tribe. G. B. G.

NOTES.

Ah-tee-ask. The word *Ah-tee-ask* means Father. A child addresses its father by this name, and a young man an elder whom he respects. *Ah-tee-ask tee-ra-wat* means the Spirit Father, or God, the chief person and ruler of the Pawnee religion. There are other minor spiritual beings to whom reference will be made below.

Winter hunt. In the days of the buffalo the Pawnees made each year two hunts for the purpose of obtaining dried meat and robes. Each of these hunts lasted from one to three months, according to circumstances, and was taken part in by all the able-bodied members of the nation. Only the old men, cripples and sick remained behind in the permanent village. The start for the winter hunt was made in January, when the robes were at their best, and the summer hunt began in July. These hunts were carried on under certain fixed rules, and were under the direction of a body of twenty-four governors. No large bodies of buffalo were ever disturbed except by the authority af these men. They appointed a number of young men to act as scouts, who each day rode far ahead of the marching village and of any outlying hunters, and from the tops of the highest hills examined the country for buffalo. Should any large bands be discovered, intelligence was at once conveyed to the chiefs, who, with the twenty-four "police," determined the plan of action by which the game should be secured. In the latter days of the buffalo, after the Pawnees obtained horses, the meat was always secured by "running," but in earlier times all hunting was necessarily done on foot. While enough buffalo were killed for actual use, the destruction was of course much less than after the advent of the horse on the plains. On the other hand, buffalo in early days were enormously abundant and, so, proportionately easier to kill.

Went to sleep in this connection means rather, became unconscious.

Parfleche. A piece of rawhide from which the hair has been removed, cut somewhat in the shape of an envelope and laced up with rawhide strings where the envelope would be gummed. A *parfleche* is the Indian trunk or satchel, and in it are packed all sorts of small articles and utensils.

Was very poor. As used here and often in the Pawnee tongue, poor means unfortunate, but not necessarily lacking possessions.

Nahoorac. In its primary signification this word means an animal or animals. It is, however, as often used to signify the spirits or secret helpers which are the medium of communication between man and *Ah-tee-ask.* These spirits or *Nahoorac* correspond fairly well to the angels of the Old Testament system. They have supernatural powers, and often exercise a guardianship over men. Each warrior of importance has at least one secret helper who always appears to him—usually in a vision or dream—in the same form, and aids him by its counsel and otherwise. The *Nahoorac* have the power of taking any form they please, and can at will become beast, bird, fish, stone or blade of grass. Sometimes they take the shape of tiny men. The chiefs, doctors and warriors in the lodge of *Ah-tee-ask* were *Nahoorac*, as were also the two swans. The name *Nahoorac* is no doubt given them because usually, when they manifest themselves to man, they take the shape of some animal.

White buffalo robe. Albino buffalo were of course extremely rare. Among the Pawnees a white robe was a most sacred thing and was jealously guarded from the sight of the profane. They have now one at least such robe, which has for many years been in the custody of one family, its existence being known only to the members of that family, and to the chiefs and doctors. Among the Blackfeet the white robe was sacred to the Sun and was always hung up in the "medicine" lodge.

Stone knife. Before the landing of the white men, stone took the place of metal with the Indians. Knives, arrowheads and cutting instruments generally were of stone. Iron and steel have now taken the place of these old-time implements and it is unusual to find any tool of stone, except sometimes mauls and hammers, in use at present. The Pawnees have none of these ancient implements, nor have the Blackfeet, and among both nations they are now regarded as "medicine." It seems quite natural that the spirit warrior should use one of these ancient knives.

Pieces of meat remained the same size. Compare Biblical account of the multiplying of the widow's handful of meal and cruse of oil by Elijah, the Tishbite.—I. Kings xvii., 10-17. Also in Scandinavian mythology the hog Shrimner on which the gods feed each day, the dish never decreasing in quantity.

Heard a buffalo coughing. When a buffalo is shot through the lungs, the blood flows up through the air passages into the throat and chokes it. The effort to clear the throat sounds like coughing.

The woman was good, i. e., generous. Under the circumstances this generosity was sufficiently noteworthy to be especially mentioned by the narrator. It would have been natural enough for the woman to have reserved the meat for the support of her own family.

Lighted their pipes and prayed, saying "Ah-tee-ask." The Pawnees when they light their pipes blow a puff of smoke toward the sky and pray, saying, "*Ah-tee-ask*, you are the ruler." They ask the Father to give them the right kind of a mind, and that they may be fortunate. A Skeedee of prominence, *La-tah Kats-tahka* (White Eagle), once said to me, "That means that we ask him to give us plenty to eat and that we may become chiefs and head men, and have all those things that people everywhere desire." When they take the second puff from the pipe they blow it toward the earth, saying, "Father of the dead, you see us." "This means that this is the Father's ground. It belongs to him and we ask him that he will let us walk upon it, and that when we die he will let us be buried in it."

A MOOSE.

AND HAST THOU SLAIN THE JABBERWOCK?

ON the 18th of September, 1884, my cousin—Capt. A. A. Clay—and I were camped on a beautiful little pond or lake, which, for the want of a known or better name we called Beaver Tooth Pond. We were looking for moose, and had come over from Wandering Bear Lake the day before in the morning, arranged our camp by the middle of the afternoon, and although it was raining and disagreeable, had cruised about the foot of the pond in the evening without hearing or seeing anything, except that a beaver slapped his tail twice. Rain fell in showers off and on all night, but the morning of the 18th broke clear and windy. The Captain and I went looking after moose signs and visited another pond, while our Indian, Aleck, one of those I had with me the year before, went after our lantern, left on the last portage. In the afternoon I took photographs, and after tea, but before sundown, we went to the head of the pond and watched for moose until after dark, when we paddled back to camp. The night was clear and still, no wind, but a heavy frost. While taking a quiet smoke before turning in for the night, the Captain was attacked by one of his grumbling fits and pitched into me, although he must have known from the experience of many years what the effect would be.

"I don't see why we should use up so much time and

not see any moose. Let me see. This is what day of the month?"

"The 18th."

"Hm! The 18th! We started from civilization on the 11th, Thursday of last week; now it is Thursday again, eight days, and we haven't seen a track."

"Hold on," said I, "Don't go too fast. I think we have seen tracks enough, certainly more moose tracks than you would have seen deer tracks at home in the same time." He lives in Elk county, Pennsylvania, in a good deer country.

"Well, perhaps we have seen one or two old tracks. You can't tell on these bogs when tracks were made. Most likely all of them in the summer—July and August. How much longer do you suppose we shall go on this way? Do you honestly believe there are any moose about here? If there are, how are to we get at them?"

To this I made no direct reply, but called "Aleck!" A grunt with a sort of interrogative inflection, was the answer. "Any moose about here, Aleck, do you think?"

"Moose here? Lots moose; plenty moose. You see fresh tracks on portage? Big track on bog? Must be good many moose for sure. Kill some bye and bye when we get to other pond where we goin'; more moose there, certain."

"That's always the way," went on the Captain, "It's always 'wait till we get to the next pond,' or 'wait till to-morrow or the day after.' It's just like trout fishing, 'there is a larger trout to be had a little further on in some other splendid pool. I know all about it. What is there to make the next pond any better than this, or the last, or to make the day after to-morrow any better than to-day, or next week or next month any better than last week or than now? I think we ought to see or hear something, if only so as to encourage us."

"How about the three bears we saw and the two you shot at,"I replied.

"Oh, we saw the bears; I admit that, but that was only accidentally; we were not hunting them particularly."

"No," I replied, "we were not after those bears, but still we saw on one day at different times two bears and a third bear on another day. We have killed grouse and caught a good many fine trout. When we get to the pond Aleck has in his mind we shall kill moose. I think we have done well so far and I know we shall do exceedingly well before we finish our trip. You can growl to the crack of doom and not affect my opinion of things. Last year I was twelve days in the woods before I got a shot and then killed a splendid bull, and I mean to get a better one this time."

While this conversation, of which I have given a mere fragment, went on, Aleck had been drawing something with a piece of charcoal on a slip of bark, and now produced it. We examined his work and saw a rough map, showing what our course was to be as we journeyed eastward. One small pond, then a lake, then two small ponds and then another lake. On this last Aleck put his finger, "We go there. Kill plenty moose for sure. Maybe you not think so? You wait we get there."

Upon this we went to bed.

The 19th was clear and warmer. In the afternoon we took a load of our things to the head of the lake, and then across a portage, passing the first small pond of Aleck's map—a mysterious looking place, suggestive of moose, with fresh tracks about it—to a beautiful lake, where we left them, covered with rubber blankets. It took us an hour to walk back to the pond, and a quarter of that to paddle to camp. The Captain had slipped in a hole in the bog and was wet to his hips, so he spent the evening wrapped in blankets. Rain fell off and on all night, but the next morning, after breakfast, signs of fair weather appearing, we struck camp and left for Brulé Lake at 8:40, passing the pond at 9:30, and finishing the portage at 10:30. I knocked the head off a grouse on the way. We crossed the lake and camped on a point on the east side, commanding a fine view. At 4 o'clock in the afternoon we went to the outlet of the lake and caught a dozen trout for supper and breakfast. After that we watched for moose until dark. The evening was calm and beautiful; later the night turned cold and there was a heavy frost.

During the 21st the wind came up from the S.W. and the usual rain made its appearance in the afternoon. The day being Sunday was passed in a proper way in and about camp. Aleck having reported a barren of considerable extent up the creek from the lake, we started to paddle up stream to look at it, but did not go far on account of the heavy wind and rain. Next morning we left camp at 8:20, leaving some of our things securely packed and covered, and taking with us supplies enough to last a week, so that we could carry everything across at one load and not have to make two trips. As we had a fifteen foot—or as they call it there, "a two fathom and a half"—canoe, tents, blankets, etc., our loads were all fair ones. We got over the portage to the first pond at 9:10. Aleck not having any name handy for this water, we called it Leaping Trout Pond; the trout breaking water all about us as we paddled to the head, which we left on the next portage at 9:37, making the portage and getting over the second pond by 10 o'clock. Where we disembarked for our last portage was the track of a tremendous old bull, and tracks were so numerous that we dubbed the place Moose Track Pond.

The sight of so much "fresh sign," or "Shkeenum mikan-o'-we," as Aleck would no doubt have called it, put us all in a good humor, and we halted fifteen minutes to take a smoke. "Beeg buck! Eh?" said Aleck as he shouldered his pack and then the canoe, for he carried both. I was content to take a tent, the blankets, my own pack, camera, etc., etc., with my rifle, some fifty pounds, and the Captain had about as much. We finished this portage at five minutes after 11, and launched our canoe on the lake, where we were to find, as Aleck said, "plenty moose." This sheet of water is shaped somewhat like a very short and fat letter H, the crossbar of the letter representing the main part of the lake, with a bay in each corner. The direction of the longest diameter is nearly north and south. We camped on the west side, and so had a bay on our right and left front, and in our right and left rear as well. The country has been a good deal burned about the lake. The east side is open for some distance back, with very little brush; but the west side, apparently burned over long ago, is covered thick with brush and small second growth timber. Well defined moose paths go all about the east side and follow the shores; so before going to camp we paddled over there to look for tracks. We did not have to hunt for them; they were to be seen without that, and so fresh that we went across to our camp ground well satisfied, and the Captain could only grumble in a feeble way.

We dined at 12:30, and arranged our camp without pitching the tent. During the afternoon we paddled about a little, but the wind blew too hard for us to stir about much. We supped before sundown and then went to the southeast bay to watch for moose. The wind fell and the sun set in a beautiful, clear sky, with the new moon and a star or two hanging over the top of the western ridge. We had not gone very far in the bay when on the hard-wood ridge away back from the eastern shore we heard an old bull "Bok! bok! bok!"

"Moose comin'," said Aleck, his black eyes flashing with excitement. It always amused me to see how excited he became when after a moose. The wind was from the southwest, so we had to paddle furiously to get out of the bay and well up to the north end of the lake, past our camp, to avoid giving our scent. We lay quiet about 50yds. off the east shore and waited. Soon we heard the rattling of his horns as he came on, knocking the dead spruces and balsams out of his way. "Boh! boh! boh!"

"Come pretty close," whispered Aleck. It was "plenty light enough to shoot," as the Captain expressed it. The sun had just set and the west was all aglow. The eastern shore sloped gently back for 150yds., then descended, making a broad hollow, back of which was the hard-wood ridge mentioned. We were looking east and the bank before us was in light from the still brilliant west. While the moose was crossing the hollow we heard little of him, but when he came slowly sidling up the near side close to the top we heard him again, "Boh! boh! boh!" Suddenly there he was in full sight on top of the bank, 150yds. back from the beach, from which we were distant 50yds.

"Oh! oh!" whispered Aleck, "beeg, beeg bull!"

The Captain was in the bow, I in the middle, Aleck in the stern with the paddle. The bull had come up out of the hollow a good deal to our right, and now walked slowly along to the left parallel with the shore. When nearly opposite us he paused a moment and slowly turned his head, his huge horns gleaming in the warm light. I think that because the Captain had but one eye—he had lost the other by a shot when quail shooting in North Carolina the year before—Aleck had some doubts about his shooting ability, although he had himself, at twenty yards, hurled a stick of wood in the air when the wind was blowing a gale, and seen the Captain knock it in the middle with a shot from his Winchester. I don't believe Aleck Langevin ever sat in a canoe with a better shot. I knew him a good deal better, and as the old bull stalked along, I leaned forward and whispered all the outlandish names I could think of to him, as expressive of the brute's size.

"By jove, Toney! Look at him! A regular *haud credo!* Don't miss him, old fellow. Look at his horns! Mindiduh eshkun, Aleck! Eh? By Zeus, he's a perfect monster! a behemoth! a jing swizzler! If Mac was here he'd call him a 'buster,' sure. Take a sure pull on him! About a foot back of the shoulder'll fetch him. By George! we mustn't lose him for anything! He's what S. would call a real 'goll-sender.'" With such encouragement I filled the Captain's ear. The only perceptible result of this friendly counsel was a nod, which I interpreted to mean, "Never fear, I'll settle him;" as, indeed, I knew he would.

The bull was a large one, and well deserved all I had said about his bulk and appearance as he paused again and slowly turned his head with its huge antlers, as though suspicious of something, but knew not what or where. He might bolt in an instant, if convinced of danger and its direction—a moose does not start until he knows there is danger and where it is; then he starts, and when he will stop is a question to which he is generally best able to reply. Up went the Winchester, and at the report the bull made a plunge and rushed to the left with tremendous strides. Hit, of course; the Captain could not miss him at that distance. An ordinary deer would stand a poor chance, running, at that range, before the same gun and its skilled handler.

Click, snap, bang! Click, snap, bang! Two more shots are in him before he has made half a dozen strides. At the last he wheels suddenly clear round, and catching the fourth shot in his right side as he turns, falls stone dead.

"Now you got him," cried Aleck, his black eyes wild with excitement, "I tell you he beeg bull for sure. Oh! great horns."

"Seven feet high, Aleck?" I queried.

"I do' no. Maybe so big."

For a minute or two we sat still, and after congratulating the Captain, talked over the bull's appearance; when we first heard him; how we had paddled to avoid giving our wind; the noise he made with his horns; how far his boh! boh! boh! could be heard; the length of the shot, and so forth. Then we turned to look at the lovely western sky, with its crescent moon and evening star, until Aleck's impatience got the better of his manners, "You want to go see him. We best go now, maybe more moose comin'." So we went up to where he lay and looked at him.

"By Jove, Cece, he's larger than I thought he was. I knew he was big when I saw him come out over the top of the bank, but I did not expect this. How tall is he?"

Out came the tape line and we measured him carefully. Straightening the foreleg, without pulling, and measuring from the tread of the hoof, bent up to the normal standing position, to the top of the withers, the bull stood 6ft. 10in. From the edge of the upper lip up over the nose to between the horns measured 30in., and from there to the end of the back 7ft. 7½in.; around the body 7ft. 10in. The horns spread 4ft. 9½in.

It is hard to forget some scenes. I can see now that great moose lying on the open, burnt ground, with his immense antlers spread out over his ungainly head. The warm glow from the still quite bright western sky lighting him up, the Captain and Aleck coming out dark against it. The young moon and a star or two over all, with a middle distance of lake, now gold by reflection, near at hand; beyond, dark as the spruce-covered ridges behind the Brulé on its further bank. After a while we took to our canoe again, but we were restless and did not feel like turning in; so we paddled around to the bay in the southeast end of the lake and heard a cow bawl. A bull answered, and went off in the direction of another pond that way, and hearing nothing more we presently went back to camp.

We raked a few coals together to warm our toes, cramped by sitting in the canoe so long with wet moccasins (a moose hunter, by the way, does not want much fire when close about moose; smoke scares them), and smoked a quiet pipe. As I knocked the ashes out of mine, ready to turn in, I said, "You're not sorry you came, are you?" To which the Captain, dear fellow, replied, "No; I am paid already for the whole trip. I only hope you kill as big a bull as this one." Next morning I killed one standing 6ft. 8½in., with horns spreading 4ft. 2in.

CECIL CLAY.

ANGLING.

THERE has been some discussion of late touching the art as well as the science of angling. There is a difference, certainly.

I have a friend who is a lover of music; he can enjoy a minstrel performance or an Italian opera. I have seen his eyes fill under the influence couched in the skill of Ole Bull and Wilhelmj; once I saw him fairly break down over a sonata from Beethoven finely rendered. He says if anything goes wrong with the performer or if he makes a mistake, he (my friend) is advised of it by cold chills running down his back. And yet, to this friend of mine the science of music is a sealed book—he cannot read a note. Some one told him he possessed the art of music. Had he cultivated himself in this art there is no telling what sort of a phenomenon he might have become.

Again, I have known of those who are so much after the manner of automatons that their scientific acquirements become painful to one compelled to listen to their performances—Gradgrinds in music, so to speak, to whom a minstrel show is a nightmare.

A combination of art and science may be desirable, but if one may not have both I prefer the art. This being a gift that comes without asking, is none the less worthy; with it one is consoled by the reflection that work will enable him to acquire the other. On the other hand the labor of a lifetime will not bring to him that which kind nature only can bestow.

The art of angling is a gift, truly, the science an acquisition. With the gift one sometimes takes to the study of the science as a duty owing to the art. Again, the art affords so much pleasure to some of its possessors they become contented with it; they think the science can add but little to the already full measure of happiness they possess in the art.

The science of angling may be acquired at the end of a wharf in the busiest part of a busy city. A cane pole, a cotton line and worms for bait may serve as instruments to knowledge. The delicate bamboo, the silk line and exquisite fly may serve the same purpose. The possessor

of the art may be compelled to the wharf and the cane pole and the worms, while his aspirations led him toward crystal streams, the songs of birds and the fragrance of wild flowers, in company with the pretty bamboo. There is a harmony in this combination aspired to, that science is often ignorant of. This is a combination that cannot condescend to exact measurements, that refuses to be ruled or squared or demonstrated, that is absolutely as free of scientific conventionalities as the breathing of the sweet fresh air. This combination is the aid to the art of angling; without it angling would not be an art, perfect, but a science merely—as the worthy deacon in the corner would say, "bless God"—for the art.

I do not wish to be considered as deprecating the science of angling; I stand in awe of it, the awe begotten of ignorance, but I do love the man who hath given me the tackle to harmonize with the art. The art must have been his, otherwise he would not have understood the means to the fuller gratification of the art. So, I love him for his gift, and that he had the industry to add to my happiness while adding to his own.

In the interest of science it may be essential to know, to a dead certainty, whether the specimen I have at the end of my line in the pool is *Salmo purpuratus* or *S. virginalis*, *Coregonus williamsoni* or *C. johnsoni*, or any other Italianized Scandinavian. But the knowledge to that dead certainty would not add one grain to the enjoyment I am having. In such instance science would be superfluous. With the view, however, of tracing, for instance, the origin of the noble Alexander, absolute precision may be necessary, but precision is not essential to enjoyment. For the benefit of science it may be necessary to know whether the remote ancestor of his excellency were a monkey or a tadpole, or both. I therefore, you see, recognize the value of science as having a tendency to show whence we came and whither we are going, and as there is such a science as the science of angling, I take off my hat to it along with the other sciences.

My notion of the art of angling, as it is the notion, I learn, of a great many, does not consist in knowing merely how to use fine tackle. This is only one of the ingredients that go to make up the total, or perhaps that tend to refine the art, if I may be permitted to suggest that so delightful an art is susceptible of qualification; or, rather, the art may not be cultivated, though one may cultivate himself in the art—it is thus better expressed.

The morning sun is up over the range, the air is cool; I see that the blackbirds are beginning to gather in great flocks, and I start out an hour ahead of the team. The walking is good in more than one sense; I have had more or less of it for a month, and know whereof I write. I am younger than a month ago, and can and do strike into a swinging gait through the straight avenue of pines leading up to the western slope of the range. Many of the trees are dead now, but there is a new growth struggling for recognition, and a little way back, on either side, the fire ceased, so the bright green relieves somewhat the sorrowful-looking dead trunks. I can hear the melody of the stream at my left, and soon I come to Fraser City and in sight of the creek. Fraser City consists of a deserted log cabin gone to wreck.

Thence for a long way I have the tumbling crystal for company and have a chance to watch the water ousels hunting industriously for breakfast. There are mosses along the banks and a few late flowers, the raspberries have ripened and have been gathered by the birds and the wayfarers, so that only a chance berry is available, but I have had plenty and am contented with a farewell taste. A pool, a couple of feet deep, challenges my attention, and cautiously peering through the brush I find at the head of it a solitary trout, waiting for a fragmentary meal to float over the riffle in front of him. While I watch him he rises slowly to the surface, takes in something I cannot see, and then settles back quietly into his old position. I would help him to a tid-bit and succeed in capturing a late fly; this I drop overboard, he sees it, and a little impatient at its slow approach he darts to meet it, then settles back again. You have no business lingering here, my black-spotted friend, you should be on your way down stream. Stepping through the brush I let him catch sight of me, and he darts away without so much as a thank you for what I had done in his behalf.

On up the road again, I put half a dozen miles between me and my starting point before I sit down upon a rock, refill my pipe, and wait for the wagon. Sitting here in the shade, busy with the pictures made by the sun's rays stealing through the pines, dreaming over the thin wreaths of fragrance drifting away on the still air, impressed with the sublime peacefulness, I am prepared to welcome a mother chipmunk, who, with a pair of nearly grown children, put in an appearance, as if seeking an interview. She sits up a few yards away watching me, and the young ones follow suit. As I make no movement she concludes, evidently, that I am harmless, and skips toward me, the little ones following, until scarcely a dozen feet away. Then she stops and sits up again upon another rock and washes her face, while the youngsters, like a couple of puppies, wool each other, roll over, then up and at it again. The old lady pauses occasionally in her ablutions to satisfy herself, perhaps, that it is all in fun, then resumes her occupation with dignity and grace. One of her progeny accidentally falls off the rock, the mother drops on all fours and looks down to ascertain the result; but no harm has come of it, and the little one is back again in a moment. In the next bout the pair go off the rock together; the mother evidently determines that ill feeling is imminent, so she jumps down and collars one of the babies. and, with a good shake, sets him to one side, while the other sits up at a respectful distance as if he were a stranger who had just dropped in to ask the time of day. I would as soon have thought of harming one of my own babies as any of this family of innocents. Yet within ten minutes I saw a young man coming down the road, he was astride a pony, and, as I'm a Christian, he had a mutilated chipmunk tied to his saddle! He had a small pony, with immense tapaderas that quite swept the ground with their long points, a macher over the saddle so ridiculously large that the pony reminded me of a boy in a man's overcoat. This young man had a clean face, save a something in imitation of a moustache and fawn-colored whiskers the size of one's finger. He had also buckskin pants with fringe down the sides, a woollen shirt and a sombrero that might serve him as an umbrella; his slender waist was incumbered with a cartridge belt, in this he had a knife about a foot long, and he carried in his hand a .22-caliber pistol. He bade me good-morning with an air of reckless bravado that belongs only to one hundred and ninety pounds of bad man, while he would weigh perhaps a hundred with his arsenal. It was a rude intrusion upon the art of angling.

I wonder at this young man. I always have been puzzled to understand the purpose of his creation, and fear I shall decease in that benighted condition. Angle worms, ants and bugs in general, may be devoted to a use, but this young man is under the protection of the law; a human being might be hanged or imprisoned for killing him; the law even forbids his being cut up into bait. I have wondered, too, as to what possible use he or any one could put the exaggerated littleness shining in his hand; the evidence of the abuse of it was hung at his saddle bow. I heard a man once tell one of this genus that if the latter ever shot him with a thing like that, and he (the man) found it out, he would give the shooter the "worst licking" he ever had in his life; the threat was as efficacious as a bullet from a Winchester. I have wondered, too, why the genus tourist comes into this country with revolvers of any kind; they are useless as against the animals, two or four-footed. They bring them in holsters, buckled up, I presume, to keep out the wet; the "Bad man from Bitter Creek" would empty his revolver and reload while the other was feeling for the buckle. If the stranger had no arms and got into trouble, which he would hardly do without his seeking it, the chances are some other bad man, reluctant to miss an opportunity, would take the quarrel off his hands—I have known of such instances. I know also—and have not wondered—men who have passed many of the best years of their lives in this country, who never carried a revolver, and they have gone through scenes calculated to enliven the hair of these innocent bearers of unnecessary burdens. I I have often thought I would mention this in pure charity, and as the young man broke in upon me in my pursuit of the art of angling, I deemed it a fit occasion.

But can I get back and finish my tour up the range in the same mood in which I started out? I'm afraid not, so I will rest a little and forget the unpleasantness by going away from the vicinity of it.

I received a letter while I sojourned in the wilderness; I received it by an accident, it contained a postscript of course and the postscript ran:

"You are hid away so that I believe no one on earth knows where you are or what you have been doing. I will therefore address this letter to you in care of Ute Bill, hoping he may find you."

This postscript calling for an answer, I gave it:

I am camping, Dido, camping,
On the Yampa's sedgy banks;
I am far from fashion's follies,
And the world of business cranks.

I have fought the gay mosquito,
I have missed the fleeing deer,
I have fallen into whirlpools,
That have made me chill and queer.

I have breathed the mystic sweetness
Of these azure courting hills,
I have quaffed the cold elixir
From these rippling mountain rills.

I have cast the gorgeous coachman,
And have wiled the wily trout;
I have munched his luscious carcass
And have warded off the gout.

I am camping, Dido, camping,
On the Yampa's crystal stream;
There is naught on earth to vex me,
And I'm free to smoke and dream.

But I've thought of thee, Oh Dido,
Thought, at morning, noon and night,
And between times, and at leisure,
As a vagrant lover might.

This evening, at the beginning of winter, the firelight shines cheerily and the wind outside is on a lark. She sits in the warm corner with a pile of stockings, all of them too small for her own use. I notice a silver thread here and there about her temples as she bends over the gaping evidences of youthful energy and patiently weaves the long bright needle in and out. I fancy the silver threads are an improvement, they have crept in so slowly I can realize in them no evidence of change, except that I like them better than I did the plain brown.

"What are you dreaming about now?"

I cannot fathom the influence that prompted this inquiry, I only know it comes, as it always does, pat to the humor.

"I was thinking of the letter I wrote you from the Yampa."

To this there was something like a little curl of the lip in coldness and the inquiry:

"Were you trying to put a trick on me?"

"Trick, no, certainly not—why did you think so?"

"I thought dido meant a trick."

"Oh! Well, the Dido I referred to was a lady of Tyre."

"Of Tyre"—reflectively—"I never heard of her. What good did she do?"

"She loved her husband."

"Is that all?"

"All! No. She got the better of a coterie of real estate agents, and became rich. But did you not like the letter?"

"I suppose so; which did you eat, the coachman or the trout?"

"Aren't you just a little hypercritical? I fancy there are some good lines in it—the 'azure courting hills,' for instance?"

"That sounds very like 'heaven kissing hill.'"

"There is no denying it; but I flattered myself the poetry was fair, as such verses go."

"Do you call it poetry?"

"You were wont to so dignify the like."

"But I am older now."

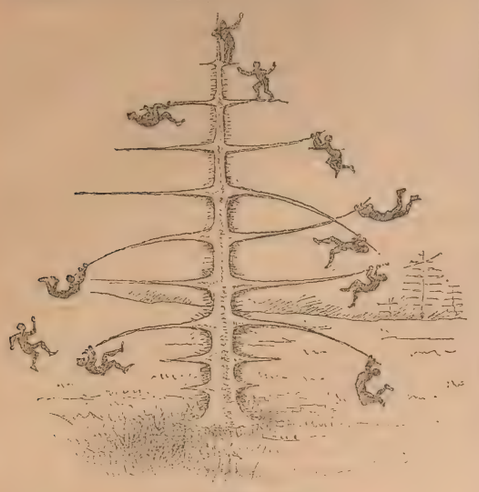
"I do not think so."

It was a very old-time glance she gave me as she said: "Then it is." BOURGEOIS.

DENVER, Dec. 4, 1886.

TRAVELS IN BOON GAH ARRAHBIGGEE.

FROM THE DIARY OF JOSEPH GOATER.



EDITED BY F. H. TEMPLE BELLEW.

(Continued.)

EARLY on the morning of the first day of the Wangbrezy's festival I was awakened by singing and music. This was their greeting to the rising sun whom they congratulated on his good fortune in happening to be present at the grand celebration they were about to inaugurate, at the same time complimenting him on the punctuality of his attendance. The singing was low and plaintive at first, gradually changing to a tripping, twittering measure, into which the notes of birds and the drone of insects was ingeniously interwoven. Their instruments consisted of whistles, a variety of horns chiefly made out of a peculiar spiral gourd, a huge zither twenty feet long with strings made out of the gobwich, from the thickness of your finger to the fineness of sewing thread, and played by two men with padded hooks. Besides these there was an enormous tambourine with the usual drum on one side and strings on the other that produced nothing short of distant reverberating thunder. As the sun fairly cleared the tops of the distant mountains the time changed to that of their national martial air—a wild tumultuous tempest of a tune, calculated to make the windows rattle in any American house, and to cause the ears of a clam peddler to ache; I had fairly to hold my own until it had got a hundred yards off, and then it was only just bearable. Still the sounds were not discordant, and there was a weird and stirring melody about them at a distance, full of barbaric grandeur.

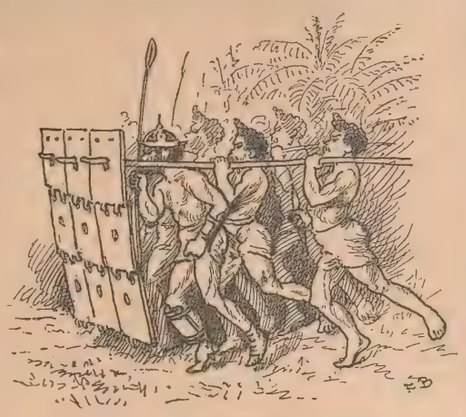
Having marched about a couple of miles around the camp the cortege pulled up opposite my tent under the grand old mosomea tree. Then began the games; first by throwing the bingee, then firing at a mark, and then at each other, duel fashion, with the fowfur loaded with soft clay pellets. Then they all engaged in a race to reach the top of a tree, the victor to receive a prize in the shape of a large red seed, which he wore for the rest of the year with great pride as a mark of distinction. There is a certain tree in this country whose branches grow out almost horizontally, and are quite elastic. It is called the *himpsa*. One of these being selected by an umpire is carefully inspected by the whole party, who then retire a distance of 200yds. At a given signal they all start, each trying to reach the tree first in order to secure the most advantageous branch. Each, as soon as he has nailed a limb, commences, by a vigorous motion of his body, to sway it up and down until he has got enough impetus to throw him up to the next branch, where he repeats the operation, and so on till he reaches the top. Sometimes he will straddle the branch, and often stand on it with his feet as acrobats do on a spring board, showing the most wonderful daring and dexterity. My favorite man, Toptee, won the prize and came grinning with it in his hand to show me. "The little God brought me that," he said, caressing it. "The little God very fond of Toptee."

When I gave him a bright brass chain to hang it by around his neck, whew! Vanderbilt and the Duke of Westminster were beggars beside him.

THE HIMPSA TREE.

After several other games had been played there came a light lunch of fish, fruit, cakes, and the goorta cup. That despatched my two warrior attendants retired for a short space of time, but presently reappeared attired in full fighting rig, which is much the same as that used for

THE KHI-GOORTA—I.

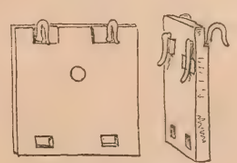


hunting big game. The warrior in this case is literally covered with weapons. To the shin of the right leg is attached a strong elastic piece of bamboo 6ft. in length with something like a cleft spoon at the top. This is for

THE KHI-GOORTA.—II.

holding either a dart or a stone. Placing one or the other of these in this receptacle the warrior grasps it with his right hand and, throwing his body back, he pulls the bamboo with him; then suddenly letting go, and bending his knee at the same time, the missile is hurled with immense velocity against its intended mark. My sketch, however, will give a better idea of the weapon than ever so much description.

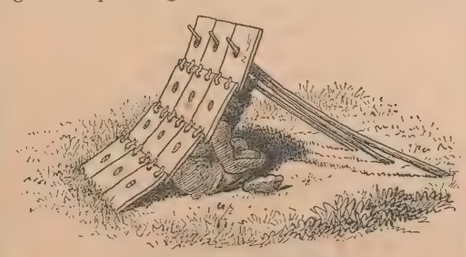
This instrument they call the Khi-goorta. To supply it the warrior carries a bag of ammunition slung over his shoulder. This elastic wand fitting, as it does, in a socket, can be easily removed, and is then used as a club and becomes a fearful weapon in the hands of these muscular little fellows. His other weapons are as follows: On his head a species of casque with a sharp knife projecting from the top, front and rear. To his left forearm is strapped a sharp dagger that projects beyond the elbow, and in his left hand he carries a creese. A double-bladed knife is bound to the palm of the right hand, so that he can use his fingers and thumb for handling the khi-goorta, or for any other purpose, while another dagger is attached



ADVANCING UNDER COVER OF THE PATSA.

to the right forearm, similar to that on the left. To the inside of each foot is firmly fastened a short, stout claw, similar to the arrangement worn by workmen in our country to enable them to climb telegraph poles, and for a parallel purpose.

Thus accoutered, one of these active little Wongbrezy will engage in a hand to hand encounter with large and ferocious beasts, and almost invariably come off victorious. In their encounters with human enemies otherwise caparisoned, I doubt not they are equally successful. They were so in the only case I ever witnessed, where a party of Arahbigees encountered a marauding band from the mountains. Their great object is to get at close quarters with their enemy as quickly as possible, when they fight like wildcats with their heads, elbows, hands and feet. They can readily detach the khi-goorta from the shin, when it might be in the way in running or leaping, but in close-quarter fighting they consider it quite an advantage.



In order to get near their foe without suffering from the darts, slings, boomerangs and other missiles mostly used by mountain tribes, they employ a composite shield called patsa, made of sections of wicker work covered with tough hide, about eighteen inches square. Each man carries one of these sections, that are so arranged that they can be locked together in any number, making a

DETAIL OF PATSA.

shield of any desired size, which is then carried on the end of a pole, or poles, by several men, and under this cover they make their advance.

They also use this patsa as a protection against the sun and rain in unsheltered places. By a simple contrivance, a sort of winch, they can twist the hooks round so as to pass through the holes and then in turning them back, tighten the plates together. I am satisfied that a similar

RESTING UNDER THE PATSA.

kind of defense, made of steel plates, might be used with great advantage by civilized armies for advancing under musketry fire. I shall speak to officers on the subject, but soldiers, like men of all other trades, are full of stale traditions, and no arguments can convince them of the value of anything absolutely new till they are blown into it, or it into them.

All these things, and many more, the Wongbrezies exhibited during their festival. When the sun had just touched the horizon the whole party collected around my tent and sang a parting song to the luminary, wishing it good night and a refreshing bath (they imagined it sank into the lake every evening and swam round, or rather was carried round by the current, to the other side, whence it arose the next morning), and thanking it for its obliging attendance during the day, and for having kept away all rain and clouds. Then they all cried three times, "Clock! Clock! Aharooma woo, Aharooma packka, dogue war Wambarr," and then filed off to the banquet. And such a banquet! No alderman ever sat down to its equal, at least in variety of fish and game. The fragrant leaves of the moy-aya served for crockery, and gourds for drinking cups. I will not attempt to enumerate the dishes, but piles of the delicious marble duck stuffed with ground nuts and savory herbs, roasted in the ashes, together with choice joints of the exquisite Axis venison, and some Ghi pears and spice melons were enough to satisfy my highest idea of a repast. At 10 o'clock I retired to my tent, leaving the merrymakers dancing, singing, howling and playing all sorts of boisterous pranks, and I went to sleep, dreaming that I was back in my native America, running to a fire with the boys in old Cambridgeport.

A MEMORY OF GOOD HOPE.

"THALASSIDROMA MELANOGASTER (Gould). — General color throughout, brownish black; belly white, divided down the center by a black stripe; rump and sides behind the thighs pure white; legs, feet and web between the toes black; length, 8½in.; wing, 6½in.; tail, 3in. Not uncommon off Cape L'Agullas and on the southeastern coast.

"THALASSIDROMA LEUCOGASTER (Gould).—Resembles preceding species in size and color, with the exception of being rather lighter, and the white of the belly *not* divided by a black stripe. (Obtained by H. E. Sir George Gray in the Cape Seas. The only specimen that has fallen under my notice was kindly presented to the South African Museum by Lieutenant-Commander L. A. Beardslee, U. S. Navy; captured on board of his ship, the U. S. steamer Aroostook, about 300 miles to the westward of the cape, in May, 1867."—*Birds of South Africa*, Layard).

Be sure and italicise the "not" in above description, for it so happened that it became the most important word of the whole, and thereby hangs this tale.

IT was a dark night and a rough one. For several days a heavy southeaster had busied itself piling up into seas, which, if any seas are so entitled, could be fairly termed mountainous; the immense mass of ocean at its service comprising the great bowl, with a Great Circle for its circumference, into which, seven thousand miles asunder, Capes Horn and Good Hope dip, while to the southward the depth reaches to the ever present and lasting Antarctic ice fields. There is no lee off the Cape of Good Hope, and a very moderate breeze from any direction, starting before it a mere ripple, may produce ere it reaches the cape's meridian a watery range which would, if the first seen by a neophyte, furnish basis for nightmares for a lifetime and insure his adherence to the land forever.

The developing process had been carried to perfection upon this night of May 20, 1867, and a speck of a gunboat, of which I was skipper, was reaping the full benefit of it. Under the snuggest of canvas, simply a few hammocks stopped on to the weather after-shrouds, with every spar and boat and gun well lashed or cleated—everything, in short, well secured for storm—the little boat lay to, looking well up into the wind and bowing to the enormous foam-crested and marbled green and blue billows which came booming toward us, apparently bound to overwhelm, until, with their crests higher than our mastheads and so near as to shut from view all else, the advance slope would slide under our forefoot. Lifted by the solid water, like a boat in a lock, we would rise till at the very summit. Then the crest would divide and go rushing by, as, with our bow pointing downward, we too would rush down into the great valley, comfortably and gracefully as a gull, but not so dry; for, although no green water came on board, on either side the combers gushed in, flooding our decks a foot or more deep, just enough, as the sailors said, to "wash her face and keep her sweet," for she soon cleared herself.

I often wonder now if the little Aroostook, a "ninety-day gunboat" of but three hundred tons, was in reality the daisy of a sea boat that I then thought, and still think her, always ready, when called on properly, to respond; tack in a light wind, wearing in a gale, scudding or lying to in first-class style; or, if she owes her place in my regard and memory to the fact that she was my first command, and that younger then by half my lift time, I had more confidence both in ship and skipper than now. I very much doubt, if the prospect of going to China in a boat of her size were now before me, that I would be able to muster the enthusiasm and zeal which then made of the trip and prospect a delight.

Although even a moderate gale will get up off the Cape a high sea, and a strong sea one of the highest, yet neither the gale nor resulting sea are as dangerous as lesser ones in some other localities. The gales, especially to the westward of the Cape, are "honest ones," blowing generally quite steadily from one direction, and not liable to go back on a luckless mariner, flanking and driving his helpless craft back over a troubled path; and the seas, though fearfully high, are comparatively harmless giants, long and regular, grand and stately in their progress. They

are not so dangerous as half the wind will in half the time pile up from two or three directions at once in say our little picnic ground off Hatteras, in the Gulf Stream, with a southeaster transforming itself into a northeaster, which transformation scene will, I guarantee, excite more emotion, physical and mental, than can Good Hope at its worst. I speak feelingly and I trust with due respect of Hatteras. The strains and bruises which came to me in a five days' circus in that charming spot this spring are still fresh in my memory. Lying to with a northeast wind blowing against the current and at the same time engaged in a fracas across our hull with the high seas got up by its predecessor, sending its own seas across us, over us and through us, and apparently watching a chance when the old sea has given us a good hit on our lee quarter, forcing the stern up and head off, to send an extra-sized and ugly messenger to send us off wallowing into the trough, then both hammering together and rocking us in the cradle of the deep, until it remains an open question which side, the lee or weather, scoops up the most water as we roll; and which set of boats or bulwarks goes first becomes a problem—a few days of this, with constant cold drenching, and a diet of sardines, hard tack, and other food needing no cooking, for with sea water instead of hot coal filling the galley furnace, cooking becomes one of the lost arts—are quite enough to dispel all romantic notions in regard to "a life on the ocean wave," and to fully impress one with the good sense in the lines—

"If Bermuda let you pass,
Then look out for Hatteras."

But off Good Hope the chances of having the wind with and not against the current are fair.

The Agullas current runs from the eastward and it is bordered by reflex currents. Thus with a little luck in adjusting the latitude we can ride out quite a heavy blow with tolerable comfort and with but little risks of sudden shifts, of collisions with unlighted coasters or of driving on to a lee shore.

For three days we had been bucking against the head wind, each day our noon's position indicating less and less success; and as we gained in distance the wind gained in strength.

We were forty odd days out from Rio and mess stores were getting uncomfortably low, the coops had been empty a fortnight and the few remaining eggs did not resemble Cæsar's wife and but one ambition animated, one thought possessed us—to get around the Cape—for at that time, before the breakwater was completed, Table Bay, fully open to the southeasters, was not to be thought of and Simons Bay was our objective point and from it Cape Town was easily accessible.

Aside from the rest and comfort that any port would, after so long a trip afford, Cape Town had for us attractions peculiarly its own; glorious four-in-hand drives at a gallop over the smoothest of roads, and through the grandest of scenery to Wynberg, Stellensbosch and the far-famed vineyards of Constantia; hunting trips among the mountains, where with lions a possibility, and ostriches, jackals and monkeys a probability, there was a certainty of at least something out of the common, for to all but myself and one other, South Africa was *terra incognita*, and the proverbial English sportsman's views as to the chances of procuring a few buffalo in Broadway were but typical of the Aroostook's mess *in re* South Africa; and even I, who had been there, after having incautiously admitted that I had not been hunting, was unable to cool off the heat I had started, by account of a large freshly-killed lion, which one morning I saw stretched on a low cart and drawn by at least a dozen span of oxen into the city. If within two days of the market place the Hottentots could kill such game, why not we as well?

And there were many other potent reasons, good dinners at Widdon's Hotel, where Cape mutton, furnished by the broadest of broad-tailed sheep, should be but one of the many good things; dinner parties at the club and mess, balls and picnics, all in the immediate future.

In addition to all of these jolly prospects, there was another strong incentive to impatience during enforced idleness. We were racing.

Starting at about the same time with ourselves, two other "90-day gunboats," the Unadilla and the Penobscot, were also on their route to China, and the first one of us to double the Cape would become the pioneer of all future gunboats, so there was, we thought, fame to be won. Well, we won it, for we were first around and first to reach China, and somehow it did not seem to impress any one but ourselves and the defeated.

That night our chances looked gloomy. I could imagine the other boats tearing along seven or eight knots perhaps (full speed in those days) and we just marking time, if indeed we were not losing ground, for if a little further south than we thought, the current was carrying us to the westward, and we had been three days running on dead reckoning, except for an altitude near noon that day, not very valuable at the best, and ours was not of the best with rolling country instead of a plain to furnish horizon, the navigator clinging with one arm around a backstay while he took snap shots at a brightish spot supposed to be the sun, stopping at times to swear a little as he wiped the spray drops from the mirrors; there were some chances that it would hardly rate as good. Such as it was, the result indicated that we were somewhat south of the charted position, hence probably to the westward also.

A westerly set was not what we wanted and to push on was. But as the figures representing "coal expended" were looming up, while those of "coal on hand" were dwindling most seriously, I concluded that we might as well hold on, and if we gained no distance we could save coal. So bringing her by the wind, we snugged her as described, and amused ourselves contemplating the prospect. She lay nicely, not a bucketful of green water came aboard, although often a baffled comber would spit at us spitefully and drench all in its wake with spray. But that didn't bother us, the water was not cold, oil skins enveloped us, and we were all more or less wet anyway and cared little for an extra ducking.

Nothing occurring on board ship excites half so much hilarity as the good drenching of a few, generally cooks or coal heavers, coming on deck for a bit of fresh air, and stowing themselves in some tempting unoccupied spot forward. And a bit of danger mixed in does not destroy the flavor.

I have seen both watches hard at work in a heavy gale rigging a sea anchor, one of the last resorts, to be used only if engine or steering gear breaks down; to be launched when all else fails to keep us head to and out of the trough. The launching, a perilous task, and the entire situation so grave and serious that its equivalent on shore would blanch faces and cow brave men. I have seen them scream with laughter when dashed in all directions from their work by a comber, and come up skylarking to complete their task, every mother's son of them endeavoring to outvie his shipmates with real or apparent indifference to danger. Sailors are curious animals.

With everything snug and comfortable, we had spent that afternoon trolling for albatrosses, great numbers of which had for several days been following us, and we had enjoyed rare sport.

"And a good south wind sprang up behind,
The albatross did follow;
And every day, for food or play,
Came to the mariner's hallo."

Our albatrosses came for the food, but the play part of the business was ours. Accompanied by hosts of other sea fowl, gulls, terns, cape hens, cape pigeons, boobys, bosus, mollymanks and stormy petrel; they had cruised constantly in our wake, swooping, now and then, in screaming bunches at some food fragments drifting astern. It seems a curious instinct that causes these fowl always to betray themselves by screaming whenever they discover a prize, thus attracting the entire flock, which rush in for a share, and ten to one the finder loses his dinner, unless it is of size suitable for instantaneous swallowing; and while the gonies chase the prize bearer and try to tear away the prize, the smaller birds hover beneath and in fragments get the most of it. It is also curious to note how soon they learn our meal hours. The corporal's guard at six bells was by eight bells swollen to a regiment, and thence till two bells (1 P. M.), when the mess cooks had finished cleaning their gear, and the bonanza in the head, of pork scraps, slush, beans, hard tack and scouse had ceased to yield dividends, there was a motley and noisy gathering astern, a pretty sight, to be long remembered. At times two or three cooks would simultaneously empty their pails, then for a time we would be deserted and for several miles unescorted; then one by one they would overtake us, and rendered bold by impunity, eager for more, would approach even to touching distance (I have seen one hit with a boathook by a man in the stern boat), and frequently fly over our deck, and while just above us peer down with their heads sidewise like a crow peeking into a jar. After we had hove to, we were never left alone, and then the fun began.

Trolling for albatross is not so simple a matter as it would seem from description, and saving the bird alive when hooked is a very difficult feat. Our gear was simple; a long strong line, a big strong hook, a slice of pork rind, the stronger the better, and a float of cork (a slab from an old-fashioned life preserver is just the thing). The baited hook is floated two or three inches under the surface. As a pot of refuse came drifting under the counter, we "skillfully cast our fly into the pool" of grease, and as it cleaved the birds would come rushing, driving away the lesser fry, and settle; always making a curve to leeward, rounding to head to wind, and heaving aback their immense wings, backing hard with their paddles as they touched water, they would make a beautiful flying move and strike the right spot every time. I never saw one attempt to feed flying; they moored, furled sail and piped to dinner.

Among the tid bits our combination had its chance, and when dipped for then came anxious times, for if, through any cause, our line should tauten while the bird s head was under water, he would, if he could, let go; if he could not, that head would never come up again, and we had but to haul in by main strength a drowned bird. And with the falling off and coming to of the ship, the weight of the line and inexperience, there were lots of chances for it to tauten. The game was to keep all slack until, with head stretched up, the bird, bothered by the float and perhaps feeling a prick from the hook, would attempt first to disgorge it, and failing in this, would try to get away by flight. This was not an easy matter, though, for they cannot rise without a preliminary paddling, flapping rush to windward, and during that rush there was new danger to us or him of escape or death. We metaphorically "lowered our tips."

Once in the air—well, just imagine yourself playing a fish 12ft. long at an angle upward of perhaps 30° or 40° to the accompaniment of a medley of screams and rushes from his mates, who would not cease their apparent attacks upon the hampered prisoner until he was well down and in over the taffrail. Landing him was another little circus, the nearer he came the wilder he got and the stronger he pulled. Then when he did come down, it was, "Stand clear!" for with wing strokes that would easily break a leg and most savage bites from a mandible 10in. long, he for a time had us almost as much as we had him. Very soon though, ancient mariner as he was, he would have to pay the usual penalty of a first trip on a vessel, *i. e.*, become thoroughly sea sick. The bird would vomit the entire contents of his stomach, a greasy mess, then settle down with half closed eyes and sprawling legs into a sulky, stupid, apparently inert mass—not so stupid though as to fail to quickly notice and strike sharply at the legs of any adventurous tar coming within distance; and if he once got hold he would hang on like a bulldog. As the biting apparatus is from 8 to 10in. long, with corresponding gape, sharp-edged and with powerful muscles, a bite was to be avoided; and to get the hook out was in consequence an adventure. Our method was to first poke at him with a broom or squillgee handle. This he would instantly seize and crush and cut through half its thickness. Then we put a running bowline around his neck, hauled taut and hove the ends around and over the handle and we had him gagged, with jaws nearly out of action; a paint swab soon supplemented the gag; then a lot of men grabbed any and everywhere to hold down the pinions; then out hook, clear away everything and stand clear. This second struggle always produced a second fit of seasickness.

We killed none of those thus captured alive; after we had had our fun out of him we would release the prisoner. To set him free was not so simple a matter either; for unable to rise from the water without difficulty, from our deck it was an impossibility; and it was necessary to carry our prize to the rail and pitch him overboard.

To blanket, hold, carry and let go (without losing the blanket) a fifty-pound, struggling, biting bird, over wet, slippery and jumping deck, was no child's play; but it was just nice enough sport, with spice of danger, to be thoroughly enjoyed by Jack, and the unlucky ones who did get nipped or who tumbled were laughed at for sympathy.

One day, while contemplating one of our prisoners, I overheard a funny soliloquy. Among our crew was an unconscious droll, one of those odd creatures who, without knowing it, was always funny. Thompson, a son of Erin, was the cook of No. 1 mess, in which capacity he kept Jimmy Legs (the master-at-arms) in a constant state of eruption. "Bricktop," that was his sobriquet, was a long, lean, red-headed, putty-faced, freckled, pimpled and raw-lipped specimen, always in a scrape, but immensely popular, for without meaning to be so, or even knowing that he was so gifted, he was a very droll man. On this occasion, regardless of the call back of the master-at-arms, he had dropped his scrubbing brush, and accoutred as he was in a torn and dirty sleeveless red undershirt, and an abbreviated pair of duck trousers, rushed from the berth to the quarterdeck to see what the excitement was about; and bare-headed, bare-armed and bare-legged, stood well to the front, arms folded, and taking in the prize—a shining, glowing study in pink, red and yellow—and thus in excited tones: "Howly Moses, d'ye mind the say goose! D'ye mind his legs, they're contagious to his body! an' his bill, 'tis worse nor an attorney's, an' phwat a fut he has, all hell wouldn't thrip him up. Blessed mither, sure he's the devil's own chicken."

By this time the enraged master-at-arms had collared him, and while ignominiously marching him below, was cheered by the roars of laughter that "Brick's" soliloquy had produced.

All sorts of curios were furnished by the drowned ones; some of the quills were over two feet long. The men skinned the feet and legs for pouches, made pillows of the feathers, sea pie of the flesh, and scrimshawed the bills and heads as souvenirs for their sweethearts. We caught, I think, eight.

That evening I had made all preparations for a comfortable night out, enveloped in oil skins and rubber, with back braced against the weather bulwarks, and well protected by them and our lying-to hammock, I had fitted myself into the coil of the throat halliards, and dozing at intervals watched at others, the wind, sea, weather, helm, spars, etc. I was disturbed from a nap by a thump on the deck by my side and a fluttering. Calling the Quartermaster he responded with a deck lantern, and we searched for the cause, which we found in the lee waterways—a wounded, gasping, stormy petrel.

Evidently the bird had been disturbed by us, and perhaps, dazzled by our lights, had come in collision with some part of our rigging, for its wing was broken and it

was otherwise bruised. Naturally I picked it up, and then came the question what to do with it. The simplest and most human course was to kill and "put it out of its misery." That one does with little compunction, although it is far from a pleasant duty when one wings or otherwise wounds a bird. But this was a peculiar case. The bird was a petrel, a "Mother Carey's chicken," and it was blowing hard. I am not a very superstitious man, yet I confess that I did not like to do it; my suggestion to the quartermaster was not responded to in a very zealous manner.

I do not think that he, any more than myself, gave full faith to the views attributed in both prose and poem, to sailors in regard to the probable nature of this bird and the probable ill-fortune that would follow its slayer.

For that matter I don't believe that I ever did know a real sailor that did fully believe that in these little birds are sheltered the souls of defunct sailors who, through sundry indiscretions, have forfeited their rights to a snug berth in Fiddler's Green, with free rum, tobacco and sweethearts, and are confined in Davy Jones's lockers, to be given in this form and under the recognizances of Mother Carey, liberty for an indefinite period, their time to be occupied in a constant hunt for rations, with never a watch below.

Still, I suppose we both had it to some extent. I think that if my kitten had, while I was cogitating, left her snug berth in my bunk and joined us, I should have meanly put that bird where I had found it and she could see it, and claimed that "it was the cat."

Finally I concluded that even a petrel would, with but one wing, one eye, and general demoralization, be better off dead than alive, especially in a gale of wind and hundreds of miles from shore, and I killed him. And the consequences of this act still affect me, and the readers of FOREST AND STREAM, for this letter, written a score of years after, is one of them. How little I thought that this apparently unimportant act would result in making for me good friends, giving to me good dinners, and to the world a very rare and valuable specimen. Thus it was. I had an all night up before me with nothing to do unless some unforeseen emergency arose. I had been studying a little book and trying to learn from it how to skin, prepare and preserve birds, and this bird gave me an opportunity to practice; it was a subject, in fact. For several hours I passed my time in the effort to get it ready for stuffing. It was my first attempt, and when finished I threw it in a locker and forgot all about it.

The next day the wind and sea moderated, and not long after we had doubled the Cape and anchored in Simons Bay, whence to Table Bay and Cape Town it is but a short and pleasant drive across country, and as soon as I could get away I went over. I had been there often, had lots of friends, and a good time was in anticipation. I visited the South African Museum, anxious to see the only extant specimen of the dodo and its egg.

At the museum I was most politely received and cicerroned by the curator, Mr. Edgar Layard, brother of the famed explorer of Nineveh. Showing me around, we came to a great case containing quantities of petrels of many varieties. Naturally I looked for one like mine, of which I was now for the first time reminded. I saw none just like it, and mentioned the fact to Mr. Layard. He became at once greatly interested, and began a most eager examination, in which I very much fear that, from a scientific point of view, I failed badly. I had not noticed much about my bird, but stuck to it that I could see none like it in the case: and Mr. Layard's excitement developed into an enthusiasm that I had then never seen equalled, though since my experience with the professors on the Bluelight dredging trips has furnished similar exhibitions. I firmly declined to admit that by any possibility the pure white of my bird's belly was either ornamented or disfigured by a single black feather, let alone a "stripe." This, by the way, was about the only point upon which I was sure, and this certainly was due to the fact that, through want of skill and experience, I had badly soiled the white belly with blood, and had wasted considerable time endeavoring, with water, chalk and pipe clay, to restore the primitive purity. This I told him, and this convinced him. Seizing both of my hands, and I verily believe coming within an ace of embracing me, he shouted, "Upon my word, my dear fellow, I believe you have secured a *leucogaster!* Where is it? Can I see it? Would you be willing on any terms to part with it?" and more to that effect.

Enthusiasm is contagious. I began to have it myself and to wonder where I had put that bird skin. When I told him that it was somewhere in my cabin, that the museum was welcome to it, but that I was a little apprehensive that Signor Jose da Cousta, who was my steward, might have taken the opportunity afforded by my absence to clean house and might have thrown it away, his anxiety was painful, and with my assent he at once telegraphed in my name, and I that evening wrote Joseph to spare that bird and send it over.

The next day it came, and I was nearly as impatient (judging from my act) as was the scientist. Immediately upon receipt of the package (I was at the time enjoying the society and voice of a charming young South African lady, singing to me the, to me, new song, "Pas de la rhone que nous,") I started for the museum, was met at the door by Mr. Layard who claimed tha the had passed a sleepless night; the possibilities of Joseph's failing had broken him all up. I, too, had passed a sleepless night and so I told him, but not at first the cause—a jolly little dance that lasted till the small hours. The joy, excitement and enthusiasm of yesterday were but lethargy, when compared with the sensations manifested when with trembling hands the package was undone and with trembling voice my friend announced, "It is, IT IS, a *Leucogaster!*" and at that shout there gathered other learned and scientific men and collectors, some wise on butterflies and some on bees.

A great book of magnificently colored plates of the birds of South Africa was produced, and life-size was seen a portrait of my bird, and under it the legend: "But two specimens of this very rare bird have been obtained, both by Sir George Gray, Governor of the Colony. One was presented by him to the British Museum, the other retained in his collection."

Could and would I part with it? Would I think £10 an equivalent?

I declined the money offer, tempting as it was in those days, for the dance and extras had rather depleted my purse; and presented the bird to the museum, Mr. Layard, however, insisting upon my acceptance of a few choice hen turkeys to take to sea with me, and a good part of another which I that day partook of at his hospitable table.

Some years after there came by mail to me a book. It was a copy of the "Catalogue of the Birds of South Africa." On its fly leaf the compliments of its author, Mr. Layard, and on page 358 the description which has formed the text of this discourse. I now send it to FOREST AND STREAM with my compliments. PISECO.

"HA HA FLY."

I THINK it is the wise, witty and wicked Henry Heine who says the Jews persecuted and hunted his ancestors so much that he inherited a love of hunting himself. My love of the pleasures of forest and stream accompanies the early but fond recollection of the brier patches and woods of Indiana where I was wont to pursue the fugitive cottontail every Saturday during my college days, and where I was ever ready to lay aside "Butler's Analogy of Revealed Religion," or the *Pons asinorum*, for a day with a rifle among the gray and black squirrels in old Jefferson county, in the Hoosier State, as long ago as 1852, and I would be loth to asseverate that at fifty-three I could cause a rifle ball to impinge upon and impale a squirrel's eye as well as I could thirty-three years ago, when I was a boy. And as this is only a brief, unambitious rambling and gossiping sketch of a day's gunning, let me here express my joy at the forthcoming publication, through the Forest and Stream Publishing Company, of "Nessmuk's" poems. The grand old man whom I have joyfully followed with his "duffle" and his light canoe from Punta Rassa, Florida, all the way up to the interior fastnesses of the Adirondack woods, can get more good sense and more fun and frolic out of the woods than any man in America. And he translates the unwritten laws as well as the joys of the forest, and of the deep sea, too, better than any disciple of good old Izaak Walton it has ever been my good fortune to follow with mind and heart and imagination.

"Nessmuk" sent me a copy of his poem, recently written, entitled: "The Joys of ye Granger," and it is as full of his characteristic genius as the "Arkansas Idyl," lately printed in our own FOREST AND STREAM. It was Dean Swift who said "Only a man of genius could write an interesting sketch on the subject of a broomstick;" and "Nessmuk" almost casts the halo of romance around the form of "Ye Granger's Son," as he feeds the brindle bull or takes care of the "Darby Ram," and then lazily swings himself on the old-fashioned farmyard gate.

"Nessmuk" never misses in his studies of nature what N. P. Willis calls "the reluctant, hiding, best word," and some of his sentences are poems, as with the same permeating and subtle love of nature, in her various moods, he paints in immortal colors scenes where

> "The May sun sheds an amber light
> The new-leaved woods and lawns between."

But this is only preliminary to my funny recollections of an æsthetic day, with a double-barreled shotgun, among the rabbits with Senator George Handy Smith and Magistrate James Brown, of the Twenty-sixth Ward:

The portly Senator, who is President *pro tem.* of the Pennsylvania Senate, is a close friend of that bright, lovable and genial gentleman, M. Stanley Quay, the great piscator, who, it is well understood, is the coming man to wear the Senatorial purple for Pennsylvania at Washington, after the 4th of March *proximo*. We call the President *pro tem.* the Lord Chesterfield of the Senate, and as a boy he had a good deal of the blood of "old Virginia never tire" in him, and the rod and gun were early household words and joys to our elegant but somewhat adipose friend and statesman.

The world and politics have dealt tenderly with "Gentleman George," and he had long been promising the Scribe and Magistrate Brown that we should go to his country seat in Montgomery county, and bag a dozen rabbits. But the serious question before the House was "where should we get a good rabbit dog?" A happy thought struck the Senator from the Twenty-sixth Ward We called on Dr. Parmenter in our Division, who assured us that he had the finest beagle in the land in his cellar and in truth his cellar was "full." "But," said the Teutonic doctor, "while he catch the rabbit in the open field easy, when you say 'Ha! ha! Fly,' the dog he run away with avidity, so, Senator, you must not lose your eye on him yet."

After extremely moderate libations of Bohemian beer and the warmest assurances as to the safety and certainty with which the beagle would chase a rabbit to his death on the greensward, the gastronomic and somewhat Rabelaisian Senator asked that the beagle should be shown up by the hospitable Dr. Parmenter.

The Doctor, after exhibiting his Parker gun of marvellous excellence, produced the dog in a leash.

And I am bound to say that a more furtive-looking beagle hound I never gazed upon; but one more bottle of beer satisfied the Senator that we had "corralled" on to a prize in dog flesh, and that not a single rabbit would survive our aggressive and sporadic hunt, with three guns, unlimited cartridges, and a lunch which, when the gastronomic George had packed it in a capacious basket, would have made Lucullus grow green with envy.

I sighed when I saw this display of edibles and bibables, good enough for Pantagruel and voluminous enough for the paunch of Pantagruel himself, made me doubt whether George, the Senator, meant anything other than an æsthetic outing. I sighed and said, looking at the well-filled lunch basket, plethoric to the bursting point, "It is painfully evident to me, Senator, that you mean to sit on the back porch while Magistrate Brown, myself and Ha Ha Fly (the Teutonic-Parmenter dog) drive the cottontails in front of you. Are you guilty, O noble Roman?"

Senator George denied this soft impeachment, asseverating that as a Virginia gentleman he was "a gunner from way back," and that the lunch was only a secondary consideration, undeserving mention, his objective point being "rabbits." But he admitted that for the first hour he and farmer Terry, who had met us at the station, would guard the lunch basket, while Brown and myself with Shoo-fly, as he called the dog, could drive out the reluctant Bre'er Rabbit, close to the piazza! We consented to this arrangement, only stipulating that the portly Senator should not devour all the cold beefsteak or the crisp celery till we came back and reported progress with Ha Ha Fly.

I took one end of the string, the other end being securely attached to Dr. Parmenter's Ha Ha Fly. Judge Brown went pecking and poking with his gun into every fence corner, brier bush and pile of fence rails visible to the naked eye, while the dog, looking as if he had been fed on cedar shavings for two months, was totally oblivious to his surroundings, only semi-occasionally looking back (like Lot's wife, hankering for—salt), toward Senator Smith and the back piazza, where the old political "war horse" sat, smoking a fragrant Cubana, but with a mischievous twinkle in the left-hand corner of his right eye!

The Senator had been positive that the rabbits were abundant, but that the safety of the lunch basket would require his attention for one hour.

He said the game protective society of Montgomery had planted out a dozen rabbits in the spring, and from the cottontail's well-known fecundity, he had reason to think there were about 444 rabbits in good position on this 100-acre farm.

"Judge" Brown assured me "that Senator George Handy Smith, for a man who had held office sixteen years, consecutively, was an eminently truthful man." Could I doubt such a candid statement? But being a born doubter I said to myself, "*Cui quomodo quibus auxillis* is it that the demnition rabbits don't show up?"

"Hist," said the enthusiastic Brown, "I see a cottontail in the fence corner. Shoot him on the spot."

I looked scornfully at the judicial-minded Brown as if to say, "We are not the kind of sportsmen who kill anything on the ground."

With that palpable hit I took off Ha Ha Fly's leash and led him up to the rabbitt in the fence corner.

Ha ha Fly only looked embarrassed, and I grew hot as I said to Brown, "This is the stupidest dog I ever saw. Ha ha Fly must be the latest joke of the Senator from the Twenty-sixth Ward." Finally, I kicked up the rabbit and unloosed the Parmenter-Teutonic but seedy-looking beagle.

He took one mournful look at me, made no vocal sign, but started full tilt after the rabbit, now 50 feet ahead. Strange sequel! From that hour to this neither Ha ha Fly nor the rabbit have been seen in Montgomery county. We peeked around for another full hour intent on game. Then Judge Brown gave me one despairing look and said, "We can't do much with rabbits without a dog." I concurred with the "court," but I insisted that that was the only rabbit in Montgomery county, and had been chased and shot at so much that it was probably gun shy.

Still, the Judge prodded all likely looking brier patches and fence corners for the supposed reluctant and nest hiding rabbit. Not one could be induced to show up; not even a "mountain partridge." We both grew darkly

suspicious of the Senator from the Twenty-sixth, and Brown cautiously suggested that the good "old man" had been playing "roots" on us. To this I demurred, as the Senator, relying on the fecundity of the average rabbit, really believed there were 444 rabbits on his country place and within reach.

We stood not upon the order of our going, but hastening back to the piazza, as the sun had long ago passed the zenith; and sure enough there was the magisterial Senator, reading the latest "Daudet," the smoke artistically curling above his head, and before him spread an appetizing lunch which Mynhere Van Tassel might have rejoiced to see and taste on that memorable occasion when kindly Minerva, Knickerbocker says, provided a couch for Van Tassel on the greensward after a "full" dinner. That lunch disappeared like the contents of an ambitious politician's pocket book on an election morn. The Senator sadly drew out his check book and filled out a check for $100, as he feared Dr. Parmenter would demand Ha Ha Fly, or what the negro called "a squidulent," when we got home. The Senator believed he had been grossly deceived by the Game Protective Society of Montgomery county, and disbelieved in the fecundity of the rabbit or that the cottontail habitually "breeded every month," as the Game Protective Society asserted.

The dinner made us forget our bad luck, and Terry, the farmer, devoured his share of the beefsteak on a Friday, albeit Farmer Terry was a good Catholic; but we didn't have the heart to stop his good digestion, which clearly waited on appetite. The Senator says next year there will be more rabbits and better beagles. J. M. S.

LEARNING A LESSON.

ONE morning in October a few years ago, after nine months of careful training of a young Irish setter, I set out to hunt ducks. I had great faith in my dog; he was of excellent strain, had proved tractable and intelligent and was a good retriever, which I particularly desired to have, being very fond of duck shooting. I had started early, and soon after daylight was passing through a piece of woods on the shore of the river along which I was hunting, when a large bird flew over just above the treetops. Without stopping to determine what it was I brought the gun to my shoulder and fired, and the large bird fell plump into the river. In an instant my dog was in the water after the game. When I reached the bank, having to push through some heavy undergrowth, I saw him in contest with the bird, and at one moment drawn completely under water in the struggle.

The large bird was a bald eagle, slightly wounded in one wing. He had grappled the setter, and the setter, surprised and frightened, broke loose and swam rapidly to shore. I shot the eagle, and at a sandbar a short distance below brought him out and showed the setter he was no longer to be feared.

A half mile further on I killed two ducks within a rod or two of shore, and told the setter to bring them to me. He refused; and no amount of coaxing could induce him to go or stay near them, though I was gentle with him and held the ducks near his nose after I had retrieved them myself. To cut the story short my dog was ruined, and months of careful training went for naught, through the mistake of a moment.

Young gentlemen, and others, too, for that matter, may learn a lesson from my misfortune, and I put it on record for their guidance. One point to be remembered is that it is unsportsmanlike and often discreditable to shoot at everything that flies over, or comes within range of your gun. J. C. B.

WASHINGTON, D. C.

A MOOSE HUNT.

ALL day we traveled up a steep ascent,
And over barrens wrapped in fine, crisp snow
Till evening came, and then prepared our camp
Beneath the shelter of the silent firs,
Whose spreading limbs almost obscured the sky.
Our camp completed, some, with sturdy strokes
That started Echo from her frozen caves
Amid the mountains, felled the groaning trees;
Some peeled the bark for fire, some water brought,
While some prepared the couch. Our labor o'er,
Before the glowing fire whose kindling blaze
Coiled like a serpent round the frosty logs,
We circling sat and ate our rude repast,
Bread, meat and tea. Smile not, ye epicures!
Your dainty palates ne'er enjoyed repast
As sweet as ours; for hunger seasoned all
With sauces richer than the choicest spice
From India's sun-kissed land. Our supper o'er,
Our pipes produced, attention on each face,
We silent sat and heard our guide relate
How, near this spot, some twenty years agone
He found a yard, and ere the evening came
Had killed his seven moose, with how and where,
Description of the cows, the calves, the bulls,
The weight of each, the number shots he fired,
The distance of each shot, each shot's effect.
Till, half the camp asleep, he slumbered too,
And dreamed the hunt again. Then 'neath the stars
With solitude and nature all around,
Tired eyelids slept fatigue and care away;
Till o'er the distant mount that towered high,
Like a huge cloud in the keen eastern air,
The kindling dawn appeared; and ere the sun
Had reached the distant mountain's topmost height,
We had our moose killed and prepared for home.

LONG ISLAND BIRD NOTES.

Editor Forest and Stream:

In looking over my bird notes the other evening, I came across a few records for Long Island which I do not think have ever been printed and which may possibly interest some of your readers,

Tringa maritima—Purple Sandpiper.—On Nov. 22, 1876, Mr. James Remsen shot a specimen of this rare sandpiper at Westhampton, Suffolk county, L. I. The bird was the only one seen, and was killed as it flew across the duck decoys. I happened to be staying at the same house with Mr. Remsen, and he presented the bird to me. I had no difficulty in identifying it, as I had a specimen of the species in my collection, and appreciating its value as a local specimen, I carefully prepared it for skinning by filling throat and nostrils with cotton and expressed it with a basket of ducks to my home. On my arrival at home two days afterward, my disappointment can be imagined when I found that an over-zealous domestic had carefully plucked and prepared the bird for broiling. I have not had the good fortune to secure another Long Island specimen since that time. J. P. Giraud, in his "Birds of Long Island," says: "This species I have never met with, and from my own observations of its habits and customs I know nothing. On the shore of Long Island it is exceedingly rare."

Somateria dresseri—American Eider.—On Nov. 29, 1879, two eider ducks, presumably of this variety, were shot in Flushing Bay by a local gunner.

Oceanites oceanicus—Wilson's Petrel.—On Aug. 7, 1881, Mr. O. B. Smith, of Brooklyn, shot a specimen of this petrel on Long Island Sound near Sand's Point, Queens county. The bird was mounted, and I had the pleasure of examining and identifying it in Mr. Smith's office, where it now is.

Nyctala acadica—Saw-whet Owl.—On Nov. 4, 1884, I shot a female of this variety near Flushing, Queens county. ROBERT B. LAWRENCE.

A SNOWY OWL was shot by a correspondent G. B. H., at Fernwood, Ill., Nov. 29.

Game Bag and Gun.

WESTERN GAME NOTES.

EAST SAGINAW, Dec. 14.—I noticed in last week's issue of the FOREST AND STREAM that my friend John Davidson tells of the brief visit he made to East Saginaw, and the sport he had with the ruffed grouse. I heartily agree with him that no nobler game bird exists than our grouse, and that it requires a dog of exceptionally good qualities as well as a man that is a quick shot and above the average to make a creditable bag on this game.

The shooting has been very good this year, myself and a friend bagging from eighteen to twenty-two or three birds in a day's shoot a number of times, and taking into consideration that we have a city here of fifty thousand inhabitants, and going out in the morning and coming back at night and making a bag of this kind I think is all one can desire. The weather has been glorious. The ideal October days have lasted well through November. What I have to complain of is the merciless slaughter of the pot-hunters. For those who shoot for market and market alone, I think are to be classed as such. I think it is safe to say that upward of ten thousand birds have been shipped out of the Saginaw valley to market, and this must necessarily destroy our shooting before long. Every time these fellows see a bird, whether it is in a tree or on the ground or gets up before the dog, the largest thing he sees is the almighty dollar, and that is what he shoots for and that alone, and besides they carry it to such an extent that they go every day that it does not storm. We may in the fall see some particular cover where, after the leaves get off and the proper time comes, one expects to go out and take a day's recreation (for a business man these days are limited and do not come as often as they should), and after all preparations are made and one has gone through the keenest anticipations he finds hopes are dashed and it is only a straggling bird now and then that the cover produces. You learn only too late that the birds are gone to market.

Several of your correspondents have made mention of the snowy owl this fall. Owls have been extremely numerous with us this season. Wm. Richter, the taxidermist here, who has a State reputation for the quality of his work in mounting deer heads and birds, informs me that he has so far put up eighty-five owls, and about three-quarters of them have been white ones. This is very unusual, for if half a dozen are brought in during the fall and winter months it is as much as we expect.

Your correspondent from Bismarck, Dakota, says he is surprised that none of the parties visiting that section this fall goose shooting have reported their luck, and makes mention of one party killing about 600 birds. I rather think he must refer to the annual pilgrimage made by the East Saginaw party. I have been for the past four years out there each fall, and this year about Oct. 1 with seven friends made up a party in the good car "City of Saginaw" (which belongs to our hunting club) taking along our cook and porter, and spent two weeks of solid enjoyment in this paradise of water fowl. We killed 511 geese in six days shooting, besides getting a number of ducks, sandhill crane and sharp-tailed grouse. One day we had exceptionally good luck, bagging 165 geese, 76 of them being killed by myself and one other. This may seem to some of your readers unnecessary slaughter, and the question will be asked what could we do with all this game? To such I will say that not one bird was wasted. What we could not eat and give to our friends in the West we brought home and distributed to our friends here. A hard freeze coming on about three days before we left froze our birds solid, and we built a big crate on the rear platform of the car that held 200 geese, and our ice box underneath held nearly as many more.

We created quite an excitement on the way. At every little place where our car stopped for a few moments a crowd of the curious would gather around and make comments. I brought home an excellent specimen of what I suppose to be the blue goose, as it is a rich slate color all over except on the under side of the head and throat, which is white. I had it nicely mounted, together with other specimens, and prize it very highly.

We contemplate having a re-union of the party just before Christmas, and have written to the absent members to see if they can come. They are R. D. Schultz, of Ranesville, O., and Gen. E. S. Jackson, of the British army, at present residing in Canada, whom I had the good fortune to meet on the Cascapedia River last summer, as I was one of the party of which he and Mr. Wells were members, where we spent several weeks with the salmon and trout.

If the opportunity presents itself before long, I will give you a little sketch of a camping expedition which three of the fraternity indulged in a few weeks ago, and relate how one of the members got lost and inquired for "Section 37." W. B. MERSHON.

BELGIAN HARES AND GRIZZLY BEARS.

Editor Forest and Stream:

In FOREST AND STREAM for Dec. 16, "A. C. H." asks whether it would be advisable for him to introduce Belgian hares into Maine. The experiment would certainly be worth trying if your correspondent will import a large number of the animals and turn them loose in a locality which is suitable for them. In many European towns the hares are a staple article of food, and although I am an "ardent partisan" on the subject of the superiority of things American, I must say that the European hare far excels any of our own species as far as table qualities are concerned. They breed once a month only when chased by hoop snakes, but nevertheless they are prolific breeders and will multiply rapidly where food is abundant. There would be no danger of an over supply, because they are too valuable for market purposes. I am afraid that the Maine snows will be rather too deep for these hares, as they are ground feeders, and do not leave the open fields until they are driven into the woods by the severest weather. It is said that they rapidly become emaciated when confined to the woods. I have killed these hares in Denmark in the middle of winter, and have found them very fat at that season of the year. But the snowfall of that northern land is not nearly so great as it is in Maine. Young hares that are hardly bigger than a minute are able to keep fat so long as they can feed on grasses, no matter what the temperature may do with their thermometers.

"Speaking of corns, how is your grandmother?" Four of us have made arrangements to spend a month among the grizzly bears next year and we want to hear about the advantages or disadvantages of the explosive bullet when used for the purpose of discouraging the animal in question. We should like very much to hear from men who have had actual practical experience. We are under the impression that an explosive bullet No. 50 fired from a Sharps rifle would confuse a grizzly so that he could not fight rapidly or with any precision of movement, and that we could then put in solid bullets whenever a good opening for business offered. We are all accustomed to hunting large game and two of the party have just returned from a bear trip in Montana and Idaho, but none of us have ever used the explosive bullet. We shall start out with the avowed purpose of making a record of grizzlies and wish to be as well fortified as possible.

Let us have testimony on the subject of explosive bullets of small caliber—.45 or.50—and their effects when used on large and dangerous game. MARK WEST.

NEW YORK.

SUMMER WOODCOCK SHOOTING.—Tompkins county, N. Y.—*Editor Forest and Stream:* The communication published in FOREST AND STREAM of the 9th inst., in which the abolishment of summer woodcock shooting is suggested, meets with the warm approval of sportsmen generally. Indeed, I have failed to hear, after a pretty thorough discussion with many of the leading members of the fraternity as to the advisability of the proposed postponement of the season, of a single protest. It has become to be a thoroughly recognized fact that earnest, united effort on the part of the best class of sportsmen is absolutely necessary to much longer preserve even a respectable number of this rare and wily bird for annual shooting. For a very long term of years it has been customary among gunners to locate, just prior to the opening day, the habitat of the woodcock, and with the arrival of the long anticipated event, everything in the shape of a shooting iron, from the modern breechloader to the old-time annihilator, has been improvised and hurried into the field. As a result of this more or less determined course of destruction, where a dozen birds were found a few years ago scarcely one can be started during the entire season at present. Tompkins county formerly ranked among the most prolific woodcock districts of the commonwealth, but the last decade of wholesale slaughter has left only a gentle reminder of the grand bonanza times fast fading. Postpone the opening day until Oct. 1, and let the woodcock thrive.—M. C. H.

NEW YORK.—Ithaca, Dec. 18.—In Tompkins county partridges are not unusually numerous. Only fair bags are reported by our local gunners. Rabbit shooting has been poor, owing to the detective tendencies of the treacherous ferret. Foxes are fairly plenty. Duck shooting along the eastern and western shores of Cayuga Lake has, up to the present writing, been fairly good. The best ground for a day's sport will be found in the immediate vicinity of Union Springs. The number killed this fall compared to that of three years ago, is startlingly insignificant. On a cold December day of that year two brothers bagged, in four hours, and within two miles of Ithaca, thirty-four ducks, seventeen of which were shot at the double discharge of a brace of muzzleloaders.—M. C. H.

A NUMBER OF WILD BOARS, consigned to Reiche & Bro., of this city, arrived on the steamer Werra from Bremen, last Sunday. Some of them will go to Tuxedo Park, where it is proposed to introduce the sport of pig-sticking; and some to Judge Caton's park at Ottawa, Ill.

ESSEX SPORTSMEN'S CLUB.—The Gloucester, Mass., Cape Ann *Advertiser* reports that "the Essex Sportsmen's Club held their first annual match last Friday and Saturday. The club was divided into two sides, one was led by Mr. C. W. Chipman, the other by Mr. J. E. Fuller. The grand total of each side was as follows: Chipman's side, 7 partridges, 13 quails, 8 rabbits, 7 red squirrels, 36 snow buntings, 8 crows, 1 owl, 1 butcherbird, 1 bluejay; total points, 1,715. Fuller's side, 27 rabbits, 10 quails, 12 snow buntings, 4 crows, 1 mink, 3 gray squirrels, 8 red squirrels, 1 butcherbird, 1 owl; total, 1,150. Mr. John E. Fuller stood at the head individually with a total of 505 points. The following are some of the highest single scores: D. B. Riggs, 465 points; C. W. Chipman, 120; W. P. Burnham, 300; C. Jenkins, 210; F. Haidy, 315; J. H. Burnham, 185; W. Ross, 200; T. B. Fuller, 195. The club and invited guests participated in a supper on Wednesday evening, at the expense of the losing team. Mr. Fuller, who made the best record, as above shown, was presented with an elegant silver medal suitably inscribed. After supper the club reorganized, under the name of the Essex Gun Club, and made choice of the following officers: President, J. E. Fuller; Vice-President, D. B. Riggs; Secretary, C. W. Chipman; Treasurer, E. S. Andrews."

A NORTH CAROLINA RESORT.—Garysburg, N. C., Dec. 14.—Many of your readers, especially those among the sportsmen of the North, would be glad to know the advantages our place offers them for hunting. Garysburg is at the junction of the Atlantic Coast Line with the Seaboard & Roanoke R. R., which connects at Norfolk, Va., with the New York, Philadelphia & Norfolk R. R., and is only two miles south of Weldon, N. C. It is a small village, blessed with educational and commercial advantages, and inhabited by moral and hospitable people. The climate is mild and salubrious. Within a radius of ten miles any quantity of deer, wild turkey and quail can be found, and on the Roanoke River, only two miles south, rare sport can be had shooting ducks and geese. The hotel is kept by mine genial host, W. T. Kee. He himself is an experienced huntsman as well as a good caterer, and those of your readers who desire to spend a vacation in profitable pursuit of game may rest assured that no place can offer better facilities.—J. H. P. L.

PROPOSED ALASKA EXCURSION.—New York, Dec. 20.—*Editor Forest and Stream:* It has often occurred to me that I would like to fish and shoot for one summer in Alaska, but when I have mentioned this to my friends I have found them much more willing to go down to the Great South Bay or one of the southern coast resorts than to undertake a trip like this. I think I could get ready in about twenty-four hours if a party of gentlemen could be got together for this trip next summer, say to start from New York by the 15th of May and return about Sept. 15. I have taken the trouble to ascertain that there would not be material difference in the cost by any of the numerous routes to Puget Sound, and from there we could go by the regular line of steamboats or have a sailing vessel take the party up and remain with it all summer. I ask that you publish this and see if they can not be banded together for the trip.—J. E. PALMER (115 Greenwich avenue).

QUAIL IN CONFINEMENT.—Brooklyn, N. Y., Dec. 20.—In answer to an inquiry from "H. M. W.," in regard to the care and feeding of quail, I have successfully kept them for seasons, and have some at present which are in the best of health. I feed them alternately on wheat and buckwheat mixed, screenings and occasionally table celery. I have also planted wheat and buckwheat in two separate boxes, which I keep in a warm place until it sprouts. After that I place one box in the coop and change them every morning, keeping one box growing steadily, in this manner the wheat is always fresh. I plant it as deep as possible, otherwise they will pull it out. I give them plenty of fresh water twice a day. By this mode of feeding I have lost but two birds out of a dozen (which two, by the way, appeared sickly when received. —J. F. M.

MAINE.—Camp Caribou, Aroostook County, Dec. 12.—Still-hunting has been a failure, all the earlier snowstorms terminating in a crust, and I know of no deer or moose being shot. Many caribou have been killed, as they are comparatively easy to get and are quite plenty. Two have fallen to my gun, and two more tempting chances were had since, but I had gotten my quota. Another hunter, E. K. Peek, got two at one shot, and the pith of it lies in the fact that he saw but one until after firing; the second one, quite small, stood near by the one aimed at. One of those shot by myself was a bull of great size and had superb antlers. The head has been set up by Bowler of Bangor.—WARFIELD.

MANITOBA FURS.—Utica, N. Y., Dec. 20.—One day last week a car laden with furs was ferried across the St. Lawrence River at Brockville, transferred to the Rome, Watertown & Ogdensburg Railroad, and afterward sent through to New York. The car came from Winnipeg, and the furs it contained were owned by the Hudson's Bay Company and valued at $71,000. The skins in the car represented the destruction of 437 bears, 65 silver foxes, 5,137 beavers, 800 foxes, 4,255 lynxes, 8,178 martens, 291 wolverines, 207 wolves, and a host of small animals. Another carload valued at over $60,000 passed through to New York a few days ago.—PORTSA.

HIGH POINT.—New York, Dec. 22.—*Editor Forest and Stream:* I have recently received several inquiries in regard to the weather at High Point, N. C. For the benefit of those of our brother sportsmen who contemplate going there for a few days' shoot, I copy a portion of letter just received from David White under date of Dec. 19, in which he says, "The snow all disappeared by Sunday, 12th, since then the weather has been very fine. The birds (quail) seem te be more plentiful than before the snowfall."—GEO. T. LEACH.

THE TURKEY.—Washington, D. C., Dec. 17.—I see that a bushman advertises good turkey hunting in your paper at "$1.50 per day, including guide, dog, turkey, etc." I was going to say that I will bar the guide, dog and trimmings if he will only furnish the turkey to scale not less than 12lbs. weight.—TAR HEEL.

LESSONS OF THE TRAJECTORY TEST.

Editor Forest and Stream:

The following article of Mr. R. H. Burns in your columns of July 8, 1886, is not true, but decidedly false, as the face of your report clearly shows. (See September and October, 1885, "Trial of Hunting Rifles at Creedmoor.") I will copy his short letter in full, that all may see it:

"I wish to call the attention of Mr. Napoleon Merrill to the fact that in your test of hunting rifles there was not a muzzleloading hunting rifle in the contest, the nearest to it being the one [the Merrill rifle] fired at the 100yds. range, and that one was beaten in regularity of bullet flight, *i. e.*, in accuracy by twenty-three breechloaders in competition. At 200yds. the muzzleloader target rifle [the Romer rifle], with all appliances of a target rifle, beat all of the breechloading hunting rifles in the regularity of shooting, the nearest one to it being the Maynard .40-cal., which was just four thousandths of an inch behind the Romer muzzleloader, the difference in elevation at 100yds. of 5 shots being: Romer, .292; Maynard, .296; difference, .004 of an inch. The work of the breechloader is selling it."

Thus boldly and unqualifiedly says Mr. Burns, who here steps in as a volunteer critic to back up Mr. J. T. Clapp in his criticism on my "Turkey Shoot" article, *vide* your columns of July 1, 1886, p. 449. Mr. Burns is a member of the Chautauqua Sportsmen's Association or the N. Y. P. and O. Shooting Club and I see his name quite often in print among the list of shooters who figure as "rifle experts" in this club. Hence when such a person boldly plays the part of a critic he is very apt to be listened to and believed by a great many who do not understand the subject of rifle shooting. His article flatly and most boldly denies (in effect) the facts and points I presented in my article drawn from your very full report in pamphlet form of your rifle trial in reference to the muzzle and breechloaders, and his denial further serves to pervert any traduce the true meaning of your most valuable report by asserting, though indirectly and in a roundabout way, that the breechloading rifles which this critic well knew from your report made comparatively high trajectories at the trial, were beaten in "accuracy" by the two muzzleloaders, which made, as he well knew, flat trajectories.

It further appears in your columns that several other very knowing persons acting as critics also have at different times adopted and artfully circulated the foregoing false doctrines of Mr. Burns, and up to this date (Nov. 22) no person has publicly come forward and repudiated them—not even the several makers of the different kinds of American breechloaders which were tested at this trial, and whose relative merits were involved, have come forward to deny them, but have silently adopted them. Our very learned critic must have known that flat trajectories result from high velocities of the bullet and give straighter shooting than high trajectories, and that high trajectories result from slow velocities of the bullet and give more crooked shooting than flat trajecteries.

Consider all this, and what is still more important, to wit—that your most valuable report should not be traduced but remain in full force in its true teachings for all future time; and consider that the cardinal lesson of this report teaches that flat trajectories *per se* announce greater accuracy (the shooting being equally steady) than high trajectories; and that to show this greater accuracy in a general way and at a glance of the eye your trial was made, and the heights of the trajectories given, so that every one can see in a moment how the different rifles shoot, and thus be able to decide on the nearly of their (vertical) trajectory accuracy by simply comparing the heights of the trajectories with each other. Consider also that your pamphlet report in its table, as well as FOREST AND STREAM, show that the trajectory made by the Merrill rifle for 100yds. is much flatter than any of the trajectories made by the 31 American breechloaders, as stated in my reply to Mr. Clapp (but in effect denied by Mr. Burns), as stated in my "Point 3. Merrill's muzzleloader also beat * * * all the 31 American breechloaders in a flat curve, all the way from 38 per cent. as the least up to 278 per cent. as the most (or greatest);" and as proof of this I referenced your report. And now Mr. Burns steps in and virtually denies this. His denial is utterly false.

The accuracy of the rifles tested are inversely as the heights of their respective trajectories nearly, and the relative heights of the trajectories vary sufficiently to enable any one who knows anything about rifle shooting to see at a glance which rifles were the most accurate shooters. Mr. Burns being a critic and belonging to a shooting club, of course knew this, or not knowing it, he should have kept silent: and the same is true as to his followers.

Did not these critics know the object of this trial, and that its very end was to arrive at (near enough for the occasion) the respective vertical accuracy of all these rifles by finding the respective heights of their trajectories and comparing them together? Could they not see at a glance that every American breechloader tested at 200yds. should shoot over and miss a deer at midrange and along midrange, and some of them over an elk or small elephant, the aim being on the center, and the charge and aim being as for point blank? Could they not see that the Romer rifle only would kill a deer under like circumstances?

The Romer rifle beat the 31 breechloaders in the flatness of its trajectory, as I stated it in my article, but which this critic and others of his kind try to suppress and smother, to wit: "Point 2. But Romer's muzzleloader beat (in a flat curve) at mid range in a 200yds. trajectory, all the 31 American breechloaders, and very, very badly too, to wit: from 37 per cent. as the least (Remington, .32-cal., No. 2 Pet.), up to the most (Stevens's Hunter's Pet). Trajectory No. 21, a Whitney, being abnormal, is rejected." And yet the wily critics try to make the public believe that these two muzzleloaders were beaten in accuracy. Is it not evident they know better? Had they not eyes to see in your report the relative heights of the trajectories? And for what purpose were they all gotten? Answer to show by deduction the relative bullet velocities, velocity powers, and accuracies of all the rifles. I mean that vertical accuracy only which belongs to the trajectory (not the target) and which could be seen very nearly when the heights of all the trajectories were obtained and presented by you to the public.

I do not here mean target accuracy, as found at the end of the range, nor screen accuracy. FOREST AND STREAM report says, and repeats it, that target accuracy was not sought for nor obtained, but that the shots were scattered purposely. The test was for trajectory accuracy. The breechloaders, as the heights of their curves prove, all shoot over too much at and along mid range to make close-shooting rifles, such as is required for killing both large and small game. A rifle which shoots correctly only at one point in the range is a poor concern for use in hunting. You require one to shoot strong and good, and close, all along the hunting range and this, without changing the aim or sights. And no amount of contradiction, whether direct, or roundabout, or under cover by Mr. Burns, his followers, or all the world, can wipe out the living facts declared by this trial, and which I honestly tried to bring before your readers in my last article. To try and deceive the public in this matter I hold to be a great sin, and it shall not be done with impunity. Please to rule them out of your columns, Mr. Editor, as nuisances against a good cause.

With these necessary explanations, alike due to you, myself and your readers, I am now quite ready to reply, but in rather terse terms, to critic's flippant article. I will leave your readers to judge, each for himself, whether Mr. Burns and his followers (whose articles they may have read in your columns) with your reports before them, wrote in stupid ignorance of this subject, or rather with the ruthless design of falsifying the records in order to build up the breechloaders at the expense of the muzzleloaders. And in forming an opinion it must be borne in mind that this subject of flat *vs.* high trajectories has been much and widely discussed, and kept almost constantly before the public for the past five years or more, insomuch so that it seems to me the most verdant tyro in rifle shooting should and must know that flat trajectories *per se* silently declare greater accuracy than high ones. This is so, as can readily be seen, because being straighter they conform more nearly to the straight line of aim (or sight) throughout the whole range (and beyond it also) and, mark well, it is from the line of aim or sight that "accuracy" (or error, it's opposite and the same thing) as it is generally called, is, and always must be, to be correct measured.

And yet right square in the face of the flat trajectories laid down in your reports for the two muzzleloaders, this vague and loose critic, backed by his followers, unequivocally declares that the Merrill rifle was beaten in accuracy by 27 of the 33 breechloaders, and that Rouer's beat all these but the Maynard by only .004 of an inch.

What a wonderful coincidence, what a tight fit indeed! Only the four-thousandth of an inch difference. Is this unblushing statement really made in utter darkness or through "total depravity?" As the breechloaders are shown to be comparatively all very weak shooters, arising mainly from the slow speed of the bullet, why did not Mr. Burns here change the subject from the ridiculous to the amusing, and assert that the Merrill rifle was beaten by 27 weak-spouting different waterpots?

And now as to Mr. Burns's letter: 1. It is not true "that there was not a muzzleloading hunting rifle in the contest;" therefore, what he calls a "fact," and to which he so graciously "wishes to call my attention" is not a fact; proof, see your records. Hunting rifles, as all know, have various weights, from 25lbs. or more down to 5lbs, or less; and who constituted this critic a sole judge in the case? And on what notable records and merit? See the various weights of the rifles tested, in your report.

2. It is not true, but most absurdly and glaringly false, that the Merrill rifle, "the one fired at the 100yds. range, was beaten in regularity of bullet flight, *i. e.*, accuracy, by 27 of the 33 breechloaders." No, there is not a word of truth in this very bold assertion; proof, the records. But it is true that this rifle beat, and most badly, too, all the American breechloaders (31 in all) in the flatness of its trajectory and consequent accuracy, and this, too, as I correctly stated it in my article to Mr. Clapp, but now contradicted and denied by Mr. Burns and others of his style. You see, his "accuracy" refers to accuracy at 50yds, hence, under your report, he stands forbidden to claim target or screen accuracy. This locates him at 50yds. on this point. You will also see that he meant to be understood that the Merrill rifle was beaten in accuracy in its broadest or most common sense, for after first using the words "regularity of bullet flight," and these not coming up to his wishes and purposes, he adds thereto, *i. e.*, accuracy. This term accuracy added, gives that deep tone and loud ring to his sentence through which he wished to deceive your readers. Vain man! Are all rifle shooters idiots? If he shall say he meant "regularity," this dodge will not better his position.

3. It is not true that 33 breechloaders were tested, but only 32. A critic should learn to tell the truth; possibly this was an error and I pass it by.

4. Under his own way of arriving at accuracy (which is not correct), it is not true that the Merrill rifle was beaten by nearly as many breechloaders as he states. Under any claim for accuracy of target or bunching of the bullets, several of the breechloaders at both ranges stand ruled out, for on a reference to the trajectory tables of heights of the curves, it will be seen that in many cases the breechloaders stand credited with more than 5 (consecutive) shots; in other words, that the wildest shots have been rejected. Example, shot No. 5, 200yds., Maynard rifle, ruled out. But with the muzzleloaders the shots are only 5, and no ruling out was deemed necessary. But for getting the normal trajectories only, which was the object of the trial, and to be able to present correct representative curves, it was right, proper and usual to throw out the bad shots, as was the case in several instances. In speaking of accuracy, your report says, page 8: "Each of the two rifles, the Romer and Merrill, with their heavy charges, maintained a high degree of accuracy." Exactly so, and thus with their flat trajectories they beat all the breechloaders very badly.

The Romer muzzleloader was tested at 200yds. only and "all the appliances" it had to it and so insinuatingly mentioned by Mr. Burns made no difference in the height and strength of its trajectory, as your readers are induced to believe they did. Mr. Burns should have known this simple fact before he appeared in the light of a brilliant rifle critic. He should have learned from your report that neither this rifle nor any of them were tested for target (or screen) accuracy, and to prevent target accuracy or "bunching the bullets" in the screens along the range and aim this target some of the rifles were so aimed as purposely to scatter the shots on the screens and targets, and this to prevent, as is stated in your report, the screens from being so much cut by the bullets as to prevent a correct measurement of the shots. Under this manner of shooting the bullets were generally scattered more or less over the screen at mid-range, 50yds. and 100yds. Take as an example, the best 5 shots—Nos. 1, 2, 3, 4 and 6—of the Maynard rifle (the boast of Mr. Burns) and they are scattered on the 100yds. screen 7.40in. horizontally and 1.80in. vertically (the Romer is some less). If No. 5 is counted in, as it should be for Mr. Burns's accuracy, the vertical spread is 11.20in. How as to Mr. Burns's .004in. Maynard beat and the 5 shots in this screen? Now examine in the tables the heights of the respective curves of the Romer and Maynard rifles at 50yds. and 100yds. and see how very little they differ in height. The great lesson to be drawn from this is, that the slight difference in the heights of these curves do not show the spread of the bullets by "a long way," and I presume this fact will astonish 49 in 50 of your readers who in glancing at the tables believe to the contrary. And these tables, mark it well, furnish no positive proof of accuracy, and even if they suggest it, which in one view of the case they do, this suggestion may or may not come out true when the rifle is tested to settle the matter. On what platform does my learned critic now stand as to the 5 shots being elevated on the screen at 100yds. and of the difference being just .004in. which beats, says he, the Romer by just .004in.? And how as to the Merrill rifle being beat, which he declared is a fact, but does not go to the trouble of trying to show or prove it.

4. Our critic further says, "At 200yds. the Romer rifle beat all the breechloading hunting rifles in the regularity of shooting [here he drops "accuracy" after the words regularity of bullet flight], the nearest one to it being the Maynard .40-cal., which was just four thousandths of an inch behind the Romer muzzleloader." He continues, "The difference in elevation of the five points being: Romer, .292; Maynard, .296; difference, .004 of an inch." It is not true that these rifles differ in accuracy (and this is just what he wishes the public to believe) by only .004 of an inch. It is more than 1,000 times this amount, and this too in favor of Romer's rifle at mid-range, where he locates his "elevation of the five shots," and it is at this point he says the Romer rifle beat all the breechloaders, but the Maynard only by the four-thousandth part of an inch. What audacious nonsense. Romer's beat the Maynard (approximately) 4.69 inches at 100yds. in trajectory accuracy, or 66 per cent. in trajectory accuracy at this point. And it beat it (adversely) in the flatness of its trajectory at this point .73 per cent., just as I stated it in my reply to Mr. Clapp, and which Mr. Burns stepped in and flatly (in effect) denied. I here challenge Mr. Burns to prove up his assertions. And let him specifically state from what line the elevation of the five shots are measured and how he got this line, and how he locates the five shots for measurements or calculations, and prove in particular that .004 of an inch represents accuracy, and define what accuracy means, and how the measurements must be made to get it. The tables do not show accuracy or regularity of shooting to be as he states, .004 of an inch, and as to the screen at 100yds. the shots are, as before stated, widely spread out over it and there is nothing on it to measure accuracy from, not even a bullseye or any center fixed. The public want light not darkness from Mr. Burns. I well understand how he worked it to get the nine mysterious figures on which he declared accuracy, so that I want no more of this incorrect work or false show. It is a cheat. In closing his letter he says "The work of the breechloader is selling it." Very good, possibly, this may be true. His entire letter, unless the last lines about the sale be excepted, has not a shadow of truth in it. Proof, consult the FOREST AND STREAM Report.

If I have erred in this letter in anything material, I request to be shown my error that it may be corrected.

If Mr. Burns and his followers had studied your pamphlet report of this trial and tried to profit by it, I am unable to see how they should have been so blind on this subject, as their criticism of my article shows.

I like to be criticised in an intelligent and truthful way, but can't heartily despise fallacy. I look upon those who seek to cover up the truths of rifle shooting, instead of holding them up for the public to profit by, as enemies to the cause, and I regret to see that the papers are too full of this kind of evil matter.

The following data are given in order that every one can figure for himself. Excepting the Maynard height of the trajectory, which is now added, the other data are the same as those on which I made out my several points in my reply to Mr. Clapp, but since attacked by Mr. Burns and others. Indeed, this false ball once set in motion by him has been most willingly speeded on its course by wily hands and hearts, until it is now full time that it shall receive a death blow square, and so be brought to a halt in its career. The data, as will be seen, enables one to figure for the outside extreme trajectories, but leaves the intermediate one to be specially regarded if desirable:

	In.
RANGE 100YDS.	
Height of mean curve, 5 shots at 50yds., Merrill's rifle, .42-cal.	1.306
Height of mean curve, 5 shots at 50yds., Maynard rifle, .40-cal.	2.155
Highest mean curve of all the American breechloaders, Stevens's Hunter's Pet rifle, .32-cal.	4.955
Lowest mean curve of all the American breechloaders, Remington-Hepburn rifle, .32-cal.	1.808
The Bland English double Express rifle, .42-cal., the same one used in the rifle test of hunting rifles near London in the fall of 1883, has, at 50yds., solid Express bullet, a mean curve, height	1.334
Also another mean curve, with hollow pointed Express bullet height	1.410
RANGE 200YDS.	
Height of mean curve, 5 shots at 100yds., Romer's rifle, .42-cal.	6.399
Height of mean curve, 5 best shots in 6, Maynard rifle, .40-cal.	11.087
Highest mean curve of all the American breechloaders, Stevens's-Hunter's Pet rifle, .32-cal.	21.987
Lowest mean curve of all the American breechloaders; Remington-Hepburn rifle, .32-cal.	8.890
Bland mean curve, 5 shots at 100yds., Bland rifle, .42-cal.	7.530

Now, the velocity and velocity powers of these rifles, as well as of all those tested, are inversely as the heights of the trajectories at mid-range. Now compare by this rule the speed of the muzzleloader bullets with the speed of the American breechloaders, and then compare both with the rules which govern in horse racing in reference to speed, and see if the American breechloaders were not "all more than distanced," as I stated it in reply to Mr. Clapp. And if so, is not this a sad comment on this much

boasted modern type of hunting rifles? Can it be used to degrade with impunity the muzzleloader? And after your test of them, are they now entitled to any more hearing or any further test with muzzleloaders until they shall undergo such radical changes, together with their ammunition, as possibly to entitle them to it? Most clearly not any more so than a plug horse once tried on the track and distanced can claim the right to enter it again. "Rule them all out" would be the public cry. Example: Under the rule of "adversely" the speed of the Merrill rifle stands as 4.955 to the speed of the Stevens "Hunter's Pet" 1.306, or comparatively as three miles and seven-tenths speed for the Merrill rifle to one mile for the Stevens rifle. Or reverse the funny scene, and let two horses which are in fact racers go round the track about three and seven-tenths times, while all the "31" others, under whip and spur, are variously coming in, but each more than distanced at best by the two on the first round. This refers to the 100yds. trial, and includes the English racer. The Merrill rifle speed for 100yds. would be just as funny.

As the muzzleloaders have been falsely assailed for want of accuracy, steadiness of shooting or what else it may be called at the trial, I hope the above will be greatly relished by these critics. I know the public generally will greatly relish such striking illustrations of facts, for they have seldom, if ever, thought of them. Come on! I have yet just a thousand and one more funny things to say; all I want is more like invitations to say them. Hitherto my deep sympathies for a down contestant have greatly curbed and restrained me, but in the future I will be free to speak.

Note well that trajectory accuracy leaves the question of target and screen accuracy entirely out; it leaves the latter to be settled in this case as a separate thing, the report so states it and states it correctly. Therefore, to the superior trajectory accuracy of the two muzzleloaders, which is a living quantity under like circumstance of range, load and aim, must be added target accuracy also. Combining these two in my article and in expressing my opinion, I said: "That the beat of the muzzleloaders in steady shooting would have been much greater than the great beat in flat curves (as I stated it), and not much short of 500 per cent. beat on a general average for the 31 rifles, 200yds. range, and of 250 per cent. for the 100yds. range." And I now reaffirm my opinion, which I stated was based on "my own experience as well as on the remarks made by the editor in FOREST AND STREAM, and also in the pamphlet report."

Here is the summary I made in my article: "The two muzzleloaders individually beat all (.32) the breechloaders individually from the beginning to the end of the trial most wonderfully" (the Bland rifle only excepted from a bad beat). Here is the point I credited to the Bland rifle: "Bland & Sons' English double Express .45-cal. breechloader beat (and very badly too) the 31 American breechloaders. It shot strong; very strong, and almost equal to the muzzleloaders" in this respect. I now reaffirm this fact. For proof that I made my points correctly and mostly truly, I again refer to your pamphlet report and to FOREST AND STREAM. Mr. Burns and his followers have denied the truths and lessons of your report and my true comments on it as well. Your report must and shall be respected, not ignored nor traduced.

Combined Trial.—A trial for both trajectory and target accuracy may be combined in one, as was the case in the London English trial in 1883 (but this trial was to a certain extent a failure) or it may be separated, as was the case in the FOREST AND STREAM trial in September and October, 1885.

Illustration.—Now suppose the rifles of A and B shoot equally steady and close on the target at the end of the range (say at 100 or 200yds.) and that both center a dollar for 50 consecutive shots. What then? Why, here at the end of the range both rifles are credited with equal accuracy, target accuracy. But how does it stand at 50yds? Answer: Rifle A beats B on the same center aim (normally) every shot, say 100 per cent. more or less, according to the more flatness of curve A than of curve B. To "change the arm" from the center in the test would be to beg the question—it is not permissible.

Point.—Nor is this beat at 50yds. or at midrange only, but a very small portion of it in hunting. It beats all the way along the range (and beyond it too) between the two points blank, *i. e.*, between the "near point blank," which is about 5yds. from the muzzle in a range of 150yds. (and less in 200yds.) to the point blank proper at 100yds. (or 200yds.) thus making over 90yds. in this 100yds. range where, strictly speaking, rifle A beats rifle B; and always remembering that "a miss is as good as a mile," and that small game often scuds away unharmed to the credit of a miss of less than one-fourth the diameter of the bullet, remembering all this and applying it to rifle A, you will readily see how, during a day's hunt after squirrels and the like, that it will bring in great lots of game, where rifle B will not bring in any perhaps. Rifle A will feed a camp where B will starve it.

Standing Merits.—And note well that the superior close and strong shooting made by rifle A over rifle B, as resulting from its flatter curve, is a standing merit in favor of rifle A over rifle B which always belongs to it and remains with it, to tell the joyful hunter at each crack of it the same sweet tale of its fidelity and unswerving constancy even to the very end, always constant, never fickle.

Power and Velocity.—The velocity and velocity powers of the rifles tested by you may be taken to be adversely (not directly) as the heights of the curves at midrange, *i. e.*, the greater the velocity or velocity power, the less the height of the curves. And the comparative accuracy of the rifles also are (almost) as the heights of curves. Now see the pamphlet table.

Example.—Thus under the rule of "adversely" the velocity of the "Stevens's Hunter's Pet" as the height of the Stevens curve, 4.955in., is to the height of the Merrill curve, 1.306in. Ratio of velocities as 3.794 to 1. Excess of Merrill velocity or beat over Stevens equals 279 per cent., which is just as I stated it in my article. In the same way all the other curves may be compared.

And now, in closing, Mr. Editor, I wish to say to you personally, that your report should and must be sustained in all its integrity, and to this end I now send you this article. In the meantime, the integrity of my last article has been assailed, and its facts flatly denied by designing critics, and I must, therefore, crave the right and privilege, through your generous columns, to defend myself against this overt attack by Mr. Burns and all others. In so doing I feel very certain that the cause of rifle shooting will be advanced by the information imparted in this letter. Some of the points here presented for the first time are new to your readers, and I think they will enjoy them much. NAPOLEON MERRILL.

GUT FROM AMERICAN SILKWORMS.

Editor Forest and Stream:

I have read Mr. Charles F. Orvis's statement of his experiment in the preparation of gut from American silkworms with some interest, the more so that the subject had previously occupied my attention. This experiment has proved a failure, not because American silk works cannot elaborate a strand of the required quality. That is set at rest, not only by the evidence of Dr. Garlick, but by the strand now in the possession of Mr. Orvis, which is far too long to have been yielded by the Chinese worm.

Mr. Orvis is apparently disposed to attribute his failure to his ignorance of the most suitable food for the worms. Without going into the discussion of this question, I would suggest that he may set his mind at rest on that point. The quality of an elephant's tusks is the same whether the elephant feed on wild saccharum or the leaves of the sacred fig tree, and the quality of the gut of any given species of silkworm will be the same, whatever the food, provided it be such as to maintain the worm in health and vigor.

There appears little room to doubt that the species experimented with by Mr. Orvis were the same species from which Dr. Garlick procured "strands of unusual strength and great length." The causes of failure are hence narrowed down to the manipulation of the gut in course of preparation, and here, I think, it is to be regretted that Mr. Orvis, with the raw material at command, did not undertake a series of experiments in modification of the treatment.

The essential feature of the treatment is the immersion of the worm in vinegar. Its success is determined by the strength of the vinegar and duration of the steeping. The treatment is empirical, its value was doubtless discovered by accident. No scientific theory can guide us in regulating the strength of the vinegar or period of immersion; our only guide is the practical experience of the Spanish makers, which should be adhered to closely, and its adaptability to the treatment of the gut of American worms demonstrated or disposed, before experimenting in other directions.

On this point I am disposed to doubt that Mr. Orvis has adhered closely to the Spanish treatment. He says he soaked the worm in dilute acetic acid or weak vinegar for a few hours. The Spanish treatment as perscribed in Ure's Dictionary of the Arts and Sciences is to steep the worm in strong vinegar for a period varying from five to eight hours, according to the temperature, five hours being enough in very hot weather.

Mr. Orvis's dilute acetic acid or weak vinegar is very indefinite, and Ure's strong vinegar would not be much more definite were it not that we know that the Spanish vinegar in common use is all made from wine and that the best quality contains from five to six per cent. of acetic acid—vinegar of this strength can be conveniently made with sugar.

Our vinegars in common use are made from beer, cider, wine, alcohol and wood vinegar, and the standard strength is five per cent. of acetic acid. The bulk of the vinegar of the stores is below this strength, and the weakest of them not infrequently fortified with sulphuric acid.

The impression created by the perusal of Mr. Orvis's paper is that he has used a vinegar inferior in strength to that used for the purpose in Spain and possibly a vinegar adulterated with sulphuric acid.

Mr. Orvis's few hours for the steeping is very indefinite and apparently success or failure depends on this time, being very carefully regulated by the temperature.

One more point; while the Spaniards stretch the gut they hold one end in the vinegar—it is the prescribed rule, and if important in the treatment of short lengths is presumably much more so for greater lengths. In fact I am disposed to lay so much stress on the importance of attention to this detail that I doubt if it is enough to hold one end in the vinegar in the treatment of American gut and would strongly recommend the employment of large shallow vessels which would admit of the gut being stretched to its full length during immersion and then withdrawn. C. F. AMERY.

THE FORT WAYNE FLY.—Fort Wayne, Ind., Dec. 18.—*Editor Forest and Stream:* Inclosed please find a "buck-fly" or whatever else it might be called, about which I desire to say a few words. I read the FOREST AND STREAM, and have for years, but have never seen this fly described. I do not find it in the "Gazetteer," Orvis and Cheney's collection does not contain it, and Henshall and Wells do not refer to it, neither does Harris's "Scientific Angler." It is not a "bucktail," neither is it a hackle or palmer. I have made and used bucktails, and made one last evening with a revolving spoon to be used in trolling for pike. If this "what-is-it" is new I desire to name it "Fort Wayne," but if it is old please credit me with being slow but coming. I never saw a fly cast until August, but now I can cast fifty feet with ease. I found but one bunch of silk worm gut in our three tackle stores, and I now make all my own flies with such material as I can pick up here and there. Is it new?—JOHN P. HANCE.

[The fly is new to us. It has a stout orange body wound with gold; tail of red, yellow and strip of wood-duck feather; a large lock of deer's hair, which extends as a wing beyond the end of the tail and is the most prominent part of the fly. This hair is not put on like a hackle but like a wing.]

THE NEW YORK TROUT LAW.—The sentiment in this section is very much in favor of protecting 6in. trout. The law as it was in 1885 was a good one and met the approval of all whom I met in the northern country. Unless we get such a law again I fear that there will not be much stocking done by private subscription here in Utica. I have been in the woods in the vicinity of Morehouseville every winter for the past five years to put out young trout; have driven and tramped through snow and worked like a beaver to bring the fishing up to the old standard, and have seen the good results from it, only to see the law repealed and the little fry exposed to the mercy of the trout hog. The idea in regard to a dividing line is good, if it can be made so trout will not be exposed for sale in the southern part of the State before May 1, the time when the season should open in the northern section. The ice is out about May 6 to 12 each year, then we get our best lake fishing. Make it all points north of the section of the New York Central R. R. May 1, and south of it April 1, trout to be accompanied by owner, same provision as in the deer law.—D. C. M. H.

NUMBERING OF FISH HOOKS.—Roxbury, Mass., Dec. 14.—*Editor Forest and Stream:* I have read with some interest an article in issue of Dec. 6 concerning the numbering of fish hooks. The style of numbering of the small manufacturer, viz: 20 to 1, is no more meaningless than the Redditch, viz: 1 to 20, which simply signifies that some party—Stubbs perhaps—has filed a notch in a piece of steel and called that size No. 20, without reference to any measurement whatever. If the small manufacturers' hooks No. 10 had signified $\frac{10}{1000}$ of an inch diameter, No. 20 $\frac{20}{1000}$ of an inch, etc., thus giving hook purchasers some understandable means of buying or ordering what they wanted, then the Redditch left-handed method would soon disappear, zeros and all. Wire manufacturers in this country are fast being driven to adopt intelligent numbering.—MECHANIC.

DR. JAMES A. HENSHALL and Judge Longworth, of Cincinnati, sailed for Havana on the 16th inst. They will spend a short time there and then sail for Valencia, and will cruise on the Mediterranean during the winter. In the spring they will spend the season salmon fishing in Scotland, after which they will return. During the Doctor's absence he will occasionally drop a line to FOREST AND STREAM. His many correspondents will please bear in mind that the Doctor will be absent all winter, which will account for their not receiving replies to any letters which may have been sent to him lately. His departure was quite sudden and he has not had time to notify all of his friends.

RESTIGOUCHE SALMON CLUB.—The annual election of officers of the Restigouche Salmon Club took place in this city Dec. 11. The following gentlemen were elected directors for the ensuing year: Messrs. John L. Cadwalader, W. Hall Penfold, Henry W. DeForest, James C. McAndrew, Arthur D. Weekes, Frank Thomson, Goold H. Redmond, Francis Bartlett and Heber R. Bishop. At a subsequent meeting of the board of directors the following officers were elected: Mr. John L. Cadwalader, President; Mr. Goold H. Redmond, Vice-President; Mr. Henry W. DeForest, Secretary and Treasurer, and an Executive Committee consisting of Messrs. Redmond, DeForest, Weekes and Bishop.

TROUT IN A FLUME.—A large salmon trout 35in. long, 8in. deep, was taken from the flume at the Wood Board Mill, Wednesday morning. It weighed 18lbs., and was dead when found. Several of these very large trout have lately been found in the mill flume, one 15lbs. one was taken out alive last week and put into the river above the fishway, but he missed the fishway, and got back into the mill again and was dead when found the second time. We have heard it said no fish could find its way up or down through the fishway, it is so blind and ill-contrived a place.—*South Windham, (Me.), Correspondence Portland Globe, Dec. 11.*

Fishculture.

Address all communications to the Forest and Stream Pub. Co

OTHER FISH TO FRY.—*Editor Forest and Stream:* Before I had read the last issue of your valuable paper I had written to Mr. Seth Green, Superintendent of the Caledonia station of the New York Fish Commission, for a blank application for young fish. A printed application was sent me together with a letter which asks me to have this application indorsed by a member of the State Legislature. This is a condition that was new to me, but I see it appended to Mr. Green's card in your last issue. I have carefully looked over the laws relating to the appointment of the Commissioners, and find nothing there which warrants this, and I am in doubt whether there is any such law on the statute books, and it seems to me that the Commissioners of Fisheries are needlessly imposing a burden upon those who may apply for fish produced by the State. I shall address letters to the other State Superintendents or to the Commissioners themselves, and learn if there is any authority for this order, or if it is an arbitrary rule introduced by Mr. Green for purposes best known to himself. I was, however, greatly surprised to find inclosed in his letter, under cover of postage presumably paid by the State, an advertisement of a private enterprise, of which the following is a copy: "The Seth Green Club. By inclosing $2.50 and this card to the—— you will receive the paper for one year. The regular subscription is $3.00. Mr. Seth Green has editorial charge of the fishculture department of the ——." I was aware that some time ago Mr. Green had, in his capacity as Superintendent, lent his name and that of the Fish Commission to advertise a patent medicine, but supposed at the time that it was mainly for the sake of seeing his name and portrait in print, of which he is known to be very fond, and never suspected him of being a sleeping partner in the concern. Now, however, he does not hesitate to send out advertisements under the stamp of the Fishery Commission covered by postage charged to the State. —JOHN W. CRAWFORD (Brooklyn, N. Y.).

THE NEW YORK FISH COMMISSION.—The Commissioners of Fisheries met at the office of Hon. R. B. Roosevelt, president of the board, New York, Dec. 6. All four were present. The following business was transacted: A proposition from the Boonville Sportsmen's Club to turn over their hatchery on the Fulton Chain of Lakes to the Commission on certain conditions was submitted to the board, and it was determined to put service in that hatchery and supply it with spawn from Caledonia for the present season, preparatory to a final decision upon the proposition made. Mr. M. B. Hill, Clayton, was authorized to continue during the present fiscal year, at his private hatchery, the work he conducted last year by the authority of the Commission, with special attention to the propagation of salmon and brook trout, pike-perch and mascalonge, for stocking the St. Lawrence River and Lake Ontario, the expenditures to be under the general direction of Commissioner Bowman. Commissioner Blackford was appointed treasurer of the Board. He was also authorized to exchange California trout spawn and fry for those of the Sunapee Lake and brown trout. On motion of Commissioner Sherman certain changes were made in the apportionment of protection districts. Two thousand copies of a general synopsis of the game laws of the State, which had been prepared by the secretary of the Commission, were ordered printed. The Commissioners have resolved to make an inspection next season of all the hatcheries under their management or assistance.

FIXTURES.

DOG SHOWS.

January, 1887.—Bench Show of Poultry and Pet Stock Association, at Adams, Mass. W. F. Davis, Secretary.

Jan. 17 to 21, 1887.—Ohio State Poultry, Pigeon and Pet Stock Association Dog Show, Columbus, O. W. F. Kuell, Superintendent, Columbus, O.

March 22 to 25, 1887.—Spring Show of the New Jersey Kennel Club, Waverly, N. J. A. C. Wilmerding, Secretary, Bergen Point, N. J.

March 29 to April 1, 1887.—Inaugural Bench Show of Rhode Island Kennel Club, Providence, R. I. N. Seabury, Secretary, Box 1353, Providence.

April 5 to 8, 1887.—Third Annual Show of New England Kennel Club, Boston. F. L. Weston, Secretary, Hotel Boylston, Boston, Mass.

April 12 to 15, 1887.—Thirteenth Annual Dog Show of the Western Pennsylvania Poultry Society, at Pittsburgh, Pa. C. B. Elben, Secretary.

May 3 to 6, 1887.—Eleventh Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

FIELD TRIALS.

Feb. 15, 1887.—Inaugural Trials of Tennessee Sportsmen's Association. Entries close Jan. 10. R. M. Dudley, Secretary, No. 84 Broad street, Nashville, Tenn.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed 4502.

THE NATIONAL FIELD TRIALS.

THE eighth annual meeting of the National Field Trials Club begun on Monday, the 13th, with the All-Aged Stake. There were 37 nominations, 22 of them filling. [See drawing in last issue, p. 409.] The judges appointed were Major W. H. Key, of Florence, Ala., Dr. Rawlings Young, of Corinth, Miss., and Mr. C. W. Paris, of Cincinnati, O. Dr. Young was unwell and not able to be present on Monday, and Col. J. H. Tresevant, of Dallas, Tex., was chosen to fill the vacant place. On Tuesday, Dr. Young arrived and joined his associates in judging the remainder of the heats.

In several of the heats we cannot agree with the decision of the judges. Our reasons will be found in the record of the performances of the dogs. The honor and integrity of the gentlemen who performed the onerous task is above suspicion and that they made their decisions conscientiously no one will for an instant doubt. The only explanation we can offer for the difference in opinion between them and us is that they failed to see some of the work that was done, or seeing it failed to rate it at its proper worth. It is often the case, especially with dogs of high courage, that a grand bit of work is done that half a second later would have been impossible, and it requires close observation and often nice discrimination to determine whether the work should score to the good or the reverse. Upon several occasions a conference with one or more of the judges showed, greatly to our surprise, that we held opposite opinions regarding the character of the work just performed. In two or three such cases, after the finish of the heat, a quiet remark to the handler of the culprit would elicit a reply that gave us no reason to change our notes. To score all the minute details of each or any heat is simply impossible. To impartially record all the work of importance and to lay before the readers a complete history of the running is our highest ambition.

BEN HILL AND BEAUMONT.

On Monday morning it was cloudy with a strong breeze from the northwest and a raw disagreeable day. Toward noon there was a break in the clouds. The sun came out and the evening was pleasant, giving promises of good weather. The drawing took place at eight o'clock, and forty minutes later a start was made for the Jones farm some two miles northwest of the town, and the first brace was put down in a cornfield at 9:28. Both are medium in size and move easy at about an equally moderate rate of speed. Ben Hill was handled by H. S. Bevan, of Lamar, Miss., and Beaumont by W. S. Ellison, of Atoka, Tenn. After three-quarters of an hour, during which time considerable ground was worked over without a find, Ben struck scent of a running bevy and after making several points and doing some nice roading he got close to the birds which were flushed and missed by his handler, who was just ahead. Beaumont had struck the scent behind Ben, and roaded a short distance but could not make it out. Following the birds into some woods Ben made a feint, and as his handler came up he drew on and located his bird. Beaumont meantime put up a brace and came round and backed Ben nicely. Bevan put up the bird and scored a miss. Soon after Ben flushed and Beaumont followed suit and stopped on point to another, and Ben backed him an instant and then broke and went on and flushed the bird. Both then pointed and backed several times, but nothing was found. Finally they were ordered up and the decision was reserved till evening, when the heat was awarded to Ben Hill. Down fifty-eight minutes.

GLADSTONE'S BOY AND LILLIAN.

Both of these dogs are well known. Glad appeared to be off as he did not move nearly so well as when we saw him last. He was handled by Tucker. Lillian started off well and had the best of it in speed. She was handled by Stephenson. They were put down in some woods at 10:36, and worked out to a cornfield where Lillian made a cast along a thicket and pointed, and Glad backed her. Stephenson went ahead to flush and one bird rose, but settled again within a few yards. Both dogs went on a few steps and pointed, and as the handlers went up the bevy flushed and settled along a ditch in tall sedge and briers a short distance away. Lillian soon had one fast, and Glad coming up also pointed or backed, we could not determine which. Stephenson put up the bird and killed it, and Lillian sent to retrieve flushed one and then brought the dead bird nicely. We then turned back for a marked bird, which flushed wild. Lillian made a point near the place and her handler claiming to see a bird on the ground, shot at it, but no attempt was made to find the bird. A little further on one got up near Glad and soon after both pointed at nearly the same time a single that was flushed to order. Turning back Glad made a nice point that Lillian backed at sight very prettily. The birds were probably running, as nothing was found. We then turned into some woods, where Glad made an elegant point that Lillian at once honored. Glad drew on and again pointed and Tucker went ahead to flush when Glad drew on and again pointed and Tucker put up the bird and missed it. A few yards on Glad jumped into a point and almost at the instant Lillian also pointed, and birds were flushed in front of each. We then turned down to a branch, and as Lillian went across she flushed one and dropped on point to another that also went a second or two later. Glad meantime pinned one just beyond that flushed just as Tucker came up. Turning back Lillian made a nice point and Glad backed her in fine style. Stephenson claimed that she was pointing where birds had been flushed from, but just then one rose in front of her and the heat was ended with Lillian the winner. Down twenty-eight minutes. This was an interesting heat and the work was brilliant with but few mistakes.

DON'S DOT AND DORA.

Don's Dot, handled by Short, ran at High Point. Dora, handled by her owner, ran here last year. Dot showed more speed and range than she did at High Point, but had no chance to point, as Dora had the legs of her, and as soon as Dot showed sign of game, Dora would cut in ahead, and at last, when Dot was drawing on a bird, Dora went in and flushed it, and the judges ordered them up awarded the heat to Don's Dot; down thirty-four minutes. We then went to lunch.

PET GLADSTONE AND DAISY F.

Both of these dogs ran at High Point with the same handlers. Pet made a much better appearance than in her heat at High Point, and showed up quite speedy and a wide ranger. Daisy also came out strong and got away in fine style, having the best of it in both speed and range. They were put down at half-past one and worked back to where the first brace were put down in the morning without a point. We then turned down the creek and shortly after Pet ran into a bevy on nearly bare ground and flushed them. Following them up Pet made a beautiful point to a single, Daisy backing her nicely. Tucker put up the bird and scored a miss. Daisy then got in a very nice point to one in the bottom of a deep gully, and Rose to order flushed and missed it. Working down on the opposite side of the gully Daisy pointed and then drew on a running bevy, and as she located them Pet also pointed the same birds; Tucker put them up and missed. The birds settled on top of a knoll in the sedge, and as Daisy was climbing the steep bank she caught the scent and made an elegant point, and Pet backed her instantly in fine style. This was very pretty. Rose put up the bird and scored another miss, and soon still another on a bird that Daisy had pinned in the sedge. Pet then flushed one, and the heat was ended with Daisy F. the winner. Down one hour.

LADY C. AND DAN GLADSTONE.

These dogs also ran at High Point with the same handlers. They were nearly equal in speed and range, Dan having the best of it in style. They were put down in sedge at 2:44. Dan made a cast into a sorghum patch and made an elegant point, but drew on as his handler came up and roaded some distance, but could not make it out. Lady also came up and dropped on point, but nothing was found and we turned down to a branch, where Dan, while at speed, ran into a wire fence and cut his mouth and broke off a tooth, but he was soon going again. Turning up the branch Lady dropped on point near a cane thicket, but nothing was found. We then beat out a large extent of ground without result. Finally word was sent to the front that a bevy had been flushed by the spectators and we turned into the woods after them. Lady found them on the edge of a branch and dropped very prettily to them. Stephenson put them up and winged one that Lady retrieved alive very nicely. Leaving our horses we followed the birds into a thicket, where Lady dropped to a single that was running and Dan backed her. As Stephenson went ahead Lady drew on and roaded out the bird very nicely and it was flushed ahead of her. Both then roaded some distance and Dan followed up his bird and located it nicely, Short to order flushing and scoring a miss. We then took two or three turns in the woods, but nothing was done except that both challenged and roaded, but had to give it up. Finally the judges consulted and a gun was fierd and a bird thrown for Dan to retrieve, which he did indifferently, and they were ordered up with Dan the winner. Down one hour and twenty-eight minutes. So far as we could see Lady had decisively the best of it and we are at a loss to understand why Dan was awarded the heat.

LUFRA AND NOBLE C.

Lufra, handled by Nesbitt, was just from Abilene with her well won laurels still green and much was expected from her, but she appeared to be stale and did not show up nearly at her best. Noble C. ran at High Point. He came out here in much better form and ran a very good race, doing some fine work. They were put down at 4:15 in a cotton field and worked toward town. Noble made a cast into a corn field and made a stylish point to a bevy, and as Lufra caught sight of him she made an elegant back a long distance away, Stephenson, to order, put up the birds and killed one, that Noble retrieved only fairly well. Lufra was unsteady to shot, but stopped to order. Following up the birds, some very nice work was done by both dogs, each getting a point at the same time, from which birds were put up, Nesbitt scoring a miss. Soon after another got up that Nesbitt killed and Lufra retrieved it well. Noble then got a good point and soon after Lufra got in one and birds were flushed to each. Noble then cast back and pinned one that had lain and Stephenson, to order, put it up. The dogs were then worked toward some birds that had been marked down, and Noble pointed and Lufra backed him, but the birds had probably run as nothing was found. A little further on Noble made a point in a thicket to a bird that flushed wild. Lufra came up and pointed where the bird rose from. Soon after Noble cast ahead along a ditch and made a point to one that also flushed wild. Meantime Lufra was roading out this bird, but she got them too late as the heat was decided in favor of Noble C. Down thirty-seven minutes. In speed and range Noble had the best of it. In style they were nearly equal. It was nearly five o'clock and this ended the work for the day.

TUESDAY.

CHICKASAW II. AND SPORTSMAN.

On Tuesday morning the weather was delightful, promising a good hunting day, and with the exception of a trifle too much wind a portion of the time the day was all that could be wished. Birds were not very plenty and nearly all the heats were prolonged in consequence. The dogs were put down at 8:35 on the Hunt Farm, which in former years has held more birds than any other grounds here. Sportsman, handled by Tucker, is well known. Chickasaw, handled by Short, ran at High Point. In speed, range and style, Chickasaw had the best of it. Sportsman was the first to find, pointing a bevy nicely. Chick had challenged, but went on down wind and flushed a brace and stopped as the other got up; Tucker killed one. Sportsman was a trifle unsteady but at once dropped to order. He then retrieved well. Following after the birds both dogs pointed and then roaded where birds had probably run, but they failed to make it out. We then took a turn along a hedge, and Chick made a stylish point to a single and Sportsman backed him very nicely. Short, to order, put up the bird, which flew toward the judges and was not shot at. This was a very pretty piece of work. We then worked down near a branch in some sedge, where Sportsman made a point and Chick backed him. As Tucker went ahead to flush, Sportsman drew on and roaded for some distance, Chick also roading. Sportsman stuck pretty close to the trail, but before he could locate his birds Chick made a cast, and as he turned back and flushed the bevy, Short killed one that Chick retrieved well. Taking the dogs round for the wind Chick made a nice point that Sportsman at once honored. As Short came up a bird flushed near Chick, but he held his point and Short put up another one just in front of him. This was well done, but he spoiled it all a few minutes later by making a bad flush with the wind in his favor, and worse than this, he came very near scoring a chase. We then turned into some woods where Sportsman made a nice point to a bevy. Chick coming toward him down wind probably did not see him, as he appears to be perfect in backing, ran into the birds and flushed them. This ended the heat with Sportsman the winner. Down fifty-four minutes.

MINNIE S. AND BRIDGEPORT.

This brace was put down in the woods near where the last brace was taken up at 9:33. Minnie is of medium size, rather a nice mover, with only a fair amount of speed; she was handled by Bevan. Bridgeport ran at the Western Trials, dividing third; he was handled by Stafford. In speed and range they were nearly equal; Bridgeport showed the most style. When first put down both alternately pointed and backed on trail of the bevy found in the previous heat. They were then worked through to some sprouts where the birds had been marked, and three or four birds were flushed near the dogs and handlers, but the thicket was so dense that we could not see which was to blame. Soon after Bridgeport flushed a brace that he should have pointed and dropped to wing. Both then pointed once or twice, but nothing was found. A persistent effort was then made to get the dogs on a marked bird, but after considerable maneuvering the task was abandoned and the bird was flushed by one of the judges. We then turned back into the sprouts, where Bridgeport made two or three points to which nothing was found. Another marked bird was reported, and the dogs were ordered in that direction. Minnie succeeded in finding it this time, but scored a flush instead of a point. Both then got in several pretty points and backs, but nothing was found, except in one instance a hare was seen to go. Finally both were found on point with Bridgeport a little in advance, and Stafford to order put up the bird. A long time was spent and considerable ground worked over without result, and the dogs were ordered up to go down again. Down one hour and three minutes. They were again put down at 12:34, after the finish of the heat between Niobe and Bob Gates, and sent into the woods after the scattered bevy. Bridgeport ran up a bird and stopped to wing, and Minnie backed him. Minnie then flushed one and instantly stopped to wing. A little further on Bridgeport made a point and Minnie caught sight of him and backed at the same instant that she flushed the bird. Bridgeport then made a point just in season to escape the penalty for a flush. A little further on they backed each other, and soon after Bridgeport half pointed and Minnie backed him. The judges then compared notes and awarded the heat to Minnie S. Down fifteen minutes; altogether one hour and eighteen minutes. We could not see upon what grounds the decision was made. Bridgeport outworked her from start to finish, and was entitled to the heat.

JACK CADE AND RICHMOND.

This brace was put down at 10:37, in sedge. Jack is a large dog and runs rather heavy. He was handled by W. W. Titus. Richmond, handled by Short, ran at High Point. He showed the most speed and style. After quite a turn Jack ran into a bevy, down wind, and flushed part of them and then, with the wind in his favor, he put up the others. Failing to find the scattered birds we beat out considerable ground to a sorghum patch where a bevy flushed under the horses and settled in the sedge. Two of them dropped near Richmond, and as he came to the place he flushed one of them and soon after the other got up near his handler. Richmond then cast down along the edge of some sedge and made a nice point, and Short went ahead to flush when Richmond drew on after him away from the bird which was flushed near Jack, who had come up and pointed it as Richmond drew on. Short killed it with his second barrel and Richmond retrieved it well. The dogs were then taken across a deep gully after the birds, and Jack scored a flush on three birds that he should have pointed. Richmond soon after made a nice point to a single that Short flushed to order and killed, and Jack retrieved it. Richmond then made a point but soon went on. The judges then compared notes and awarded the heat to Richmond. Down fifty-four minutes.

NIOBE AND BOB GATES.

This brace was put down in an old field near the road. Niobe is a pretty little bitch with an easy, graceful way of going and quite a turn of speed. She was handled by Ellison. Bob Gates, handled by Stephenson, won the All-Aged Setter Stake at High Point. In speed they were nearly equal; in range and style Bob had the best of it. Soon after starting Bob made an elegant point to a hare, and soon after Niobe also pointed one. Working down the gully Bob made a point, and as his handler went ahead to flush Bob drew on after him away from the bird, the judges flushing it soon after. The bird flew over the reporters, and Mr. Irwin made a pass at it and knocked it to the ground. It recovered, however, and went off in a sadly demoralized condition. Bob made another stylish point at the edge of the woods at the lower end of the gully to a bird that his handler failed to flush, but it got up when the other handler came along. We then turned up into the woods, and Niobe dropped on a pretty point to a bevy that Ellison flushed to order and killed one. Niobe, sent to retrieve, went to the bird and mouthed it, but refused to bring it, and her handler went to her and put it in her mouth, but she only brought it a few steps and dropped it. Following up the birds Niobe pointed just as a bird flushed wild a short distance in front of her. Bob then made a very handsome point, and Niobe backed an instant and moved up but dropped to order. Stephenson went ahead to flush, when Bob drew on, and alternately pointing and roading running birds, working them out very nicely. They flushed just ahead of him and Stephenson scored a miss. A little further on Bob made a nice point to a single and Niobe backed him very prettily. Stephen, to order, put up the bird and scored another miss. They were then taken up and we crossed to a large open field where Bob, making a wide cast, turned back along the woods with his nose over his shoulder in the wind, and pinned a bevy in fine style. Stephenson, to order, put up the birds and killed one that fell across the road. Bob, sent to retrieve, went over the two six-feet high fences and brought the bird in good form. This ended the heat with Bob the winner. Down fifty-four minutes. Bridgeport and Minnie S. were then put down to finish their heat, after which we went to lunch.

PATSEY D. AND GAY GLADSTONE.
